COIMBATORE.

from 8*l*. to 9*l*., and of those of smaller size from 4*l*. to 6*l*. Many more were destroyed in the same interval by private persons, who never reported the facts; as, although government rewarded the destruction of an elephant, the tusks, which were required to be surrendered, were often of considerably greater value than the reward. Of domestic cattle, kine are excellent and numerous. They are white, of a light make, bony, with large dewlaps, very active, and are in great demand for fleet draught all over the Carnatic. The breed of buffaloes is inferior, but that of sheep is good, they being easily fattened, and their flesh of excellent quality: their wool, though coarse, is manufactured into excellent carpets and blankets. Silk is produced in the district, but the quantity is small, and the quality not prime.

The vegetable productions consist chiefly of dry grains. The principal alimentary crops are gram (*Cicer arietinum*), various sorts of panic, as *Panicum miliaceum*, *Panicum italicum*, *Panicum spicatum*; various kinds of millet, *Holcus spicatus*, *Holcus saccharatus*, *Curcuma longa* or turmeric. Of commercial crops, opium is raised on the hills, but not of superior quality.⁹ The castor-oil plant (*Ricinus communis*) is much cultivated, and its produce consumed at home, and exported largely. Experiments have been conducted by the government for the introduction and cultivation of the Mauritius sugar-cane, and favourable reports have been received of their progress.¹ Cotton is produced, and manufactured into coarse fabrics for home wear, and for exportation to Trinchinopoly, Salem, Mysore, and Malabar. One of the experimental farms established by the government, with the view of introducing the American species of cotton, was located in this district. In 1849 it was discontinued; the object for which it was formed, having, it is said, been fully attained by "demonstrating that the soil and climate are capable of producing cotton suitable to the British market."² The district is noted for the abundance and excellence of the tobacco which it produces. Its superiority is "attributable³ to the richness and suitableness of the soil for its culture, to its being irrigated from wells containing much saltpetre, and to the attention paid to its cultivation." The sandal-tree grows freely in the jungly forests round the base of the hills, and the wood is

exported in considerable quantities.⁴ The extensive forests in the neighbourhood of the Annamally Hills contain abundance of teak and other valuable timber.⁵

The population is officially returned at 1,153,862.⁶ It consists almost entirely of Brahminists. The language spoken is the Tamil.

The routes, generally speaking, between Coimbatore and the adjoining districts are good, having lately been much improved. The trunk road is from north-east to south-west, from Salem, through the towns of Coimbatore and Palghat, to the western coast at Ponany. The principal places are Coimbatore, Palaghat, and Darampoor.

¹ E.I.C. Ms. Doc.

COIMBATOOR,¹ * the principal place of the British district of the same name, is situate near the left bank of the river Noyel, a tributary of the Cauvery, in a dry and well-cultivated country, on the declivity, and near the base of the great mountain-group of Neilgherry, and on the north side of the remarkable depression² which traverses the Ghauts from east to west. From this latter circumstance it is admirably ventilated by the currents of air incessantly sweeping that great gorge. The streets are wide,³ airy, and neatly built; but the salubrity of the place is impaired by the bad quality of the water, which is obtained from wells, and is for the most part brackish. The European quarter is eastward of the town, and detached from it. The jail for the district is situate in the south-eastern part of the town, and is a large square building, capable of containing 275 prisoners. A detachment of native infantry is stationed here. The huts of the sepoys are near the town. On its south side is a tank, never less than three miles in length, and during the rains increasing to a lake of considerable extent. In the time of Hyder Ali the town is said to have contained 4,000 houses; but it suffered much in the wars between the British government and Mysore. Elevation above the sea 1,483 feet. Distance from Calicut, E., 80 miles; Mangalore, S.E., 196; Bombay, S.E., 600; Seringapatam, S., 100; Bangalore, S., 140; Madras, S.W., 268. Lat. 11°, long. 77° 1'.

COLABA.¹—This name is given to the southern² part of Lighthouse Island, the northern being called by the British

* Coimbatore of Buchanan; Coimbatore of Wilks.

COLABA.

Oldwoman's Island. These two parts are connected by a causeway, overflowed at spring tides. Lighthouse Island is likewise connected with Bombay Island by a causeway.³ In 1838, a spot of ground at the northern extremity of the island, which was usually covered by the sea at high water, was granted⁴ to a company of European and native merchants, for the purpose of constructing a wharf and line of warehouses for the deposit of merchandise, and of excavating a canal, to insure constant smooth water for boats lying alongside the wharf.

³ Heber, *Narrat. of Journ.* II. 216.

⁴ *Bombay Rev. Disp.* 9 May, 1838.

Colaba is the seat of an observatory, one of sixty now in operation in various parts of the world, for the purpose of magnetic and meteorological observation, whereat the instruments are read hourly, day and night, without interruption. The building was completed, the instruments set up, and assistants provided, in the year 1841; but a variety of untoward circumstances occurred, which for a considerable period retarded the course of observation, and rendered the results attained imperfect and untrustworthy. The obstacles which prevented the perfect success of the establishment were, however, by degrees overcome, and in the latter part of the year 1842, the duties of the establishment were brought into orderly and systematic discharge. In 1843 further improvement was effected; and from that time the proceedings of the institution have been highly satisfactory. The charge of the observatory was allotted, in the first instance, to Mr. Orlebar, professor of natural philosophy in the Elphinstone College, Bombay.

The erection of a church at Colaba was commenced in 1848.⁵ The construction of this edifice was the result of a desire to establish some permanent memorial of the gallantry and endurance of those who fell in Seinde and Affghanistan; and the mode chosen, was selected on the ground of combining a record of the departed brave, with a purpose of the highest spiritual utility. The cost of the building was estimated at 70,000 rupees, or about 7,000%. Towards this sum the government contributed 30,000 rupees, the remainder to be supplied by private subscription. But the estimate having been considerably exceeded, the government has been authorized to contribute a further sum, equal to a moiety of the balance required.⁶

COL.

⁷ Bombay Ml.
Disp. 20 June,
1842.

Colaba is the seat of barracks,⁷ which formerly were subject to the inconveniences arising from an unsatisfactory supply of water. To provide a remedy for this evil, was an object combined with the construction of the causeway⁸ connecting Colaba with Bombay Island; and a sufficient extent of iron pipes were forwarded from England to enable the project to be completed. The centre of the island is about lat. $18^{\circ} 53'$, long. $72^{\circ} 52'$.

COLABA (Angria's lapsed territory).—See KOLABA.

COMORIN (CAPE),¹ in the native state of Travancore, the most southern point of what is called the Peninsula of India. "It is formed² of a circular low sandy point, not discernible above the distance of three and a half or four leagues from the deck of a large ship. Within two or three cables' length of the south-east part of the point lies a sloping rocky islet, high above water, with other rocks about it, on which the sea breaks. To the westward of this islet, the shore of the cape is sandy and barren, but to the eastward it abounds with trees, having a fort and village among them close to the sea." The land is bold, and safe to approach within about a mile and a half or two miles, the depth of water in some places increasing towards the shore. "A great way out from the cape³ there is a bank abounding in cod, where some ships have caught considerable numbers of those fish; but it appears to be of small extent and little known." The base of the southern extremity of the Western Ghauts is about a mile or a mile and a half

² Horsburgh, *East-India Directory*, i. 618.

³ Horsburgh, *ut supra*, 610.

CONCAN.

from the sea. "These mountains⁴ rise in majestic sharp peaks, chained together, and forming a ridge;" and "a little detached from the end of the chain over the cape, on the east side, there is a sharp conical mountain by itself, like a sugarloaf."* A bold summit, some distance north of the cape, when viewed from afar, appears isolated, and has by navigators sailing at a distance been often mistaken for the cape itself. To the eastward of the rocky islet previously mentioned, and about three miles from it, is a fort. Colonel Welsh, describing the place in 1824,⁵ says, "A few fishermen's houses, some venerated temples, and a Dutch church, now form the celebrated town of Cape Comorin." Lat. 8° 5', long. 77° 37'.

CONCAN,¹ in the presidency of Bombay, a narrow tract stretching from the south of Sawuntwarree, on the frontier of Goa, in lat. 15° 44', long. 73° 45', to the Damaun river, in lat. 20° 22', long. 72° 52', a length of about three hundred and thirty miles, with a breadth varying from twenty-five to fifty miles. It is bounded on the west by the Arabian Sea, and on the east by the culminating ridge of the Ghats. The eastern part, stretching up the face of the Ghats, and along their summits, is extremely rugged. The mean elevation of the western, or more depressed part, is about 100 feet;² but it has many isolated hills, or short ranges, some of which have a considerable elevation. Though rugged, this tract has many fertile valleys, each of which, for the most part, affords a passage to a small river or torrent holding a westerly course from the Ghats to the Arabian Sea. The geological surface-formation is volcanic, generally trap, rising in terraces from the low country to the summit of the Ghats, and in some places overlaid by ferruginous sandstone, which, when decomposed,³ forms a laterite, easily mouldering into a reddish fertile earth. But a country so rugged cannot but contain much land that is totally irreclaimable, though producing in its gorges and ravines dense jungle, infested by beasts of prey,⁴ especially tigers, here remarkably fierce and destructive. In some places, however, the rock is so hard and close as totally to preclude vegetation of any kind, and presents the appearance of a huge black mass overtopping the general outline of the mountain. This is in

CON.

many instances surmounted by a formidable hill-fort. The rivers, in the upper or steeper part of their course, near the mountains, are clear and rapid; but after entering the level country, where they are affected by the tide, they are very deep and muddy, their estuaries forming small havens, which, before the establishment of British supremacy, afforded lurking-places for pirates. The most fertile spots are on the banks of streams. The rivers abound with fish, but they are also frequented by alligators. Venomous serpents are unfortunately very numerous. The climate is characterized by the great heaviness of the monsoon rains, the amount of which in one year has been known to be nearly 300 inches.⁵ The Concan abounds in thermal springs, the water of which has a temperature in no instance exceeding 110°,⁶ and is found very serviceable in cases of rheumatism. When cooled, it is pleasant and salubrious to drink.

The Concan comprehends two collectorates,—Tannah and Rutnaghery, which will be found more particularly described in their proper places in the alphabetical arrangement. Of the tract south of Bombay, Mbar is the principal town. There are numerous small towns or forts along the coast, at the estuaries of the small rivers, or on the creeks or small bays, which abound. Of those places the most worthy of notice are Junjera, Rutnagheryah, Viziadroog, and Vingorla, notices of which are given under their respective names.

The Concan appears to have been little noticed in Indian history until the beginning of the sixteenth century, when its seacoasts became the scene of the daring and active operations of the Portuguese. In the middle of the seventeenth century it was conquered⁷ from the king of Beejapore by the Mahratta leader Sevajee. Aurungzebe was less successful in his attempts upon it: his son Moazzim, whom he despatched against it, lost, in 1694, nearly the whole of his horses⁸ and cattle, either from want of provisions, or from the deadly effect of the climate. It thenceforward remained under the rule of the chief of Sattara, and subsequently under that of the Peishwa, until, on the overthrow of the latter in 1818, it was incorporated with the dominions of the East-India Company.

CONDAPILLY,¹ in the British district of Masulipatam, presidency of Madras, a hill-fort, having an elevation² of about

CONJEVERAM,¹ * in the British district Chingleput, presidency of Madras, a town on the route from Madras to Arcot. It is situate on the Wegawati, a torrent devoid of water during the dry season. The streets are wide,² cross each other at right angles, and have a row of cocoanut-trees on each side. The houses are of mud; they are roofed with tiles, and are built in the form of a square, with an inclosed court in the middle: altogether they appear superior to the houses in the country towns of Bengal. The principal inhabitants are Brahmins, of whom there are about a hundred families, and a large number of dancing-girls, kept in honour of Iswara or Siva. The pagodas dedicated to that deity and his consort Kamaehuma are represented as "great³ stone buildings, very clumsily executed both in their joinings and carvings, and totally devoid of elegance or grandeur, although they are wonderfully crowded with what are meant as ornaments." These pagodas are highly famed in the mythological lore of the Brahmins, and are amongst the most revered and frequented in Southern India. The great gateway of the pagoda, as is usually the case with such structures, is huge and lofty, and from the top, which is reached by seven flights of stairs, there is a view "extremely fine,⁴ consisting of extensive woods intersected by a large sheet of water, with numerous pagodas rising among the trees, and a magnificent range of retiring mountains in the distance." Distance from Cuddalore, N., 81 miles; Arcot, E., 27; Bangalore, E., 145; Madras, S.W., 42. Lat. 12° 50', long. 79° 46'.

COO.

COOMTA,¹ in the British district of North Canara, presidency of Madras, a town on a creek on the east coast of the Indian Ocean. "It seems² to have been formerly a place of some note. Its lanes are straight, and fenced with stone walls, and it has many cocoanut-gardens. Twice it had the misfortune of having Tippoo's army encamped in its vicinity, and on both occasions it was burned down by some of the irregulars." Salt is made on the banks of the cove, by evaporating the sea-water. Of late years, this place appears to have recovered its former prosperity, from being selected as the port of shipment for the raw cotton produced in the district of Bellary and in the Southern Mahratta country. A road from Dharwar, by Sircy, was opened some time since; but this affording but imperfect accommodation, another was subsequently constructed, opening a communication for wheeled carriages for the entire distance between Dharwar and Coomta.³ The town is situate about a mile from the port, which, however, is little more than an open roadstead, having a headland running out at its northern termination, which protects the anchorage from the north-west wind, being that which prevails nearly the whole of the trading season, and renders the bay comparatively calm during this part of the year; but it is entirely exposed to the south-west monsoon, and after this commences, it is unsafe for any country vessel to remain there.⁴ Distant N.W. from Mangalore 113 miles, S.E. from Bombay 328, N.W. from Madras 410. Lat. 14° 26', long. 74° 29'.

COOMTY.—A town in the native state of Nagpoor, or the rajah of Berar's dominions, 145 miles E. from Nagpoor, and 22 miles S.W. from Ryepoor. Lat. 21°, long. 81° 22'.

COONDADUM.—A town in the British district of Coimbatore, presidency of Madras, 33 miles S.E. of Coimbatore. Lat. 10° 50', long. 77° 30'.

COONDAPOOR.¹—The principal place of a subdivision of the same name, in the British district of North Canara, presidency of Madras. It is situate on the south or left side of an estuary receiving five fresh-water rivers,² flowing down from the Ghauts. Though this estuary is extensive, it is shallow, and navigable solely for boats and small³ vessels; and those which ply on it are only canoes. The surrounding country is remarkably beautiful; and an old fort, erected by the Portu-

guese a short distance inland of the town, commands a noble prospect. General Matthews, preparing for the disastrous expedition in which he perished, made lines around this fort. The town contains about 250 houses, and has long been stationary with respect to increase of size and prosperity. The tallook of which this town is the principal place extends between the sea and the Ghauts, numerous streams flowing down from which traverse it. Hence the soil is moist, and water is found at no great depth below the surface; and as there is a considerable quantity of fertile ground, rice succeeds well. In the numerous creeks and inlets, a considerable quantity of salt is made, by evaporating sea-water. The area of the tallook is 432 square miles,⁴ and the population, according to official report, 72,767; indicating a relative density of 168 to the square mile. The tract comprised within this subdivision, according to Wilks,⁵ formed part of the dominions of the Cadumba dynasty, which at a remote period ruled extensively over this part of India, and was subverted during the second century of the Christian era. Coondapoor town, and some other posts on the seashore, were in the early part of the sixteenth century seized⁶ by the Portuguese, and the more inland tract was included within the great realm of Vijayanagar until its overthrow, in 1565,⁷ by a Mussulman confederacy at Telikota; subsequently to which this territory appears to have become part of the state of Bednor; on the overthrow⁸ of which by Hyder Ali, in 1763, it became incorporated with his dominions; and when his son, in 1799, fell beneath the attack of the British, it became part of the British district of North Canara. Distance from Mangalore, N., 53 miles; Bombay, S., 390; Bangalore, N.W., 205; Madras, W., 380. Lat. 13° 38', long. 74° 45'.

COONNAGOODY.—A town in the British district of Madura, presidency of Madras, 42 miles E. of Madura. Lat. 10° 7', long. 78° 47'.

Ouchterlony, Survey of Neilgherry Mount, 2.

COONNOOR, one of the minor sanitary stations on the Neilgherry Hills, in the district of Malabar, presidency of Madras, 6,000 feet above the level of the sea. It is situate on the crest of the hills, in the south-east angle of their summit; the residences of the Europeans, including an hotel, being placed on the rounded tops of a range of hills,

COO.

which runs from a high mountain called "Coonor Betta," towards the top of the pass; while the bazaar and native residences are in the hollow below, and adjacent to a masonry bridge, which spans a wide stream flowing from the Jakutalla valley, and descending the hills at this point in a large volume of water. The south-west monsoon sets in at this station in the month of June, but with less rigour than at Ootacamund, owing to the clouds, which come charged with rain from the westward, meeting with opposition from the high spurs of the Dodabetta range which intervene. The annual fall of rain here averages fifty-five inches; that at Ootacamund sixty inches. Distant N. from Coimbatore 26 miles. Lat. $11^{\circ} 21'$, long. $76^{\circ} 56'$.

COONYGUL.—A town in the native state of Mysore, 47 miles N.E. from Seringapatam, and 36 miles W. from Bangalore. Lat. $13^{\circ} 1'$, long. $77^{\circ} 5'$. E.I.C. Ms. Doc.

COORG,¹ a district of Southern India, and recently an independent raj, is bounded on the north by Mysore and the collectorate of Canara; on the east by Mysore; on the south by the collectorate of Malabar; and on the west by Malabar and Canara. While a separate raj, its limits were more extensive; but upon the subjugation of the province by the British, in 1834, the talooks of Paotoor and Umr Sooleay were annexed to the collectorate of Canara. The present district of Coorg lies between lat. $11^{\circ} 56'$ and $12^{\circ} 45'$, long. $75^{\circ} 25'$ and $76^{\circ} 13'$, and extends about sixty miles from north to south, and thirty-five from east to west. The area is estimated at about 1,420² square miles. Coorg is a very rugged, and altogether mountainous region, the lowest part being fully 3,000 feet above the sea. The tract which most nearly resembles a plain, is the valley, about eighteen miles long and thirteen broad, lying between Merkara and Nakuand, which, viewed from above, has a level appearance, but when examined more closely, is found to consist of a succession³ of low ridges, with small narrow valleys, or perhaps rather ravines, between them; the lowest being the bed of the great river Cauvery. The ridges are parallel to each other, and commence in a steep abutment, whence they proceed in a direction south-east, until they terminate in the plains of Mysore or Wynand. Some of those ranges have on their summits very small table-lands, but

¹ E.I.C. Ms. Doc.

² Report on Med. Topography and Statistics of Coorg, 1.

³ Madras Journal of Literature and Science, iv. 239—Baker, on the Climate of Coorg.

COORG.

in general their tops are sharp ridges. The whole country, with few exceptions, is covered with forests more or less dense, but seldom so overgrown by underwood as to qualify them to be called jungle. To the eastward, however, towards Mysore, in which direction the elevation of the surface diminishes, bamboos make their appearance, and the forest becomes thick jungle, filled with every variety of wild animals. The prevailing geological formations are primitive; "the principal⁴ rocks being sienite, granite, and greenstone; and the subordinate ranges being uniformly capped with a thick stratum of lithomargie earth, consisting of detritus of granite or sienite in every stage of decomposition, cemented by argillaceous earth, and coloured by oxide of iron. Large masses of felspar of a cream-colour, partially decomposed, and in the state of what is called porcelain clay, are also of frequent occurrence." The following are the principal elevations⁵ which have been registered in Coorg; but it is possible that there may be some greater not yet ascertained:—

The country is intersected and traversed in every direction by ramparts, called by the natives kuddinega. They are generally from fifteen to twenty-five feet high, with a ditch in front, of ten feet deep by eight or ten wide; and being in many places double, triple, or quadruple, their linear extent cannot be less than between 500 and 600 miles. The natives know nothing of the origin of those vast works, which in the aggregate are twenty times the extent of the Piet's wall of North Britain. Their antiquity, however, is doubtless very great, as enormous trees, which must be the growth of ages, are found on many parts of the walls. The general declivity of the

COORG.

country is to the north-east and east, as indicated by the course of the Cauvery and its feeders, which flow in that direction, and receive the drainage of nearly four-fifths of the country. The Cauvery rises near the top of a hill on the eastern verge of the Western Ghats, in lat. $12^{\circ} 25'$, long. $75^{\circ} 34'$, and, flowing through the great valley between Merkara and Nakmiad, nearly east, for about thirty-five miles, to the vicinity of Scedapoor, there turns north-east for the further distance of seven miles, to Hosaputna, where it becomes the boundary between this district and the territory of Mysore, and so continues for twenty miles to Cannagaul, where it enters Mysore. It receives right and left many torrents and streams, the principal of which is the Soornavaty or Haringhec, which drains the northern half of the country, and joins the Cauvery on the left side, in lat. $12^{\circ} 30'$, long. $76^{\circ} 2'$. The Lechman Teert, another large tributary of the Cauvery, rises in lat. $11^{\circ} 57'$, long. $76^{\circ} 1'$, and taking a course north-east of about twenty-five miles, passes into Mysore, where it falls into the Cauvery on the right side, about fifteen miles above Seringapatam. In its course through Coorg the current of the Cauvery is generally tranquil, except in a few places where it traverses beds of granite rock, and it is nearly everywhere fordable in the dry season; but at Frazerpett, where it is 225⁶ feet wide, it during the monsoon rises from twenty to thirty feet. The Puiswanni and the Burrepollai are the only considerable rivers flowing westward. The latter rises in the most elevated and secluded part of the Western Ghats, about lat. $11^{\circ} 55'$, long. 76° , and, flowing tortuously through the valleys and gorges of the elevated country, leaves it abruptly through a series of rocky ravines, in one of which it forms a fine cataract of nearly 300 feet in height, and, entering Malabar, falls into an estuary on the coast of the Indian Ocean, a few miles north of Cannanore. The temperature of the atmosphere in Coorg is low, owing to the elevation of the country, the proximity of the ocean to the south-west and west, and the prevalence of winds from those points. It is also remarkably equable, "the daily⁷ range indoors never exceeding 6° or 8° ,—often not beyond 2° ; and the thermometer seldom rising higher than 74° , nor sinking below 60° , in the open air. The range is a little higher during the dry season;

⁶ Report, ut supra, 5.

⁷ Madras Journal, ut supra, iv. 340, Oct. 1838.

COORG.

the daily extremes being 52° or 53°, and 68° and 70°: the annual extremes are probably 52° and 82°. The greatest ranges of temperature are in January and February, amounting to from 53° to 72°; and the weather then is not only cold, but excessively dry. In April and May the heat becomes oppressive during the day, but the nights are almost always cool. The monsoon commences in June, and towards the close of that month the rain falls very heavily, insomuch that from the 22nd to the 27th of that month, in the year 1835, there fell twenty-seven inches. This weather continues during July, August, and September, the air being loaded with moisture, and the sun seldom seen; at the same time the temperature is wonderfully equable, the extremes in the open air being 56° and 65°. The total fall of rain in one year (1835-1836) was 119⁸ inches, of which forty-four were in June. The climate is in general healthful for Europeans, but has an unfavourable influence on those inclined to visceral congestion, asthma, or dysentery. Notwithstanding the excessive moisture, the equability of temperature causes rheumatism, catarrh, or pneumonic affections, to be little known. It is a remarkable fact, however, that the "climate"⁹ appears decidedly inimical to the cure of cuts, wounds, and sores, which are often totally unmanageable without change of air."

⁸ *Madras Journal*,

⁹ Report, ut
supra, 8.

For so circumscribed a tract the zoology is varied and important. Elephants are numerous, and were more so until rewards were given for their destruction; since which, numbers have been shot or taken in pitfalls. Tigers are numerous, but are not so ferocious as in less-elevated and more sultry regions. Here also are found the leopard, the chita or hunting-leopard, and the tiger-cat. Bears are rare, but exceedingly fierce and dangerous. The wild dog, as large as a greyhound, but much more strongly built, hunts in packs of a dozen or more, is very fierce, and attacks and destroys even kine. The bison attains the enormous height of seventeen hands, and the elk harbours in the secluded wilds. Of deer there are the muntjak, the memina or moose-deer, and the chital or spotted deer. Wild swine, hares, and monkeys, are among the animals of this district. Of birds there are eagles, hawks, parrots, woodcocks, snipes, pigeons in great variety, and many others, including the bucceros or rhinoceros-bird. The cobra di capello and

COORG.

some other deadly snakes are common, and alligators are sometimes seen in the Cauvery. The thickets are infested by the jungle-leech, about an inch long, not thicker than a hair, making way in great numbers through the clothes of such as enter the jungles, and causing great irritation by their bites. Bees abound, and much wild honey and wax are found in the woods.

Previously to the occupation of the country by the British, in 1834, the roads, or rather paths, were very rude, the rajahs discouraging any improvement, as tending to facilitate invasion. The only route which could be considered as a road, was that commencing at Periapatam, in Mysore, proceeding through, a thick jungle to Verajenderpetta, and thence by the Huggala or Hingin Ghaut, a very steep descending pass, to Cannanore, in Malabar. This is the worst ghaut in the south of India, being so steep as to be nearly impracticable for laden cattle, and totally so for wheeled carriages; neither is it capable of much improvement, the declivity being in many places one in three feet. A road, commencing also at Periapatam, proceeds westward, but to the north of that just described, through Nunjerajpet to Merkara; but this is a very bad route, and is now nearly disused. At the present time the principal road is that leading from Mysore into Coorg, and thence into Canara. It proceeds from Periapatam north-westward, through Frazerpet to Merkara, and thence by the Sulia or Sumpaji Ghaut, having an easy slope down to Canara, and terminating at Mangalore, being practicable for guns and all sorts of carriages. Another road has been more recently constructed between Canara and Mysore, which passes by the Munjeerabad Ghaut, somewhat to the north of the road by the Sumpaji Ghaut. The authorities were induced to sanction the construction of this road by regard to its advantages, as connecting Canara and the important seaport of Mangalore with the towns and districts in the west of Mysore. There are several cross-routes, but these are merely very rude paths, full of large stones, intersected with deep ruts, and passing over steep acclivities, which might, by the exercise of an ordinary portion of skill and care, be either avoided or reduced.

The men of Coorg are a handsome athletic race, usually above the middle size, and, with scarcely any exception, well-

COORG.

limbed. The women are not so tall in proportion, but are well made and well-looking, though rather coarse, but fair in comparison to the men. Both sexes are laborious and industrious in the practice of agriculture, their main and almost exclusive employment; except that the men shoot and hunt, partly to destroy animals injurious to their crops, and partly for the produce of the sport. They are well clad, the men wearing a turban, and a gown reaching to the feet, and being girt round the waist with a shawl or handkerchief, to which they attach the formidable Nair knife. The women wear a loose cotton wrapper, reaching from the shoulders to the knees, and a small white cloth tied round the head. Both sexes daily, after their labour, wash the whole body in warm water. A very singular and revolting custom prevails here, different from polyandry, in which each woman has exclusively a plurality of husbands. In Coorg the wives of several brothers are the wives of all. "On the marriage¹ of an elder brother, his wife is considered the property of all the brothers jointly; and as the juniors successively marry, their wives in turn are common to all the brothers." This abominable custom, however, is falling somewhat into disrepute, and its practice becoming more circumscribed. The amount of the population² in 1836 was officially returned at 65,437 persons; and the increase in that year was nearly ten per cent. on the total. Since the annexation of Coorg to the British dominions, the revenue has improved, cultivation has been extended, and the general prosperity of the country steadily increased. The only assemblages of dwellings which can with any propriety be denominated towns, are Merkara, Somwarpet, and Verajenderpett.

The inhabitants of Coorg are Nairs, and consequently Brahmmins of the Sudra caste;³ yet, in some respects, they manifest little reverence for the Brahminical code.⁴ Though a barbarous, they are an energetic and brave race, and with unflinching spirit and desperate valour they maintained⁵ their independence against the vastly superior power of Hyder Ali and his son Tippoo Sultan, severely retaliating on their oppressors in the campaign of 1791, and materially aiding in their humiliation. By the treaty of that year they were received under the protection of the British government.

In 1832, the sister of the reigning rajah, with her husband,

⁵ Id. iii. 12.

COORG.

fled from Coorg into Mysore, and claimed the protection of the British resident from the violence of their relative. Under these circumstances, it became the duty of the British authorities to afford the protection implored, without regarding the complaints of the rajah, or the military preparations which he proceeded to make. Various communications passed between those authorities and the prince, whose country, it may moreover be observed, was a prey to the most oppressive tyranny and misgovernment. At length the rajah seized and detained an emissary of the British government, who, with another native, had been despatched to Coorg, under an impression that native negotiation might be more effective than European. This act of violence the rajah defended, on the ground of reprisal for the withholding from his vengeance the fugitive victim of his tyranny. Negotiation was now relinquished; a force of 6,000⁶ men was despatched to punish the outrage, and the government of Madras issued a proclamation to the effect, that the rajah, in consequence of oppression and cruelty to his subjects, the assumption of an attitude of hostility and menace towards the British government, the encouragement and aid afforded to its enemies, and the imprisonment of the British emissary sent to open a friendly negotiation with him, was no longer to occupy the royal seat. In the beginning of April, the British force, commanded by Colonel Lindesay, entered⁷ Coorg from Mysore, and having found the stockades made by order of the rajah deserted, advanced to Merkara, the capital, which, having been evacuated, was occupied without opposition, and the British flag hoisted. Simultaneously with the movement under Colonel Lindesay, a column under the command of Colonel Foulis marched from Cannanore, in Malabar, and ascending the course of the Burrepollai, or Stony River, penetrated⁸ into the heart of the country by the Horgullum Pass, and took the town of Verajunderpet, sixteen miles south of that of Merkara. The enemy made an abortive attempt at resistance, in which they lost about 250 men and four chiefs, the loss on the British side being comparatively insignificant. On the 18th, the wretched rajah surrendered unconditionally. During those operations, a weak column, under Colonel Jackson, marched from Mangalore, and attempted to penetrate the country by a route to the north of that of Colonel Foulis; but, entering a deep rocky

⁶ *As. Journal*, 1834, part II. 277.

⁷ *Id.* Sept. 1831, part II. 19, 83.

⁸ *Id.* 163-150.

ravine, suffered from a fire so deadly and well sustained, that it was obliged to retire, after severe loss, leaving behind the wounded and the whole of its baggage. Another column, under Colonel Waugh, entered the country by a route nearly parallel to that of Colonel Lindesay, but to the north of his line of march, and penetrated to Merkara, though not without suffering very severely in forcing the passage. The country thus subdued was incorporated with the territory of the East-India Company, and the deposed rajah deported to Benares.⁹ The annexation of his dominions to those of the British was almost unavoidable, no male branch of the royal house remaining alive to become a claimant of sovereignty. The ex-rajah receives an annual stipend of 60,000 rupees.¹

⁴ *Id. Account of Nepal*, 89.

COOSY.¹—A large river tributary to the Ganges. Its remotest source, the Bhotiya Coosy, is, according to Buchanan,² in Nepal, amidst the snowy peaks of Himalaya, and in about lat. $28^{\circ} 25'$, long. $86^{\circ} 11'$. It takes a course first south-west for about sixty miles, then winds south and south-east for 160 more, to lat. $26^{\circ} 45'$, long. $87^{\circ} 13'$, its place of exit from the mountains, from which it descends "by three cataracts,³ or rather violent rapids." About thirty miles above that place, it on the left side receives the Arnn,⁴ a great torrent, which, rising in Thibet, flows through a valley dividing the main

COO.

range of the Himalayas, thus receiving the drainage of both faces of the Snowy Mountains. About ten miles from its junction with the Arun it also receives, on the left side, the Tambur, which rises on the southern face of the Himalaya, and flows through Nepal for about 100 miles, to its confluence. At the place of its exit from the mountains, the Coosy appears to be a greater stream than the Ganges at Hurdwar, and is nowhere fordable;¹ in ordinary years, in its course through the plains. In the upper part of its course, near the mountains, the water, even in summer, retains considerable coolness, and the stream is subject to sudden rise and fall; but it is navigable for small boats downwards from the last cataract. It there takes a southern course, and in lat. 26° 37', long. 57° 12', fifteen miles lower down, it touches on the British territory, and forms the boundary between it and Nepal for ten miles, when it enters the British district of Purnea, through which it holds a course due south for eighty miles, to its confluence with the Ganges, in lat. 25° 19', long. 87° 19'; its total length of course being about 325 miles. During its course through the level alluvial tract of Purnea, it sends off numerous branches, and receives but one considerable stream—the Gogaree, which, flowing from the N.W., joins it on the right side, ten miles above its confluence with the Ganges. Notwithstanding this great loss of volume, it is everywhere a very large stream, having a channel one and a half to two and a half miles wide, with many shoals and islands, through which the river forces its way, forming many alterations among them during its inundations. Even where narrowest, Buchanan² found it, ^{c. 11. 12.} when lowest, to have a stream 1,200 feet wide and fifteen deep. From those particulars it may be concluded to be larger than the Jumna, and even the Ghogra.

COOTCOTTAH.—A town in the native state of Hyderabad, or dominions of the Nizam, 82 miles S.W. from Hyderabad, and 35 miles N. from Kurnool. Lat. 16° 20', long. 77° 55'. E.I.C. Ms. Doc.

COOTUL.—A town in the native state of Hyderabad, or dominions of the Nizam, 60 miles S. from Ellichpoor, and 145 miles E. from Aurungabad. Lat. 20° 19', long. 77° 31'. E.I.C. Ms. Doc.

COOTULPORE.—A town in the British district of Burdwan, presidency of Bengal, 22 miles S.W. of Burdwan. Lat. 23°, long. 87° 40'. E.I.C. Ms. Doc.

COP—COR.

COPPACHOOR.—The name of a tribe inhabiting a valley between the snowy range of the Himalaya and that known as the Sub-Himalayas. The centre of the territory inhabited by this tribe is about lat. $27^{\circ} 20'$, long. $93^{\circ} 20'$.

E.I.C. Ms. Doc.

COPPA DROOG.—A town in the native state of Mysore, under the administration of the government of India, distant 120 miles N.W. from Seringapatam, and 29 miles S.E. from Bedenore. Lat. $13^{\circ} 31'$, long. $75^{\circ} 28'$.

E.I.C. Ms. Doc.

COPUL.—A town in one of the recently ceded districts of the native state of Hyderabad, or dominions of the Nizam, 51 miles W. from Bellary, and 78 miles E. from Dharwar. Lat. $15^{\circ} 21'$, long. $76^{\circ} 13'$.

CORALLEA.—A town in the British district of Tipperah, presidency of Bengal, 31 miles N.E. of Dacca. Lat. $23^{\circ} 52'$, long. $90^{\circ} 53'$.

¹ E.I.C. Ms. Doc.

CORINGA,¹ in the British district of Rajahmundry, presidency of Madras, a town on the estuary of that branch of the Godavery² which opens into Coringa Bay, and which is generally called the Coringa River, its mouth forming the harbour of Coringa. At the entrance is a bar, having twelve or fourteen feet of water at spring tides. Within the bar the depth of water is from two and a half to four fathoms. The town, which is a place of considerable trade, is situate on the south side of the estuary. It is the best place on this coast for building or repairing small vessels, there being a considerable number of shipwrights and calkers, who here find constant employment. The place, however, from its low situation, is subject to be overflowed by extraordinary rises of the sea, and in May,³ 1787, in consequence of a prolonged and very violent gale from the north-east, the sea rushed over the site of the town, swept away all the houses, and in a moment destroyed nearly the whole population, estimated at about four thousand. The deluge⁴ overspread the adjacent country for several miles inland, destroying, as is estimated, fifteen thousand people, and upwards of a hundred thousand head of cattle. A similar⁵ disaster occurred in 1832, when several vessels were carried into the fields and left aground in elevated situations; one

new ship, on the stocks, was swept into the river and lost. Distance from Rajahmundry, S.E., 32 miles; Madras, N.E., 290; Calcutta, S.W., 562. Lat. $16^{\circ} 49'$, long. $82^{\circ} 19'$.

CORLAM.—A town in the British district of Ganjam, presidency of Madras, 11 miles N.E. of Chicacole. Lat. $18^{\circ} 24'$, long. $84^{\circ} 3'$.

E.I.C. Ms. Doc.

COROMANDEL (COAST OF).¹—Part of the eastern coast of Southern India, forming the shore of the Bay of Bengal. It is considered to commence at Point Calimere, in lat. $10^{\circ} 17'$, long. $79^{\circ} 56'$, and to hold a direction nearly due north as far as Gondogam, in lat. $15^{\circ} 20'$, long. $80^{\circ} 10'$.² It extends across the estuaries of many rivers, and the entrance to the extensive Pulicat lake or inlet; but there is no place within its whole extent where large ships can be sheltered in all weather. Blackwood Harbour,³ the least objectionable, is open to the north, on which point it might be sheltered⁴ by a breakwater; the construction of such a work, however, though practicable, would be enormously expensive. Of the several other places frequented by shipping, none have havens, and ships must be anchored in the open sea, where, during the closing months of the year, they are exposed to the violence of the north-east monsoon. Consequently, the coast is then nearly deserted; and the few navigators who venture to anchor, must be prepared to weigh, cut or slip anchor, and work out to sea on the first setting in of a gale. At all times a heavy sea rolls on shore from the vast expanse of the Bay of Bengal, and causes a tremendous surf, which totally precludes communication from the ships lying at anchor with the land by means of boats constructed on the European plan. These would inevitably be dashed to pieces; and resort is therefore had to the Masula boats,⁵ which are flat-bottomed, of the same shape at stem and stern, from thirty to thirty-five feet in length, ten or eleven in breadth, and seven or eight in depth. The planks which form these boats are sewed together with coir yarns, or twine spun from the cocoanut-fibre, crossing the seams over a wadding of the same fibre, which presses on the joints and prevents leakage.

* To the coast, within these limits, Hornburgh considers the term Coromandel Coast in strict propriety confined; but, by licence, it is sometimes extended, so as to include the coast further northward to Balasore.

COR.

- The places principally frequented by shipping on the Coromandel Coast are Negapatam, Nagore, Tranquebar, Cuddalore, Pondicherry, Sadras, Madras, and Pulicat. The coast throughout is, with little exception, low and sandy, and the sea shallow near the shore, with sounding gradually increasing with the distance from land.

The etymology of the name Coromandel has been variously explained; but it appears that it was originally denominated Choramandal or Cholamandal, which is considered to mean the mandal or region of the Chola, an ancient dynasty¹ of this part of India.² The Coromandel Coast comprises the sea-coasts of the British districts Tanjore, Arcot, Chingleput, and Nellore.

CORONGE.—An island about two miles in length from north to south, situate close to a rocky point off the coast of Arracan, which forms a bay, having several rocks and islets. Distant from Cape Negrais, N., 33 miles. Lat. $16^{\circ} 32'$, long. $91^{\circ} 20'$.

CORYGAUM.—A village in the British district of Poona, presidency of Bombay, on the route from Poona to Ahmednuggur, 16 miles N.E. from the former. The place is unimportant, but is associated with interesting historical recollections. On the 1st January, 1818, a British force, under the command of Captain Staunton, comprising a detail of artillery, a battalion of infantry, and a small number of auxiliary horse, occupied the village, in which they were attacked by three divisions of the Peishwa's infantry, consisting of about 1,000 men each, supported by immense bodies of horse. The action lasted from noon till nine in the evening, during which period several buildings were repeatedly taken and retaken. On both sides the loss was terrific; but the result was most honourable to the British, who remained masters of the place. In recognition of the gallantry displayed on the occasion by Captain Staunton, a grant of 500*l.* per annum was conferred upon him by the East-India Company. Lat. $18^{\circ} 39'$, long. $74^{\circ} 8'$.

E.I.C. Ms. Doc.

CORTAGERRY.—A town in the native state of Mysore, 47 miles N.W. from Bangalore, and 81 miles N.E. from Seringapatam. Lat. $13^{\circ} 31'$, long. $77^{\circ} 17'$.

E.I.C. Ms. Doc.

CORTAPALEYAN.—A town in the British district of

* See note in Wilks.¹

COS.

Coimbatore, presidency of Madras, 55 miles N.E. of Coimbatore. Lat. $11^{\circ} 33'$, long. $77^{\circ} 35'$.

COSSIMBAZAR,¹ * in the British district of Moorshedabad, presidency of Bengal, a town adjoining the city of Moorshedabad on the south, and in fact a suburb of it. The Bhagirathi, a great offset of the Ganges, here forms, by its winding,² a peninsula, at one time insulated, and thence denominated the Island of Cossimbazar.† The manufactures of this town were formerly of importance, especially of silk fabrics; but they have much decayed before the irresistible competition of the cheaper wares of Britain. A considerable quantity of silk being produced in the surrounding country, it is generally here prepared for market. Here was formerly a considerable factory,³ belonging to the East-India Company. In 1756 it was taken,⁴ without resistance, by Sooraj-oo-dowla, nawab of Bengal. By a careful census in 1829, the number of houses was stated at 1,300; of inhabitants, at 3,538; of which 1,325 Mussulman, 2,213 Brahminical. Distance N.E. from Calcutta by land, through Berhampore, 120 miles; by water, 163. Lat. $24^{\circ} 8'$, long. $88^{\circ} 18'$.

COSSIPORE.¹—A manufacturing suburb of Calcutta, situate on the left bank of the river Hooghly, six miles north of Fort William. Here is located the government foundry, represented as one of the most complete and perfect to be seen in any country.² During the administration of Lord Hastings, several pieces of brass ordnance cast at this place were sent to England, and submitted to the examination of a committee of artillery officers at Woolwich, who pronounced the workmanship and finish superior to those of the royal arsenal.³ Young artillery officers are now required to attend at this establishment for instruction in the casting of guns.⁴ The foundry,

* Market of Cossim; from Cossim, a proper name, and Bazar, "market." It might have been conjectured that it was named after Cossim Ali, the nawab of Bengal, expelled by the British, 1763, were it not that it is described by Tavernier¹ as an important place a century earlier. It is the Cossimbazar of Thornton;² Cossimbuzar of Rennell.³

† Hamilton states¹ that this peninsula abounds in wild swine, deer, hares, feathered game, and even tigers. But it is only about 1,000 acres in extent, and is close to the towns of Moorshedabad and of Cossimbazar. He farther states that it is one of the largest inland trading towns in Bengal.

COV—COW.

with a series of beautiful waterfalls, forming a *tout ensemble*, the contemplation of which is highly grateful to the eye and soothing to the feelings. The lowest and most conspicuous of the series of waterfalls is nearly 200 feet in height, the water of which being much broken in its descent, forms a favourite bathing-place, where the bathers enjoy the benefit of a shower-bath on the grandest scale." The vegetable kingdom is here peculiarly comprehensive, rich, and varied, including forest trees of enormous size, date-palms and sago-palms, wild nutmeg, a coarse species of cinnamon, wild mango-steen, jak (*Artocarpus integrifolia*), various twiners, such as the *Cocculus indicus* (pepper-vine). The arrow-root plant grows to the height of from twenty to twenty-five feet; the ferns attain the size of moderate timber-trees. The number of flowering indigenous vegetables is estimated at 2,000. The soil and climate, so favourable to vegetation, have caused this place to be selected for the attempt to cultivate some of the rarest and most valuable inter-tropical exotics, including the nutmeg, clove, and cinnamon. All of them are represented as thriving, though the undertaking does not appear to have been pushed so as to afford as yet any beneficial commercial result. Elevation above the sea 700 feet. Distance from Tinnevely town, N.W., 32 miles; Madras, S.W., 350. Lat. $8^{\circ} 56'$, long. $77^{\circ} 20'$.

COVELONG,¹ in the British district of Chingleput, presidency of Madras, a town on the Coromandel Coast. It is of dangerous approach from the south and south-east, in consequence of a rocky shoal² projecting upwards of a mile into the sea in that direction. Here are the ruins of a fort,³ formerly belonging to the Imperial East-India Company of Ostend, but subsequently acquired by the English, who dismantled it. The locality of Covelong appears to be peculiarly favourable for the production of salt, and it is stated that a pure white description of this article may be manufactured here at the low rate of four shillings and sixpence per ton.⁴ Distance from Cuddalore, N.E., 80 miles; Arcot, E., 62; Madras, S., 21. Lat. $12^{\circ} 47'$, long. $80^{\circ} 18'$.

COVILPUTTY.—A town in the British district of Tinnevely, presidency of Madras, 36 miles N.E. of Tinnevely. Lat. $9^{\circ} 12'$, long. $77^{\circ} 56'$.

COWLAPOOR.—A town in the native state of Nagpoor, or

COW—CRA.

the rajah of Berar's dominions, 152 miles S. from Nagpoor, and 115 miles W. from Bustur. Lat. $19^{\circ} 10'$, long. $80^{\circ} 13'$.

COWREAL, in the British district of Jubbulpore, Saugor and Nerbudda territory, lieutenant-governorship of the North-West Provinces, a town on the route from Jubbulpore to Punnah, 29 miles N.E. of the former. Lat. $23^{\circ} 32'$, long. $80^{\circ} 10'$. E.I.C. Ms. Doc.

COXE BAZAR.—A town in the British district of Chittagong, presidency of Bengal, situate on the eastern side of the entrance to Maschal Channel, a considerable arm of the sea, flowing between the island of Maschal and the mainland. Lat. $21^{\circ} 31'$, long. $92^{\circ} 6'$. Horsburgh, Director, li. 2.

COYELBOODAIL.—A town in the native state of Berar, or dominions of the rajah of Nagpoor, 151 miles S.E. from Nagpoor, and 73 miles N.W. from Bustur. Lat. $19^{\circ} 50'$, long. $81^{\circ} 5'$. E.I.C. Ms. Doc.

CRANGANORE.¹—A town of Malabar, with a fort. It is situate² on the Cranganore River, called also the Ayecotta River. The river has a bar at the entrance, with five or six feet water on it: inside, there are fourteen or sixteen. The place was taken, in 1662³ or 1663, from the Portuguese, by the Dutch, who appear to have constructed the fort. In 1789, it was purchased from the Dutch by the rajah of Travancore; in the following year, possession⁴ of it was taken by Tippoo Sultan; and at the general pacification which closed the war provoked by the sultan's attack upon Travancore, it was ceded to the British. In this part of India are many Jews; and one section of that extraordinary people, termed White Jews, claim a peculiar connection with Cranganore. According to their account,⁵ their ancestors escaped from Jerusalem at the time of its final destruction, and after various migrations, the descendants of the fugitives made their way to the western coast of India, where, in the year of the world 4250, or 490 of the Christian era, the local sovereign granted them a settlement at Cranganore, where they were joined by others of their nation, and in which place they remained about a thousand years; but, as one of their number stated,⁶ "discord arising among ourselves, one of our chiefs called to his assistance an Indian king, who came upon us with a great army, destroyed our houses, palaces, and

CUDDABAL.—A town in the British district of Bellary, presidency of Madras, 46 miles W. of Bellary. Lat. 15° 5', long. 76° 17'.

¹ *E.I.C. Ms. Doc.*

CUDDALORE,¹ the principal place of the southern division of Arcot, presidency of Madras, a town on the Coromandel Coast, situate at the estuary of the river Panar. The river, though having a considerable length of course, is small at its mouth, and closed up by a bar, so as only to admit coasting-craft of moderate size; but there is good anchorage off shore² a mile and half. The site of the town is low, being not more than five feet above the sea; and, from this circumstance, the place might be supposed to be insalubrious; but such is not the case, and the new town especially is regarded as peculiarly healthy. The population are in general well lodged, and there are many good houses, arranged in broad regular streets. The

² *Horsburgh, East India Directory*, 1. 590.

CUDDAPAH.

old fort, now nearly demolished, is thus described :—"A quadrangle³ of unequal sides, with an indifferent rampart and ditch, and no outworks, excepting one advanced from its north-eastern angle: a bastion covers each of the other angles, and the curtains are furnished with the imperfect kind of flanking defence obtainable by means of a succession of bastions placed in a prolongation of one and the same straight line." The town is the principal civil station of the zillah or district. Distant from Madura, N.E., 170 miles; Tanjore, N.E., 77; Arcot, S.E., 84; Madras, S., 100. Lat. 11° 43', long. 79° 50'.

³ Wilks, Historical Sketches, II. 482.

CUDDAPAH.¹—A British district under the presidency of Madras, named from the principal place within it. It is bounded on the north by Kurnool and the British district of Guntoor; on the east by the British districts Guntoor and Nellore; on the south-east by the British district of Arcot (the northern division); on the south-west by the territory of Mysore; and on the west by the British district of Bellary. It lies between lat. 13° 12'—16° 19', long. 77° 52'—79° 48', and comprehends an area officially returned² at 12,970 square miles. The mountains of this district form an uninterrupted chain of great extent, consisting of numerous parallel and continuous ridges, which rise abruptly from the plains, and traverse the whole length of the district, constituting part of the Eastern Ghauts. The hill-ranges most worthy of note are those of the Nulla Mulla and Lanca Mulla to the east, and of Gurumcondah and Punganoor to the south. The former take a south by easterly course, by Cummum, to the town of Cuddapah: they thence proceed south-west to Bakrapett, ten miles from Cuddapah, where they separate into two ranges; one running south-east towards the celebrated hill-shrine of Tripetty, with peaks attaining in some instances a height of 3,500 feet above the level of the sea; the other running west, and becoming identified with another but lower range, which, taking its rise near the Toombuddra, runs in a semicircular direction, by Bungunpully and Ghooty; thence turning south-east to Gundicotta, where it is intersected by a remarkable chasm, the sides of which are elevated upwards of 200 feet from the base, and through which the Pennar river flows. The general slope of the country is to the east; the plains eastward of Bellary and Gooty having an elevation of 1,182 feet, while the depression

¹ E.I.C. Ms. Doc.

² Parliamentary Return, 1851.

CUDDAPAH.

in which the town of Cuddapah is situate, is only 507 feet above the level of the sea; and the more eastern limit of the district has an average height of 450 feet. The numerous streams which intersect the district consequently flow in that direction, discharging themselves into the Bay of Bengal. The principal river is the Northern Pennar, which, rising on the north-west flank of the Nandidurg Mountain,³ flows northward into the British district of Bellary; subsequently turning eastward, it passes into this district, and, holding a course generally south-eastward for 110 miles, flows through the Eastern Ghats to Somesaram, where it passes into the British district of Nellore. Though having an average breadth of nearly 300 feet, and during the periodical rains containing a large stream, it becomes during the dry season nearly devoid⁴ of water. Numerous torrents fall into it in its passage. On the right side, at Gundy Kot, it receives the Chitravati, rising in Mysore; on the same side, thirty-eight miles further down the stream, it is joined at Kamulapoor by the Paupugnee, flowing from the south-west; and at Gundlamudd, forty miles lower, by the Chittair. On the left side of the Pennar, its principal feeders are the Kundaur, joining it at a point about two miles above the confluence of the Paupugnee, and the Sugglair, joining about twenty miles lower down, at Mullailpatam. Like the Pennar, these are considerable torrents during the periodical rains, but during the dry season, they are either nearly or totally without water; and when they are in that state, the vegetable and animal substances in their channels are seriously injurious, by exhaling malaria, contributing to the origin and continuance of epidemics. The most prominent characteristics of the climate are great heat during the day, and oppressive closeness and stagnation of air during the night; and from these conditions of the atmosphere results its enervating influence on the European constitution. The average maximum temperature for several years has been found to be 98° in the shade; the mean⁵ for the whole year, in the shade, 81°; the minimum 65°. The year may be divided into three seasons. 1. The cool; 2. the hot and dry; 3. the hot and moist. The cool season commences in October, and continues until February. About the end of October the north-east monsoon sets in, thunderstorms and vivid lightning generally preceding

⁴ Report on Med. Topography and Statistics of Centre Division of Madras Army, 4.

⁵ Report, ut supra, 53.

CUDDAPAH.

the heavy rain. This monsoon ends about the end of November, and during its continuance the wind is steady from the north-east, the weather exceedingly pleasant, and the whole country under cultivation; luxuriant crops attesting the fertility of the soil. The mean temperature throughout this season is stated⁶ at 77°, and the maximum at 89°; the atmosphere being remarkably clear. Towards the middle of February the weather begins to get hot, and Europeans cannot remain out of doors later than eight o'clock in the morning. The crops in the valleys are reaped in February, and as March advances, the wind sets in strongly from the east; grass is everywhere burned up, vegetation disappears, and the country becomes a parched dreary waste. In April the air is either perfectly calm, or moved only by light uncertain breezes during the day, followed by complete stillness during the night, when the temperature is kept up to a great height by radiation from the rocks in the hilly tracts. In May the heat is still greater, but its distressing effects are moderated by strong winds blowing from the west. The south-west monsoon commences early in June, being ushered in by tremendous thunderstorms, and continues to the early part of September; being characterized rather by steady and strong west winds, than by any great fall of rain, which is intercepted by the Western Ghats, and precipitated on the table-lands extending from them eastward.

The geological formation of the mountains is generally primitive, consisting of granite, gneiss, and mica-slate; and in many places they are overlaid with sandstone, intermixed with veins of greenstone.⁷ In some places the sandstone rests on a limestone of a deep-blue colour; and such formations have been considered to afford promising indications of the existence of coal-fields. This sandstone is the matrix of most of the diamonds for which Golcondah has long been celebrated. About seven miles from the town of Cuddapah, between Chinnoor and a range of hills on either side of the Pennar river, are still to be seen the sites of several diamond-mines. "They⁸ consist merely of pits rudely excavated, and surrounded with heaps of stones. The mines have not been worked of late; and from being known several centuries past, it is probable that they are quite exhausted." Heyne, however, states⁹ "that the country is by no means exhausted, and that abundance of

Disp. 23 Oct. 1835.

diamonds might be procured, should an increased demand for them arise." There are mines of iron, lead, and copper,¹ in many of the hills; but with the exception of the first, scarcely any of them have been worked. The earth in many parts of the country is impregnated with saltpetre, carbonate of soda, and culinary salt, which by simple processes are extracted in large quantities by the native population. Those saline ingredients extensively deteriorate the water of the wells. The natives generally make use of river or tank water; but though more free from saline impregnations, it holds in suspension much earthy admixture, and is contaminated with decomposed animal and vegetable matter.

of Literature and
Science, x, 123—
Newbold, Account
of the Ceded
Districts.

Much of the country is hilly, jungly, and intricate. Wild animals are numerous: they are principally the tiger, the bear, the leopard, the jackal, the fox, the hare, the elk, the antelope, the hog, the wolf, the hyæna,² the mongoose, the squirrel, the monkey (of which description of animal there are great numbers and many varieties), and the porcupine. Of birds there are the Indian eagle, the vulture, the hawk (in great numbers and variety), the paroquet, the dove, pea-fowl, jungle-fowl or common gallinaceous poultry, partridges, florikin, plovers, snipes, quails, bustards, storks, herons, gulls, wild-ducks, geese, teal, and pelicans. In other departments of zoology there are the fresh-water tortoise, the geometrically-shelled tortoise, the alligator, the iguana, the chameleon, and lizards of various kinds; the cobra di capello and whip-snake, the rock-snake, and the green-snake; the honey-bee, the silkworm, and the lac insect.

Of trees the most remarkable and valuable are the teak, blackwood, cocoanut-palm, date-palm, palmyra, babul or *Acacia arabica*, nim or *margosa*, and bamboo.

The best soil is the regur, or black cotton-ground, in some places mingled more or less with calcareous matter, imparting to it a higher colour, and more open and friable texture. The principal alimentary crops are rice, ragi (*Eleusine corocana*), bajra (*Holeus spicatus*), jowar (*Holeus sorghum*), chenna (*Cicer arietinum*), dhal (*Cytisus cajan*), wheat, oil-seeds, and sugarcane. Amongst the principal commercial crops may be mentioned tobacco, indigo, and kusum (*Carthamus tinctorius*). "Cotton³ is cultivated to considerable extent in this district."

³ Report on Cotton
Wool in
India, 412.

CUDDAPAH.

The most common fruits are the mango, tamarind, plantain, and water-melon. Less abundant are the guava, peach, lime, citron, jack, pomegranate, and grape.

Such manufacturing industry as is found, is employed on cotton piece-goods, muslins, blankets, and other coarse woollens; in the preparation and use of indigo and other dyes; in the working of gold, silver, and other metals; and in pottery.

The exports consist of cotton piece-goods, coarse woollens, a small quantity of silken fabrics, sugar, grain, and tobacco: the imports are betel, iron, steel, copper, and some other articles of less importance.

The language spoken is the Canarese. The population, according to official return, amounts to 1,451,921.⁴ Of these about one-eighth are represented to be Mussulmans, the rest Hindoos; of which latter description a considerable number are of the Bramhin caste. Artisans, tradesmen, agriculturists, and shepherds are generally Hindoos, as few Mussulmans like those occupations, preferring service either in the army or police.

⁴ Madras Census,
1850-51.

The principal road lies in a direction from south-east to north-west, and leading from Madras to Cuddapah, and thence to Bellary. There are also routes of inferior description. 1. From south to north, from the cantonment of Cuddapah to Hyderabad, through the Murkondah Pass. 2. From east to west, from Nellore to the cantonment of Cuddapah. 3. From north-east to south-west, from the cantonment of Cuddapah to Bangalore.

The principal places—Cuddapah, the locality of the military and civil establishments of the district, Sidhout or Siddawattan, and Rachuti or Roychoty—are described under their respective names in the alphabetical arrangement.

In 1816 this collectorate was the scene of serious disturbances, originating, it is believed, in a feeling of distrust towards the government, occasioned by the adoption of measures affecting the prescriptive rights of landed property. These, however, were speedily suppressed; and the home authorities, upon the subject being brought before them, having directed that long undisturbed possession should be regarded as sufficient evidence of the existence of such rights, the district shortly after resumed its wonted tranquillity.⁵

Its limits, inclusive of the great salt marsh termed the Runn, extend from lat. $22^{\circ} 47'$ to $24^{\circ} 40'$, and from long. $68^{\circ} 26'$ to $71^{\circ} 45'$. Its greatest length from east to west is 205 miles, and its breadth from north to south (which is nearly equal throughout its whole extent) 110 miles. The area, exclusive of the Runn, is 6,764² square miles, and its population is returned at 500,536.³ This long narrow tract, interposed between the desert and the sea, forms a connecting link between Guzerat and Sind.⁴ Two mountain-ranges intersect⁵ the country. The principal, termed the Lunkhi, nearly bisects the province from east to west; the other runs in a parallel direction, but more to the northward. Both are of moderate height. The most remarkable hill of the range first mentioned, is the Nunow, rising from the centre of the province, and well known to navigators from its height and sugar-loaf form. The northern chain is in like manner distinguished by the Judria, a hill of similar form, from the materials of which are fabricated the millstones of Cutch. Indications of volcanic⁶ action are observable along the bases of the hills, where an extensive surface is overlaid with basaltic eruptions, and the rocks bear evidence of having been rent asunder by the effects of fire. Earthquakes have, indeed, been experienced to a very recent period, showing that these operations have not yet ceased. In July, 1819, a severe shock was felt throughout Cutch, the effects of which were so violent that every fortification in the country was shaken to its foundations, and several hundreds of the inhabitants perished. Among the remarkable phenomena of this convulsion of nature, were the upheaving of an enormous mound of earth and sand many miles in extent, and the simultaneous submersion of an adjacent tract of country. Allah⁷ Band, or the Band of God, is the name which has been given by the natives to the mound, in allusion to its not being the work of man.

Though the province is of small dimensions, and sterile⁸ in its character, owing to the sandy⁹ nature of the soil, there are, notwithstanding, several fertile tracts. These are chiefly comprised in the valley between the two mountain-ranges already noticed, and in the extensive plain stretching south of the

Lunkhi hills, nearly to the coast, where it is skirted by a border of sand, extending from the Indus on the west, to the head of the Gulf of Cutch on the east. On the opposite, or northern side of the province, beyond the second range of mountains, the entire frontier is fringed by a broad belt of luxuriant pasturage, called the Bhunni.

¹ Burnes, *ut supra*, 571.

² Macmurdo, *ut supra*, 212.

Like Sind, of which Cutch probably once formed part,¹ the country is characterized by a deficiency of water. During the prevalence of the south-west monsoon, numerous torrents descend from the mountains, both in a northerly and southerly direction; but there are no permanent rivers² in the province, the beds of the streams becoming dry with the cessation of the rains. No reliance, moreover, can be placed upon any considerable supply from tanks or artificial lakes, inasmuch as, owing to the porous character of the subsoil, such reservoirs are quickly exhausted by filtration. Wells, however, are abundant, and excellent water is obtained by penetrating the rock underlying the more recent formations.

⁵ Clune, *ut supra*, 56.

Some mineral productions are obtainable in Cutch. Coal and iron have both been found, the former at Jamutra³ and the latter in the vicinity of Bhooj. Alum is obtained in considerable quantities by boiling the waters of the mountain springs in the neighbourhood of Lukput, whence it is exported, chiefly to Bombay, for the purposes of dyeing. There is a scarcity of timber both on the mountains and in the plains: the former are covered with low brnshwood; but the trunks⁴ of decayed trees, constantly met with in the Lunkhi range, induce the belief that its sides were formerly clothed with forests. Plantations of peepul and babool occasionally surround the villages; the date-tree is more common, but the mango, banyan, and tamarind are rare. Of commercial crops, cotton is the principal; the soil of the most productive tracts being peculiarly favourable⁵ to the growth of this staple article. Sugar-cane is cultivated, but its quality is represented as inferior. Jowar, bajree, and the common grains of India, are the chief alimentary products. Though the country boasts of no great variety of fruits, none surpass it in the excellence of its grapes and musk-melons. Among the domestic animals, the horse is held in high estimation: it is remarkable for a bony head and cheeks, a thin and long neck, and large sparkling eye, with small soft

CUTCH.

ears. Kine, though of inferior breed, are abundant, as are also buffaloes and camels. The wild animals are, the tiger, leopard, wolf, hyena, jackal, and fox. The wild ass roams in the Runn. This salt marsh consists of two principal portions,⁶ the larger bounding Scinde on the south-east, and the smaller being connected at its western extremity with the Gulf of Cutch. The Great Runn extends between lat. $23^{\circ} 22'$ — $21^{\circ} 42'$, long. $69^{\circ} 50'$ — $71^{\circ} 20'$; is about 160 miles in length from east to west, and and 80 in breadth from north to south. Its area is estimated by Burnes⁷ "at the enormous space of 7,000 square miles." Throughout this wide expanse there are, however, several islands, or more elevated tracts, and some of considerable extent. Burnes does not consider the term marsh a correct appellation for this singular tract. He points out that "it has⁸ none of the characteristics of one; it is not covered or saturated with water but at certain periods; it has neither weeds nor grass in its bed, which, instead of being slimy, is hard, dry, and sandy, of such a consistency as never gives way, unless a long continuance of water on any individual spot have converted it into clay, which is rare; nor is it otherwise fenny or swampy. It is in reality but the dried-up bottom of an extensive inland sea, which, from having once been overwhelmed with water, more readily receives what flows into it, from being lower than other parts of the country." Burnes conjectures that the desiccation of the bed of this conjectural sea has resulted from its elevation by the upheaving of the earth, caused by one of those earthquakes so common in this part of India. To such an origin he attributes the saltiness of the Runn, as well as to numerous saline streams flowing into it from the north and north-east. "So salt⁹ is the Runn, that it is often encrusted with it an inch deep, the water having been evaporated by the sun; and even lumps of salt may be picked up as large as a man's fist, and beautifully crystallized." During the monsoon, the Runn is flooded by sea-water blown into it, as well as by fresh water derived from the rains, or discharged into it by the various swollen rivers. In the dry season, fresh water is never to be had anywhere, except on the islands or rocky elevated spots; and there it is scarce. The Runn is throughout devoid of herbage, and vegetable life is discernible only occasionally in a tamarisk-bush, growing by

has been abolished, and the complete suppression of infanticide is anticipated.⁷ The revenue of the Rao amounts to 7,38,423 rupees, or 73,8427., and the military force maintained by him consists of a body of irregular horse, in no way subject to the control of the British government.⁸

A number of feudatory chiefs, boasting descent with the Rao from a common ancestor, enjoy an amount of revenue, and exercise unlimited authority within their respective domains. Of these chiefs, the following account is given by a former governor of Bombay :⁹—

“The family of these chiefs is derived at a recent period from Tatta in Sind, and they all sprung from a common ancestor, Humeerjee, whose son, Rao Khengar, acquired the sovereignty of Cutch before the middle of the sixteenth century of our era.

“The number of these chiefs is at present about 200, and the whole number of their tribe in Cutch is guessed at 10,000 or 12,000 persons. This tribe is called Jhareja. It is a branch of the Rajputs. The Rao’s ordinary jurisdiction is confined to his own demesne, each Jhareja chief exercising unlimited authority within his lands. The Rao can call on the Jharejas to serve him in war; but must furnish them with pay at a fixed rate while they are with his army. He is the guardian of the public peace, and as such chastises all robbers and other general enemies. It would seem that he ought likewise to repress private war, and to decide all disputes between chiefs; but this prerogative, though constantly exerted, is not admitted without dispute. Each chief has a similar body of kinsmen, who possess shares of the original appanage of the family, and stand in the same relation of nominal dependence to him that he bears to the Rao. These kinsmen form what is called the bhyaud or brotherhood of the chiefs, and the chiefs themselves compose the bhyaud of the Rao.”

¹ E.I.C. MS. Doc.

CUTTACK,¹ a British province, named from its principal place, lies within the presidency of Bengal, and is divided into three districts: the northern, or Balasore; the central, or Cuttack proper; and the southern, or Pooree. It is bounded on the north by the British districts of Midnapore and Iljellee; on the north-west by the petty native states known

CUTTACK.

as the Cuttack Mehals; on the west by the Mehals and the British district of Ganjam; and on the east and south-east by the Bay of Bengal. It lies between lat. $19^{\circ} 40'$ — $21^{\circ} 45'$, long. $85^{\circ} 8'$ — $87^{\circ} 31'$, and has an area of 7,635² square miles. The sea-coast, forming part of the north-western boundary of the Bay of Bengal, extends in a direction generally from south-west to north-east, from Priaghy, near the southern extremity of Chilka Lake or inlet, in lat. $19^{\circ} 42'$, long. $85^{\circ} 40'$, to a point seven miles east of the mouth of the river Soobunrecka, in lat. $21^{\circ} 37'$, long. $87^{\circ} 30'$. It is by seamen called the Orissa coast. In the southern part along the shore is a low, level expanse, beyond which inland appear³ several "saddle hills," terminating a chain of mountains extending along the coast to the southward. Between those hills and the low sandy shore, is the extensive Chilka Lake or inlet, communicating with the sea by means of a narrow strait, in lat. $19^{\circ} 42'$, long. $85^{\circ} 40'$; at a short distance from which a sand-bank is said to project two miles into the sea, rendering dangerous the close approach of shipping to the coast. The navigator, continuing his course to the north-east, is struck by the appearance of Pooree, with its three pagodas of Juggernaut, at the mouth of the most southerly estuary of the Mahanuddee, and in lat. $19^{\circ} 49'$, long. $85^{\circ} 54'$. At this point commences the delta of the Mahanuddee, the shore of it extending north-east for eighty miles, to lat. $20^{\circ} 35'$, long. $86^{\circ} 40'$. It is low and swampy, resembling the Sunderbunds at the estuaries of the Ganges, being intersected by numerous sluggish winding streams, influenced by the tide, and infested by innumerable alligators of great size and voracity. The soil is in general a deep mud, overgrown with coarse grass and brushwood, and containing many morasses,⁴ quagmires, and quicksands, perplexing and dangerous to travellers. The Black Pagoda, another vast monument of Brahminical superstition, is seen on the coast nineteen miles north-east of the temples of Juggernaut. Further onwards is False Bay,⁵ having at its extremity two points, the southernmost known as False Point, the other as Point Palmiras, and also called True Point. Point Palmiras is a low sandy tongue of land, covered with Palmira palms, and having on each side a channel, each the mouth of the river Brahmunnnee, that to the south being navigable for small coasting craft. It does not

appear that any of the numerous estuaries of the Mahanuddee are navigable for vessels of any considerable size. Above Point Paluiras, the coast takes a direction which forms the extensive bay, terminated by the south-westernmost banks at the mouth of the Hooghly, and called by European seamen Balasore Road. This bay "affords⁶ good anchorage, the bottom being mostly stiff blue clay, intermixed with sand at times, or small stones." Inland, or westward of the low swampy maritime tract, extends the Moghalbandi, a dry tract, with a sandy soil, in general much mixed with gravel and calcareous conglomerate. It is for the most part hungry and unproductive, and large plains occur totally unfit for cultivation,⁷ where low stunted brushwood is the only specimen of vegetation. In the more favoured parts, however, there are fine groves of mango-trees, dense thickets of luxuriant bamboos, noble specimens of the banian (*Ficus indica*), and various wild flowering shrubs. Inland, and westward of this tract, and in some measure parallel to it, is the hill country, closing down towards the seacoast, in the vicinity of Chilka Lake, in the southern part of the district, and also at its northern extremity, where, near Bala-ore, a group of rocky picturesque hills project boldly to within sixteen or eighteen miles of the shore. These mountains, denominated Nilgiri* or Blue Hills, were, through a whimsical corruption of sounds, called by the earlier English navigators the Nelly Green Hills.⁸ In intermediate parts between those extremes, the distance of the highland from the coast increases in some places to sixty or seventy⁹ miles. The hills¹ visible from the low country, between Point Palmyras and the Chilka Lake, occur generally in irregular, scattered groups, having peaked and waving summits, which seem to cross each other at all angles, or are isolated, conical, and wedge-shaped hills, wholly disconnected at their bases. They are all covered with vegetation to the top. The greatest height of those seen from the Moghalbandi is said to be 2,000 feet; but their ordinary elevation is less, varying from 300 to 1,200 feet. These highlands are represented to be, for the most part, of primitive formation, principally granite, so finely grained as in some measure to resemble

* Nilgiri; from Nil, "blue," and Giri, "hill." These are the Nilgar Hills of Horsburgh.¹

CUTTACK.

sandstone, and containing, disseminated throughout, vast² quantities of imperfectly-formed garnets, with veins of stecatite. The prevailing colour of the rock is red, and being diversified by the stecatite, as above mentioned, it presents a very striking and singular appearance. Next to granite, the rock most abounding in this part of the district is that called laterite, or iron-clay, which is found in some instances combined with the granite so completely and intimately, as to render doubtful which was the inclosing substance. Iron is abundantly diffused throughout the whole of the Cuttack hills, in the state of pisiform³ iron-ore, earthy-red iron-ore, and ochrey-red iron-stone. ³ *Id* 179.

According to popular report, gold dust is collected in the sands of some of the rivers; but the existence in the district of any metal, except iron, does not appear to have been ascertained.

The Mahanuddec, the principal river, rises near Shawa,⁴ in the district called Bustar, and flows, generally eastward, for a distance of 500 miles, to the town of Cuttack, where it divides into the numerous branches inclosing or traversing the delta; its total length of course being conjectured to be 580 miles. The discharge of the Mahanuddee⁵ is said to be observable for some distance at sea, pouring a current of fresh water, which flows like an independent stream on the surface of the salt water, from the greater specific gravity of the latter. The Brahmunnee, rising in Palamow, takes a direction generally south-east, to the western border of Cuttack, which it crosses about lat. 20° 50', long. 86°, and continuing its south-easterly course for about 100 miles farther, falls into the Bay of Bengal, close to Point Palmyras, in lat. 20° 43', long. 87° 5'. The Byturnee, rising in the hills of Orissa,⁶ after a very irregular course, crosses the western frontier of Cuttack, in lat. 21° 3', long. 86° 13', and continuing to flow through it south-eastwards for sixty miles, falls into the Bay of Bengal, in lat. 20° 40', long. 87° 3'. There are many other streams and torrents flowing from the mountains, all holding a course generally south-eastward, and falling into the Bay of Bengal, into the greater streams already described, or into the Chilka Jhil or lake. This shallow but extensive piece of water stretches, in the southern part of the district, for about forty-two miles in length, from north-east to

south-west, and sixteen in breadth, being for many miles divided from the sea merely by a strip of sand not more than 300 yards in width. It communicates with the sea by a narrow channel, and its water is saline, yielding, by means of solar evaporation, large quantities of culinary salt. It abounds with excellent fish. Numerous islands abridge the extent of water-surface; and where these do not intervene, the water is shallow. The general depth is only four or five feet, the greatest does not exceed six, and the lake is considered to be in the course of being rapidly filled up by the silt swept into it by the numerous torrents of which it is the reservoir.⁷

⁴ Stirling, *ut supra*, 183.

The climate, in general, in the low alluvial tract along the seashore, is characterized by great insalubrity,⁸ resulting from the malaria of the swamps, which produces fevers and agues. The southern parts of the seacoast, however, in the vicinity of Pooree or Juggernath, and Kanarak or the Black Pagoda, having dry sandy soil, and during the greater part of the year being favoured with a brisk refreshing sea-breeze, enjoy a healthful climate,⁹ both in the hot and cold months, with a very bracing atmosphere during the latter; but in the rainy season the wind sets from the land, and renders the climate both unpleasant and unhealthy, as in most parts of India. The coast has sometimes been extensively inundated, in consequence of the level of the sea having been raised by violent hurricanes, of which one occurred in 1831,¹ and another in the following year, when upwards of 20,000 human beings perished, and more than 50,000 head of cattle.

Though the low tract along the coast is nearly devoid of timber-trees, they are numerous in the interior. The most important are the sal² (*Shorea robusta*), which appears to be obtainable of useful size in any required quantity; the pryasal (*Buchanania latifolia*), the gambar (*Gmelina arborea*), sisu (*Dalbergia sisu*), the mango, the bur (*Ficus indica*), the pipal (*Ficus religiosa*), together with a vast variety of trees and shrubs, yielding drugs, dyes, and wild fruits relished by the natives. The woodlands also produce lac, wax, honey, and various kinds of resins.

In some parts of Cuttack there are wild elephants,³ supposed not to be indigenous,⁴ but to have sprung from domesticated individuals, which have escaped and relapsed into the wild

CUTTACK.

state. Of other wild animals, there are the tiger,⁵ panther, leopard, hyæna, bear, jackal, otter, wild dog, wild swine, wild buffalo, deer, and antelope. There is also a gigantic bovine quadruped,—the gayal, larger than the bull, having huge horns; and a large kind of antelope, called by the natives the gloranga, and resembling the nylgau (*Antelope picta*). There are also monkeys, the porcupine, and the ichneumon.

Buffaloes are the most valuable domestic animals; the others, which are kine, sheep, swine, and goats, being of diminutive breeds. The principal crops are rice, jowar (*Holcus sorghum*), bajra (*Holcus spicatus*), raji (*Eleusine corocana*), oil-seeds, opium-poppy, tobacco, indigo, and cotton in small quantities. Some experimental attempts made to introduce improvement in the production of the last-named article failed, and were consequently abandoned.⁶ The manufactures are few and insignificant, being principally coarse cotton cloths, for the wear of the poor natives, a small quantity of fine muslins, and thick cotton quilts. The population has been stated officially⁷ at 2,127,555; an amount which, compared with the area, indicates a relative density of 279 to the square mile. The majority consists of Brahminists, not more than a tenth of the whole being Mussulmans. The Oorias of the plains are characterized as “certainly the most⁸ mild, quiet, inoffensive, and easily-managed people in the Company’s provinces.” From this portion of the population are drawn the class of servants styled the Balasore bearers, in Calcutta and its vicinity, and in that capacity advantageously known for fidelity and honesty. Notwithstanding the testimony above quoted, the author following, Abul Fazel, gives on the whole a very unfavourable impression of the character of the population; but by a later authority its accuracy is impugned.⁹ “The paiks, or landed militia of the rajwara,¹ are said to combine, with the most profound barbarism and the blindest devotion to the will of their chiefs, a ferocity and unquietness of disposition, which have ever rendered them an important and formidable class of the population of the province.” The total amount of this rude militia is estimated at 56,050.²

Commerce is in a very languid state, and appears on the whole to be declining. In Cuttack proper it can scarcely be said that any commerce exists; in Balasore it is very limited.

CUTTACK.

From the latter district rice is said to be exported in favourable seasons. Some other exports take place, but their value is very small; and it appears that, during a period of five years, the imports greatly exceeded them.³

³ Bengal and Agra Guide, 1841, vol. II. part 1. 352.

Cuttack is not one of the permanently settled districts, but a settlement has recently been effected for a term of years.⁴

⁴ Parl. Rep. on Growth of Cotton in India: Managerie, 3364. Bengal Rev. Disp. 14 Aug. 1830.

Cuttack and Balasore, as well as Koordah, Pooree, and Kanarak, the principal towns, are described under their respective names in the alphabetical arrangement.

The routes are—1. From north-east to south-west, from Calcutta, through the town of Cuttack to the Circars; 2. from the town of Cuttack to Kamptee and Nagpore; 3. from north to south, from the town of Cuttack to Pooree.

Cuttack was among the latest of the Mahomedan acquisitions in India. The decline of the ancient royal house of Orissa dates from the death, in 1524,⁵ of Rajah Pertab Rudra Deo, an event which the monarchy was not destined long to survive. Its downfall may be regarded as completed in 1592,⁵ when a lieutenant-governor arrived from the Mahomedan kingdom of Bengal to assume charge of the administration. From this time the province appears to have formed part of the possessions of the ruler of Bengal till 1750, when it was invaded by the Mahrattas, and became tributary to the rajah of Nagpore. The chout, or tribute, amounted to 40,000*l.* per annum. After the lapse of a few years, during which the resources of the country seem gradually to have decayed, difficulty was experienced in discharging the obligation; whereupon the Bengal chief proposed that he should be absolved from the stipulated payment, and that the rajah of Nagpore should take possession of the territory, and undertake its management through his own officers. The proposal being acceded to, the province of Cuttack, in 1756, passed to the Mahrattas. Under their administration it appears to have experienced the anarchy, and to have been subjected to the rapacity, which were the unfailing characteristics of their rule. During the Mahratta war of 1803, the occupation of Cuttack formed part of the British plan of military operations. This service was performed by Colonel Harcourt, who, having taken possession of Juggernaut, proceeded to reduce the fort of Barabutlee, situate about a mile from the town of Cuttack. Its capture took place on the 14th October, 1803. and the

⁵ As. Res. xv.—Stirling, Orissa Proper, 287-292. Calcutta Review, x 217.

CUTTACK.

victory was followed by the entire submission of the province. Among the results of the conquest was the subjection to British supremacy of the group of native states known as the Cuttack Mehals. These are eighteen in number; viz. Angool, Autgur, Banky, Berumbah, Dhenkanaul, Hindole, Kundiapurra, Neelgur, Nursingpoor, Nyagur, Runpoor, Talchur, Tiggrenah, Autmallik, Boad, Duspulla, Koonjerry, and Mohurbunge. In the aggregate they contain an area of 16,929 square miles, and a population of 761,805. Within this extensive tract the land fit for tillage bears a trifling proportion to the space occupied by rock and jungle, or covered by forests producing the finest timber. The sal-tree is particularly sought after, from the size it attains, especially in the hill state of Duspulla,⁶ whence is procured the timber annually required for the ear of Juggernaut. Many years since a British superintendent was appointed, with a view to establish such a control over the conduct of the rajahs as might prevent the commission of crimes and outrages. The abolition of suttee⁷ is one of the beneficial measures arising from this appointment.

CUTTACK.¹—The principal place of a British district of the same name under the presidency of Bengal. “The extent,² appearance, and population of the town,” says an observer, “are not unsuitable to its rank as the capital of a large province. Its situation on a tongue of land or peninsula near the bifurcation of the Mahanuddee is commanding in a political and commercial point of view, though these advantages have been in some degree counterbalanced by the outlay incurred in defending it by stone revetments from the encroachments of the rivers which wash two of its sides.” The fortifications³ are in a ruinous state, and their materials are fast disappearing, the stones being carried away and used in various public works, among others in the lighthouse at False Point, and in the macadamization of the cantonment roads. This old fort, says a recent observer,⁴ “deviates little from a regular parallelogram, having its longest faces to the north and south, the river running parallel with the former, at a short distance from it. The walls were originally defended by high square bastion towers projecting at different distances: the place could never

at any time have offered much resistance, as the walls were barely five feet thick on the three land faces, which a six-pound shot could have perforated." On the river face, however, they were not only of great height but of proportional thickness. "There^a is only one gateway, and that in the centre of the eastern face. It is narrow, and between two square towers, like the others wide at the base, and decreasing towards their summit. The archway is of comparatively modern date, and is the work of the Mogul government of the province. There was an inner gateway, which was taken down to build the lighthouse with." A broad deep moat faced with stone seems to have been greatly relied on by the natives for the defence of the place from hostile attack. On the British taking possession of the fort in 1803, this was drained, and numerous alligators which infested it, either destroyed or allowed to escape into the river. Within the fort is an old mosque, built by the former Mogul occupants. It has no architectural pretensions whatever. The town is straggling, and exhibits evident signs of decay. There are some very good houses of hewn stone and brick, but for the most part in very indifferent repair, the poverty of the inhabitants preventing them from maintaining their habitations in decent condition. In the suburbs is the "Kuddum Russool," a Mussulman building displaying neither grandeur nor elegance, but venerated from its containing some alleged sacred relics. The inclosure and the ground surrounding it are used as the common burial-place for the Moslem inhabitants; and the guardian priests make a good harvest in unhealthy seasons, by the mortuary-fees exacted for each grave. The Jama Masjid, or great mosque, in the main street, is a very clumsy, inelegant building: it is used both as a school and a place of devotion. The Brahminical temples are rude, ungraceful erections, and generally small. The only one of large dimensions, and which was commenced by a Mahratta governor, is unfinished. Very little trade now exists in Cuttack. It has manufactures of brass cooking-vessels, and shoes, which constitute the staple commodities of the place. The soil of the vicinity is poor and sandy: rice of indifferent quality is the principal crop.

DABLA.—A town in the Rajpoot state of Oodeypoor or Meywar, 98 miles N.E. from the town of Oodeypoor, and 55 miles S. from Ajmeer. Lat. $25^{\circ} 41'$, long. $74^{\circ} 49'$. E.I.C. Ms. Doc.

DABLING.—A village of Koonāwar, in Northern India, situate in a belt of arable land near the left bank of the Sutlej, and four miles from the confluence of its feeder the Hopchoo, and amidst groves of poplars and orchards of apricots.¹† The opposite bank of the Sutlej presents a perpendicular section of 6,000² or 7,000 feet of pure rock. The scanty population is, according to the description of Herbert,³ altogether of the Chinese Tartar type. "The head man, a Lama, came to pay

¹ Jacquemont, Voyage, iv. 309.

² Lloyd and Gerard, Tour in Himalayas, ii. 130.

³ As. Res. xv. 308—Levels of the Sutlej.

* Hamilton states,¹ "This place is noted for a smart action that was fought here in 1763 with the troops of Cossim Ali." It may have been the action mentioned in Scott,² who does not specify the locality.

† The grape does not succeed here. "Point de vignes," as Jacquemont states: a circumstance the more extraordinary, as at Khab, six miles further north, and only eighty feet less elevated, there are vineyards.¹

¹ Gazetteer, i. 474.

² History of Dekkan, Append. ii. 422.

³ Lloyd and Gerard, ut supra, 145.

DAB.

his respects to us in a dress exactly similar to what is represented as the Chinese costume. His stockings were of woollen stuff sewed, and ought rather from their shape, or want of shape, to have been called bags. His shoes were exactly Chinese, the soles having a spherical shape. He wore also a Chinese skull-cap, but the other people in the village went bareheaded, and wore long tails plaited. They were all rather fair, particularly the women, who had a fine rosy colour. We were very much pleased with the appearance of the assembled village, and could hardly help thinking we had got on the high road to Pekin." Notwithstanding that the elevation of Dabbling is 9,400⁴ feet above the sea, the reverberation of the sun's rays from the rocks rising about it, caused, during the visit of Gerard, the heat to be so great, that the thermometer reached 109° in a tent. A mile to the east of Dabbling, is another less village, called Doobling, the path between them being very rough, and rendered practicable by means of scaffolds or balconies fastened in some places against perpendicular faces of precipices. The vicinity is fertile,⁵ in comparison with the sterility of the mountains rising on every side, and produces walnuts, apricots (which, when dried, resemble prunes, and form an important article in the diet of the inhabitants), cherries of small size but fine flavour, deodars, and birches. Those villages are considered so connected, that they are always named together, under the appellation of Dabbling-Doobling. Lat. 31° 45', long. 78° 39'.

Garden, *Tables of Routes*, 48.

DABUTA, in the British district of Budaon, lieutenant-governorship of the North-West Provinces, a village on the route from Allypore to Moradabad, 45 miles S.W. of the latter place. Water is plentiful, but supplies for troops must

DACCA.

be collected from the neighbouring villages. The road in this part of the route is bad; the country low, level, and partially cultivated. Lat. $28^{\circ} 21'$, long. $78^{\circ} 23'$.

DACCA.¹—A British district, named from its principal place, and situate within the limits of the presidency of Bengal. It is bounded on the north by the British district Mymensing; on the east by the British districts Tipperah and Bulloah; on the south by the British district Backergunge; and on the west by the British district Deccan Jelalpore, or Furreodpore. It lies between lat. $23^{\circ} 12'—24^{\circ} 17'$, long. $90^{\circ} 11'—90^{\circ} 58'$, and has an area of 1,960 square miles.² It is a level depressed tract, drained by numerous rivers, and by streams of inferior dimensions. In the north-western part of the district, however, and also in its eastern angle towards the Megna, are some small ridges,³ generally running from north to south, and having an elevation from twenty to fifty feet above the adjacent country. The southern division of the district is the most depressed, and being, in consequence, widely inundated during the periodical rains of closing summer and commencing autumn, is generally under rice-cultivation. Of the rivers, the Megna, or lower Brahmapootra, flowing from north-west to south-east, first touches on the district at its northern boundary at Agarasonda, and continuing to hold a direction south-east for thirty miles, forms the eastern boundary as far as Byrub Bazar, where it turns to the south, and flowing in that direction forty-five miles, forms the boundary on the east side of Dacca, towards Tipperah and Bulloah, as far as Moiskondi, where it leaves the district. At the point where it turns south, it receives on the left the Gora Outra, a considerable stream, and is thence termed the Megna; fifty miles lower down, it, on the right side, receives the Dulassereo, a large offset of the Koonae or Jabuna, and twenty-five miles lower down, on the same side, the Kirty-Nassa, a large offset from the Ganges. It also sends off and receives, right and left, many other watercourses of less importance, and several small tributaries from the Tipperah hills.

The year⁴ may be considered to be divided into three seasons—the hot, the rainy, and the cool. The first lasts from the beginning of March to the end of June, and is succeeded by the periodical rains, continuing until the early

¹ E. I. C. Ms. Doc.

³ Bengal and Agra Guide, 1811, vol. ii. part 1. 273.

⁴ Id. 274.

DACCA.

part of October, at the close of which the cool season commences, and lasts till the middle of February, when the weather gradually becomes warmer. During the cool season, ice may be obtained by exposing water to the night air in shallow, wide earthen vessels. Generally the climate is characterized by moisture, resulting as well from the great amount of rain, as from evaporation from the several great rivers. During the hot season, sickness is prevalent, and increases with the temperature. During the cool season, there are, with little intermission, either fogs or heavy dews. The mean annual temperature at noon is 79° ; the greatest annual fall of rain has been found to be ninety-three inches, the least forty-six, the mean seventy.

In the northern and western parts of the district there is much kunkur, or calcareous tufa, in many places largely impregnated with iron. There is also much clay, white, yellow, or blue, which on the more elevated parts is barren, and over-run with jungle; but in the depressed tracts, flooded during the periodical rains, is overlaid with a deep dark-coloured alluvial mould of great fertility. Altogether, however, the average fertility of this district is decidedly inferior to that of the country north and west of it.

Of wild animals, Dacca possesses the elephant, buffalo, tiger, bear, and leopard. Of wild birds, there are the fishing-eagle, vulture, kite, argila or adjutant-bird, and cranes of various kinds. The porpoise is common in the large rivers, which also harbour in great numbers the ghariyal, or sharp-beaked crocodile, and the magar, or blunt-beaked crocodile (alligator). Snakes exist in great number and variety. Fish are abundant and excellent. The domestic animals are principally kine and buffaloes.

Cultivation is partial and unskilful, so that the district does not supply its own consumption of grain, and that article is imported in large quantities from the neighbouring districts.⁵ Esulent vegetables are abundant, but usually not of kinds known in Europe. Sugar, betel-nut, hemp, indigo, and other plants yielding dye-stuffs, are produced in moderate quantities. Cotton was formerly produced in considerable quantities, but its culture has been much limited since the manufacture of fine muslins in the city of Dacca has ceased, the staple being too short for the manufacture of coarse strong fabrics, which

⁵ Bengal and
Agra Guide, ut
supra, 277.

DACCA.

alone are now made in the district. In⁶ the attempts recently made by the East-India Company to introduce the American cotton, Dacca participated; but the result was complete and total failure. The climate appears to be unsuitable for the purpose, and myriads of insects preying on the plants, destroyed the bolls and frustrated the hopes of the cultivators.

⁶ Cotton Report, July, 1848, Questions 225, 370, 371.

Manufacturing industry is circumscribed and insignificant, since the failure of the muslin-trade. Dyeing, bleaching, embroidery, working in gold and silver, the fabrication of articles of jewellery, glass, paper, soap, cabinet-ware, coarse woollens, sacking, cordage, and hardware, are carried on to a small extent. The exports are coarse cottons and woollens, indigo, date-sugar, preserved fruits, betelnut, dried fish, cheese, soap, jewellery, and hardware; the imports, grain, oil-seeds, spices, cocoanuts, tobacco, catechu, wax, silk, British cotton yarn and piece-goods, metals, hardware, timber, bamboos, and lime.

The amount of population is returned officially⁷ at 600,000, which, compared with the area, indicates a relative density of 306 to the square mile. In the northern part of the district, are two tribes, denominated, the one Kunch, the other Rajbansi, apparently of different origin from the rest of the population; more robust in physical type, and more daring and resolute in character. Excluding these, the Mussulmans are considered to be more numerous than the Brahminists, but not in a great degree. Education does not appear to be greatly encouraged in Dacca. The town has a government college in a prosperous state (of which some account will be found in the proper place), but throughout the district there were on the 30th September, 1850, only two government vernacular schools.

⁷ Parliamentary Return, April, 1851.

Dacca, the locality of the civil establishment and a military cantonment, Naraingauj, and Islampoor, are described under their respective names in the alphabetical arrangement.

There are scarcely any roads in this district, in consequence of the facility afforded by the several large rivers for communication by water, and the extreme difficulty of conducting roads across the numerous streams. There is a very indifferent route from south-west to north-east through Dacca, from Calcutta to Sylhet; another from south to north, from Dacca

DACCA.

to Nusseerabad, in the adjoining district of Mymensing. A superior road, projected some years since, from the capital, was abandoned in consequence of the great difficulty in the way of its execution.⁸ At a recent period, a line of steam communication was established experimentally, between Calcutta and Dacca, but the result was unfavourable, the expense having greatly exceeded the receipts. The failure, however, being attributed in some degree to the slowness with which the natives of Bengal adopt new customs, it was resolved to continue the experiment, and to extend the line to Assam.⁹

Under the Mahomedan rule, the affairs of Dacca were administered by an officer appointed by the nawaub of Bengal, and accountable to him for the revenues of the province. The establishment¹ of the British authority, on the grant of the Dewanny in 1765, of course put an end to the actual power of the subordinate governor, as well as to that of the chief; but an adequate provision was made for the Dacca nawaub, and his successors continued stipendiaries of the British government until the year 1845, when the title² and dignity became extinct by the death of the last possessor without heirs. The pecuniary allowances thereupon lapsed, but a small sum was allotted for the maintenance of the female connections and servants of the deceased nawaub.³

DACCA,¹ a town, the principal place of the British district of the same name, presidency of Bengal, is situate on the Burha Gunga, a considerable stream, communicating with the Dulasserec, a large offset of the Koonae or Jabuna. The Burha Gunga is, however, here about half a mile² wide in the dry* season, and still wider during the rainy season. The climate is considered good, the heat being tempered by the cooling effect of the numerous rivers; and as their currents are rather rapid, they produce none of the deleterious results of stagnant water, or of water approaching to stagnancy. The city is³ four miles in length, and one and a quarter in breadth. It is at present a wide expanse of ruins, in many places overgrown with jungle, which, as well as the dilapidated buildings, is infested with numerous tigers,⁴ snakes, and other noxious creatures. "All its splendid buildings, the castle of

* Walter¹ states that "this city can now boast an iron suspension-bridge," which is kept in thorough repair.²

DACCA.

its founder, Shah Jehangir, the noble mosque he built, the palaces of the ancient newaubs, the factories and churches of the Dutch, French, and Portuguese nations, are all sunk into ruin, and overgrown with jungle." Though thus comparatively desolate, its minarets, huge ruined palaces, and other monuments of departed grandeur, give it an impressive and not unpleasing aspect, during the periodical rains of closing summer and autumn, when it stands alone above a wide, watery waste. At present, the works and places of public character are fitting only to be enumerated, not described. The city and suburbs are, in a recent publication,⁵ stated to possess ten bridges, thirteen ghats or landing-places, seven ferry-stations, twelve bazars, three public wells, a variety of buildings for fiscal and judicial purposes, a jail and jail-hospital, a lunatic asylum, and a native hospital. Among the noticeable establishments is the elephant dépôt,⁶ containing generally from two to three hundred of these animals. The religious edifices devoted to Christianity are St. Thomas's Church, the Baptist Mission meeting-house, the Romish, Armenian, and Greek churches. There are said to be a hundred and eighty Mussulman mosques, and a hundred and nineteen Brahminical temples. The English, Armenians, and Greeks, have cemeteries at this place. Here is a college subject to the control of the Council of Education, but under the management of a local committee,⁷ consisting of twelve members, of whom one half are unconnected with government, and five are natives. The committee have a secretary, and for conducting the educational duties, there are, besides a head master, superintending the whole establishment, three masters in the senior, and nine in the junior school department, of which latter six are natives. There is also a vernacular department, directed by two pundits; and attached are a librarian and a writer. In September, 1850, there were 340 pupils; of whom 46 were Christians, 15 Mahomedans, and 279 Hindoos. The daily average attendance was 298. The Baptist Mission⁸ maintain a number of schools here.

In 1850, the Court of Chancery pronounced its judgment in favour of the validity of the bequest contained in the will of the late Mr. Robert Mitford, for the benefit of the native inhabitants of Dacca, and the residue of the testator's estate,

DACCA.

amounting to between eleven and twelve thousand pounds, has been accordingly paid over to the government of Bengal, to be applied to charitable purposes within the city.⁹

⁹ Bengal Public Disp. 4 Dec. 1850.

The manufactures of Dacca are at this time scarcely deserving of notice. A small quantity of coarse cotton, silk, and embroidered goods, constitutes the sum of them; and even this scanty remnant of skilled industry is constantly and rapidly giving way before the competition of British fabrics. The muslins of Dacca were formerly unrivalled for fineness and every desirable quality. The spinning of the very fine thread was carried on with wonderful nicety. The operation was performed with a fine steel spindle by young women, who could only work during the early part of the morning, while the dew was on the ground; for such was the extreme tenuity¹ of the fibre, that it would not bear manipulation after the sun had risen. The darners were so skilful, that they could remove an entire thread from a piece of muslin, and replace it by one of finer texture. The demand for those extremely beautiful fabrics was principally for the supply of the royal wardrobe at Delhi, and has declined with the decay of that court. Such muslin, from its wonderful fineness, was called *abrawan*, or "flowing water," and *shabnam*, "evening dew." The manufacture is now totally lost; and though some time ago an order was sent from China for a small quantity of such muslin, at the rate of ten rupees, or 1*l.* per square yard, no artisan could be found competent to execute it. The falling off² of the general Dacca trade took place as far back as 1801, previously to which the yearly advances made by the East-India Company and private traders for Dacca muslins, were estimated at upwards of twenty-five lacs of rupees (250,000*l.*). In 1807, the Company's investments had fallen to 59,590*l.*, and the private trade to about 56,020*l.* In 1813, the private trade did not exceed 20,595*l.*, and that of the Company was scarcely more considerable.

¹ As. Res. xii. 639—Walter, ut supra.

² Walter, ut supra, 638.

In 1817, the English commercial residency was altogether discontinued. The French and Dutch factories had been abandoned many years before. The extent of misery caused by the annihilation of the manufacture and trade of this once flourishing mart, is not readily to be conceived.

³ Id. 536.

The population, according to a census³ made in 1830,

DAC—DAD.

amounted (exclusive of military) to 66,989; of which number 31,429 were Brahmminists, 35,238 Mussulmans, 322 Armenians, Greeks, and others; the whole residing in 16,279 houses. This result shows a great diminution since 1814, when the number of houses assessed to the police-rate was 21,631.⁴ Within the last eight or ten years, however, there is reason to think that the prosperity and population of the place have somewhat increased. The importance of Dacca is of comparatively recent date, as it is not mentioned either by Ferishta or Abulfazl.

⁴ Walter, *ut supra*, 537.

The civil establishment of the district of which this is the chief location, consists of a judge, a collector, and other European officers, with a due proportion of subordinates. For military purposes, Dacca is within the Presidency division, and the immediate vicinity of the town was usually the station of a regiment of infantry and a detail of artillery. It had, however, been alleged, that the site of the cantonment was unhealthy, and in consequence remedial measures were from time to time adopted.⁵ These, however, failed in producing the desired result, and at the latter end of 1852, it was finally determined to abandon the cantonment.⁶ Distance of the town from Furrcepore, E., 39 miles; Berhampore, E., 138; Calcutta, N.E., 150. ³ Garden, *Tables of Routes*, 164. bagh, and at Jahannabad,³ sixty-five miles lower down, it is crossed by the same route by means of ford.

E.I.C. Ms. Doc. DALLAH.—A town in the recently acquired British district of Pegu, presidency of Bengal, 42 miles S.W. of Rangoon. Lat. $16^{\circ} 21'$, long. $95^{\circ} 47'$.

DALLAH.—The name of one of the rivers forming the delta of the Irawady. It flows past the town of Dallah, and falls into the Bay of Bengal about lat. $16^{\circ} 8'$, long. $75^{\circ} 49'$.

¹ E.I.C. Ms. Doc. DALPATPOOR,¹ in the district of Pachamrat, territory of Oude, a town on the right bank of the Ghaghra, seven miles S.E. of Faizabad, 82 E. of Lucknow. In 1837, Harpal Singh, the zemindar or proprietor of the adjacent country, employed² 500 men in building a mud fort of considerable extent. Lat. $26^{\circ} 44'$, long. $82^{\circ} 14'$.

E.I.C. Ms. Doc. DAMAKA.—A town in the British district of Camroop, in Lower Assam, presidency of Bengal, 28 miles N.E. of Goalpara. Lat. $26^{\circ} 27'$, long. $90^{\circ} 56'$.

¹ E.I.C. Ms. Doc. DAMAN.^{1*}—A town on the coast of the Northern Concan, and belonging to the Portuguese,² though included within the limits of the presidency of Bombay. It is situate on the Damungunga, or river of Daman, which rises in the Ghauts, about forty miles further east. The river has a bar at its mouth, having two feet water at low water spring tides, and eighteen or twenty feet inside. There is never less in common springs than three fathoms at high water on the bar, the rise of the tide being seventeen or eighteen feet. Outside the bar is a road, in which vessels may anchor in eight fathoms of water. The town is fortified, and has a rampart with ten bastions³ and two gateways. There are nine Christian churches, and a fort called the Castle of St. Hieronymus. The surrounding country is fruitful and pleasant, except in the rainy season, when it is extensively overflowed. During the dry season, there remain some shallow jhils or ponds, abounding in fish and reptiles. The river, admitting the tide, is brackish, and when the water left by rain is evaporated, recourse is had to wells, the water of which, however, is also in some degree brackish, and moreover, very unwholesome, causing fevers and other formidable ailments. "Provisions⁴ and vegetables are

⁴ Horsburgh, *India Directory*, I. 471.

* Daman of Tassin; Damman of the Oordoo writers.

DAM.

cheap and plentiful." Daman is an excellent place for small vessels to remain at during the S.W. monsoon, and for the purpose of repair, the country being well stocked with ship-timber. Many ships of from 500 to 600 tons burden have been built in this river. Daman, described as "a town⁵ great and strong," was sacked and burned by the Portuguese in 1531. It was subsequently rebuilt, and in 1558 was taken by the Portuguese,⁶ who converted the mosque into a Christian church. The place appears from that time to have remained one of their possessions. The district, of which the town is the principal place, is about ten miles in length from north to south, and five in breadth. Distance of the town of Daman from Bombay, N., 101 miles. Lat. 20° 24', long. 72° 53'.

DAMAN,¹ or THE BORDER, so called because it stretches between the Suliman Mountains and the Indus. The tract formerly constituted a portion of Runjeet Singh's kingdom of Lahore, and is now annexed to the British province of the Punjab. Where not under the influence of irrigation,² it in general presents the appearance of a plain of smooth hard clay, bare of grass, but sprinkled with dwarfish bushes, tamarisks, and occasionally trees of larger size, but seldom exceeding the height of twenty feet, the soil or climate being unfavourable to their further growth. In place of the clay, the surface in some places consists of a loose and irreclaimable sand. The clay appears to be deposited by the waters either of the Indus or of the numerous small rivers which, during the season of the melting of the snow, stream down from the mountains, and add to the inundation. Where duly irrigated, the clay is very productive, and few countries are more fertile than the Derajat, or that part of the plain which extends along the western bank of the Indus. The Derajat, so called from the three towns, Dera Ismael Khan, Dera Fati Khan, and Dera Ghazee Khan, abounds in towns and good villages. In summer, the heat in the Daman is intense, and the productions in a great measure resemble those of India.

The Daman is 300 miles long, from the Kala or Salt Range on the north, to the confines of Sind on the south, and has an average breadth of about sixty miles. Lat. 28° 40' to 33° 20', long. 69° 30' to 71° 20'.

DAMMOODAH.

miles N.E. from Neemuch, and 11 miles S. from Kotah. Lat. 25°, long. 75° 56'.

¹ E.I.C. Ms. Doc. **DAMMOODAH.**^{1*}—A river rising in the British district of Ramgurh, presidency of Bengal, about lat. 23° 55', long. 84° 53'. It takes a south-easterly direction through the British districts Ramgurh and Pachcet, into those of Bancoora and Burdwan, and twelve miles below the principal town of the last-named district, and in lat. 23° 5', long. 88° 1', it turns nearly due south, a direction which it holds for the remainder of its course through the British districts Burdwan and Hoogly, until its fall into the river Hoogly on the right side, in lat. 22° 13', long. 88° 7'; its total length of course being 350 miles. Its feeders are numerous, the most important being the Barrachur, a considerable torrent, falling into it on the left side, in lat. 23° 40', long. 86° 51'. On the route from Calcutta to Hazareebagh, it is crossed by means of a ferry,² fifty miles above its mouth. At Rancegunj, eighty-five miles higher up, and in lat. 23° 35', long. 87° 8', the bed of the stream is described by Jacquemont³ as 500 yards wide, fordable, with a rapid current, and limpid water, about one foot deep in the middle of December, or during the dry season. At Gomeah, ninety miles higher up the stream, the same traveller states⁴ the bed to be 250 yards wide, and free from obstructions, with a slender stream of very fine water.† The valley of the Dammoodah, which is about to be traversed by the railway from Calcutta, is known to abound in coal and iron; and, indeed, the only doubt as to the practicability of manufacturing malleable iron in the district, arises from the absence of limestone for the reduction of the ore into metal. Limestone, however, may be imported from Sylhet and other places; and it has been estimated by competent authority,⁵ that, assuming the cost of railway bars at 107. per ton, bar-iron may be manufactured in the Dam-

* David's Town; from Daud, nom. propr., "David," and Pur, "town."

DAO—DAR.

a distance of forty-five miles.* Some of the streets are straight and wide,³ but the greater number mere wretched lanes. Here is a spacious well-built serae, or public lodging-house, surrounded by a rampart of brick, with battlements and loopholes, and probably intended for a stronghold of the former government. There is another extensive serae, inclosed and secured by gates. The number of houses,⁴ including Ahmud-gunj, has been computed at about 2,000;† and; admitting the usual ratio of inmates to houses, the population appears to be about 10,000. It is a place of considerable trade,⁵ and has manufactures of setringis, or coarse cotton carpets, blankets, and cotton fabrics of various sorts. The police division, of which it is the principal place, contains 378 villages, and a population computed at 92,300; the Brahminists being as ten to six to the Mussulmans. The town is 42 miles N.W. of Gya, 60 S.W. of Patna, 89 E. of Benares. Lat. 25° 3', long. 84° 27'.

DAORALAH.—See DOURALA.

DAPOOLEE.—A town in the British district of Rutnagherry, presidency of Bombay, 55 miles N. of Rutnagherry. Lat. 17° 48', long. 73° 16'.

DAFOOREE.—A town situate on the left bank of the Moota river, a feeder of the Beema, in the British district of Poonah, presidency of Bombay, four miles N. of Poonah. The town contains a residence¹ for the use of the governor of Bombay, and in its vicinity are the Botanical Gardens,² maintained by the government. Lat. 18° 32', long. 73° 51'.

DARAGUNJ,¹ ‡ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a town on the route from the cantonment of Allahabad to Jaunpore, and communicating by ferry with the former, of which it may be considered in some measure a suburb. The Ganges, on the left bank of which it is situate, has here a bed a mile wide,² the stream in the dry season occupying only a third of that space, the remainder being moist sand and mud, over which the road is difficult. It is a place of some importance, having, according to a return made in 1834,³ a population of 9,103; of whom

³ Buchanan, Journ. from Madras, through Mysore, Canara, and Malabar, II. 374.

DARAPOORAM,¹ in the British district of Coimbatore, presidency of Madras, a town situate about half a mile from the left bank of the river Amrawati,² in an elevated open country. The streets are wide, and the houses in general well built. Here is a large mud fort, formerly of considerable importance³ during the wars between the British and the rulers of Mysore, but now in ruins.* Distance from the town of Coimbatore, S.E., 42 miles; Madras, S.W., 250. Lat. $10^{\circ} 45'$, long. $77^{\circ} 36'$.

* Buchanan, after mentioning the fort, gives the following curious statement:—"The commandant, according to the report of the natives, agreed to surrender the place to Col. Fullarton. As, however, he wished to make an appearance of resistance, some pioneers were sent into the ditch to undermine the wall, which they did very coolly, while over their heads the garrison kept up a tremendous fire. When the passage was open, the firing ceased, and our troops walked in quietly, without any injury being done on either side."

DAR.

DARBARRA, in the Punjaub, a large fortress of the Daman. It is situate 12 miles N.W. of Tak, and at the mouth of a pass into the Suliman Mountains. Its walls are very lofty, but it does not appear to be otherwise of importance, and it is situate in a very barren and secluded country. Lat. $32^{\circ} 15'$, long. $70^{\circ} 20'$.

Masson, *Bal. Afg.*
Panj. i. 52.

DARBEE.—A town of North-Eastern India, in the native state of Bhotan, 60 miles E. from Darjeeling, and 105 miles N. from Rungpore. Lat. $27^{\circ} 12'$, long. $89^{\circ} 18'$.

E.I.C. Ms. Doc.

DARBUNG, or **ROOSHKATONG**,¹ in Bussabir, a river of Koonawur. It rises in about lat. $31^{\circ} 57'$, long. $78^{\circ} 25'$, on the south-western declivity of the stupendous range of Damuk Shu, bounding that territory on the side of Ladakh. Gerard estimates the elevation of its source at about 15,000 feet above the sea. The scene, as described by him, is one of terrific desolation. "The Darboong was lost amidst the fields of snow and ice by which it was generated; the whole space on every side was floored by ice, half-hid under stones and rubbish. In some places the snow is of an incredible thickness, and lies in heaps. Having accumulated for years together, it separates by its gravity, and spreads wide desolation in its route. Nowhere in my travels have I observed such enormous bodies of snow and ice, or altogether such a scene."² About five miles below this place, and nearly south of it, the stream receives a number of snow-torrents, tumbling down the glaciers and mountains on every side, and rushes downwards, sometimes amidst spiry peaks of limestone, sometimes beneath vast arches of perpetual ice and snow. Soomdo, about two miles below this, or between six and seven miles from the source, has an elevation of 13,000 feet, so that the torrent in that part of its course has a fall of nearly 300 feet a mile. The declivity, however, soon becomes much less, and the stream flows through a fertile dell,³ to which it affords the means of irrigation indispensable to productiveness in this arid climate. It is in consequence bordered by several villages, by the name of one of which it is sometimes called the Rooshkatong. Jacquemont⁴ describes it, in this part of its course, as a considerable river, which descends from the north-west with turbulence and enormous rapidity. At Soongnum, it is crossed by a sanga or wooden bridge, thirty-three feet long,⁵ and at an elevation of 9,030 feet above the sea; and

¹ Mss. Letter from Bengal, 20 Sept. 1853.

² Description of Darjeeling, 1839, p. 6.

DARJEELING, in the British district of the same name, presidency of Bengal, a sanatorium¹ for troops located within the military division of Cawnpore, Allahabad, Dinapore, and Benares. It is situated "on² the southern side of a great hollow or basin, being that of the Runjeet River, which falls into the Teesta a few miles east of the place. To the north, the view is open, and exhibits the usual succession of range beyond range, all irregularly ramifying in every direction, and in apparently inextricable confusion: it terminates in the Snowy Range. To the westward, the view is confined by a lofty range at the distance of about ten miles; to the eastward, appears the valley of the Teesta; and on each side of it is the confused assemblage of mountain-ridges, as to the north; to the south, Darjeeling has the Sinchul Peak, elevated about 9,000 feet, and Gurdun-Kultnr range, which is a ramification of it. These mountains are completely clothed with forest from the top to the very bottom."

In regard to natural scenery, the country round Darjeeling is described as inferior to that of Landour and Mussooree, but as contrasting favourably with that of Almora. In one respect, however, it has an advantage even over the former places, commanding as it does the most magnificent view which can probably be obtained of the Snowy Range, distant about sixty miles, in which, eminently conspicuous, appears the Kunching Jinga, rising 27,000 feet above the sea. Dr. Hooker,³ when on a botanical mission to this region, thus describes his first impression of the scene:—"Early next morning I caught my first view, and I literally held my breath in awe and admiration. Six or seven successive ranges of forest-clad mountains as high as that whereon I stood (8,000 feet), intervened between me and the dazzling-white pile of snow-clad

³ *Rhododendrons of Sikkim*, 5.

DAR.

mountains, among which the giant peak of Kinchin-junga rose 20,000 feet above the lofty point from which I gazed. Owing to the clearness of the atmosphere, the snow appeared to my fancy but a few miles off, and the loftiest mountain at only a day's journey. The heavenward outline was projected against a pale-blue sky, while little detached patches of mist clung here and there to the highest peaks, and were tinged golden-yellow or rosy-red by the rising sun."

Gneiss is the principal formation of the rock at Darjeeling; slate occurs on the banks of the Runjeet River; at the foot of the hills, iron-ore abounds; and traces of copper are said to have been discovered.

The advantages possessed by Darjeeling, as the site for a sanatorium, in the salubrity of its climate* and facility of access from the plains of Bengal, induced the British government, in 1835, to open a negotiation with the rajah of Sikkim, for its cession, in return for an equivalent in land or money. The rajah consented to an unconditional and gratuitous transfer. Several years afterwards, however, a grant of 3,000 rupees per annum was made to the rajah, as compensation for the cession, which sum at a later period was doubled.⁴ A sanatorium for Europeans has been established,⁵ and its results, as exhibited in official medical reports, are considered satisfactory.⁶ The district of which Darjeeling is the principal place, was enlarged in 1850, by the annexation of a further portion of the territory of Sikkim. The sequestration of this tract, yielding a revenue⁷ of 26,037 rupees, took place in consequence of outrages committed by the rajah against British subjects, a course of conduct which at the same time exposed him to the forfeiture of the annual payment which had been granted as compensation for Darjeeling.⁸ Lat. 27° 2', long. 88° 19'.

DARROOR.—A town in the native state of Hyderabad, or dominions of the Nizam, 185 miles N.W. from Hyderabad, and 72 miles S. from Jaulnah. Lat. $18^{\circ} 50'$, long. $76^{\circ} 11'$.

DARSHANGANJ,¹ in the district of Pachamrat, territory of Oude, a town near the right bank of the river Ghaghra, five miles S.E. of Faizabad. It was built² by Darshan Singh, a freebooter, the brother of an adventurer originally a trooper in the Company's service, but raised to the station of zemindar, or fefsee, by the favour of Sandat Ali Khan, formerly nawab vizier. It is rather a thriving place, several merchants of considerable property residing there. Distant E. from Lucknow 80 miles. Lat. $26^{\circ} 41'$, long. $82^{\circ} 12'$.

DASNUI,¹ in the British district of Meerut, lieutenant-governorship of the North-West Provinces, a town, the principal place of the pergunnah of the same name, situated on the route from Delhi to Ghurmukteesur, and 18 miles E. of the former. Elevation above the sea 821² feet. Lat. $28^{\circ} 41'$, long. $77^{\circ} 36'$.

DASOREE.—A town in the Rajpoot state of Jondpore or Marwar, 79 miles N. from Jondpore, and 50 miles S.W. from Beekaneer. Lat. $27^{\circ} 23'$, long. $72^{\circ} 56'$.

DASPORE.—A town in the British district of Midnapore, presidency of Bengal, 31 miles N.E. of Midnapoor. Lat. $22^{\circ} 37'$, long. $87^{\circ} 50'$.

DATCHAPULLY.—A town in the British district of Guntoor, presidency of Madras, 52 miles N.W. of Guntoor. Lat. $16^{\circ} 37'$, long. $79^{\circ} 48'$.

DATMER, in native Gurwhal, a village on the left bank of the Supiu or Tonse. The village is inhabited by savage and lawless banditti, who practise their misdeeds with much impunity, in consequence of the extreme difficulty of access to their fastness. It was a secondary station in the great trigonometrical survey of the Himalaya. Elevation above the sea 8,354 feet. Lat. $31^{\circ} 5'$, long. $78^{\circ} 20'$.

DATREE,¹ in the British district of Mynpooree, lieutenant-

DAU.

governorship of the North-West Provinces, a village on the route from the city of Agra to Etawah, and 29 miles² N.W. of the latter. The road in this part of the route is good, the country cultivated, and studded with small villages. Lat. 27° 5', long. 78° 42'.

² Garden, Tables of Routes, 7.

DAUDPOOR.—A town in the native state of Calahandy, one of the hill zemindarries of Orissa, 90 miles W. from Goomsoor, and 20 miles N.E. from Joonnagudda. Lat. 19° 59', long. 83° 19'. E.I.C. Ms. Doc.

DAUKORE.—A town in the British district of Kaira, presidency of Bombay, 31 miles E. of Kaira. Lat. 22° 42', long. 73° 10'. E.I.C. Ms. Doc.

DAUMNUGGUR,¹ in the peninsula of Kattywar, province of Guzerat, or territory of the Guicowar, a town on a river which, fifty miles² to the eastward, falls into the Gulf of Cambay. The surrounding country is well watered and fertile, producing abundant crops of fine grain, sugar-cane, and cotton. It is fortified, and belongs to the Guicowar, and received its name from Damoji, one of the family. Distance from Ahmedabad, S.W., 120 miles; Baroda, S.W., 120; Surat, N.W., 98; Bombay, N.W., 208. Lat. 21° 40', long. 71° 30'. E.I.C. Ms. Doc.

² Tod, Travels in Western India, 304.

DAUNABAD, in the Reechna Dooab division of the Punjab, a town situated on a feeder of the river Ravee, 60 miles S.W. of the town of Lahore. Lat. 31° 7', long. 73° 21'. E.I.C. Ms. Doc.

DAUNDIAKHERA, in the district of Bainswara, territory of Oude, a town on the left bank of the Ganges, 50 miles S. of Lucknow, 30 S.E. of Cawnpore. Butter estimates the population at between 8,000 and 9,000, of whom 250 are Mussulmans. Lat. 26° 10', long. 80° 42'. E.I.C. Ms. Doc.

DAUNG, THE.¹—A tract of country so called, situate within the limits of the presidency of Bombay, and comprising several petty native states, tributary to a chief, styled the rajah of Daung. It is bounded on the north-west by the petty state of Wursavee; on the north-east and east by Candeish and the sub-collectorate of Nassick; on the south by the native state of Point; and on the west by that of Bauhsda. It extends from lat. 20° 22' to 21° 5', and from long. 73° 28' to 73° 52'. Its length from north to south is fifty-two miles, and its breadth twenty-eight, comprehending an area of 950 square miles, with a population of 70,800. The country abounds in

¹ Statistical Papers, 26.

DAU—DAY.

- ² Bombay Pol. Disp. 23 Nov. 1849.
Id. 19 Mar. 1851.
- teak forests, which are rented by the British government² of the Daung chiefs, who usually refer to the British representative any points of dispute among themselves.
- DAUNTA, in the Myhee Caunta division of Guzerat, or the dominions of the Guicowar, a town, the chief place of the petty native territory of the same name, situate 48 miles-E. of Deesa, and 139 miles N. of Baroda. The territory of Daunta is subject to the supremacy of the Rajpoot state of Edur,¹ and, moreover, pays tribute to the Guicowar. In 1820, the Rana agreed to cede a fixed proportion of his revenues to the state of Pahlunpore,² but the obligation was subsequently commuted for an annual payment of 500³ rupees, and the district is now released from sequestration.⁴ The town of Daunta is in lat. 24° 12', long. 72° 50'.
- DAUSAN.—See DEESAUN.
- E.I.C. Ms. Doc. DAVADANAPUTTY.—A town in the British district of Madura, presidency of Madras, 33 miles N.W. of Madura. Lat. 10° 8', long. 77° 43'.
- E.I.C. Ms. Doc. DAVAGOODOO.—A town in the British district of Nellore, presidency of Madras, 12 miles S.W. of Ongole. Lat. 15° 20', long. 80°.
- E.I.C. Ms. Doc. DAVANKONDA.—A town in the British district of Bellary, presidency of Madras, 52 miles N.E. of Bellary. Lat. 15° 33', long. 77° 37'.
- E.I.C. Ms. Doc. DAVAROY DROOG.—A town in the native state of Mysore, 76 miles N.E. from Seringapatam, and 39 miles N.W. from Bangalore. Lat. 13° 22', long. 77° 16'.
- ¹ E.I.C. Ms. Doc. DAVERCONDA,¹ in Hyderabad, or territory of the Nizam, a town on a hill,² near the left or northern side of a feeder of the river Pedawag, one of the tributaries of the Godavery. It is supplied with water from a tank of considerable size, situate on its west side. The extensive district of Daverconda, on the south side of the town, is named from it. Distant from the city of Hyderabad, S., 52 miles. Lat. 16° 42', long. 78° 59'.
- E.I.C. Ms. Doc. DAVERHULLY.—A town in the native state of Mysore, 68 miles N.E. from Bedenore, and 126 miles N. from Seringapatam. Lat. 14° 6', long. 76° 2'.
- Garden, Tables of Routes, 54. DAVIPOOR, in the British district of Moradabad, lieutenant-governorship of the North-West Provinces, a village on the route from the town of Moradabad to Almora, and 12 miles

DAV—DEB.

N. of the former. The road in this part of the route is difficult for wheeled carriages; the country open, flat, and partially cultivated. Lat. $28^{\circ} 59'$, long. $78^{\circ} 54'$.

DAVULGHAUT.—A town in the native state of Hyderabad, or dominions of the Nizam, 70 miles N.E. from Aurangabad, and 100 miles S.W. from Ellichpoor. Lat. $20^{\circ} 30'$, long. $76^{\circ} 11'$. E.I.C. Ms. Doc.

DAWLUTWALLUH, in the Damaun division of the Punjab, a town situated 80 miles N.W. of Dera Ghazee Khan, 60 miles S.W. of the town of Dera Ismael Khan. Lat. $31^{\circ} 10'$, long. $70^{\circ} 20'$. E.I.C. Ms. Doc.

DEAGANJ,¹ in the British district of Mynpooree, lieutenant-governorship of the North-West Provinces, a village on the route from the city of Agra to Etawah, and 46 miles² S.E. of the former. The road in this part of the route is good; the country cultivated, and studded with small villages. Lat. $27^{\circ} 3'$, long. $78^{\circ} 46'$. ¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes, 7.

DEAMAH,¹ in the district of Sultanpoor, territory of Oude, a town on the route from Pertabgurh to Sultanpoor cantonment, 13 miles² S.W. of the latter. It has a bazar, and is abundantly supplied with water from wells. The road in this part of the route is bad. Lat. $26^{\circ} 10'$, long. $82^{\circ} 3'$. ¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes, 300.

DEARY.—A town in one of the recently sequestered districts of the native state of Hyderabad, or dominions of the Nizam, 17 miles S.E. from Ellichpoor, and 13 miles N. from Omraouttee. Lat. 21° , long. $77^{\circ} 44'$. E.I.C. Ms. Doc.

DEATPORE.—A town in the British district of Malda, presidency of Bengal, 25 miles N.W. of Malda. Lat. $25^{\circ} 12'$, long. $87^{\circ} 52'$. E.I.C. Ms. Doc.

DEBEEPOORA.—See DAVIPOOR.

DEBRA.—A town in the British district of Midnapoor, presidency of Bengal, 16 miles E. of Midnapoor. Lat. $22^{\circ} 23'$, long. $87^{\circ} 39'$. E.I.C. Ms. Doc.

DEBUR.—A considerable lake in the Rajpoot territory of Oodeypoor, or Meywar: it is about nine miles in length by five in breadth, and is fed by several streams flowing from the northward. On its southern side it has an outlet by a stream flowing into the Mhye river. Distant S.E. from Oodeypoor 30 miles. Lat. $24^{\circ} 12'$, long. $74^{\circ} 4'$.

DEBURA, in the British district of Goruckpoor, lieutenant- E.I.C. Ms. Doc.

governorship of the North-West Provinces, a town on the left bank of the river Raptée, 51 miles N.W. of Goruckpoor. Lat. $27^{\circ} 17'$, long. $82^{\circ} 58'$.

¹ *Mit. Hist. of India*, ii. 283. Elphinstone, *Hist. of India*, 2.

DECCAN,¹ in its usual acceptance, implies the tract of country in Southern India, situate between the Nerbudda and the Kistna rivers. Properly speaking, however, it includes the whole of the territory lying south of the Vindhya Mountains, which separate it from Hindostan on the north. Taken in its latter extent, it comprehends the valley of the Nerbudda, and the narrow tract of lowland forming a belt round the coast of the Peninsula; and it occupies, in addition thereto, the vast expanse of triangular table-land, which, resting on each side upon the Eastern and Western Ghauts, is supported at its base by the sub-Vindhyan range, termed the Sautpoora Mountains.

² *Madras Journ. Literature and Science*, 1837, p. 346—Sykes, *Geol. of Deccan*.

The seaward face of the table-land on the west, towards the Concans, though abrupt,² is not precipitous, but consists of a succession of terraces or steps. In their northern section, the Ghauts, on this side of the Peninsula, attain an elevation seldom exceeding 3,000 feet; advancing southward, the range increases in height, Bonasson Hill being 7,000 feet above the level of the sea, and the peak of Dodapet, in the Neilgherries, having an elevation of 8,700. Near Cape Comorin, in the extreme south, and at the point of convergence with the range from the opposite coast, the Western Ghauts terminate abruptly in a peak about 2,000³ feet above the sea. Their average elevation may be stated at about 4,000 feet. From the point of convergence, the Eastern Ghauts take a northerly direction. These last-mentioned mountains, at their southern extremity, may be characterized rather as detached groups and clusters of hills appearing at intervals, than as a regular range. About lat. $11^{\circ} 40'$, they assume the character of a continuous chain, and, running along the coast of Coromandel in a direction a little north-west of the city of Madras, form a junction at Naggery, in lat. $13^{\circ} 20'$, with the main ridge, which crosses the Peninsula in a south-west direction,⁴ to the Neilgherries. Thence the Eastern Ghauts continue a northerly course, and terminate in about the same latitude as their counterpart of the opposite coast. Here uniting with the Vindhya zone, which crosses the continent from east to west, they constitute one side of the triangle upon which rests the table-land of the

⁴ Newbold, *ut supra*, 130.

DECCAN.

Deccan. In regularity and grandeur, the Eastern Ghauts bear no comparison with those of Western India; their average elevation does not exceed 1,500 feet. The intermediate table-land has consequently a gradual slope to the eastward, as indicated by the drainage of the country in that direction.⁵ All the principal rivers,—the Godavery, Cauvery, Kistna, and Pennaur, though deriving their sources from the base of the Western Ghauts, find their way into the Bay of Bengal through fissures in the Eastern Ghauts. According to Captain Newbold,⁶ “the mean elevation of the table-land around Bangalore and Nundidroog above the sea is 3,000 feet; northerly, towards Hyderabad, it sinks to 1,800 feet; and a little south of Bangalore, it falls, by rather abrupt steps, to the level of the plains of Salem, viz. 1,400 feet; whence to Capo Comorin the mean height of the country is about 400 feet. The average height of the low country between the Ghauts and the sea, on both the coasts of Coromandel and Malabar, may be roughly estimated at 200 feet, rising at the base of the mountains to 800 feet.” On the Coromandel side, the slope to the sea is gentle, exhibiting the alluvial deposits borne down from the higher portions of the table-land; while that of Malabar is marked by a succession of irregular hilly spurs from the Ghauts, descending to the sea in abrupt cliffs. The central part of the Deccan is composed of waving downs, which, at one time, present for hundreds of miles one unbroken sheet of green harvests; but, in the hot season, bear the appearance of a desert, naked and brown, without a tree or shrub to relieve its gloomy sameness.⁷

A general outline of the geology of the Deccan is all that the limits of this article will permit to be sketched. A writer, already quoted, observes, “Hypogene⁸ schists, penetrated and broken up by prodigious outbursts of plutonic and trappean rocks, occupy by far the greater portion of the superficies of Southern India. They constitute the great bulk of the Western Ghauts, from between the latitudes of 16° and 17° to Cape Comorin, and from the base of the Eastern Ghauts, from beyond the north limit of the Peninsula, to their deflection at Naggery, in lat. 13° 20'. They are partially capped and fringed in the Western Ghauts by laterite, and in the Eastern Ghauts by sandstone, limestone, and laterite. From Naggery

DECCAN.

to Cape Comorin, they form, with few exceptions, the basis of the plains of the Carnatic, Arcot, the valley of Seringapatam, Salem, Trichinopoly, Coimbatore, Tanjore, Madras, Tinnevely, and Travancore; and, intimately associated with granite, the principal hills and ranges on the low lands south of the Salem Break and valley of the Cauvery. North of this valley, and above the break, they form the basis of the table-lands of Mysore, the Baramahal, Bellary district, part of Hyderabad, and the Southern Mahratta country; and present a groundwork on which will be sketched out, as accurately as the present imperfect state of information will permit, the circumscribed areas occupied by more recent aqueous strata. Towards the north-west flank of our area, almost in a line drawn diagonally across the Peninsula from Nagpore, by Beejapore, to the western coast, the hypogene and plutonic rocks disappear, emerging only occasionally under one of the largest continuous sheets of trap in the world." Compared, then, with some other countries, the geology of Southern India is clear and distinct in its principal features. It has been ascertained, partly from observation, and partly by means of specimens obtained from various sections of the country, that the entire basis of the Peninsula, and its principal elevations,* are composed wholly of granite. Overlying the granitic floor, are the stratified hypogene rocks, the usual order of superposition being gneiss resting immediately on the granite, followed by mica and hornblende schists, the two latter supporting clay-slate, statuary marble, &c. These rocks are wholly destitute of organic remains; for, although of aqueous origin, as attested by their stratified character, the sedimentary deposit has subsequently become crystallized by the effect of subterranean heat, and hence they are grouped by geologists in the metamorphic class. Ascending in the series, we next arrive at the fossiliferous strata. Here, in the order of superposition, limestone is the lowest, followed by varieties of clay and sand rocks. From various circumstances, arising chiefly from the paucity of the imbedded fossils, and from the failure of discovering among them the distinguishing genera, these varieties have not hitherto admitted of a detailed classification. These

* Severndroog, Chitteldroog, and others in Mysore; Adoni and others in the Ceded Districts, &c. &c.

DECCAN.

sedimentary rocks are overlaid by the trap formation, a volcanic product, fused by subterranean heat, and projected to the earth's surface, where it occasionally assumes a columnar form, but more usually may be traced in extensive sheets, covering a vast tract of country. Two rocks, of aqueous origin, peculiar to Southern India, are met with, capping trap and all other rocks, without reference to age or composition. These are *latérito* and *regur*. The former consists of an iron-clay. In its texture, it is full of cavities and pores, and contains a large quantity of iron. While in the mass, and excluded from the air, it is soft and readily cut; but upon being broken up and exposed, it soon becomes hard, and resists the effects of air and water better than brick. It is consequently one of the most valuable materials for building. The maximum thickness of its beds does not exceed 200 feet, and these are not altogether destitute of organic remains. *Regur* is the black cotton clay, formerly supposed to be produced by the decomposition of trap rocks, but now regarded, and apparently more justly, as a marine deposit. One other overlying formation requires notice,—the calcareous substance termed *kuunkur*, found on analysis to contain the elements of oolite and chalk. Its origin is referred to the action of thermal springs, charged with carbonic acid, bringing up lime in solution, and depositing it on the earth's surface. It is used as a rough building-stone, and universally employed to burn into lime.

The universal prevalence of granite and the hypogene rocks has been mentioned. It remains to describe the geographical position of the more recent and the overlying strata. Partial deposits of sand-rock, of a recent period, containing pelagic shells, are found scattered over the south-eastern extremity of the Peninsula; but the older sandstone and limestone beds are not met with south of Salem. The chief development of these older rocks lies in the district of Cuddapah, and again in Hyderabad, also in the Southern Mahratta country, and in the tract between the Godavery and the Kistna. A bed of shelly limestone occurs in the vicinity of Pondicherry, to which, from an examination of its fossils, geologists concur in assigning a more elevated position than to the limestone strata before described. The outpouring of the trap rock is distributed over a considerable portion of the Peninsula. It extends from the

DECCAN.

seashore, at the northern extremity of the Western Ghats, to its eastern limit at Nagpore and the banks of the river Toombuddra, and terminates southward on the seacoast, in the latitude of Fort Victoria or Bancot. Within these boundaries the landscape is marked by the usual distinctive features of basaltic rock; hills of tabular form rising from the general level, sometimes abruptly, in perpendicular masses; sometimes in steps, or terraces, piled one upon another, decked with magnificent forests, and producing beautiful and romantic scenery. From the southern termination of the trap, the laterite or iron-clay succeeds as the overlying rock, to Cape Comorin, covering the base of the mountains and the narrow tract that separates them from the sea, and occasionally exhibiting a succession of low rounded hills and undulations. It exists also in detached beds on the opposite coast of the Peninsula, expanding over a large surface near the south banks of the Pennar,* crowning the loftiest summits of the Ghats, and of the table-lands in the interior. Regur, like laterite, overtops all other rocks, with the single exception of the most recent deposits. This soil is chiefly indebted for its fertility to its retentive power in regard to moisture. When its surface is dried to an impalpable powder, the substratum retains its character of a hard black clay approaching to rock, usually moist and cold. "It occupies principally the elevated table-lands of the Ceded Districts, the Hyderabad, Nagpore, and Southern Mahratta countries. It is less common in Mysore, but is again seen in continuous sheets, from six to twenty feet thick, below the Salem Break, covering the lower plain of Coimbatore, Madura, Salem, Trichinopoly, Tanjore, Ramnad, and Tinnevely, to the vicinity of Cape Comorin."

Of the remote history of the Deccan little is known. Hindoo legend relates that it was invaded by Rama, king of Oude, when in pursuit of Ravan, the ruler of Ceylon, who had carried off his consort Siva; but the date of Rama's existence is involved in obscurity.⁹ An ancient distribution of the country into the national divisions of Dravira or the Tamul Country, Carnata, Telingana, Maharashtra, and Orissa, is, however, indicated by the five corresponding languages¹ of the Deccan, all of which are derived from an origin totally distinct from the Sanscrit.

⁹ Elphinstone, *Hist. of India*, 206.

¹ *Id. ut supra*, 217.

DECCAN.

In the fifth century before Christ, the Peninsula is stated to have been partitioned between the four kingdoms of Pandya, Kerala, Cola, and Chola.² Passing, however, to authentic history, we learn that the first Mahometan invasion of the Deccan was attempted in the year 1294, by Alaudin, afterwards emperor of Delhi. Its object was restricted to the assault of Deogiri, the capital of Maharashta; and this was successful, the city being captured and given up to pillage. A few years later, Alaudin extended his conquests over the whole of Maharashta, Telingana, and Carnata; and in 1325 the reduction of the Deccan was completed by Mohammed Togluk. But the supremacy of the emperor was not of long duration: the Hindoo rajahs of Telingana and Carnata were the first to recover their possessions. Their success was followed by the general revolt of the Deccan, in 1347, when Hasan Ganga founded the Mahomedan dynasty of Bahmani. His independence was recognised at Delhi, and the power of the empire was thus driven across the Nerbudda. In the struggles which ensued, the house of Bahmani succeeded in subverting the kingdom of Telingana, and, at a later period (1565), the fall of the monarchy of Bijayanagar or Carnata was effected, by the league of the Mussulman princes against Rajah Ram, at the battle of Talicote. Subsequent events tended to the dismemberment of the Bahmani empire; and its final dissolution gave rise to the independent Mahometan states of Beejapore, Ahmednuggur, Golconda, Bedur, and Berar. Of these the two latter, merging into one or other of the remainder, became extinct; and in the time of Shah Jehan, in 1630, the Deccan was divided into the three kingdoms of Ahmednuggur, Golconda, and Beejapore. The first of these became tributary to Shah Jehan in 1636; and in 1686, his son and successor Aurungzebe, subverting the monarchies of Golconda and Beejapore, the whole of the territory previously severed from the empire was recovered, and the Deccan once more passed under the rule of Delhi. But though Aurungzebe now grasped the universal sovereignty of India, he was not destined long to retain it. The Mahrattas, who had previously attracted little notice, had emerged from obscurity during the reign of his father, and were now about to act a conspicuous part in the history of the Deccan. In the late imperial contest with Golconda and Beejapore, they had shared the fate of the con-

² Elphinstone, ut supra, 218.

DECCAN.

quered; but their power and resources, though crippled, were not destroyed. The fortresses and districts of which they had been dispossessed were again fast falling into their hands; and upon Aurungzebe's retreat to Ahmednuggur, in 1706, they attacked the imperial army, and plundered its baggage. Ten years after the death of Aurungzebe, his successor concluded a pence with Saho, the Mahratta chief, and admitted his claim to levy tribute over the whole of the Deccan. The Mogul empire was now tending to its close. Asof Jah, whose descendants are known as the nizams of Hyderabad, had succeeded to the vicereignty of the Deccan. He was subsequently promoted to the office of vizier at Delhi; but being disgusted with the court, and sensible that his power rested upon a solid foundation, he resigned his appointment, and returned to his government at Hyderabad. The Mahrattas, in the interim, had obtained a large accession of territory, and at the time of Asof's return, the chief authority of the nation was wielded by Balaji, one of Saho's principal officers, and subsequently the founder of the dynasty of the Peishwas. This able minister had laboured unremittingly to concentrate the power of the Mahrattas; and having succeeded, he usurped the authority of his master, and offered himself as a competitor for the sovereignty of the Deccan. But Asof deemed the power of his rival too formidable for resistance: he therefore applied himself to accomplish its reduction by means of dissensions among the principal chiefs; but, failing in his attempt, he finally effected a compromise with the Peishwa, and entered the lists himself as an usurper. The result was the foundation, on the part of Asof, of the Mahometan kingdom of Hyderabad, which still continues to be ruled by his descendants; and the formation, under the Peishwa, of a powerful monarchy, comprising the larger portion of the territories now included within the limits of the presidency of Bombay. The remainder of the imperial possessions in the Peninsula, with few exceptions, were held by chieftains subject to the supremacy of one or the other of these two potentates. Those north of the Toombuddra were distributed principally between the rajahs of Colapore and Berar, and Angria of Colaba, all of whom acknowledged some degree of dependence upon the Peishwa. Of the provinces south of the Toombuddra, the Carnatic and Tanjore were held under the

DECCAN.

feudal sovereignty of the Nizam. The Mysore, though previously tributary to both Moguls and Mahrattas, assumed independence during the commotions of the times, and in the sequel became the prize of the Mahometan usurper Hyder Ali. In the extreme south, the petty state of Travancore, secured from invasion by its remote position, and by the sea and mountains which surround it, *appears to have long enjoyed an uninterrupted freedom from foreign sway.* The nabob of Kurnoul, Rajah Tondiman, the rajah of Coorg, and other inferior rulers, seized each on his own district, and rose to the rank of petty princes, acknowledging a feudal superiority, but maintaining their own exclusive right to internal independence.

Such were the changes introduced into the native governments of the Deccan in the earlier part of the eighteenth century. The possessions of European nations within the Peninsula afforded at that time no indication of future grandeur. A few petty settlements acknowledged the dominion of France and Portugal. The English occupied a station at Surat, and another at Madras; and these, with the island of Bombay, constituted nearly the sum of British territory in Southern India. In the subsequent contests for power which ensued between the native chiefs, the English and French took opposite sides. The results of these struggles proved unfavourable to the powers whose cause had been espoused by the French. Among the men of that nation most distinguished in India, both in war and negotiation, was M. Bussy, who established the French power and influence over the Northern Circars, so often referred to in the Indian history of the middle of the eighteenth century. These possessions, however, like most of the French acquisitions, remained to them only a very short time. Clive attacked them with a force from Bengal, and though opposed by a larger force, the skill, energy, and happy fortune which marked all Clive's enterprises, triumphed, and the Circars were transferred from the French to their great rival in India. Thenceforward the interests of France rapidly declined, the influence of the British rose in the ascendant, and a new empire was established in India. Within the limits of the Deccan the French still retain Pondicherry, with other minor settlements, and the Portuguese continue undisturbed within the slender territory of Goa and Daman; but important revo-

DEC.

lutions have occurred in the native governments within the Peninsula, from which the British alone, of all the European settlers in India, reaped any advantage. The dismembered provinces of Mysore, at the close of the first war with Tippoo, formed the earliest addition to their original acquisitions. A further annexation accrued upon the death of Tippoo, and the final partition of his dominions. This was followed by the incorporation with the British empire, of the Carnatic and Tanjore. Some years later, the forfeited possessions of the Peishwa tended to swell the extent of the empire. These acquisitions, with certain cessions from the Nizam, the subsequent conquests of Kurnool and Coorg, and the lapse, from failure of heirs, of Angria's territory of Colaba, and the raj of Sattara, constitute in the aggregate a continuous territory, stretching from the banks of the Nerbudda to Cape Comorin. Its greatest length from north to south measures 1,000 miles, and its extreme breadth exceeds 800; and if Sindo and a portion of British Guzerat be excluded, the Deccan, as defined in this article, will be found to comprehend the provinces now distributed between the two presidencies of Madras and Bombay, with the several native states already enumerated.

It will be obvious that in so large a tract of country there must be a great diversity of people and great variations as to manners and character. In the countries connected with the British government of Bombay, the higher classes, everywhere in the East the most unmanageable, were in 1822 admitted by Mr. Elphinstone to certain privileges. A great dislike existed towards the courts of law, and the privileged classes, of which there were three constituted, were exempted, the first totally, the second partially, from the strict process of the Adawlut; while a third class, composed of meritorious native military officers of the rank of soubahdar, were exempted from personal arrest. A commission was appointed, which took cognizance of cases involving claims upon the first two classes, and proceeded to dispose of them in a mode which, while securing justice, should be free from offence.³ The commission was subsequently abolished, and its duties transferred to an officer called "agent for sirdars."

DECKNALL.—A town in one of the native states known

DEC—DEE.

as the Cuttack Mehals, 39 miles N. from Cuttack, and 77 miles S.W. from Balasore. Lat. $21^{\circ} 1'$, long. $85^{\circ} 55'$.

DECTAUN,¹ in a detached portion of the native state of Gwalior, a town belonging to Scindia, on the route from Mow to Baroda, 20 miles² W. of former, 196 E. of latter. It is estimated to contain 1,000 houses,³ and about 5,000 inhabitants, and is the principal place of a pergunnah of the same name. Elevation above the sea 1,881 feet.⁴ Lat. $22^{\circ} 34'$, long. $75^{\circ} 31'$.

DEEANUTPOOR,¹ in the British district of Allypore, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Allypore to Agra, and 21 miles² S. of the former. The road in this part of the route is good, the country well-cultivated and populous. Lat. $27^{\circ} 38'$, long. $78^{\circ} 7'$.

DEEDWANA.—A village in the Rajpoot state of Joudpore or Marwar, 112 miles N.E. from Joudpore. Lat. $27^{\circ} 19'$, long. $74^{\circ} 30'$.

DEEG,¹ in the territory of Bhurtpore, a town situate in a lone tract, amidst numerous marshes and jhils, or small lakes, fed by the stream Manus Nye,² conveying the drainage of a considerable country lying to the west. As it is nearly surrounded by water during a great part of the year, it is then almost inaccessible³ to an enemy. Before dismantled by the British, its outline, the outer wall, was an irregular pentagon, the southern and longest side of which towards the middle curves inwards, or towards the north. At the south-west angle is the Shah Bourj,⁴ a high rocky mount, having on its summit an area of fifty yards square, and inclosed by a rampart, having four commanding bastions facing the four cardinal points. Within the walls, the fort, an extensive building with high rampart twenty feet thick,⁵ furnished with bastions, commands the whole town. Close to the west of the fort is the palace of the rajah, with a fine garden, inclosed by a high wall. The ground-plan of the garden is rectangular, 475 feet long,⁶ and 350 wide; and on each side is a remarkably beautiful building. In the middle is an octagonal pond,⁶ with openings on four sides, leading up to the four buildings, each opening having, from the centre of the pond to the foot of the flight of steps

leading into them, an avenue of jets d'eau." These beautiful buildings, which are surpassed⁷ in India for elegance of design and perfection of workmanship only by the Taj Mahal of Agra, are constructed of a fine-grained sandstone, quarried of great dimensions at Roopbas, in the south-eastern part of the Bhartpur territory.⁸ Deeg is a place of great antiquity. "The ancient name was Diragh, or Dirghpura, and will be found mentioned in the Skand Puran, and 4th chapter of the Bhagavat Mahatama."⁹ It became early¹ one of the chief strongholds of the Jats, from whom, in 1776, it was wrested by Nujuff Khan, the powerful minister of Shah Alim. After the death of Nujuff Khan, however, it reverted to the rajah of Bhartpur. Here, on the 13th of November, 1804, the army of Holkar was defeated² by a British force, under the command of General Fraser; and the Jats, having taken a hostile part by firing on the victors, siege was laid to the place on the 16th of December following, and on the 23rd of the same month it was carried by storm.³ Subsequently restored to the Jat rajah, it, after the capture of Bhartpur by the British, commanded by Lord Combermere, was surrendered⁴ without resistance, and dismantled. Distant W. from Muttra 24 miles.⁵ Lat. 27° 29', long. 77° 23'.

DEEGAREE, in the Rajpoot state of Joudpore, a village on the route from the town of Joudpore to that of Ajmeer, and three miles east of the former. The road in this part of the route, though sandy, is probably good, as Boileau travelled it on horseback, by moonlight, at the rapid rate of ten miles an hour. Lat. 26° 17', long. 73° 15'.

DEEGIL.—See DEG.

DEEGHYL, in the British district of Rohtuk, lieutenant-governorship of the North-West Provinces, a considerable village on the route from Kurnool to Rewaree, and 76 miles S.W. of the former. Water is abundant, though indifferent, and supplies are plentiful. The road in this part of the route is good. Lat. 28° 46', long. 76° 41'.

DEEGUCHEE.—A town in the British district of Sattara,

* Hamilton states,¹ "to preserve this town from the violence of the torrents that pour down from the hills during the rains, it is necessary to keep large embankments in repair."

DEE.

presidency of Bombay, 61 miles E. of Sattara. Lat. $17^{\circ} 30'$, long. $74^{\circ} 59'$.

DEEHA, in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a village on the right bank of the Ganges, 795 miles N.E. of Calcutta by the river route, 13 S.E. of the city of Allahabad by the same. Lat. $25^{\circ} 19'$, long. $82^{\circ} 3'$. E.I.C. Ms. Doc.

DEEMLA.—A town in the British district of Rungpore, presidency of Bengal, 39 miles N.W. of Rungpore. Lat. $26^{\circ} 6'$, long. $88^{\circ} 55'$. E.I.C. Ms. Doc.

DEENANUGUR, in the Lahore division of the Punjab, a town situated on the right bank of the Barco Dooab Canal, 89 miles N.E. of the town of Lahore. Lat. $32^{\circ} 10'$, long. $75^{\circ} 29'$. E.I.C. Ms. Doc.

DEENGROO.—A halting-place on a rivulet of the same name, on the southern declivity of the Shatul Pass. It is situate just above the limit of forest, in a tract having a rich soil covered with a close sward. Elevation above the sea 12,300 feet. Lat. $31^{\circ} 21'$, long. $78^{\circ} 1'$. Lloyd and Gerard, Tours in Hima-
laya, II. 10.
Journ. Roy. As.
Soc. I. 345.

DEENGURH.—A town in the native state of Bhawalpore, 32 miles S. from Bhawalpore, and 110 miles N.W. from Beekaneer. Lat. $28^{\circ} 56'$, long. $71^{\circ} 49'$. E.I.C. Ms. Doc.

DEENIUTLA.—A town in the native state of Coosh Behar, 61 miles N.E. from Dinajepore, and 10 miles S. from Behar. Lat. $26^{\circ} 7'$, long. $89^{\circ} 26'$. E.I.C. Ms. Doc.

DEEPLA.—A town in the British province of Scinde, presidency of Bombay, 162 miles E. of Kurrachee. Lat. $24^{\circ} 30'$, long. $69^{\circ} 40'$. E.I.C. Ms. Doc.

DEEROEE, a river of Assam, rises on the south-eastern boundary, in lat. $27^{\circ} 10'$, long. $95^{\circ} 21'$, and flows for about forty-five miles through the district of Scebpoor, to its junction with the Disang, a tributary of the Brahmapootra, in lat. $27^{\circ} 4'$, long. $94^{\circ} 41'$.

DEESA,¹ in Guzerat, or dominions of the Guicowar, a town on the river Bunnass² (western), the residence and possession of a petty Mussulman chief, styled the nawaub of Deesa, who is also nawaub of Pahlunpoor. There is here a British cantonment, which is situate on the left bank of the Bunnass, three miles N.E. of the town. Distance from Mhow, N.W., 301³ ¹ E.I.C. Ms. Doc.

DEHRA DOON.¹†—A fertile valley at the south-western

¹ *Trans. Roy. As. Soc.* I. 274.

² Index to Map of Malwa, 44, 117.

³ *Memoirs*, 209.

* Dhasan of Tassin; Desan of Franklin;¹ Dussaun of Malcolm.²

† Doon. in the language of the country, signifies "dale, or valley." Baber¹ says, "in the language of Hindoostan they call a julga (or dale)

DEHRA DOON.

base of the lowest² and outermost ridge of the mountains of the Himalaya, and forming with the pergunnah* of Jounsar Bawur, a British district under the lieutenant-governorship of the North-West Provinces. The valley is inclosed on the north by the Jumna river, separating it from Sirmour and Jounsar; on the north-east by the mountains of native Gurhwal; on the south-east by the Ganges, dividing it from British Gurhwal; and on the south-west by the Sewalik range, separating this district from that of Saharunpoor. The length of the valley in a direction nearly from south-east to north-west, or from Rikkee Kasee on the Ganges, to Rajghat on the Jumna, is forty-five³ miles. Its breadth varies from fifteen to twenty miles. It lies between lat. 30° — $30^{\circ} 32'$, long. $77^{\circ} 43'$ — $78^{\circ} 24'$.

The mountains on the north-eastern frontier of the valley, towards Gurhwal, have an elevation of 7,000 or 8,000⁴ feet above the sea; those of the Sewalik range from 3,000⁵ to 3,500. The elevation of the bed of the Ganges at the confluence of the river Sooswa, at the south-eastern extremity, is 1,200⁶ feet; that of the Jumna, at the confluence of the Asun, at the north-western extremity, is 1,469.⁷ Midway between those depressed extremities of the valley, a gently increasing elevation runs transversely from the Sewalik mountains to those on the north-eastern boundary, and divides the valley into two basins, that on the north-west drained by the Asun, and that on the south-east by the Sooswa, discharging themselves, as already mentioned, the former into the Jumna, the latter into the Ganges. The town of Dehra, situate on this ridge, has an elevation of 2,369⁸ feet; the source of the Asun, an elevation of 2,148;⁹ that of the Sooswa, which river takes its rise a few hundred yards⁹ from the former, has the like elevation. These rivers flow along the north-eastern base of the Sewalik range, the surface of the valley in general having a considerable slope to that part, and in consequence, nearly all the supplies to those rivers proceed from the north-eastern side of the valley. The formations of the Sewalik are recent, or tertiary¹ in the con-

deon." Dehra is the chief place of the valley, so that Dehra Doon may mean "the Dehra valley."

* The districts of Jounsar and Bawur¹ were disjoined from the raj of Sirmour, and annexed to the British territories, upon the expulsion of the Ghoorkas in 1815.¹

ventional language of geologists, and for the most part are composed of calcareous sandstone,² clay conglomerate, or marl, containing a vast profusion of fossil remains of mammalia, fishes, reptiles, and testacea. The more elevated range on the north and north-east frontier consists generally of what in the same language are styled transition formations, compact limestone,³ devoid of organic remains, clay-slate, greywacke,⁴ with occasionally dykes of trap and other stone, of supposed igneous origin, with extensive overlying beds of quartz sandstone, and in many places large beds of quartz. The transverse elevation connecting the Sewalik and north-eastern ranges, appears to be of loosely-aggregated diluvial formation, from the fact stated by Jacquemont,⁵ that the wells at the town of Dehra, situate on the crest, are nearly 200 feet deep.

The climate is marked by a range of temperature not inconsiderable. Dr. Royle⁶ states it to vary from 37° to 101°; and he adds, that snow occasionally falls in winter. In 1811⁷ the mean heat of June, the hottest month, was 88°; of December, the coldest, 60°; and of the whole year, 74°. Other observations, made some years earlier,⁸ give results not greatly differing from these; the mean⁹ temperature of January, which in this instance was the coldest month, being 52°; that of June, the hottest, 86°; and that of the whole year, 70°.

In 1839, the total fall of rain was sixty-seven inches; of which fifteen fell in July, and twenty-six in August. October was the driest month; the next in degree April; the next December, and then November. During the dry season, and in cleared situations, the climate is as healthy as in any part of India. "During the rains, however, and in consequence of the rich and rank vegetation in which the whole valley is clothed, from being under the action of numberless small streams, from the formation in the lower ground of extensive and stagnant marshes, and more especially from the miasma exhaled from the growth and increase of the underwood, as also of the trees themselves composing these mighty forests, fevers somewhat peculiar and local are generated; and in fact, for a European constitution at the above season, even a journey through, far more a residence in these wilds, would be certain

* By the Hon. F. Shore. The year in which these observations were made is not stated.

DEHRA DOON.

of producing⁹ them." The most unhealthy months are July, August, and September, during which the periodical rains fall; and it is stated, that of¹ the large number of individuals engaged in the extensive grants of land made by the government in 1837, not one person, European or native, escaped fever during the unhealthy period. Hopes, however, are entertained, that by clearance of the jungle and drainage of the swamps, the deadly malaria may be removed, or its effects materially mitigated. The Dehra Doon² is not under the influence of the hot winds.

⁹ Dr. Wallick, in McDonald, *ut supra*, 206.

¹ McDonald, *ut supra*, 256.

² *Id.* 258.

The general aspect of the country is very pleasing, according to the account of Herbert,³ who was well acquainted with it. He says, "The appearance of this valley is highly picturesque, particularly in the neighbourhood of Dehra. The intermixture of cultivation, in which the fields are defined by hedges, with patches of green, over which are scattered fine groves of trees; the undulation of the surface and its intersection by numerous streams, are features that might almost remind one of the scenery of England. The proximity of lofty mountains, occasionally clothed with forests, in which the pine, oak, and walnut are conspicuous, gives a variety to the landscape, which, viewed at a favourable season, is picturesque and beautiful in a high degree. The soil is gravelly, yet, to judge from the cultivation, far from poor." Jacquemont's⁴ impressions of the country appear to have been somewhat different; but he describes them with much liveliness. "Notwithstanding its solitude and elevation, Dehra, more than any other part of India, recalls to my mind the tropical scenes which I for the first time saw in America. The bold outlines of the mountains, and the varied tints of the forests with which they are covered, indeed, at first reminded me of scenes in the Alps; but the abundance of plantains (bananas) caused my thoughts to turn to Haiti. The varied productions of nature appear to be wonderfully affected by different circumstances. Numerous forms of the tropical vegetation of the plains of India abound here, though in a climate differing by a more continued prevalence of moisture, a partial exemption from hot winds, and a greater degree of cold in winter; but there is a resemblance in the solstitial rains, one of the most striking circumstances of inter-tropical meteorology. Those rains, which prevail throughout

³ *Ut supra*, xxxv.

⁴ *Ut supra*, 14.

DEHRA DOON.

the whole southern declivity of the Himalaya, even to the greatest height, are the cause why the tropical forms of vegetation are found mingled with the Alpine at a height exceeding 6,000 feet above the sea."

Arborescent vegetation is greatly developed, and covers the uncultivated parts with dense and almost impenetrable forests, consisting of trees, many of which are common in more southern parts of India; and arborescent species of genera of which the herbaceous ones are found in the colder parts of the world. Here also occur plants found not only in Southern India, but even under the equator. A large number of each class are enumerated by Dr. Royle.⁵

The zoology is important, comprising the elephant,^{6*} wild buffalo,⁷ tiger, leopard, hyæna, lynx, jackal, wild hog, bear, deer, and the four-horned⁸ antelope.† Of quadrumanous animals, there are the langur (*Simia entellus*) and bandar (*Simia rhesus*). A species of python⁹ is met with, as might be expected in a tract so congenial to the nature of those reptiles.

The soil is in general a deep rich mould, though in some places composed of shingle or gravel swept down by the torrents from the mountains. For the most part, the soil and climate are adapted to the successful growth of rice, maize, gram (*Cicer arietinum*), cotton, sugar, opium, hemp, indigo, plantain; and, according to a statement in a late work of good authority, "every¹ English plant thrives luxuriantly in the Dhoon, where in March, April, and May, a splendid show of English flowers is to be seen in all the gardens." The eminent botanists, Dr. Royle² and Dr. Falconer,³ who had ample means of local

* Jacquemont¹ unaccountably asserts that there are no elephants in these tracts:—"Les forêts du sommet des plaines qui s'étendent immédiatement le long des montagnes, celles qui sont indiquées sur la plupart des cartes comme le séjour des éléphants, des rhinocéros, des tigres, &c. ; mais les deux premiers de ces animaux ne s'y trouvent pas, ou ne s'y trouvent plus." Foster,² however, states that elephants abounded between Lal-Dong and Hurdwar, and that they were captured for the sake of their tusks; and in the steps taken for measuring a base³ in the Dehra Doon, in conducting the trigonometrical survey of the Himalaya, wild elephants were found troublesome. Mundy⁴ also mentions, that in the same vicinity they attacked his baggage-elephants.

† It is, however, stated in a modern publication,¹ that "the antelope was never seen wild in the Dhoon."

DEHRA DOON.

information, considered the south-western declivity of the range rising north of the Dehra Doon as well suited for the successful growth of tea. The result of the experiments made in consequence has amply justified the sagacity of their conjectures.⁴ Tea has been produced of a quality which has commanded the approval of the best professional judges. According to the latest reports, the plant was thriving in different localities, extending over four degrees of latitude and three of longitude, and it was believed that in Dehra Doon alone there were 100,000 acres suitable for its growth.

⁴ Rev. Disp. to India, dated 22 Sept. 1846.

The statistics⁵ of the annual produce and consumption of sugar are stated as follow. The consumption, it will be seen, vastly exceeds the home supply.

⁵ Sugar Statistics, Calcutta, 1848.

Estimated cultivation of cane in beegahs of 14,100 square feet, 3,149.

Estimated produce of goor from cane, in maunds of 80 pounds each, 8,600.

Average produce per beegah, maunds 2 29 $\frac{3}{4}$.

Estimated consumption of the district, whether in sugar, khaur, goor, or the raw cane, in maunds of 80 pounds, 67,725.

Number of pounds per head on which estimate is based, 96.

Quantity consumed above the produce, 59,125 maunds.

In 1837 extensive grants were made by government in the Dehra Doon. The terms⁶ were a forty years' lease, under which one-fourth was to be rent-free for the whole term, and the remainder for three years; after the expiration of which the twentieth part of the rent assigned was to be paid, rising annually in twentieths, until, at the end of the twenty-third year, the maximum rent of four annas per beegah, or twelve annas per acre, should become payable.* The grants in the first instance amounted to something less than 30,000 acres,⁷ and the grantees having expended large sums in conveying emigrants and cleaning and cultivating the lands, saw reason, as the year advanced, to anticipate their reward in crops of the finest quality; but on the setting in of the rains, the jungle-fever⁸ became so general, that from death, the prostration of

⁶ Rev. Disp. to India, dated 23 Feb. 1842.

⁷ McDonald, *ut supra*, 202.

⁸ *Id.* 252.

* It would appear, that previously such measures were discountenanced. Mr. Shore, long the political agent here, entertained, or expressed an opinion, "that an acquaintance¹ with Europeans contaminated the natives," and was even averse "to too general a range for visiting the mountains."²

¹ McDonald, *ut supra*, 252.

² Skinner, *Excursions in India*, 1. 202.

DEHRA DOON.

disease disabling many who survived, and the departure of others in terrified flight, scarcely any hands remained to gather the harvest, which consequently rotted where it grew. The circumstances of the country, however, in regard to health, appear, as already intimated; to be improvable, and better results are looked for. It does not appear that the expectations of the grantees have been generally realized, as, in some instances² at least, they have withdrawn from the speculation. At the time the valley was wrested from the rajah of Gurwhal by the Ghoorkas, it is said to have yielded an annual revenue of 10,000*l.*,¹ * though those invaders could never realize more than 2,000*l.* from it. Under British rule its prosperity has evidently advanced.

3 Oct. 1840.

¹ *Frazer, Tour in*
Himalaya, 300.

² *Memoir on*
Statistics of N.W.
Prov. 1848, p. 178.

The number of mouzabs or townships in Deyrah Doon proper² is 214. The area is 673 square miles, or 431,240 British statute acres. The following statement shows the respective proportions of assessed and unassessed land. The former, termed malgoozaree, being divided into cultivated and cultivable; in the latter, lakhiraj or land yielding revenue, which, however, is alienated from government, either for public or private purposes, being discriminated from that which is barren.

Malgoozaree, or	{ Cultivated acres.....	40,196
assessed land	{ Culturable acres	67,791
Minhae, or	{ Lakhiraj acres	17,865
unassessed land	{ Barren acres	305,388
		431,240

³ *Jacquemont*,
iv. 19.

The people are of mixed character. The Mussulman³ portion of them resemble those of the adjacent plains, in their high and strongly-marked features, full beard, and general figure: the Hindoos, on the other hand, exhibit traces of the blood of their Ghoorka conquerors. According to Jacquemont, they are a lively, inoffensive, and honest race. Their dress is poor and simple, consisting of a small gown, and a cotton wrapper on the head. The lower order have merely a small swathe around the loins.

The following returns of the population of the Deyrah Doon

* Herbert¹ states the amount at 8,000*l.*

DEHRAH.

proper are the result of a census⁴ made in the year 1845. They include men and women, adults and children, of all ages.

Hindoo	{ Agricultural	18,534
	{ Non-agricultural	4,856
Mahomedan and others not Hindoo	{ Agricultural	4,783
	{ Non-agricultural	3,910
Total		32,083

The above gives a proportion of something more than forty-seven persons to each square mile.

The district (including Jaunsa Bawar) is under the charge of a superintendent; but the judicial administration is connected with that of Saharunpore,⁵ and subordinate to it.

Previously to the Goorkha invasion of the Dehra Doon, in 1803, it was regarded as the most valuable⁶ part of the dominions of the rajah of Gurwhal, who frequently resided at Dehra, and made his final stand at the village of Gurudwara, in its vicinity, where he was defeated and slain. The invasion of the valley by the British, in 1815, during the Nepaul war, was marked by the obstinate, though ineffectual, defence which the Goorkhas made at Kalunga or Nalapani,* and the fall of Général Gillespie and a considerable number of men under its walls. On the final expulsion of the Ghoorkhas, it became a British district.

DEHRAH,¹ the principal place of the Debrah Doon, is situate on the crest of a ridge of moderate height, extending from the Sewalik range to that bounding the valley on the north-east. It is situate amidst an extensive and dense grove of very luxuriant mango-trees, and surrounded by verdure, the vicinity being watered by a torrent descending from the mountains. As the intermitting nature of the stream renders the supply of water from it precarious, the town is in dry weather supplied from several wells, nearly 200 feet deep. Jacquemont² describes the place as a very large village, consisting of several cottages; and in a letter, bearing date May, 1842, it is mentioned as "a large town, in the neighbourhood of which are many houses, the property of Europeans." Its situation is favourable for traffic, being at the intersection of the route from Hurdwar to Sirmoor with that from Saharunpore and

the plains to the British sanitary stations of Mussourie and Landour, and to Western Gurwhal. Whatever may be the present prosperity of Delhra, it must have resulted from British rule; for in the account of the trigonometrical survey of the Himalaya, drawn up about 1820,³ where it is noticed as one of the stations of small triangles, the town is said to be "small and poor." Mundy,⁴ writing eight years later, describes it as inconsiderable, but with good cantonments, and a handsome temple, built of stone, and embellished externally with designs in stucco. The elevation of this place above the sea is 2,369⁵ feet. Distance N.W. from Calcutta 974⁶ miles. Lat. 30° 19', long. 78° 5'.

DEJEEKOTE.—A fort in Sinde, belonging to Ali Moorad, ameer of Khyrpoor, from which town it is distant eleven miles south. It is built on a range of low limestone hills, proceeding in a direction from south-east to north-west, and reaching the Indus at Roree. It consists of a number of fortifications crowning several eminences, and connected by a single mud wall pierced with loopholes. Here, in January, 1843, the British army was encamped during the advance of Sir Charles Napier to destroy Emaum Ghur. Though stronger than most of the fortresses of Sinde, Dejeekote is open to capture by escalade. There is a large tower, which was intended to contain the treasure of the Ameer, and which is covered by an irregular outwork in a singular style. On the south side of the fort is a magazine and manufactory of powder.

- DEK—DEL.

This fort is called also Ahmedabad. Lat. $27^{\circ} 22'$, long. $68^{\circ} 48'$.

DEKAR.—A town in the native state of Nagpoor, or dominions of the rajah of Berar, 140 miles E. from Nagpoor, and 172 miles W. from Sumbulpoor. Lat. $21^{\circ} 30'$, long. $81^{\circ} 20'$. E.I.C. Ms. Doc.

DEKOOLEE.—See DEOKULLEE.

DEKTOWLI, in the British district of Mynpooree, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Aligurh to that of Etawah, and 34 miles N.W. of the latter. The road in this part of the route is good; the country open and well cultivated. Lat. $27^{\circ} 8'$, long. $78^{\circ} 38'$. Garden, Tables of Routes, 45.

DELHI.¹—A British district, within the limits of the lieutenant-governorship of the North-Western Provinces, so called from the celebrated city, its principal place. It is bounded on the north by the British district of Paneeput; on the east by the Jumna, separating it from the British districts of Meerut and Boolundshuhur; on the south by Bullubgurh and the British district of Goorgaon; and on the west by the district of Rhotuek, and by Buhardoorgurh and Jhujur. It lies between lat. $28^{\circ} 24'$ — $28^{\circ} 54'$, long. $76^{\circ} 49'$ — $77^{\circ} 29'$, and has an area of 602² square miles. The population in 1848 amounted to 306,550. Of this number, 85,448 are returned as Hindoo and agricultural; 129,066 as Hindoo non-agricultural; 9,227 as Mahometans, and others not Hindoo, agricultural; and 82,809 of those classes non-agricultural. Nearly one-half the entire population of the district is concentrated in the city of Delhi;³ and if the suburbs be included, the proportion will be found to exceed one-half. Exclusive of the city and its suburbs, the district is divided into two pergunnahs,—northern and southern. Of these, the former is far the more populous, as it contains only 172,126 British statute acres, and has a population of 74,917; while the southern pergunnah, with an area of 211,634 acres, has a population of only 71,354. In both pergunnahs, the Hindoo population greatly preponderates; its proportion to the number of other classes being, in round numbers, about thirteen to two. But in the city and suburbs of Delhi, long the seat of a powerful Mahomedan monarchy, the proportion becomes little more than eight to seven. ¹ E.I.C. Ms. Doc.

DELHI.

The eastern, northern, and north-western parts of this district are watered by the Jumna and its branches, by the Delhi Canal, or that of Ali Mardan Khan, and by the Hansouti Nullah, a torrent which, in the rainy season, expands into the Farrukhnagar Jhil, an extensive plash⁴ or shallow lake, discharging itself into the Jumna about two miles north of the city. The southern part is barren,⁵ with an uneven surface of rocky⁶ ridges. The aspect of the country is thus described by Dr. Royle:—"Delhi, the capital of Northern India, situate on the western bank of the Jumna, nearly at the upper part of the inclined slope which forms the plains of India, is elevated about 800 feet above the level of the sea. The soil is barren, and remarkable for its saline efflorescence; and the wells, for the brackishness of their water. The rocky soil, always exposed to the solar rays, absorbs much heat, and a high temperature, with considerable dryness, is produced in the hot weather; but from the openness of the country, and exposure to the winds which pass over extensive* lakes in the vicinity, a greater degree of cold is produced in winter than we should otherwise expect. We do not, therefore, find in Flora round Delhi, such plants as Guttiferæ, Anonacæ, and Strychnæ, which, requiring moisture with heat, flourish in the southern provinces of India. But the climate in general being favourable, and the minimum of cold not long-continued, we find many of the plants which are common in warmer parts of India, but which are not found at Saharunpore."

¹ India Jud. Disp. 7 Aug. 1839.

The climate being in general dry,⁸ and the soil for the most part either sandy or rocky, requires consequently to be fertilized by frequent applications of moisture. The principal alimentary crops are barley, wheat, and pulse. The demand of government in this district, on account of the land revenue, amounted, in 1846-47, to 34,9677. The assessment has been fixed for a series of years, and is not liable to increase until the year 1870.⁹ The district is intersected by the grand trunk road from Calcutta, and is also connected with Meerut by means of an excellent road, completed some years ago.¹ That a tract having inconsiderable natural resources, should for so long a period have contained the capital of a vast empire, seems extraordinary. It probably resulted from the progress

* The jhil of Farrukhnagar, already mentioned.

DELHI.

of the conquest of Hindostan, previously to the British sway, having always been from the west to the east. Delhi, consequently, was found the best station for maintaining political and military communication between the Deccan and the great valley of the Ganges on the one side, and on the other the Punjab and Affghanistan, usually the base of operations to invaders.

DELHI.^{1*}—A celebrated city, the principal place of the British district of the same name, under the lieutenant-governorship of the North-Western Provinces. The site of the present city is a low rocky² range, about a mile from the right bank of the Jumna, and on an offset³ of that river, which leaves the main stream five⁴ miles above the town, and rejoins it two miles below. The approach from the south-east, or the direction of Agra, is very striking, from the innumerable ruinous monuments of former prosperity and grandeur. "Everywhere⁵ throughout the plain, rise shapeless half-ruined obelisks, the relics of massive Patan architecture, their bases being buried under heaps of ruins bearing a dismal growth of thorny shrubs. Everywhere one treads on overthrown walls. Brick mosaics mark the ground-plan of the humbler dwellings of the poorer classes. Among the relics of a remote age, are occasionally to be seen monuments of light and elegant style of architecture, embellished with brilliant colours, gilt domes, and minarets encased in enamelled tiles." These surprising collections of ruins are the remains of the ancient city of Delhi, which, according to Wilford,⁶ extended above thirty miles along the banks of the Jumna. The present city, founded by Shahjehan in 1631, is about seven^{7†} miles in circumference, and inclosed on three sides by a fine wall, which is interrupted towards the river. Shahjehan disposed along this defence a few weak towers scarcely projecting⁸ from it; but since the acquisition of the city by the British, it has been strengthened⁹

by large bastions, each mounting nine cannon.* A ditch has also been excavated and the glacis raised. As the curtains are extensive, small external martello towers have been constructed, to bring the foot of the walls under the fire of musketry.¹ The tops of but few houses appear above the ramparts, over which rise graceful acacias, and still overtopping these, lofty detached date-trees; while the minarets of mosques, and tombs shaded with the gloomy foliage of the salvadora, are scattered over the glacis. The Jumma Musjeed,² or principal mosque, and the palace, displaying a very high and extensive cluster of towers and battlements, rise above all, and render the external aspect of the place very imposing. Franklin³ enumerates seven gates,—the Lahore, Ajmere, Turkoman, Delhi, Moor or Mohur, Caubul, and Kashmere. Bacon,⁴ who visited the place ten or twelve years ago, gives the same number, but styles the Caubul the Agra gate. The actual number, however, appears to be eleven,⁵—the Cashmere, Lahore, Caubul, Buddurnao, Ajmere, Turkoman, Delhi, Rajghat, Negumbod, Lall, and Kaila gates. The last four are on the river face. The Cashmere gate has casemated apartments for the accommodation of the city-guard, which is stationed there. The streets are for the most part narrow, but the Chandni Chauk,† or principal street, which runs north⁶ and south from the gate of the palace to the Delhi gate of the city, a length of about three quarters of a mile, is fifty yards wide, having good shops⁷ on both sides. It is also remarkably clean, a small raised watercourse⁷ flowing down the middle of the street in a channel of red stone.⁸ There is another large street running east and west, from the gate of the palace to the Lahore gate of the city, but it is inferior to the Chandni Chauk, though like it provided with a watercourse.⁹ The inhabitants have, however, spoiled the appearance of both by erecting houses in

DELIH.

the centre and across the streets in some places, so that it is not without difficulty that their original course can now be traced. In the Chandni Chauk is situate the imperial palace, described by Heber¹ as one of the noblest kingly residences he had ever seen; far surpassing the Kromlin, though not equal to Windsor.² It is inclosed on three sides³ by a wall of red granite, a mile in circumference, and about⁴ forty feet high, flanked with turrets and cupolas. It is very beautifully built, and has two noble gateways, each defended by a barbican. On the remaining side it is defended by the river (the branch of the Jumna), over which is a narrow bridge,⁵ forming a communication with the old fort of Selimghur, on the eastern bank. That antique fort is supposed to have been raised by some early Patan sovereign, and is in a very heavy, massive style of architecture, devoid of ornaments, except a few rude carvings on the mouldings and cornices. The entrance to the palace is through a succession of noble and very lofty gateways, built of red granite⁶ highly sculptured; the principal one is described by Heber⁷ in the same terms which he applies to the palace generally. A splendid Gothic arch in the centre of the great tower is succeeded by a long vaulted aisle, like that of a Gothic cathedral, with a small open octagonal court in its centre, all of granite, and all ornamented with inscriptions from the Koran, and finely-carved flowers. The Dewani Khas, or "private council-chamber," is a pavilion of white marble,⁸ surmounted by four cupolas of the same material,⁹ and open on one side to the court of the palace, on the other to its garden. Its pillars and arches are exquisitely carved and ornamented with arabesques gilt and inlaid, flowers, and inscriptions,* in the most elaborate Persian character. A rich foliage of silver, which formerly graced the ceiling, has been long since carried off. At present this splendid and tasteful hall is seldom entered by the emperor, and is in a very filthy state, being the retreat of crows, kites, and other unclean birds.¹ The garden, though now quite neglected and desolate, was formerly extremely beautiful, and refreshed by numerous

DELHI.

elegant fountains of white marble, supplied from an aqueduct of the same material. Within its inclosure is an octagonal pavilion of white marble, containing a fountain and an elegantly-ornamented bath, and consisting of three very large apartments surmounted by white marble² domes; but all is now mutilated and defaced with dirt. The Moti-masjid, or private mosque for the court, is an elegant little building of white marble, exquisitely carved, but, like the rest, neglected and dilapidated. The Dewanee-aam, or public hall of audience, is a large and splendid pavilion of marble, but now fallen into ruin and neglect, the throne, when seen by Heber,³ being nearly covered with pigeon's dung. Near the palace, and in the Chandni Chank, is the small mosque of Roshun-a-Dowlah, from which Nadir Shah witnessed the massacre of the inhabitants of Delhi by his troops. The Jumma Masjid, or principal mosque, is situate* on a small rocky eminence, of such height that the platform from which the structure rises, overlaps the adjacent houses, and is thirty⁴ feet above the general level of the city. This platform or court, a square of 450 feet, is paved with red stone, and on each of three sides is entered through a large gateway, approached from below by flights of stone steps. In the middle is a marble reservoir for water, filled by several fountains supplied from a canal by means of machinery, and intended for the ablutions required in the Mahomedan ceremonial. On three sides the court is skirted by open arcades, with octagonal pavilions at convenient intervals; the west is occupied by the mosque, a splendid structure of an oblong form, 261⁵ feet in length, and approached by another magnificent flight of stone steps. The whole front is faced with large slabs of fine white marble, and along the cornice are ten compartments, four feet long and two and a half broad, inlaid with numerous inscriptions⁶ from the Koran, in the Nuskhi character, executed in black marble. The interior is paved with flags of white marble, three feet long and a foot and a half broad; and the walls and roof are lined with the same material. The

* Heber¹ states "very advantageously." Bacon,² on the contrary: "The position is not felicitous, being in a low, dirty part of the city, amid narrow streets and meanly-built houses." It is presumed, the epithet "low" is not intended to indicate deficiency of elevation, but applies to the character of the neighbourhood.

DELHI.

structure is surmounted by three domes⁷ of white marble intersected with black stripes, and at each extremity of the front is a minaret* of considerable height, and having a winding staircase of 130 steps of red stone, by which access is obtained to the summit, whence is a fine and extensive view of the city, with its palaces, mosques, and battlemented walls, as well as of the surrounding country, widely overspread with monuments and other buildings in every stage of decay. Attached to the mosque is a large and deep well,⁸ said to be excavated in solid rock, and from which the water is raised by means of complicated machinery and a succession of reservoirs. In 1809, the machinery became so much decayed as to be unserviceable, until repaired by the British authorities. Hamilton⁹ seems to intimate that the fountains in the court of the mosque are supplied from this source, and not from a canal, as stated by Heber. The Jumma mosque was commenced by Shahjehan† in the fourth year of his reign, and completed in the tenth, at an expense¹ of about 100,000*l.* English money. Authority was given in 1851 for the repair of the building.² Of the other religious buildings, the only one worthy of much notice is the Kala‡ Masjid, or Black Mosque, so called from the dark hue given it by time. It is a structure of no great size, in a plain massive style of architecture, according to the plan of the primitive Arabian mosques, and consists of a square³ court, surrounded by an arcade, and surmounted by numerous small ill-shaped domes. It is generally supposed to have been built by some of the early Affghan sovereigns.

Near the Cashmere gate is an English church,⁴ erected at the cost of 10,000*l.*, by the munificence of Colonel Skinner, a highly distinguished commander of irregular troops in the East-India Company's service.

Though above one-half of the population of the city consists of Hindoos, their temples⁵ are mean, in consequence perhaps of the general poverty of the votaries of the Hindoo creed.

The many gorgeous palaces of the nobles of Delhi, which once

DELHI.

gave so splendid an aspect to the city, have been in a great measure demolished, the beams and other wood-work having been torn⁶ away for fuel by the Mahrattas and Rohillas. Considerable improvements have, however, taken place since the acquisition of the city by the British, who have made it more cleanly, built a court of justice,⁷ and, for the resident, a palace, which is surrounded by several fine houses in the Italian style of architecture. A great number of houses have also been built by the native inhabitants, the number of whom is considerably on the increase.

During the prosperity of the city, all parts were copiously supplied with water by means of a canal, made, at vast expense and with much skill, by Ali Murdan Khan, a munificent Persian, of great ability, and high in command⁸ under Shah Jéhan. Drawing its supply from the canal of Feroz Shah, near Rair, a distance of seventy miles, this great watercourse, as it approaches the city, is conducted along the summit of a prolonged artificial mound, of such an elevation that the bottom of the channel is much higher than the surrounding country; holding its course, by means of an aqueduct of masonry, over a considerable depression, and skirting the north-eastern base of the range of rocky hills stretching westward from Delhi, the stream is finally led across it, in a channel cut through the solid rock for nearly three miles,⁹ being twenty-five feet in breadth, twenty-five in depth, generally, but in one place sixty feet. It¹ then enters the city, and, passing through it by an open channel, traverses another long extensive aqueduct, by which it reaches the palace, throughout the whole of which it ramifies, in open or covered courses, having outlets to the Jumna; thus diffusing constant streams of fresh water. In like manner, in the space between the range of hills and the palace, numerous underground channels were cut, leading to the various residences of the nobles, and the different divisions of the city; yielding to the whole city and its suburbs a supply of good water, from open well-shafts connected with these subterraneous water-courses. On a review of the ancient works in Delhi connected with the canal, it is obvious that money must have been expended with a most lavish hand, to effect even that of which the existence is known; and much is yet hidden in the ruins of the neighbourhood. According to Polier,² a watercourse ran

DELHI.

through every principal street; and such a copious and pure supply was inestimable to Delhi, as the water of the Jumna in the neighbourhood of the city, impregnated with natron,³ is disagreeable and unwholesome. If, as stated,⁴ Ali Murdan Khan served Shahjehan from 1638 to 1656, the canal must have been made in that interval. The resulting revenue appears to have been assigned as a remuneration to the officer who provided for the requisite repairs; as Safdar-jang, the father of Shoojah-oo-dowlah, the nawaub of Oude, is alleged to have derived an annual revenue⁵ of 250,000*l.* from it.*

In the course of the revolt of Safdar Jang,⁶ in 1752, and the subsequent disorders and disasters of Delhi, the canal went to ruin,⁷ and the supply of water was cut off; and though subsequently restored, at a cost of 10,000*l.*, by Ahmed Shah Doorance, in one of his temporary occupations of the city, it again became unserviceable through neglect, and the supply was interrupted, until, in 1820,⁸ the requisite repairs having been effected by the British authorities, the watercourses and conduits of the city were again set flowing, to the unspeakable joy of the inhabitants, who went out in jubilee⁹ to meet the stream, throwing flowers and other offerings into the water, and imploring blessings on the government.

When the prosperity of Delhi was at its meridian, there was, near the left bank of the Jumna, opposite the palace, an imperial preserve and pleasure-ground, surrounded by numerous palaces of the nobles; and to supply these, as well as to irrigate the Doab, Ali Mardan made another canal,¹ which, drawing its supply from the Jumna on its left side, nearly opposite the commencement of Feroz Shah's work, proceeded

* It appears that the direct revenue¹ derived from the Delhi canal in the two years ending 1838, amounted to 50,000 rupees above the entire ordinary expenditure for maintenance and management, while the indirect revenue from increased fertilization in the four districts of the Delhi territory (including Jheend) benefited by the canal, is assumed at 132,635 rupees; and after making some deductions, the annual income to the Company's treasury from the canals is estimated at 170,000 rupees, upon an outlay of about eleven lacs (110,000*l.*), which gives a return of nearly 15½ per cent. The financial results are thus highly satisfactory, whilst the other effects, rendering hundreds of villages populous, flourishing, and almost independent of drought and the fluctuations of seasons, and in securing a large population from famine and distress, are highly gratifying.

tracts from Report
of Mr. A. A. Ro-
berts (Officiating
Collector).

According to a recent census (1845-46), the city of Delhi contains 137,977² inhabitants; of which number, 71,530 are stated to be Hindoos, 66,120 Mahomedans, and 327 Christians. The inhabitants of the palace of the titular sovereign are not included in the above return; but they cannot be numerous, as nearly all the servants of the permanent residents pass the nights outside its inclosure, returning to their duties in the morning. But besides the city, there are extensive suburbs—"the Islington, Clerkenwell, &c., of Delhi," as the British officiating collector termed them. According to a census made in 1847, these contain a population amounting to 22,302. The entire population of Delhi and its suburbs consequently exceeds 160,000. According to a table, published in the local Gazette, of the amount of traffic crossing the bridge of boats at Delhi, in 1852, the number of buffaloes is returned at upwards of 100,000, of mules and ponies 84,000, and of hackeries 65,000.³

The Delhi College⁴ is under the management of a local committee or council, composed partly of European and partly of native members. The college was founded in 1792. In 1829, Nawwab Itmad-ood-Dowlah, formerly minister of the king of Oude, endowed the college with the sum of 170,000 rupees, the interest of which produces 7,253 rupees per annum; and this sum, added to the government grants and assignments, raises its gross receipts to the sum of 40,580 rupees per annum. The institution is divided into four departments,—English, Arabic, Persian, and Sanscrit. On the 30th April, 1851, the number of students was as follows: Christians, 22; Mahomedans, 206; Hindoos, 105; giving a total of 333.

⁵ 1851.

At the time of Heber's⁵ visit, in 1824, the exterior of the palace of the emperor was guarded by the troops of the East-India Company, but the internal duties were performed by a provisional corps, raised in the name of the local sovereign, and nominally under his orders. During Bacon's⁶ visit, several years afterwards, one corps in the East-India Company's service was stationed within the city, the remainder of the

⁶ *Ut supra*, II. 218.

garrison being cantoned outside the walls. The arsenal is situate on the bank of the Jmna, and at the time of the visit of Von Orlich, in February, 1843, contained 110 guns, of different calibre, and other arms of various kinds, arranged with great care and taste. The powder-magazine, until a very recent period, was situate within the walls of the city. Its dangerous position was brought to notice in the year 1850, and orders were given for its removal.⁷ It seems unaccountable, that for the deposit of such stores a site should have been so long retained in the midst of a great city, and nearly three miles from the military cantonment.

⁷ Bengal Mll.
Disp. 3 Sept. 1851.

The surrounding country is widely overspread with vast ruins, principally of Indreput⁸ or Délhi, the seat of empire previously to the foundation of the present walled town of Shahjehanabad. This scene of desolation extends from the garden of Shahlimar, north-west of the present town, to some distance beyond the Kutb Minar, nine miles south of it. Even on the north-west, where the extent of dilapidated remains is smaller, the road is a "continued avenue of ruined tombs, gardens, serais, and palaces,"⁹ up to the walls of Delhi. The Shahlimar,* made by Shahjehan, in 1632, is a mile in circumference, and is popularly reported to have cost a million¹ sterling; but it is now in such a ruined state, as to present little evidence of such expenditure. Thorn² says, "Shah Jehan evinced, in the construction of these gardens, the same taste for picturesque beauty and sublimity as he did genius in building and other works of art. Here every provision was made to render seclusion pleasant, to gratify the senses, to soften the cares of royalty, and to beguile the tedium of life. Pavilions, pleasure-houses, and baths, invited to refreshment and repose, while grottos and groves afforded ample protection from the intensity of the solar heat." This once splendid retreat is surrounded by a high brick wall, having, at intervals, octagonal pavilions of red stone, but all much dilapidated, the only vestiges of its former attractions being a number of trees, of great size and age, amidst which is situate the country mansion,³ built some years since by the British resident. No traces of walls mark out the extent of ancient Delhi; but the ruins extend over a tract altogether about thirty miles in cir-

DELHI.

cumference. It may be that this vast area was at no one time continuously occupied by buildings, but that the population shifted from place to place, and thus different parts became in succession covered with habitations. A few hundred paces to the south of the present city, is the Kotela or citadel of Feroz Shah, formerly the fortress of the old city, within the north-western angle of which it is situate. On one side it was washed by the Jumna,⁴ which now seldom reaches it, except in very heavy floods. The works of this citadel were very extensive; but the architecture is clumsy in style and rough in execution, and has no pretence to aught but strength. The material is the rough wrought stone found on the spot, which is too hard to admit of being better worked. The Kotela was to old Delhi what the Lal Killa is to the present city, and was probably considered an elegant building in remote times. Rising from the terraced roof of a building at the bottom of the courtyard, is a pillar, popularly called the Lath or Staff of Feroz Shah, the visible part measuring thirty-seven⁵ feet in length, and ten feet four inches in girth at the base. It is a single shaft of red sandstone, without any joint, and is thought by Prinsep⁶ to have been quarried in the Sewalik Mountains at Rajpur, on the bank of the Jumna. It bears several inscriptions, some in Sanscrit,⁷ of a comparatively modern date (as late as the twelfth century); of others, "the language⁸ differs essentially from every existing written idiom: it is, as it were, intermediate between the Sanscrit and the Pali." The most ancient of these inscriptions purports to have proceeded from Asoka, surnamed Pirjadassi,⁹ a Buddhist monarch, anointed 325¹ years before the Christian era, and its tenor is the inculcation of some of the observances of that sect. The building, on the roof of which is the pillar, stands close to the ramparts of the river-face. It is square, and has three stories in height, all vaulted. Its use seems to be matter of uncertainty. There are buildings near to this which may have been appropriated to the purposes of a menagerie; but in the judgment of Prinsep, that on which the pillar stands was not so employed. The most probable conjecture is, that it was a summer-house. Heber² erroneously describes the shaft as "a high black pillar of cast metal, called Feroze's Walking-stick;" and Bacon³ unaccountably represents it as standing on the ground.

DELHI.

Similar monuments, with the same Buddhist inscriptions, are found at Allahabad,⁴ and two other places in India of less celebrity. The popular name has resulted from the pillar having been re-erected⁵ in its present position (probably about 1355⁶) by Feroz Shah, the Patan monarch of Delhi. Close to the elevated terraced roof on which this pillar stands, are the ruins of a large mosque.⁷ The old Patan fort,⁷ contiguous on the south to these various buildings, is inclosed by walls sixty feet high. At each angle is a circular bastion, and in the middle of each side a gateway, defended by two round towers, pierced with loopholes. About a mile and a half south of this is the tomb of Humayon, the emperor, who, after being driven from his kingdom, succeeded in re-establishing the Mogul dynasty on the throne of Delhi. It stands in the middle of a platform 200 feet square, supported on every side by arcades, and ascended by four great flights of stone steps. Each arch of the arcades serves as a receptacle⁸ of one or more tombs. The mausoleum of the sovereign, rising on the platform, is a noble building,⁹ of a square form, constructed of red stone, inlaid with marble, and surmounted by a large dome of the latter material, the style of architecture approaching to that usually termed Saracenic. In the interior is a large circular apartment,^{*} in the middle of which is a small white marble sarcophagus, containing the remains of Humayon; and around are smaller apartments, in which are entombed his relatives and more favoured retainers. From the top of the building, the view¹ is striking, being on every side over a wide expanse of ruins, which to the westward extends to a range of hills seven or eight miles distant. Some hundred yards west of this mausoleum is a collection of burial-places and small mosques, the most remarkable structure being the tomb of Nizam-ood-deen,² a reputed Mussulman saint, which building is ornamented with elaborate and elegant carvings in white marble. Around, most of the deceased members of the present imperial family lie buried, each within a small inclosure of elegant lattice-work, executed in white marble. Among these monuments is that of the Princess Jahanara, a daughter of Shahjehan. About two miles west of the tomb of Humayon, and four miles south of the city, is the mausoleum of Safdar

Jang, vizier of the empire in the middle of the last century, and ancestor³ of the present king of Oude. It is composed of arcades, surrounding a large octagonal dome, built of white marble⁴ and red sandstone, arranged in alternate parallel perpendicular sections, and contains in its interior the body, deposited in a white marble sarcophagus,⁵ beautifully carved. The surrounding garden, as well as the building, is kept in good order by the agent of the king of Oude; but the elegant fountains, which once ornamented and refreshed the scene, are neglected.

A few hundred paces west of the city is an observatory⁶ of enormous size, with the following colossal instruments constructed in masonry:—1. An equatorial dial, the gnomon of which is 118 feet 7 inches long, with a base of the length of 104 feet 1 inch, and of the perpendicular height of 56 feet 9 inches. This, called by Jey Singh, its constructor, Semrat-Yunter, or “prince of dials,” is made of stone, but the edges of the gnomon and the surface for graduation were of white marble, most of which has been torn away. 2. Two smaller equatorial dials, each with a gnomon 35 feet 4 inches long, and having stairs to the top. 3. A wall, on which is delineated a graduated semicircle for taking the latitudes of bodies that lie due east or due west from the eye of the observer. 4. A wall in the plane of the meridian, and bearing a double quadrant, having as centres the two upper corners of the wall, and intended for observing the altitudes of objects passing the meridian. 5. Southward of the great dial, are two circular buildings, of exactly the same size and construction, each 172 feet 6 inches in circumference, and 24 feet 6 inches high, and designed for observing the altitude and azimuth of the heavenly bodies. 6. A concave hemispherical surface, to represent the inferior hemisphere of the heavens, the diameter being 27 feet 5 inches. This observatory (as well as similar structures at Jeypoor, Muttra, Benares, and Oujein, respectively) was made by Jeysingh,⁷ rajah of Amber, who was employed by the emperor Mohammed Shah⁸ to reform the calendar.

Nine miles south of the city is the celebrated Kutb Minar, probably the highest column in the world. It tapers regularly from the base to the cupola, which, according to Franklin,⁸ is

* Who reigned from 1718 to 1748.

DELHI.

capable of containing a dozen persons. The exterior is for a great part of the height adorned by fluting, there being twenty-seven projections, alternately round and angular. The column is surrounded by four balconies or galleries, supported by large stone brackets, and having small battlements, which, while they have an ornamental effect, afford some slight security to those who venture on such a giddy footing. The first balcony surrounds the column at the height of ninety⁹ feet from the ground, the second at 140, the third at 180, and the fourth at 203 feet. As far as 180 feet, to which the fluting extends, the material is a fine red stone, declared by Jaquemont¹ to be unquestionably the compact quartz abounding in the neighbourhood. Above the height of 180 feet, the material is a very fine white marble, the form circular, but not fluted. The cupola, or small dome on the summit, is supported by eight square pillars, and is surrounded by an iron² gallery, reached by a spiral* staircase winding up through the interior. The entire height has been ascertained by careful measurements and calculations to be 242 feet 6 inches,³ the diameter at the base 48 feet 2 inches. In 1803, the column was injured by lightning and earthquake; and either from those causes, or from the more gradual influence of time, many stones on the west side have been displaced, so as to cause a vertical crack⁴ in the staircase and central pillar. A British officer of engineers has repaired the damage to a considerable extent, and has performed the task with great architectural skill. According to Bacon,⁵ the undertaking was a very bold one, as a very large portion of the masonry at the base of the pillar must have been removed before the new could be substituted. "The native masons," he observes, "generally a most hardy and adventurous set, were with the greatest possible difficulty brought to put their hands to the labour." Of the numerous inscriptions on the exterior of the column, four in Persian have been examined⁶ by means of a powerful telescope, and copied. Two of them declare that it was erected by Shams-ood-deen Altamsh, a Mussulman king of Delhi, of Turkish⁷ origin, who reigned from 1210 to 1236. Another inscription,

DELHI.

on the upper part of the column, states that it was raised by the command of the heir of the kingdom of Suliman Abul Muzeffer Altamsh, Naser Amin-ool-Momenin, who was probably identical with the former. If, however, these inscriptions refer to different persons, they may be reconciled by supposing that the first-mentioned prince built the lower fluted part, which is composed, as already stated, of red quartz, and that the other added the upper portion, of white marble. In those inscriptions it is also mentioned that certain injuries occasioned by lightning, were repaired in 1529, and again in 1531. The name of Kutb Minar, by which it is popularly called, may have resulted from an inscription over the gate of an adjoining ruined mosque, stating that "Kutb-ud-din-Ibek, on whom be the mercy of God, constructed this mosque." Kutb-ood-deen Ibek reigned⁸ in Delhi from 1206 to 1210. About 420 feet north of the Kutb Minar, is a vast unfinished structure of the same kind, but of nearly twice its circumference, though only forty feet high. It is without any clue to explain the era or the motive of its construction. Some have supposed that it was intended with the Kutb Minar to form a pair of minarets to a mosque to be erected on the same stupendous scale; but the discordance in size and structure renders the supposition untenable. Of all the conjectures that have been formed respecting the purpose of raising these vast piles, the most plausible appears to be that they were intended to commemorate the triumph of Islam over Brahminism. Ruins of large and elaborately-constructed buildings, apparently dedicated to the latter faith, are everywhere to be seen about the minars. In a court of one of those ruined edifices, and about 130 feet north-west of the Kutb Minar, is a metal pillar, the part of which above ground is about⁹ twenty-six feet high, and one foot in diameter. It has not been ascertained how much is buried, but, according to the characteristic account given by the Hindoos, it rests on the back of the tortoise which upholds the universe. It is popularly believed to be composed of a peculiar alloy, but Jacquemont affirms it to be merely soft iron. About twenty feet north-west of this pillar is a large Mussulman tomb, said to contain the remains¹ of Shams-ood-deen Altamsh, and bearing inscriptions of unascertained meaning. At no great distance is the burial-place of the unfortunate emperor Shah Alum, and close

⁸ Ferishta, i. 188-200.

⁹ Jacquemont, iii. 509.

¹ Ewer, 483.

DELHI.

to it the country residence of his successors, "a large² but paltry building, in a bad style of Italian architecture, and with a public road actually leading through its courtyard."

Four miles nearly due east of this place, and ten miles south of the present city of Delhi, is Toghluhabad, now a vast collection of ruins of buildings, originally constructed of hard red stone, in such a massive³ style, that it would seem as if nothing but an earthquake were capable of producing the universal destruction everywhere observable. Wilford⁴ mentions, on the authority of some early missionaries, that here "were certain tombs, which were asserted to be those of some ancient princes of Delhi, who were Christians, and lived a little before the invasion of the Mussulmans." The most remarkable ruin is that of a fortified mausoleum of the founder, who was probably Feroz Toghluks, celebrated for the number of his public works, and stated by Ferishta⁵ to have built in 1351 the city of Ferozabad, adjoining that of Delhi. Though Toghluhabad⁶ is ten miles from the present Delhi or Shahjahanabad, it must have adjoined the previous or original city of that name.

In the absence of direct observations respecting the elevation of Delhi above the sea, an approximate estimate may be safely made from careful observations at no great distance. The height of Dasna, sixteen miles due east of the channel of the Jumna, abreast of Delhi,⁷ is 821 feet. The slope of the surface from that part of the doab to the river is very gentle, and if assumed at two feet per mile, it will give the elevation of that part of the channel at about 790 feet. Farther, the elevation of Gurgaon, seventeen miles south-west of Delhi, is 817 feet, and as, during the rainy season, an extensive and nearly stagnant piece of water extends between the two places, the inclination of the surface from the former to the latter cannot be great; though undoubtedly there is some declension, as the drainage of the Jhil or swamp is into the Jumna,⁸ at Delhi.

* Ferishta¹ attributes the foundation of the fortress of Toghluhabad, near Delhi, to Gheias-ood-deen Toghluks, who reigned from 1321 to 1325; but (though generally a faithful recorder) the probability of his account is impaired by his allowing for the completion of this stupendous work, but one year from the accession of the prince, who must have been fully occupied by the multitudinous affairs resulting from an altered succession and a distracted realm.

DELHI.

The elevation of Delhi, therefore, does not probably vary much from 800 feet. A series of observations, extending over a period of three years, gives the following as the mean temperature in the daytime, of the respective months: January, 56°; February, 61°; March, 72°; April, 83°; May, 91°; June, 92°; July, 86°; August, 83°; September, 83°; October, 77°; November, 65°; December, 58°. Delhi may be regarded as a rather arid district: the fall of rain⁹ in 1842 is reported to have been only ten inches. That year, however, was considered a very dry one, even more so than 1837, in which the deficiency of rain was productive of dreadful famine. Smart frosts during the nights of mid-winter afford the means of producing ice, to be stored for a relief during the heats of summer. The earth, which is generally impregnated with mineral salts, especially saltpetre, is moulded into round shallow pans, into which water is poured to the depth of about an inch, and they are set¹ out in rows on layers of split bamboos or hurdles, covered with straw. The frost of the night is sufficient, under such management, to produce ice, which is carefully removed in the morning, and deposited for preservation in deep pits.

* This event is stated by Wilford¹ to have taken place in 1050; by Tod,² in 792. Such wide discrepancy between the conclusions of authors who have both given great attention to the subject, shows (what indeed scarcely needed illustration) how little reliance ought to be placed on the Hindoo records.

DELHI.

mention of Delhi; though in all three enterprises the routes of the invader must have lain at no great distance from it. But on the invasion⁶ of India, in 1191, by Mohammed Shahab-u-din of Ghor, Delhi appears as one of the four great Hindoo powers. It was then held in union with Ajmeer, by Pirthi or Pritwi Raj, a Rajpoot prince, who having, on the plains of Sirhind, given battle at the head of a force, according to native estimate comprising 300,000 horse and 3,000 elephants, besides infantry, was defeated, made prisoner, and put to death by the invader. Kutb-ood-deen, a lieutenant of the victor, took⁷ Delhi in 1193, and established there an independent Mahomedan dynasty, known among the Oriental historians as that of "the slaves⁸ of the sultans of Ghor." In 1288, the Khiljis or Giljis, adventurers from Afghanistan, having murdered the reigning prince, Keikobad,⁹ succeeded in transferring the sovereignty to Jelal-ood-deen, one of their number, and established the Khilji dynasty, which lasted till 1321, when it was terminated by the assassination of Sultan Mobarik, and the supreme power was transferred to Gheias-ood-deen Toghluk, the founder of the Toghluk dynasty. In the reign of Mahmud, of this dynasty, the Tartar conqueror Tamerlane invaded India; and, in 1398, marched to Delhi, the operations against which he prefaced by massacring¹ in cold blood his Hindoo prisoners, reported by native authorities to have been 100,000 in number. After a brief resistance, Mahmud, the sovereign of Delhi, took to flight, the town was plundered and burned, and the inhabitants butchered. According to the account of a panegyrist² of the invader, "high towers were erected of their heads, and their carcasses were left a prey to birds and beasts: never were such carnage and desolation known." The stay of Tamerlane in Delhi was only of sufficient length to enable him to complete the series of barbarities by which his visit is rendered infamously memorable; and after his departure the city and the adjoining territory remained for nearly half a century in an unsettled state, until the sovereignty was acquired, in 1450,³ by Beblol, of the Patan or Afghan tribe of Lodi. His grandson, Ibrahim, was, in 1526, defeated and slain, at the battle of Paniput,⁴ by the renowned Baber, whose lineal descendant, popularly called down to a late period the Great Mogul,⁵ is at present the titular sovereign. Baber's son

and successor, Humayun, was, in 1519, defeated⁵ and expelled from India, by Shir Khan, an adventurer of Patan descent; but receiving assistance from the king of Persia, Humayun recovered his sovereignty, in 1554, by a decisive victory which he gained at Sirhind. The progress of the power of the Moguls in India was more rapid even than that of the British in the same country; as in the reign of Akbar, the son and successor of Humayun, the empire extended from Chittagong⁶ in the east, to Candahar in the west, and from Bultistan or Little Tibet in the north, to the southern boundary of Berar at the opposite point. Subsequently, the southern frontier was for a short period extended by the conquests⁷ of Aurungzebe to Tanjore. The empire was originally distributed into twelve subahs or viceroalties, but the number was ultimately increased to fifteen, for the purpose of comprehending the additions which were the fruits of Akbar's later conquests. The assessed revenue of Akbar, settled by him in the fortieth year of his reign for a term of ten years, amounted to 9,07,43,881 *pieas* rupees,⁸ or about eleven millions sterling.

Elphinstone,⁹ from Abulfazl, estimates the number of persons bound to render military service at 4,400,000, but the whole number at one time actually drawn out, did not probably much

operated heartily with Baber, who always speaks of them and their race with strong marks of dislike and resentment;" and adds, "under these circumstances, it may seem one of the strangest caprices of fortune, that the empire which he founded in India, should have been called both in the country, and by foreigners, the empire of the Moguls; thus taking its name from a race that he detested." Seeing, however, that Baber was of Mogul origin, it would not appear a very "strange caprice of fortune" that the empire which he founded, should be called after a people from whom he was descended; but Hiskine proceeds to account for it as follows:—"This arose not so much from his being a descendant of Chengis Khan, as from his being a foreigner from the north; and from the age of Chengis Khan downwards, all Tartars and Persians, in the loose colloquial language of India, seem to have been denominated Moguls." And Bernier, who visited India towards the close of the reign of Shahjehan, mentions that most in his service "were? people drawn from every country, mostly Persians, and in less number Arabians and Turks; for it is sufficient ground for being called a Mogul, to be a foreigner of a fair complexion, and professing Mahomedanism; circumstances which cause the distinction from the Indians, who are swarthy and pagans, and also from the Christians of Europe, who are called Frangis."

² Voyage, I. 5.

DELHI.

exceed 200,000¹ cavalry, and about 20,000 infantry and artillery-men. Bernier,² who considered the army which Prince Dara, the son of Shahjehan, led against his brother Aurungzebe, as inferior to none ever mustered in India, estimates it at 100,000 cavalry, 20,000 infantry, and eighty pieces of artillery. The treasure accumulated by Shahjehan amounted, according to report, to six millions sterling,³ exclusive of jewels and gorgeous furniture of much greater value. The harem* of Akbar was maintained on a scale of great magnificence. In the Ayeen Akbery⁴ it is described as "an inclosure of such immense extent as to contain a separate room for every one of the women, whose number exceeds 5,000." By the conquests of the successors of Akbar, especially Aurungzebe, the extent and revenues of the empire were vastly increased, though perhaps with little, if any, advance of its actual power. The empire of Aurungzebe is stated to have been divided⁵ into twenty-one soubahs, assessed in the aggregate at 37,724,615*l*.

But this prosperity was only the prelude to rapid and total decay. The chiefs of Rajpootana became alienated⁶ from the throne of Delhi; a spirit of insurrection and fierce hostility pervaded the Sikhs,⁷ Mahrattas, and others;⁸ and, after the death of Aurungzebe, in 1707, his feeble successors became the helpless instruments of conflicting chiefs and parties. His grandson, Jehandar Shah, was, in 1713, deposed and strangled,⁹ after a reign of one year. Farokshir, the next in succession, met the same fate in 1719; in the course of which year two¹ other occupants of the musnud passed thence to the grave. Rennell² observes, that, "in eleven years from the death of Aurungzebe, five princes of his line who had mounted the throne, and six others who had been competitors for it, had been disposed of; and the degraded state of the regal authority during this period had introduced an incurable anarchy, and a disposition in all the governors of provinces to shake off their

* Abulfazl¹ considers this great establishment as a proof of his sovereign's political wisdom. "There is in general great inconvenience arising from a number of women; but his majesty, out of the abundance of his wisdom and prudence, has made it subservient to public advantage; for by contracting marriages with the daughters of the princes of Hindoostan and of other countries, he secures himself from insurrections at home, and forms powerful alliances abroad."

¹ Ayeen Akbery, i. 65.

DEHII.

dependency on the head of the empire. From this time," he continues, "affairs declined very rapidly." During the reign of Mohammed Shah, who ascended the throne in 1719, the dismemberment of the empire to a vast extent took place, through the encroachments of the Mahrattas, who, in 1737, under their leader Bajee Rao, pushed their attacks to the gates of Delhi; and the usurpation of Asof Jah, the Nizamool-mulk,* and viceroy of the Deccan, who made himself the virtually independent³ ruler of the spacious realm now known as the territory of the Nizam. These disruptions, and the consequent weakening of the empire, tempted the invasion of Nadir Shah, the barbarous usurper of the sovereignty of Persia, who, having overrun the greater part of Afghanistan, crossed⁴ the Indus at Attok, and marched upon Delhi. He was met, on the 13th February, 1739, at Kurnaul, by the Mogul army, which there experienced so decisive a defeat, that the invader occupied Delhi without farther resistance. Whilst engaged there in levying a heavy contribution, the Persian troops were rashly attacked by the populace, who destroyed several hundreds of them. Nadir attempted to restore order, but in vain; and being placed personally in some danger, he gave orders for a general military execution, which were acted upon with terrible fidelity. The massacre of the inhabitants continued from the dawn of light till the day was far advanced.† Fifty-eight days after his arrival, Nadir marched from Delhi homewards, bearing with him plunder, the amount of which could‡ not be much less than twenty millions sterling. At

⁴ Mendez, in *Tieffenhaller, Beschreibung von Hindustan*, li. 47. Fraser, *Hist. of Nadir Shah*, 137. Elphinstone, *Hist.* li. 390.

* Administrator of the empire.

† As might be expected, the numbers killed on each side in this dreadful affair are very imperfectly ascertained, and very variously stated. Mendez,¹ an eyewitness, gives 400 Persians and 100,000 Indians as the amount. Mirza Zuman, quoted by Fraser,² states the numbers at 400 Persians and 120,000 Indians; or, according to other versions, 150,000. Otter³ reports 2,500 Persians and 225,000 Indians; Hanway,⁴ 400 Persians and 110,000 Indians. Soigneux,⁵ a Romish missionary, swells the numbers to 5,000 or 6,000 Persians, and a million Indians. Sontt⁶ gives the number of the former at 1,000, the latter at only 8,000; which seems as incredibly small as the numbers in the account last quoted appear exaggerated. The statement of Mahadikhau, in the Nadir-namah, is considered by Elphinstone⁵ the most probable; and he makes the number of Indians put to the sword, 30,000.

‡ There is as much diversity in the authorities respecting the extent of

DELHI.

the same time Mohammed Shah ceded⁵ to Persia the greater part of the province of Tatta, commensurate with the tract now called Sind, and all the possessions of the Mogul empire west of the Indus. In other quarters, the empire was shorn of extensive provinces. Bengal disclaimed⁶ the sovereignty of the Mogul, and the Rohilla Patans, taking advantage of the disasters inflicted by Nadir, and the confusion subsequently caused by the invasions of the Dooranees, assumed independence⁷ in 1749, in the tract extending from Oude to the Jumna. Safdar-jang, the nawab of Oude, made himself independent in that province. The Mahrattas, in addition to the encroachments in the Deccan, which have been already noticed, made themselves masters of Guzerat, Berar, and Orissa, and Malwa⁸ was divided between them and several native princes and zemindars; Ajmeer reverted to the Rajpoots, and the Panjab was, in 1752, ceded to Ahmed⁹ Shah Dooranee, of Cabul. Ahmed Shah, the Great Mogul, who had succeeded to the shattered sovereignty of Delhi on the death of his father, in 1748, was, in 1754, deposed and blinded. In his reign, the dismemberment of the empire may be regarded as completed, and on the accession of his successor, Alumghir II., nothing remained¹ to the house of Tamerlane but the spoiled and decayed metropolis, which itself, in 1756, was taken by Ahmed² Shah Dooranee, and, in 1758, by the Mahrattas.³ The last-named people, now aiming at the entire empire of Hindostan, collected, under the command of Sedashio Bhao, their forces,

booty as in regard to the numbers of the slain. According to Elphinstone,¹ "it comprised a treasure in money, amounting, by the lowest computation, to eight or nine millions sterling, besides several millions in gold and silver plate, valuable furniture, and rich stuffs of every description; and this does not include jewels, which were inestimable." The total amount appropriated by Nadir, according to Fraser,² was 70 crore, or 70,000,000*l.* Rennell³ makes it 62,000,000*l.* The money alone which Nadir took, is estimated by Hanway at 37,500,000*l.*; by Fraser⁴ at 30 crore, or 30,000,000*l.*; and in the Nadir-namah⁵ at 15 crore, or 15,000,000*l.* Amongst the miscellaneous plunder was the famous peacock throne, valued by the jeweller Tavernier at 6,000,000*l.* The plunder carried away by the officers and soldiers is estimated by Fraser at 10 crore, and the charges of the Persian army, and the damage inflicted by them, at 20 crore; making a total loss to the sovereign and people of Delhi of 100 crore, or 100,000,000*l.*

estimated at about 70,000 cavalry and 30,000 infantry, and were, in January, 1761, encountered at Paniput³ by Ahmed Shah Dooranee, at the head of a confederate Mahomedan army of nearly equal number, when the Mahrattas were totally routed, their commander and the greater part of their army being cut to pieces. Shah Alum, whose right to the titular sovereignty accrued on the assassination of Alimgir, in 1759, was at that time a fugitive in Bengal, and his son* Jewan⁴ Bukht, a youth of thirteen years of age, was, under the name of Shahjehan, recognised shah of Delhi, by Ahmed Shah Dooranee. Shah Alum, however, assumed the title of Padshah, and coming into collision with the forces of the English East-India Company, was defeated by them at Patna, in February, 1760. Subsequently he threw himself on the clemency of the British, and in 1765, obtaining from the East-India Company an assignment of territory, yielding a revenue of 260,000l.,⁵ he made over to them the Dewanny of the provinces of Bengal, Bahar, and Orissa, which was virtually a grant of the provinces themselves. In 1771, Shah Alum, determined at all hazards to try his fate at Delhi, left Allahabad, the residence assigned him by the British authorities, and made over to the Mahrattas the territory and revenue allotted to him by the arrangement of 1765. But the proposed transfer was of no avail to the Mahrattas, as the British authorities, regarding the alienation of the districts as an abandonment, did not hesitate to resume the grants; and the short-sighted emperor, having entered Delhi⁶ on the 25th December, 1771, found himself there the destitute and helpless captive of the Mahratta chief Madhaji Scindia, who became the real sovereign⁷ of the capital and the adjoining territory. The power of Scindia being weakened by various causes, Ghulam Kadir, a Rohilla chief, son of Zabith Khan, and grandson of Najib-ood-dowla, who had made a great⁸ figure in the affairs of Delhi during the time of Ahmed Shah Dooranee and Alimgir, gained a footing there; but his conduct to Shah Alum was more intolerable than even that of the Mahrattas, and the Shah wrote to Scindia, urging him to march to his deliverance. The correspondence having been treacherously disclosed to Ghulam Kadir, he forcibly entered the palace of the captive emperor, struck⁹ out his

* Called Bedar Bukht, in the Memoirs¹ of Amir Khan.

DELHI.

eyes with a dagger, seized his scanty treasures, and subjected the females of his family to plunder and outrage. This dreadful consummation of the emperor's adversity took place in 1788, when he was about sixty-five years of age, and had nominally reigned about twenty-nine years. Ghulam Kadir shortly after fell into the hands of Scindia, who put him to death with ostentatious* cruelty. Under the Mahrattas, Shah Alum long suffered neglect and abject poverty; nor was his condition improved when the command¹ of Delhi was intrusted by that power to Perron, the French adventurer; for though a sum of about a hundred thousand² pounds sterling was nominally allotted for the annual expenditure of the royal household, not much more than a fifth† of that sum was ever actually disbursed. On the 8th September, 1803, the British army, under General Lake, marching from Allypore on Delhi, came in front of a superior Mahratta force, under command of Louis Bourquien, a French adventurer, and advantageously posted on the left bank of the Jumna to defend the approaches to the city. There the army of the Mahrattas was utterly routed³ with great slaughter, a vast number of their men being driven into the Jumna and drowned, and all their artillery and stores falling into the hands of the British. Delhi thereupon, without farther resistance, admitted the conquering army, and the Mogul emperor was taken under the protection of the East-India Company, an allowance being assigned for his support. By the twelfth article of the treaty of Sorjee Anjenjaum, signed 30th December, 1803, between the East-India Company and the Mahratta leader Dowlut

* According to most of the authorities, his eyes were struck out, his nose, ears, hands, and feet cut off, and thus mutilated, he was sent forward towards Delhi, but died on the way. The account given in the *Memoirs of Amir Khan* is, that he was "tied by the foot to the foot of an elephant, and so he was beaten to pieces, and separated limb from limb, and suffered a miserable death."

† The Appendix, quoted in the text, says (p. 38), "There are fifty sons and daughters of the emperor; the monthly stipend allowed to each of the princes of the imperial family by the French and Mahrattas, did not exceed fifteen rupees, or about two pounds sterling. The monthly sums disbursed by Monsieur Dugeon, who had charge of the person of the emperor, were, for the expenses of his majesty, royal family, dependants, establishment, &c. &c., about 17,000 rupees (about 2,125*l.* sterling)."

Rao Seindia,⁴ the latter "renounces all claims upon his majesty Shah Alum, and engages, on his part, to interfere no further in the affairs of his majesty." In October, 1804, the Marhatta chief Jeswunt Rao Holkar, having under his command about 70,000 men, with 180 pieces of cannon, laid siege to Delhi; the British force in which consisted of but two battalions and four companies of native infantry, two corps of irregular horse, two corps of irregular infantry, and a corps of matchlock-men. Most of the irregular troops deserted,⁵ yet Lieut.-Colonel Burn, in command of the garrison, took measures for maintaining, with his very inadequate force, the whole line of defences, though nine miles in circuit, and in a very ruinous state. The operations of Holkar were materially crippled by a sortie, in which the guns of his breaching-battery were rendered unserviceable, and after an ineffectual attempt at escalade, he drew off his army with such haste, that three mines, laid for the destruction of some bastions, were left unexploded.⁶ General Lake, whose approach caused the siege to be so precipitately raised, reached the city three days afterwards. The unfortunate Shah Alum died in 1806, at the age of eighty-six,⁷ and was succeeded by his son Akbar, who, dying in 1837, at the age of eighty, was succeeded by the present Padshah, Mohammed Bahadur.

The prestige of the name of the Mogul throughout India, long after the nominal ruler of Delhi had ceased to possess any real power, was remarkable, and rendered expedient a jealousy on the subject which the real condition of the latter state would not otherwise have warranted. The feelings of deference for the throne of Delhi extended to provinces very remote from the seat of its former grandeur, and to Hindoos not less than to Mahomedans. It was in fact universal. In 1813, the Tamburetty, or princess of Travancore, a Hindoo state situate near Cape Comorin, and never subject to Delhi, applied for a dress of investiture from the Padshah, for her infant son, though he was under the guardianship of the British government. It was with some difficulty that her desire was overcome; and though compelled to acquiesce in the decision of the British authorities, the applicant was by no means satisfied that the coveted investiture was unnecessary or improper. The universal respect entertained for the Mogul

DELHI.

authority, and even for its semblance (of which the above is an instance) has rendered it necessary that the British government should discontinue as far as possible any assumption of regal or imperial dignity on the part of the representative of the great Mahomedan power which once was paramount in India, and the head of the house of Baber is fast subsiding into the station of a subject. The British government long since disallowed his pretensions to coin money, to establish weights and measures, to confer title or command, except within the limit of his own household. The pride of the Mogul is said to have been wounded by⁸ Lord Hastings, when governor-general, having remained seated during an interview. So early, however, as 1805, the presentation of nuzzur or offerings by British functionaries, was subjected to check; the Marquis of Hastings and Lord Amherst restrained it still further, and a later governor-general, Lord Ellenborough,⁹ forbade it altogether, and substituted a pecuniary equivalent, which, after some hesitation, was accepted by the king.¹ More recently, an arrangement has been made with the heir-apparent, by which the palace* of Delhi is to be given up to the British government, the king and the members of the royal family over whom he is to continue to exercise jurisdiction (the number of such persons being considerably abridged) removing to another residence.²

documents of the Padshah, is Shahjehanabad. The number of persons connected with the Padshah, by consanguinity more or less remote, is considerable; and from the extension of their families and the withholding by the king of their due share of the allowances granted by the British government, they are said to have been sometimes subject to great distress. The king received compensation for the discontinuance of emoluments derived from nazzar, or offerings made in recognition of his superiority, but still did not escape the pressure of debt. It was proposed a few years since, to increase the royal allowances (previously about twelve lacs per annum), by the addition of three lacs, on condition of due provision being made for claims of dependants. His majesty did not at first think fit to accept the boon on the condition annexed to it, but subsequently altered his determination.³ Lat. $28^{\circ} 30'$, long. $77^{\circ} 18'$.

DEOHRA.¹—A village in the hill state of Bussahir. It is situate in a fertile valley inclosed by mountains, rising with a gentle declivity, formed into numerous terraces, covered with soil, and carefully cultivated under rice and other grains. The houses are dispersed in a straggling manner, amidst cultivated spots along the high banks of a feeder of the river Pabur. The residence of the Rana, situate on the summit of an isolated eminence, is a collection of buildings five or six stories high, communicating in the upper part by galleries and balconies of wood. The lower part of each building is constructed of large blocks of stone, bonded with great beams, of which the surrounding forests yield abundant supplies. The eaves of the roofs project greatly, and the outer surfaces are concave, in the

DEO.

Chinese style. It is totally without defence against assault. Elevation above the sea 6,550 feet.² Lat. $31^{\circ} 6'$, long. $77^{\circ} 44'$.
² Jacquemont, iv. 163.

DEOHURI, in the British district of Bareilly, lieutenant-governorship of the North-West Provinces, a village close to the route from Bareilly to Almora, and 34 miles N. of the former. Lat. $28^{\circ} 53'$, long. $79^{\circ} 31'$.
 E.I.C. Ms. Doc.

DEOJANA.—See DOOJANUN.

DEO KHAS.—A town in the British district of Behar, presidency of Bengal, 39 miles S.W. of Gayah. Lat. $24^{\circ} 40'$, long. $84^{\circ} 29'$.
 E.I.C. Ms. Doc.

DEOKULTEE,¹ in the British district of Ghazee-pore, lieutenant-governorship of the North-West Provinces, a village on the route from Benares cantonment to that of Ghazee-pore, 29 miles² N.E. of the former, 17 W. of the latter. It is situate three miles north of the left bank of the Ganges, and on the river Gungee, traversed here by a bridge of masonry. Lat. $25^{\circ} 33'$, long. $83^{\circ} 18'$.
¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes, vi.

DEOLEE.—A town in the native state of Nagpoor, or dominions of the rajah of Berar, 52 miles S.W. from Nagpoor, and 50 miles S.E. from Omrnouttee. Lat. $20^{\circ} 40'$, long. $78^{\circ} 32'$.

Lloyd, Journ. to Himalaya, i. 116.

Fraser, Journ. to Himalaya, 42.

DEONTUL, in the hill state of Hindoor, a summit of the Malown ridge, celebrated as the spot where the obstinately-contested Goorkha war was virtually decided. It is about a mile and a quarter S. of Malown, and is situate between that fortress and Surujgarh, both held by the Goorkhas at the beginning of April, 1815, when General Ochterlony advanced to attempt their reduction. With a view to cut off the communication between those forts, and to facilitate the formation of a breaching-battery, a British detachment, under Colonel Thompson, took possession of Deontul, where it was furiously attacked by about 2,000 Goorkhas, who, however, were utterly defeated, with the loss of 700 men, including their commander. After this defeat the Goorkhas offered no further serious opposition, and soon after concluded the convention for ceding the hill states to the East-India Company. Lat. $31^{\circ} 11'$, long. $76^{\circ} 53'$.

E.I.C. Ms. Doc. Wood, Oxus, 88.

DERA DEEN PUNAH.—A town of the Derajat, on the right or west bank of the Indus. It was nearly destroyed by the great earthquake of 1819 and the overwhelming floods which at the same time descended from the Suliman Mountains. Lat. 30° 40', long. 70° 52'.

Mascon, Bal. Afg. Panj. i. 38.

DERA FUTTI KHAN, a town of the Derajat, is situate in a very fertile country, on a small western branch of the Indus, and at no great distance from the main stream. The crops in the vicinity are principally cotton, grain of various kinds, indigo, and some sugar and opium. Lat. 31° 9', long. 70° 50'.

¹ Burnes, Pol. Pow. of Sikhs, 6. Id. on the Trade of the Derajat, 100. Id. Bolin. III. 232. Id. Pers. Narr. 82. Wood, Oxus, 80.

² Mascon, Bal. Afg. Panj. i. 31.

DERA GHAZEE KHAN.¹—The most southern and also the most important of the three towns which contribute to give to the Derajat its name. It is a large, populous, and commercial place, situate in a low alluvial tract, four miles from the right or west bank of the Indus, and contains numerous ruins of mosques,² and of the extensive and well-constructed residences of the former Durani governors and officers. It carries on considerable transit-trade; an advantage attributable to its being situate at the point where one of the great routes from Eastern India and the Punjab into Beloochistan and Khorasan intersects the great route from north to south into Sinde. The bazaar contains 1,600 shops, the inmates of 530 of which are engaged in weaving and selling cloth. It is in other respects well supplied with goods, but ill-built and dirty. Some manufactures are carried on here in silk, cotton, and mixed fabrics of silk and cotton, called loongees, intended for scarfs and waistbands. Coarse cutlery is also manufactured to a considerable extent.

The surrounding country is very unhealthy during the hot season, but remarkably fertile, being well irrigated, and producing grain, fruits in abundance and of fine quality, sugar, cotton, and much indigo, in which a considerable traffic is driven. Both the transit and the direct carrying-trade are conducted almost exclusively by the Lohani Afghans, who are at once a pastoral and a mercantile tribe.

DER.

Dera Ghazee Khan, in consequence of its advantageous position, has been recommended by Burnes and others as the best site for a great annual fair, to be held under the protection of the British government, commanding, as it does, such important routes and the navigation of the Indus north and south. It was a dera, post, or camp of Ghazee Khan, who, about three centuries ago, figured as an adventurer here, and being wrested from the Durani empire by the Sikhs, fell to the British upon the conquest of the Punjaub, in 1849. Lat. $30^{\circ} 4'$, long. $70^{\circ} 54'$.

DERA ISMAEL KHAN.¹—A considerable town of the Derajat, built a short distance from the right or west bank of the Indus, to replace the former town, which, having been situate only a hundred yards from the river,² was, a few years ago, swept away by it so completely that not a vestige was left. The town is well laid out, but is ill built of unburnt brick, and in general has an air of desolation, though in spring there is much business, it being then crowded by the Afghans of the Lohani tribe, who purchase great quantities of goods to transport by their caravans for the supply of Afghanistan and Central Asia. The most important article of commerce is white cotton cloth, of which two millions of yards are yearly sold here, and eighteen millions of yards taken through,³ in transit from Hindostan to the north and west of this place. There is also a considerable trade, by way of the Indus, southward, in grain and salt, from Kala Bagh. The position of Dera Ismael Khan is important, being situate on one of the great routes from the north to Sindh and the Southern Punjab, and also in the vicinity of the ferry at Kalaaree, one of the most frequented over the Indus. There is another ferry over that river⁴ three miles to the eastward of the town. About three centuries ago, there was here a dera, post, or encampment of Ismael Khan, an adventurer in this country; and hence the name which the town bears. It was wrested from the Durani empire by the Sikhs, and became incorporated with the British dominions upon the conquest of the Punjaub in 1849.⁵ Its population is stated to be 8,000.⁶ Lat. $31^{\circ} 50'$, long. $70^{\circ} 58'$.

DERAJAT.—See DAMAN.

DERAPOOR, in the British district of Cawnpore, lie-

E. I. C. Ms. Doc.

DEVAPRAYAGA,¹ * in Gurwhal, a town at the confluence of the Aluknunda and Bhageerettee. The former flows from the east, the latter from the north, and at the vertex of the right angle formed by their junction the town is situate. According to the graphic description of Raper,² "The contrast of the two streams is very remarkable; the former (Bhageerettee) runs down a steep declivity with a rapid force, roaring and foaming over large stones and fragments placed in its bed, while the placid Aluknunda, flowing with a smooth unruffled surface, gently winds round the point." The banks of both rivers are composed of hard black rock; but while those of the Aluknunda are almost perpendicular, to the height of eighty or a hundred feet, those of the Bhageerettee are shelving and expanded. The Aluknunda, the deeper and more considerable river, is, at the season of low water, 142 feet in breadth, and in the rainy season rises forty-six or forty-seven feet. It abounds with fish of the rohu† species, four or five feet in length, regarded sacred, and so tame as to take food from the hand. The Bhageerettee is, at the season of low water, 112 feet in breadth, and rises forty feet in the rainy season. Each river is crossed by a jhula or rope bridge. The united stream having a breadth of eighty yards, receives below the confluence the name of the Ganges. The town is built 100 feet above the water, on the scarp of a mountain rising

DEVAPRAYAGA.

behind it about 800 feet. A slight of steps cut in the rock gives access to the town from the water's edge.

The houses are arranged so as to form two rows of unequal length, joined at a right angle, the longer row facing the Bhageerettee, the other the Alukuunda. They are generally two stories high, built of large stones, cemented with lime mortar, and having sloping roofs, covered with shingles. In the upper part of the town stands a temple, sacred to Ramachandra.* It is situate on a terrace from twenty to thirty yards square, and six feet high, and is built of large blocks of cut stone piled on each other, without cement, so as to form a pyramid, bulging in the middle, and decreasing rapidly towards the summit, which is surmounted by a white cupola; and over all is a square sloping roof, composed of plates of copper, crowned above with a golden ball and spire. The entrance is on the western side, in a portico, from the roof of which are hung bells of various sizes. Under the shelter thus provided, the worshippers perform their devotions. The image of Ramachandra, about six feet high, carved in black stone, but painted red, except the face, is seated opposite the door, and under the eastern part of the cupola. Before the idol, and opposite the portico, is the brazen image of a Garuda.† One knee is bent on the ground, and his hands are joined in the attitude of prayer. The whole height of the building is between seventy and eighty feet. Under the terrace is a temple, sacred to Mahadeva. The only information which the Brahmuns professed to be able to vouch for, when questioned respecting the age or founders of the building, was, that it had stood for 10,000 years, which is certainly a very respectable degree of antiquity. It is a peculiarly sacred place of pilgrimage for the superstitious Hindoos, being one of the five principal Prayags or confluences mentioned in the Shastras. The grand rite is ablution, which takes place at the confluence, in three kundas or basins, excavated in the rock, at a level a little lower than

* An incarnation of Vishnu.¹

† Willford² describes the Garuda with his usual recondite learning:—
"Garuda, or the eagle, upon whom Vishnu and Jupiter are represented riding. Garuda is represented generally like an eagle; but, in his compound character (somewhat like the cherub), he is represented like a young man, with countenance, wings, and talons of the eagle." "Garuda is called the Vahan (literally the vehicle) of Vishnu or Jupiter."

DEV—DEW.

the surface of the current, which here is so rapid and violent as to sweep away any attempting to bathe in it. The names of the pilgrims are registered on their making sufficient disbursements to the officiating Brahmins, on account of dues and oblations. The annual revenue of these functionaries, exclusive of such contributions, does not exceed 120*l.*, derived from twenty-five villages,³ granted for the purpose by the rajah of Gurwhal; and notwithstanding the holy celebrity of the place, the Brahmins are compelled to eke out a subsistence by the practice of trade. The temple, as well as the rest of the town, was much shattered by an earthquake in 1803, but subsequently repaired by Brahmins sent thither for the purpose by Daulat Rao Sindia. The town contains between 200 and 250 houses, inhabited principally by Brahmins from the Deccan. The heat is sometimes very great, exceeding 100°⁴ at noon in the shade. Elevation above the sea, of the town, 2,266 feet;⁵ of the stream, 1,953. Lat. 30° 8', long. 75° 39'.

- E.I.C. Ms. Doc.** **DEWAS.**—A town of Baghelcund, in the native state of Rewah, 21 miles N.E. from Rewah, and 50 miles S.W. from Allahabad. Lat. $24^{\circ} 46'$, long. $81^{\circ} 35'$.
- ¹ **E.I.C. Ms. Doc.** **DEWAS,**¹ in Malwa, a town, the principal place of a small territory of the same name, situate between lat. $22^{\circ} 30'$ and $23^{\circ} 2'$, long. $75^{\circ} 53'$ and $76^{\circ} 27'$, and embracing an area of 256 square miles.² This petty raj or state is held conjointly by two chiefs of the lineage of the Puar or Pramara³ Rajpoots, now greatly humiliated, but at a remote period so powerful that "the world is the Pramara's," was an ancient saying,⁴ denoting their extensive sway. Their dynasty is recorded to have ruled over Malwa for 1,058⁵ years. In more recent times, we find one of the ancestors of the present rajahs, a military commander in the service⁶ of Sevajee, the founder of the Mahratta power, and his two sons, Tukajee and Jewajee, accompanying Bajee Rao, subsequently Peishwa, when appointed soubahdar⁷ of Malwa in 1735, and receiving from him Dewas and some other possessions. During the distracted state of Central India which followed, the dominions of the rajahs of Dewas were incessantly overrun⁸ by Mahrattas, Pindarries, and other freebooters, their towns and villages sacked, and themselves and families reduced to misery; but since the British protection has been extended to them, their dominions have been restored to order and prosperity. The treaty under which this was granted, is dated in 1818.⁹ By its engagements, the rajahs are bound to maintain a contingent force, to be at the disposal of the British government. This force, since the date of the treaty, has been considerably increased, and now consists of 400 infantry, forming part of the Malwa united contingent. The military force of the state consists of 175 horse and 500 foot. The rajahs have agreed to act by a union

DHAMÉE,¹ a small hill state, is bounded on the north by Bhugee; on the east and south by the territories belonging to the rajah of Patecala; and on the west by Bhagnl. Its length probably does not exceed five or six miles, its breadth may be taken to be nearly equal, and its area about twenty-five square miles. Its centre is in lat. $31^{\circ} 12'$, long. $77^{\circ} 8'$. It is throughout a collection of summits of considerable height, with intervening valleys, and is drained northward by a stream* which discharges itself into the Sutlej, and southward and westward by a few insignificant streams, feeders of the small river Gumbur. The general elevation of this small territory probably exceeds 4,000 feet. The left bank of the Sutlej at Soonee, to the north, and much lower than the greater part of the country, is 2,283 feet² above the sea. It is one of the Barah Thakoorai,³ or "twelve lordships," which were in the tract between the Sutlej and the Tonse, until the divisions were obliterated by the Gorkha invasion. Dhamee belongs to a petty Hindoo rana or prince, who received it from the British government on the expulsion of the Gorkhas in 1815. It contains seven pergunnahs⁴ or subdivisions, estimated to have a population of 3,000, and to yield an annual revenue of 350*l.*, out of which a sum of 72*l.* is paid as tribute to the East-India Company.

³ Malcolm, Index to Map of Malwa, 103.

DHAR,¹ in Malwa, the principal place of a raj of the same name, is situate on the route from Mhow to Baroda, 33 miles² W. of the former, and 183 E. of the latter. The town is nearly three and a quarter miles in length and half a mile in breadth. It is surrounded³ by a mud wall, and has many striking buildings, especially two large mosques, built of red stone, but fast falling to decay. Water is abundant, being supplied from two small and eight large tanks. There is a fort, built of red stone, situate outside the city, on an eminence rising forty feet above the plain. The rampart, from thirty to thirty-five feet high, has twenty-four round and two square towers, on the larger of which last the rajah's palace is, built of stone. The gate of the fort is in the western face, and is defended by octagonal towers. The city is represented to have once contained 20,000 houses, an amount which would assign it a population of about 100,000.

At present its numbers fall short of that amount to an extent

DHAR.

which would make comparison ludicrous. An English and vernacular school has been established here by the present ruler⁴ of Dhar.

⁴ India Pol. Disp.
18 Sept. 1850.

The raj or petty state of Dhar contains an area of about 1,070 square miles, and has much fertile ground, producing abundant crops of rice, wheat, millet, maize, pulse, oil-plants, sugar-cane, tobacco, opium, ginger, cotton, hemp, turmeric, esculent vegetables, and pulse. The annual revenue⁵ is estimated at 475,000 rupees, or 47,500*l.*; the population at 104,860. The rajah maintains a military force, which, inclusive of the police, amounts to about 1,100 men; and a contribution is made by the state of 8,000 rupees per annum in aid of the support of the Malwa Bheel corps. The rajah is a Puar⁶ or Pramar Rajpoot, of a very ancient family, but owes his present dignity to the gift of the Peishwa, about a century ago.⁷ Towards the close of the last and in the early part of the present century, the state of Dhar was miserably devastated by the troops of Scindia Holkar and other freebooters; and when the British troops, in 1817, advanced to this part of India, the limits of the state were greatly contracted, and its revenue did not exceed 35,000 rupees. By the intervention of the British government, various districts of which Dhar had been dispossessed were restored to the rajah, and Bairseeah, which had been conquered from the Pindarries, was granted to him, subject to the condition that the British government should retain possession of it for a limited period, for the purpose of liquidating a loan; after which period that government was to have the option of holding it, or of letting it, for the benefit of the Dhar state, which was thenceforth to be entitled to the revenue and produce. This arrangement was made in 1819.⁸ In 1821, a new engagement was concluded, by which the district of Bairseeah was ceded to the British government from the expiration of the period of retention before stipulated for; in consideration of which, and of the tribute of Allee Mohun also ceded, a specified annual payment was to be made.

⁸ Treaties, 626-629.

The bargain, however, was found a losing one, and Bairseeah was in a few years given back to Dhar; but the home authorities regarding this as an illiberal proceeding towards an ally who had no power to resist, annulled the surrender, and directed the engagement of 1821 to be adhered to. Possession

DILA.

of Bursrah was consequently resumed, and the stipulated payment restored.² By the treaty of 1819 the British government undertook to protect the state of Dhar, in return for which the rajah ceded the tributaries of Bauswarra and Doongerpore, entered into the usual engagements of subordinate co-operation and friendly alliance, and bound himself, at all times when required, to furnish troops in proportion to his ability.

Elevation of the town above the sea 1,908 feet.¹ Lat. $22^{\circ} 35'$, long $75^{\circ} 20'$.

DHAREE DEBEE, in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a village on the route from Almora to Sireenuggur, and 10 miles S.E. of the latter. Here is a dharmasala.³ The road in this part of the route is good. Lat. $30^{\circ} 15'$, long. $78^{\circ} 55'$.

DHARMA,¹ in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a Bhotia mahall or subdivision, lying north of the main range of the Himalaya, and between it and Himades, or South-Western Tibet. Still some of the summits have a great elevation; Lebong, on the eastern frontier, being 18,912 feet above the sea. The elevation of the Dharma pass, on the northern frontier, leading to Himades, is probably about 15,000. The whole habitable portion consists of the narrow, and generally very rugged valleys² down which flow the river Dhouli and its feeders; the rest consists of rocks or mountains, covered with perpetual snow. The boundaries of a tract so ill peopled and difficult to explore are not very precisely defined, but they may be considered as lying between lat. $30^{\circ} 5'$ — $30^{\circ} 30'$, long. $80^{\circ} 25'$ — $80^{\circ} 45'$, and as inclosing an area of about 400 square miles. When Traill drew up his account, it had twenty-four villages, containing 342 houses, and consequently, if six persons be allowed to each house, the population may be estimated at 2,052, or between four and five to the square mile. They are called Bhotias, and are of the Mongolian or Tartar variety of the human race. "In their personal appearance," observes Traill,³ "the Bhotias are perfect Tartars, and exceed the natives of this province in size

¹ A place of meeting for the neighbourhood, and where justice is administered, and stores are distributed. From Dharm, "justice," and *sal*, "place."

DHA.

and stature, more particularly the Dharma Bhotias, among whom individuals possessing extraordinary strength are by no means uncommon. They are excessively dirty in their persons, using the skirts of their dress to cleanse both their persons and their cooking utensils, yet are in good circumstances, having warm clothing, substantial houses, and abundance of animal food in the flesh of their numerous sheep and goats, used as beasts of burthen in the lucrative carrying-trade with Hindes. In the course of this commerce, grain, the produce of Lower Kumaon, and cotton broadcloths, hardware, sugar, and other goods, brought from Hindoostan, are sent to Hindes, and exchanged for culinary salt, tincal or borax, gold dust, and wool; besides some others of less importance.

DHARMDA.—A town in the British district of Midnapoor, presidency of Bengal, six miles S.W. of Midnapoor. Lat. $22^{\circ} 21'$, long. $87^{\circ} 19'$. E.I.C. Ms. Doc.

DHARMKOT,¹ in Sirhind, a small town in the British district of Ferozepore, with a fort, situated about seven miles from the left bank of the Sutlej. Dharmkot is distant 39 miles W. from Ludiana, N.W. from Calcutta 1,140 miles.² Lat. $30^{\circ} 55'$, long. $75^{\circ} 17'$. E.I.C. Ms. Doc.

DHARMSALEH.—A town in the native state of Nepal, on the left bank of the river Kurnalli, and 126 miles N.E. from Almora. Lat. $29^{\circ} 51'$, long. $81^{\circ} 45'$.

DHARWAR,¹ in the presidency of Bombay, a British district, named from its principal place. Previously to 1836, the collectorate of Dharwar consisted of eighteen talooks, stretching nearly 300 miles from north to south. In that year the ten northern talooks were formed into a new district, denominated the Collectorate of Belgaum, those in the south remaining under the control of the collector of Dharwar,² and forming the district now distinguished by that name. As at present constituted, the district of Dharwar is bounded on the north by the Belgaum collectorate; on the east by the territory of the Nizam and the British collectorate of Bellary; on the south by the Mysore dominions; and on the west by the Madras territory and the Belgaum collectorate. It extends from lat. $14^{\circ} 16'$ to $15^{\circ} 50'$, and from long. $74^{\circ} 50'$ to 76° . Its greatest length from north to south is 105 miles; its greatest breadth from east to west 77 miles. The area is 3,837 square E.I.C. Ms. Doc.

⁴ Evidence before Commons' Com. 1849—Growth of Cotton in India, Q. 3797.

miles. A great part of the collectorate consists of extensive plains.³ A small portion has an inclination to the south-west, as indicated by the direction taken by the streams, which, flowing towards that point, fall into the Kali Nadi, a river making its way through a deep valley in the Ghauts to the Arabian Sea or North Indian Ocean. The Tumbudra,* rising in the territory of Mysore, on the eastern declivity of the Ghauts, and in lat. $13^{\circ} 12'$, long. $75^{\circ} 12'$, flows for ninety-five miles to the southern boundary of the collectorate, which it touches in lat. $14^{\circ} 20'$, long. $75^{\circ} 41'$; thence continuing its course circuitously, but generally towards the north-east, for sixty-five miles, it forms the boundary between this collectorate and that of Bellary, and finally leaves Dharwar in lat. $15^{\circ} 9'$, long. 76° . In lat. $14^{\circ} 56'$, long. $75^{\circ} 46'$, this river receives on the left side the Wurda, rising on the eastern declivity of the Ghauts, and flowing north-easterly for a distance of fifty miles. In many parts of the collectorate of Dharwar the soil is fertile, and well suited to the growth of cotton.⁴ Various attempts have been made by the Bombay government for the introduction of the New Orleans species. Previous experiments having failed, the last was commenced in 1842, and has been attended with success. In that year twenty-five acres only were sown with American cotton. It was cultivated by the ryots in the midst of their own native products, and much in the same manner, excepting that the American cotton was sown some weeks earlier. The return of the newly-introduced species being found much larger than that of the indigenous article, and the quality considered superior, the cultivation spread with extraordinary rapidity. Small experimental farms were established by government; but these, except in so far as they tended to provide a supply of seed, seem to have been of no value, as it is stated by competent authority, that the cultivation of the ryots themselves excelled that of the farms. These establishments were consequently soon relinquished, and the breadth of land devoted to the cultivation of American cotton continued, without artificial aid, to extend, until, in five years only from the date of the successful experiment, it had reached 25,000 acres; and it is stated that, but for the occurrence of

* According to the trigonometrical survey as engraved by Walker.

DHARWAR.

unfavourable weather at the proper time for sowing, it would have amounted to 60,000 acres. The superiority of the New Orleans cotton over the indigenous species is now generally recognised in Dharwar. The principal marts are Hooblee, Havery, Narragoorda, Sirey, Noolgoond, and Balgnpoor. Their distances vary from 80 to 130 miles from the Madras port of Coompta, to which a good road for wheeled carriages has been constructed, and where the cotton is shipped for Bombay. The population of this collectorate is for the most part Canarese,⁵ the Mahrattas, though once the ruling race, not amounting now to more than a tenth of the whole. Canarese, the language of the people, was therefore, in 1836, judiciously substituted for Mahratta in the transaction of official business.⁶ The population has been returned at 754,385,⁷ the relative density being 196 to the square mile.

Dharwar, the principal town, and Hooblee, as well as others of note, are described under their respective names in the alphabetical arrangement. The principal roads are the following:—One leading from south-east to north-west, from the town of Dharwar to Belgaum, and thence eastward, through Sawunt Warree, to the port of Vingorda; another, from south-east to north-west, from the town of Dharwar to Kolapore; and a third, from Dharwar to Hooblee, and thence to Winddeguttee, on the Canara frontier of the Madras territory, there to join the road constructed by the Madras government for facilitating the inland trade between Dharwar and the port of Coompta.

At the date of the latest returns, the number of government vernacular schools in this district amounted to fourteen, and that of the pupils to about 900. There is also a government English school⁸ in the town of Dharwar, containing forty pupils.

The territory comprised within the collectorate of Dharwar appears at the earliest recorded period to have formed part of the Brahminical realm of Vijaynagar,⁹ and on its overthrow, by the defeat¹ of its rajah at Talikot, in 1565, by a Mussulman confederation, to have become part of the kingdom of Beejapoor. In 1675 it seems to have been overrun² and partially conquered by Serajee, the notorious founder of the Mahratta sway, becoming thereby subject to the power of the rajah of

DHARWAR.

Sattara, and subsequently to that of the Peishwa. In 1776 the province was overrun³ by Hyder Ali, the usurping sultan of Mysore. The capture by that chief, in 1778, of the fort and town of Dharwar, and their recapture,⁴ in 1791, by a British force acting in co-operation with the Mahrattas, are noticed in the article on the town. On the overthrow of the Peishwa in 1818, Dharwar was incorporated⁵ with the territory of the East-India Company.

DHARWAR,¹ the principal place of the British collectorate of the same name, in the presidency of Bombay, is situate close to the frontier which divides the Bombay territory from the Madras collectorate of Canara. Duff,² describing its condition, says, "The defences of this fortress are principally of mud, and though irregular and now greatly decayed, were then [in 1790] very strong. It is situated in a plain, having an outer and an inner ditch from twenty-five to thirty feet wide, and nearly as many feet deep. Adjoining to the fort on the south side, and outflanking it to the eastward, is a town or pettah, defended by a low mud wall and a ditch of no strength."

In 1837, this place was the scene of religious disputes between the Brahmins and Lingayets, which rose to such a height as to render necessary the interference of authority. The principle upon which the British government have acted in such matters, is to allow to the members of every religious persuasion the undisturbed exercise of their own rites and ceremonies so long as they are unattended with danger to the public peace. The Vrayasunthole procession at Dharwar, in the judgment of the Bombay government,³ was incompatible with this necessary condition, in consequence of the mutual animosity subsisting between the Lingayets and Brahmins, and it was determined that it should not again take place.

Two of the government vernacular schools, the one Mahratta and the other Canarese, are established in this town; as is also an English school, containing about forty pupils.⁴

In 1778, Dharwar was taken⁵ from the Mahrattas by Hyder Ali, the sultan of Mysore, and in 1791 retaken⁶ by a British force auxiliary to the Mahrattas, who very little furthered the operations. On the final overthrow of the Peishwa, this place, with the other possessions of that potentate, fell to the disposal of the British government. Distant from Bombay, S.E., 288

Agra to Oojein*.

DHOLPORE.¹—A small raj or territory on the northern bank of the Chumbul river, named from its principal place, and bounded on the north and north-east by the British district of Agra; on the south-east by the Chumbul, dividing it from the territory of Gwalior; and on the west by the territory of Kerowly. It lies between lat. $26^{\circ} 30'$ — $26^{\circ} 57'$, long. $77^{\circ} 32'$ — $78^{\circ} 20'$; is about fifty-four miles in length from north-east to south-west, twenty-three in breadth, and has an area of 1,626² square miles. The large river Chumbul, touching on the territory at its south-west angle, forms its south-eastern boundary for about sixty miles, and subsequently flowing eastward, forms the boundary between the British district of Agra and the territory of Gwalior. The Bangunga, called in this part of its course the Ootungun,² after forming the boundary for a few miles, passes to the interior, through which it flows in a direction generally easterly for about fourteen miles, and subsequently, for twenty miles, forms the boundary between this territory and the district of Agra. In its course along the frontier, it on the right or south side, and in lat. $26^{\circ} 54'$, long. $77^{\circ} 57'$, receives the torrent Parbutty, flowing in a direction from south-west to north-east through this territory, which it enters from the territory of Kerowly. The surface of the country in the eastern part is generally level and sandy.³ The south-western part is hilly, being overspread with low ranges of sandstone,⁴ connected with the hills of Gwalior. Notwithstanding the poor quality of the soil, it is rendered fertile by continual irrigation, and, in due season, is covered with fine crops, interspersed with groves of mango-trees.

The principal towns of the territory—Dholpore, Barce, and Rajahkern—are described under their respective names in the

* In Walker's *Indian Atlas*¹ the Bangunga and Ootungun are set down as identical, which is in accordance with fact. Hunter, however, mentions² them as different streams:—"On the day before the action, Azim Shah was encamped between Jahjow and Agra, on a barren plain void of water, so that the army was much distressed. This must have been between the Bangunga, which runs past Jahjow, and the Ootungun, which is distant from it $8\frac{1}{2}$ miles, on the road towards Agra." Hunter seems here to have mistaken the Khari Nuddee for the Ootungun.

DHOLPORE.

alphabetical arrangement. If the population be assumed at the rate of that of the surrounding British districts, it will amount to 550,000. The revenue is estimated at 700,000 rupees, or 70,000⁵ per annum.

The principal route through the country is from north to south, from Agra to Gwalior, by the town of Dholpore.

The chief, who is styled Rana, and the majority of his subjects, are Jauts, who, according to the Brahminical notions respecting caste, are a spurious⁶ offset of the Rajpoots. Probably the first of the Rana's ancestors who rose into notice was the chief of Gohud,* who, about the middle of the eighteenth century, acquired territory by the favour⁷ of the Peishwa Bajee Rao, but on the defeat of the Mahrattas at Paneeput, rebelled, and about 1761⁸ made himself master of Gwalior and the adjacent country. The political relations between the Rana and the East-India Company commenced in 1779, when the respective parties formed a treaty⁹ of alliance, offensive and defensive, in which it was stipulated, that when peace should be concluded between the Company and the Mahrattas, the Rana should be included in it, and that his then present possessions, and such acquisitions made during the war as it should be agreed to leave in his hands, were to be guaranteed to him, together with the fort of Gwalior, recognised as of old belonging to the family of the Rana,† if at the time of the peace he should be in possession of it. In 1780, that fort having been taken¹ by a British detachment under Major Popham, was made over to the Rana, from whom subsequently it was wrested² by Scindia, in 1784, the British government having abandoned the Rana, on the ground that he had been guilty of treachery. In 1801,³ however, that government engaged to establish⁴ the Rana in his hereditary dominions of Gohud, and certain districts enumerated in the treaty of that date; but difficulties arising in the way of carrying out this engagement,

* Hamilton makes the following statement:—"The Rana's ancestors were zemindars of the village, and by caste Jauts, of the Damrowly tribe. Bheem Singh, the Rana prior to the battle of Paniput in 1761, acquired Gwalior, but was afterwards obliged to yield it to the Mahrattas."

¹ Gazetteer, I. 695.

† According, however, to Gladwin,¹ the Rana had never been able to get possession of Gwalior, until the British took it, and made it over to him.

¹ In note on As. Miscell. I. 240.

DHOLPORE.

in consequence of the opposition of Scindia, the Rana agreed, by a new treaty, concluded in December, 1805,⁵ to relinquish the possessions thus guaranteed, receiving in their stead those which he now holds, comprising three districts—Dholpore proper, Baree, and Rajahkeri. Hence the chief is sometimes, though rather inaccurately, styled the Rana of Dholpore Baree. The military⁶ force maintained by the Rana, inclusive of the quotas of the jaghiredars, consists of about 2,000 men.⁷

DHOLPORE.^{1*}—The principal place of the small raj or territory of the same name, a town on the route from Agra to Gwalior, 34² miles S. of the former, 37 N. of the latter. It is situate a mile³ from the north-west or left bank of the Chumbul, here crossed by ferry, but fordable at Keytri, four miles higher up the stream, though the channel is there three-quarters of a mile wide. The river during the rainy season rushes down with a vast volume⁴ of water, overflowing the right bank, but restrained by the left, which is high and steep, so that the fort situate on it has a striking appearance. Here are some fine antique mosques and mausoleums. One of the mosques is stated⁵ to have been built by Shah Jahan in 1634; and some other of the buildings here are of still earlier date. They “are⁶ all elaborately built, and worked out of the fine freestone of the country; and the trellis-work upon some of their stone screens is still as beautiful as when first made.” Dholpore is an ancient place, and was founded at a very remote period by a prince called Daula, from whom the name has been derived. Such, at least, is the traditional report of the natives, as recorded by Tieffenthaler.⁷ Baber repeatedly mentions⁸ the place, and states that it surrendered to him in 1526. He adds, that, seeing a huge solid mass of red stone there, he ordered⁹ it to be hewn into a house, if practicable; but finding that it had not sufficient depth for that purpose, he caused the top of the rock to be levelled, and a tank excavated therein. He also caused a palace, a mosque, a pleasure-ground, and a well to be formed near it. At present there is encamping-ground here, and a large bungalow or lodge for travellers, built¹ by a former British resident, and purchased by the Rana for its present

* In a recent publication, the elevation above the sea, of the bed of the Chumbul at Dholpore, is estimated¹ at 1,050 feet; but there appears reason for thinking that this estimate errs in excess. The elevation of Agra is thought not to exceed 600 feet; and if this be so, that of the confluence of the Jumna and Chumbul, about 140 miles lower down the Jumna than Agra, is probably about 450. If two feet per mile be allowed for the slope of the water-way of the Chumbul, Dholpore, on this last-named stream, 100 miles from the confluence, may with propriety be assumed to have an elevation of about 650 feet above the sea.

great Snowy range of the Himalayas, being 27,600 feet above the level of the sea. Lat. $29^{\circ} 11'$, long. $82^{\circ} 59'$.

¹ E.I.C. Ms. Doc.

² As. Res. xvii, 2
—Tralli, on the
Bhotia Metals of
Kamson.

DHOULI,¹ a principal head-water or tributary of the great river Ghoghra, has its remotest source at the southern base of the Neo Dhoora Ghat, or pass leading from the Bhotia mahall, or subdivision of Dharma,² to Hiundes or South-western Tibet, and at an elevation above the sea of probably about 15,000 feet, and in lat. $30^{\circ} 28'$, long. $80^{\circ} 33'$. Its source is to the north of the main range of the Himalaya, through which it holds its way by the valley of the Dharma mahall or subdivision, and flows at the western base of the great mountain Lebong. About thirty-five miles from its source, and in lat. $30^{\circ} 5'$, long. $80^{\circ} 40'$, it touches on the mahall of Choundans, the western frontier of which it forms for fifteen miles, and falls into the Kalee on the right side, in lat. $29^{\circ} 57'$, long. $80^{\circ} 38'$. Its stream is in general a succession of violent rapids in a rocky channel, amidst awful precipices and ravines. Webb³ describes it, at twenty-five miles from its source, as "violent, turbid, in continued rapids from six to twenty-five feet; bed rocky, average breadth from sixteen to twenty yards;" and adds, that after rain "the water is so foul and turbid as to be unfit for drinking." The road to Hiundes by the Neo Dhoora Pass proceeds up the course of the river, passing by means of spar bridges from side to side, according to the exigencies of the path, which sometimes winds along the faces of the nearly perpendicular precipices; yet, during the season when the passes are open, this difficult track is crowded by innumerable laden goats and sheep, bearing grain and other merchandise from the lower districts to Hiundes.

DHOUR BOONGA, in the British district of Gurhwal, lieutenant-governorship of the North-West Provinces, a town on the right bank of the river Sanee, 20 miles S. of Sireenuggur. Lat. $29^{\circ} 57'$, long. $78^{\circ} 52'$.

E.I.C. Ms. Doc.

DHOUREA.—A town in the native state of Oude, 80 miles N. from Lucknow, and 73 miles E. from Shahjehanpoor. Lat. 28° , long. $81^{\circ} 9'$.

E.I.C. Ms. Doc.

DHOWLUTNUGUR, in the Jetch Dooab division of the Punjab, a town situated on the route from Wazeerabad to Bhimbur, 20 miles N. of the former. Lat. $32^{\circ} 47'$, long. $74^{\circ} 9'$.

DHU.

DHUBBOOEE,¹ in Guzerat, or the territory of the Guicowar, an ancient decayed town. It has a nearly quadrangular ground-plan, and is inclosed with a rampart² two miles in circuit, made of large hewn stones, and having on the interior side a beautiful and useful colonnade of the same material. Within this inclosure is a large tank of strong masonry, access to the water of which is by means of a grand flight of stairs extending quite round it, and on the well-constructed stone embankment are numerous Brahminical temples. The total circuit of the tank is considerable, it being supplied with water not only from the periodical rains, but also by means of an aqueduct of stone, conveying it from the country outside. Viewed from the country, Dhubbooe has a noble aspect, its ramparts being surmounted by fifty-two towers, besides one at each angle, of superior dimensions to the rest. In each face of the quadrangular rampart is a double gate, with a spacious area between, surrounded by a corridor and guard-rooms. The portal on the eastern side is called the "gate of diamonds," and with the temple adjoining, forms a very noble and elegant specimen of Hindoo architecture. It extends 320 feet in length, with proportionate height, and the upper part of the building is supported by rows of figures of elephants sculptured in stone, and represented as richly caparisoned. All parts of these superb buildings are embellished with a profusion of sculptures, representing warriors in combat on horses, on foot, or on elephants, in a very superior style of execution; and there are besides sculptures innumerable of lions, camels, birds, snakes, and various other animals. A considerable part of the ramparts and other buildings have been destroyed by the hand of time and by invading Mussulmans. According to native tradition, these magnificent structures, including the fortifications, tank, and temples, cost upwards of ten millions sterling. The vast quantity of massive hewn stone used in them, is calculated to excite the greater surpriso, as not the smallest pebble is to be met with in this part of Guzerat. The place swarms with monkeys, which are supported, encouraged, and protected by the inhabitants, though very mischievous and troublesome. Distance from Baroda, S.E., 15 miles; Surat, N.E., 78; Bombay, N., 225; Ahmedabad, S.E., 80. Lat. 22° 8', long. 73° 25'.

DHUI PEAK, in the British district of Kumaon, lieute-

DHUMTOUR, or **DUMTAUR**, in the British province of the Panjab, a valley extending nearly in a direction from east to west, in lat. 34° — $34^{\circ} 10'$, and long. $72^{\circ} 55'$ — $73^{\circ} 15'$. It is described by Baron Hügel, who explored it, as giving the impression of having been once the bed of a vast torrent. It is still furrowed by numerous watercourses, discharging themselves into the river Dor, which flows with a scanty stream in a stony channel half a mile wide. Here the traveller, descending from the elevated country lying to the north, finds the vegetation assuming the character of that which prevails in Hindostan. The sugar-cane especially is grown in such abun-

DHU.

dance, that it forms a principal article of fodder for cattle. The mountains which inclose the valley on the north-west, are clothed with dense and luxuriant forests of oak, pine, walnut, wild olive, and plane trees. The valley is populous, and abounds in villages, each defended by a small fort. Dhuntour, which gives name to the valley and district, is a small and poor place. The inhabitants are Eusufzai Afghans.

DHUMTOUR, in the Punjab, a small town, 16 miles E. of the Indus, lying on the route into Cashmere, by the Dub Pass. It is situate in a beautiful, well-watered, and productive valley, crowded with small forts, erected and maintained on account of the dangerous proximity of the Eusufzais. Lat. $34^{\circ} 7'$, long. $78^{\circ} 7'$. Von Hugel, III. 64.

DHUNAIREE.—A town in the province of Guzerat, or dominions of the Guicowar, 26 miles N. from Deesa, and 140 miles S.W. from Oodeypoor. Lat. $24^{\circ} 37'$, long. 72° . E.I.C. Ms. Doc.

DHUNCHI.—A town in the native state of Nepal, 42 miles N. from Khatmandoo. Lat. $28^{\circ} 19'$, long. $85^{\circ} 14'$. E.I.C. Ms. Doc.

DHUNELA,¹ in the territory of Gwalior, or possessions of Seindia, a small town on the route from Agra to the fort of Gwalior, 60 miles² S. of former, 11 N.W. of latter. It has a bazar, and supplies may be obtained. Here, on the 24th December, 1843, was the encampment of the Mahratta army, consisting of twenty-two regiments, with a large and well-appointed park of artillery, advancing³ to give battle to the British, posted at the neighbouring village of Hingona, under Sir Hugh Gough, commander-in-chief. Lat. $26^{\circ} 24'$, long. $78^{\circ} 8'$. E.I.C. Ms. Doc.

² Garden, Tables of Routes, 22.

³ Further Papers respecting Gwalior, presented to Parliament April, 1844, p. 150.

DHUNGAWAN, in the British district of Sohagpoor, territory of Saugor and Nerbudda, lieutenant-governorship of the North-West Provinces, a town 34 miles S.E. of Sohagpoor, 119 miles E. of Jubbulpoor. Lat. $23^{\circ} 2'$, long. $81^{\circ} 52'$. E.I.C. Ms. Doc.

DHUNGOEE.—A town in the British district of Sarun, presidency of Bengal, 39 miles N. of Chupra. Lat. $26^{\circ} 17'$, long. $84^{\circ} 40'$. E.I.C. Ms. Doc.

DHUNGURHEE, a town in the native state of Oude, 130 miles N. from Lucknow, and 53 miles E. from Pilleebheet. Lat. $28^{\circ} 41'$, long. $80^{\circ} 47'$. E.I.C. Ms. Doc.

DHUR, in the mahall or subdivision of Dharma, British district of Kumaon, a village a mile from the right bank of the river Doulee. East of the village, a hot spring throws up a dense and powerful stream. The banks of its small channel are tinged of an ochreous hue, partly occasioned by its heat, and partly, perhaps, from a chalybeate quality. Elevation above the sea probably about 8,000 feet. Lat. $30^{\circ} 5'$, long. $80^{\circ} 37'$.

E.I.C. Ms. Doc.

DHURAMPORE.—A town in the native state of Nepal,

DHU.

70 miles S.E. from Khatmandoo, and 50 miles N. from Durbunga. Lat. $26^{\circ} 52'$, long. $85^{\circ} 55'$.

DHURAVEE.—An island situate to the north-west of Salsette, off the coast of Bombay; it is about seven miles long by two broad, and its centre is in lat. $19^{\circ} 14'$, long. $72^{\circ} 53'$.

DHURKOT.—A town in the native state of Nepal, 162 miles N.W. from Khatmandoo, and 122 miles N.W. from Goruckpoor. Lat. $28^{\circ} 22'$, long. $82^{\circ} 48'$. E.I.C. Ms. Doc.

DHUROWLEE,¹ or **DEROWLI**, in the British district of Furruckabad, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Allygurh to that of Futtehgurh, and 39 miles² W. of the latter. The road in this part of the route is deep, heavy, and bad for carts; the country flat, cultivated in some parts, in others overrun with bush-jungle. Lat. $27^{\circ} 30'$, long. $79^{\circ} 7'$. E.I.C. Ms. Doc.
² Garden, Tables of Routes, 46.

DHURPHUREEPUTTEE.—A town in the British district of Tirhoot, presidency of Bengal, 27 miles W. of Mozufferpoor. Lat. $26^{\circ} 7'$, long. $85^{\circ} 2'$. E.I.C. Ms. Doc.

DHURUMPOOREE.—A town in the native state of Dhar, in Malwa, 29 miles S. from Dhar, and 35 miles S.W. from Mhow. Lat. $22^{\circ} 10'$, long. $75^{\circ} 26'$. E.I.C. Ms. Doc.

DHURUMPOOREE.—A town in the British territory of Sattara, presidency of Bombay, 49 miles N.E. of Sattara. Lat. $17^{\circ} 57'$, long. $74^{\circ} 44'$. E.I.C. Ms. Doc.

DHURRUMPOOR, a petty Rajpoot state under the political superintendence of the government of Bombay, is bounded on the north by the petty raj of Bansda; on the east by the Daung; on the south by the district of the rajah of Penth; and on the west by the British district of Surat. The country¹ (which includes an area of about 225 miles), overrun with dense forest, admits of little cultivation. The revenue² is estimated at 91,000 rupees, or 9,100*l*. The rana maintains a small military establishment, and the population of his territory is returned at 16,650 inhabitants.

In 1831³ the rajah's pecuniary embarrassments led him to mortgage to his creditors the revenues of a portion of his villages, he agreeing to abstain from all interference in the revenue or police management of those mortgaged villages until his creditors' claims should be liquidated; but, at a later date, it being found that public inconvenience was occasioned

DIAMOND HARBOUR.¹—The well-known port so called is situate in the river Hooghly, 29 miles² below Calcutta. The adjacent territory, though interesting from being the first possession of the East-India Company in Bengal,³ is singularly unhealthy, the whole country round being swampy. There is no town, unless a few native huts are worthy the appellation; but ships are usually lying in the harbour, for the reception or discharge of cargo. The road from Calcutta is excellent. Communication between this place and the capital is also maintained by means of the electric telegraph. Lat. 22° 12', long. 88° 10'.

DIA—DIG.

DIA SIAWALA.—See DEENA.

DIBING.—A town in the native state of Cashmeer, or territory of Gholab Singh, 109 miles E. from Sirinagur, and 67 miles N.E. from Kishtewar. Lat. $33^{\circ} 56'$, long. $76^{\circ} 50'$. E.I.C. Ms. Doc.

DIBONG RIVER rises in lat. $28^{\circ} 23'$, long. $96^{\circ} 46'$, and, flowing for ninety miles west through Thibet, and fifty miles south-west through Sudiya, in Assam, falls into the Brahmapootra river in lat. $27^{\circ} 50'$, long. $95^{\circ} 28'$.—See BRAHMAPOOTRA. E.I.C. Ms. Doc.

DICHOO.—See DAICHOO.

DIG,¹ in the British district of Cawnpore, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Cawnpore to that of Calpee, and 15 miles² N.E. of the latter. Water is abundant here, but supplies must be collected from the surrounding country. The road in this part of the route is good; the country well cultivated, and studded with small villages. Lat. $26^{\circ} 17'$, long. $79^{\circ} 57'$. E.I.C. Ms. Doc.

DIG, or DIGA,¹ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a village on the left bank of the Ganges, 752 miles² N.W. of Calcutta by the river route, 56 S.E. of the city of Allahabad by the same. Lat. $25^{\circ} 15'$, long. $82^{\circ} 18'$. E.I.C. Ms. Doc.

DIGAR.—A town in the native state of Cashmeer, or territory of Gholab Singh, 20 miles N.E. from the town of Le, and 134 miles N.E. from Kishtewar. Lat. $34^{\circ} 16'$, long. $77^{\circ} 55'$. E.I.C. Ms. Doc.

DIGAROO.—A river in Upper Assam, rises in Thibet, in lat. $28^{\circ} 10'$, long. $96^{\circ} 13'$, and after a course of ten miles through Thibet and fifteen through the Sudiya district of Assam, falls into the Brahmapootra, in lat. $27^{\circ} 50'$, long. $96^{\circ} 2'$.

DIGGEE, or DHIGGI,¹ in the Rajpoot state of Jeypore, a town on the route from Nusserabad to Gwalior, 48 miles² E. of former, 193 W. of latter. It is of considerable size, and supplies and water are abundant. Lat. $26^{\circ} 24'$, long. $75^{\circ} 35'$. E.I.C. Ms. Doc.

DIGNUGGUR,¹ in British district of Burdwan, presidency of Bengal, a town four or five miles on the right of the railway now under construction from the town of Burdwan to Rancegunge, 18 miles N.W. of former, 38 S.E. of latter. Jacquemont describes² it as having many hundred houses, a considerable number of native gentry, some in the employment of government, others speculating in sugar, which is abundantly pro- E.I.C. DILLY (MOUNT).¹—A remarkable headland² in the British district of Malabar. In clear weather it may be discerned from sea at a distance of from twenty-four to twenty-seven miles, and as the contiguous land is low, the headland, which is bluff, and has a small ancient fort on the summit, appears³ at a distance like an island. "The shore here is bold and safe to approach, there being seven and eight fathoms at one and two miles' distance, twenty and twenty-two fathoms at two or two and a half leagues' distance, and at fifteen leagues' distance abreast the mount you lose soundings. This is the narrowest part of the channel between the main and Lacadiva Islands, the distance being twenty-seven leagues between Elicalpeni Bank and Mount Dilly. Abreast of this headland there is frequently a drain of current to the southward, with a short confused swell, the effect of brisk north-westers, which greatly prevail here." Elevation above the sea 804 feet.⁴ Some years ago a project was set on foot for the construction of a harbour off this promontory, but in consequence of the enormous expense required for its formation, the scheme was abandoned.⁵ Lat. $12^{\circ} 2'$, long. $75^{\circ} 16'$.

¹ E.I.C. Ms. Doc.

DINAGEPORE,¹ under the presidency of Bengal, a British district named from its principal place. It is bounded on the

DINAGEPORE.

north-east by the native state of Bhotan; on the east by that of Coosh Behar and the British district of Rungpore; on the south by those of Bograh, Rajeshaye, and Malda; on the west by Purnea; and on the north by the British territory of Darjeeling. It lies between lat. $24^{\circ} 53'$ — $26^{\circ} 38'$, long. $88^{\circ} 2'$ — $89^{\circ} 16'$; is 130 miles in length from north to south, and 75 in breadth. The area² is 3,820 square miles. It is a very flat country, the only eminences being mere undulations,³ not rising more than 100 feet above the ordinary level of the surface. There is, however, a general, though very gradual, slope of the country from north to south, as indicated by the flow of the rivers in that direction. The principal of these is the Teesta, which, flowing southerly from the mountains of Sikkim, touches on the district in lat. $24^{\circ} 53'$, and flowing south-east for thirty-five miles, divaricates into two streams, one, called the Attree,* flowing south, the other flowing south-east into Coosh Behar, and retaining the name of Teesta. The Attree, with the exception of a few miles, during which it flows through the district of Rungpore, holds a southerly course through Dinagepore for 100 miles, during the latter portion of which it forms the boundary between this district and that of Bograh, and finally crosses the southern boundary into the British district of Rajeshaye. It communicates with other streams having courses in some measure parallel to its own, and sends from its right side a large offset, called the Purnabada, which, flowing south-westerly by the city of Dinagepore, passes the southern boundary of the district into the British district of Malda, and falls into the Mahanunda. During the rainy season, the Attree is navigable⁴ for craft of twenty tons, throughout the larger portion of its course in this district, but near its upper end no loaded vessels can ascend after the middle of November. In the southern part, vessels of forty tons frequent it from the middle of June till the middle of October. In the dry season, it admits of boats carrying only forty or fifty maunds (two to two and a half tons). The Jamuna, or Jabuna, a considerable stream, holds a course nearly parallel to the Attree, but on an average about fifteen miles to the east of it. The water is remarkably pure, and the river is navigable⁵ during the rainy season throughout its course in this district, a distance of about sixty miles, for craft varying from twenty

DINAGEPORE.

to twenty-five tons, according as they may ply on the lower or upper parts of the stream. With a parallel course, but still farther to the eastward, flows the river Curateea, an offset from the Attree. In its upper part, it passes through the district of Rungpore to the frontier of Dinagepore, and forms for seventy miles the boundary between these two districts, when it passes the south-eastern corner of the latter into the British district Bograh. The Tangon, rising in the northern quarter of the district, and having a course parallel in some measure to the Attree, and on an average about twenty miles west of it, flows through this district for about 140 miles, crossing the southern frontier into the British district Malda. It in all places is available for the transmission of goods by means of rafts or very small boats, but is not generally navigable for craft of any considerable burthen. The Cooliek, a considerable watercourse, unites the Tangon with an important stream termed the Nagor, which for eighty miles constitutes the boundary between Dinagepore and Purneah, and then forms a junction with the Mahananda, the united stream still forming the boundary between the two districts for twenty-five miles, and then passing into the district of Maldah. Numerous smaller streams traverse the country, communicating with the greater and with each other; the whole tract, in consequence of the propinquity of the Himalaya and the powerful influence of the monsoons, having such redundancy of moisture, that the surface is little but a reticulation of watercourses. There are no proper lakes, but in the rainy season the rivers in some places form considerable sheets of water; and there are many marshes, originating in copious springs, and in the rainy season so increased as to become temporary lakes. The deserted channels of rivers also retain water in places, which are denominated jhils or ponds. The winds are more variable here than is common in India; but by far the most prevalent among them is that from the east, which ushers in the periodical rains, commencing about 12th June,⁶ and ending about the 14th of October. In spring there are strong west winds, producing great heat, and sometimes storms, accompanied by thunder, rain, and hail. Hailstones are occasionally of such size as to cause death to human beings and cattle struck by them, and to break through the roofs of houses. A hailstone has been found measuring six inches in

⁶ Buchanan,
II. 007.

DINAGEPORE.

diameter. From the termination of the rainy season in October, to the setting in of the hot winds in the beginning of April, the weather is comparatively cool, and to Europeans pleasant, though even they sometimes find the cold⁷ in mid-winter such as to render woollen clothing and fires necessary to comfort.

⁷ Buchanan,
II. 608.

The wild elephant and rhinoceros can scarcely be said to be known here. Two elephants are stated to have made their appearance in the forests of Peruya, accompanied by a rhinoceros, having probably wandered from Nepal.⁸ There are tigers and leopards, but in no great numbers; and as these animals find abundant food in the jungle, they seldom injure human beings. Some assert that lions have occasionally been observed. The jackal, wolf, hyæna, fox, and wild dog are common; bears are few in number, frequenting the recesses of ruined towns; otters are so numerous that their skins might become an article of commerce. Wild buffaloes abound, and commit great havoc; their strength and ferocity being such as to deter the natives from attacking them. Peafowl are numerous, and the jhils and marshes are overrun with wild geese, wild ducks, and some other aquatic birds. Fish swarm to an incredible degree in all the waters, and form the principal animal food of the people; crocodiles are common, but not very dangerous to human beings. Venomous serpents are numerous, and many persons perish from their bites. Bees abound, and wax⁹ is an article of commerce, though not of great importance.

⁸ Id. II. 780.

⁹ Id. II. 775.

Forests and jungles were forty years ago estimated to over-spread about 220 square miles¹ of the district. Their best produce appears to be bamboos of various kinds, many of them serving several important uses; sal (*Shorea robusta*), *Ficus indica* and *Ficus religiosa*, the coconut-palm, which, however, does not bring its fruit to perfection; khajur palm (date), valuable for its juice yielding saccharine matter when inspissated, and when fermented an alcoholic beverage much used; the Palmira palm, valuable for similar purposes; and some other trees of the same character. There are besides, the nim (*Melia azadirachta*), simul (*Bombax heptaphyllum*), the deodar, botanically denominated *Uvaria longifolia*, stated by Buchanan to be a very useless tree, and consequently widely

¹ Id. II. 770.

DINAGEPORE.

differing from the noble deodar, or *Cedrus deodar*, of the Himalaya. To the above are to be added various kinds of mimosa. Other trees of importance are the jujube (*Zizyphus jujuba*) and jak (*Artocarpus integrifolia*), a species of breadfruit. Rice is the principal grain of the district, and in many parts two crops are yearly obtained from the same ground. Wheat and barley are raised, but in no great quantities; meruya (*Cynosurus corocanus*) and various kinds of millet are also articles of cultivation. Peas, and various others kinds of pulse, as well as oil-seeds, are extensively raised. The insipid fare of the bulk of the people peculiarly requiring seasoning, many products are grown for this purpose: ginger, turmeric, capsicum, coriander, anise, and pepper. Of esculent vegetables, there are the potato, sweet potato, begun or egg-plant, esculent arum radish, plantain (*Musa paradisiaca*), various cucurbitaceous plants, and many others unknown in Europe; most of the vegetables of that quarter of the world, however, thriving here during the cool season. A small quantity of cotton is cultivated: it is generally of poor quality, and is retained for home use. There is, however, a kind, denominated son, of superior quality, produced in the eastern part, having a strong staple, well suited for sailcloth and cordage. The sugar-cane flourishes, having a stem of considerable thickness, and twelve or fourteen feet high. The canes are planted in the beginning of spring, and gathered towards the close of the succeeding winter. The juice is prepared merely by boiling down, either into a thick syrup or a hard dry cake, and in these states sent to market. The tobacco grown is not sufficient for the consumption of the district. Betel (*Piper betle*) and hemp (*Cannabis sativa*), yielding an intoxicating extract, are grown to considerable extent. The cultivation of indigo has been tried, but does not appear to prosper. Silk is produced in considerable quantity, the worms being fed on the foliage either of the mulberry or of the castor-oil plant (*Ricinus communis*).

The domestic animals are kine, buffaloes, sheep, horses of a very diminutive and wretched breed, swine, goats, which are very numerous, and of which 300,000, it has been stated, are annually sacrificed,² their flesh forming feasts for the worshippers. Wretched dogs, owned by no one, swarm in the towns and villages. Cats, which animals, however, are less

² Buchanan,
ii. 697.

DINAGEPORE.

numerous, are equally neglected. Geese, ducks, gallinaceous poultry, and pigeons, are the domesticated birds.

The principal manufacturing processes are dyeing, the weaving of cotton and silk, mat-making, paper-making, book-binding, tanning, distilling, oil-pressing, carpentry, smithery, and the fabrication of pottery.

The principal exports are grain, oil, ghee or clarified butter, cotton cloths, silk, and coarse silk fabrics, turmeric, and ginger; the imports, salt, metals, manufactured and otherwise, cotton fabrics of various kinds, blankets and other woollens, and spices.

The majority of the people are wretchedly lodged in huts,³ the sides of which are of strong coarse matting, the roofs of thatch, the framework of strong bamboos. Persons in easier circumstances have dwellings of mud, and latterly a few of the more wealthy have built houses of brick, in imitation of those of the Europeans. Mosques are numerous in the district. They are generally small, and of simple construction; the form, a cube, covered with a dome, or a paralleliped covered with several. The most numerous Hindoo places of worship are denominated sthans,⁴ and are merely heaps or square terraces of earth placed under trees, having a stone or a rude image of clay painted as an object of worship. A step in advance of this is the mondop, having walls painted with rude, frightful imagery, on subjects drawn from the Hindoo mythology. Such a building, surmounted by a pyramid or a dome, is a still higher effort of devotional zeal, and is reserved for the more revered objects of worship. The most complex and expensive is called a novorotno, or "building of nine ornaments," having a roof of two stages, with an octagonal ground-plan, a central pyramid, and eight others, one at each external angle. Such buildings are costly, as they are cased with expensive tiles elaborately carved. That at Gopalganj is said to have cost 20,000*l*.

The population is stated to be 1,200,000, which, compared with the area, affords an average of 314 to the square mile. The Mussulmans have been estimated to exceed the Hindoos in the proportion of seven⁵ to three. Among both, marriages take place excessively early, the conjugal union being ordinarily completed before the female has reached the close of her

³ Buchanan, II. 522.

⁴ Id. II. 524.

⁵ Id. II. Appendix, 18.

DINAGEPORE.

⁶ Buchanan,
ii. 689.

⁷ *Id.* ii. 689.

⁸ *Id.* ii. 707.

thirteenth year,⁶ or the male that of his sixteenth. The effects of these premature marriages are said to be manifested in the physical and intellectual deterioration of the population, and the small increase of their numbers. The inhabitants⁷ of Dinagepore are represented by Buchanan as a puny, weak race, and far from having numerous families. They are, moreover, said to be generally short-lived, being cut off in great numbers by fevers and dysentery. The prevalence of these affections does not appear to arise from want of food. Polygamy is very prevalent, especially among the Brahminists. Widows rarely burned themselves with the bodies of their husbands, even when that horrible practice was permitted by law, and not more than one or two instances occurred annually. Only a few Brahmins of superior rank are versed in Sanscrit. Much more extensive is the knowledge of the Prakrit, a dialect⁸ corrupted from the Sanscrit, which has supplied most of the words, the syntax and inflexions having sprung from the ordinary tongue of the district. The common people are acquainted only with Bengalee, which appears to be the indigenous language of this country.

The number of towns is very small in proportion to the extent and population of the district, the great majority of the people residing in dispersed hamlets. The chief towns—Dinagepore, the capital, Hemtabad, Raegang, Damdahab, and Ghonaghat—are noticed under their respective names in the alphabetical arrangement.

There are few routes through this district. They are—
1. From west to east, from Purneah, through the town of Dinagepore, to Rungpore; 2. from south to north, from Berhampore, through the town of Dinagepore, to Darjeling; 3. from south-west to north-east, from Maldah to the town of Dinagepore.

Legends respecting the primeval state of the tract comprised in this district abound in the works relating to the early mythology of India; but the commencement of authentic history may be placed at the beginning of the thirteenth century, when Raja Lokhymon or Lakshmanyah was expelled⁹ from his dominions by Muhammad Bakhtyar, one of the generals of Kutb-uddin, emperor of Delhi. When Fakhruddin, in 1338,¹ proclaimed himself independent sovereign of Bengal, he appears to have made himself master of Dinagepore at the

DIN.

same time, though its obedience was probably precarious. Eventually it was, in 1538, reduced,² with the remainder of Bengal, by Shir Shah, the renowned Afghan, who soon after established himself in the sovereignty of Delhi, from which he had expelled Humayon. After the death of Shir Shah, it was subdued³ in 1584 by Akbar, the son of Humayon, and appears to have remained a district of the empire of Delhi until the time nearly of its dissolution. In 1765, it was conveyed⁴ to the East-India Company by the grant of Shah Alun.

DINAGEPORE.^{1*}—The principal place of the British district of the same name, a town on the route from Purneah to Rungpore, 85 miles² E. of the former, and 43 W. of the latter. It is situate on the river Purnabada. Through the exertions of the British authorities, it is now clean and well watched, which is understood to present a favourable contrast to its former state. There is no public building deserving any consideration, the spacious residence of the rajah³ having for many years been in a state of ruin, and the ditch and rampart with which it was inclosed being nearly obliterated. There are no Brahminical temples worth notice, and but one mosque, even that being small, and of no architectural pretensions. The public offices of the civil establishment are large, but ill built, and totally devoid of elegance. That establishment consists of a civil and sessions judge, a principal sudder aumeen, a collector, a magistrate, an assistant to the magistrate and collector, an assistant surgeon. About eleven native moonsiffs are also attached to it. The population has been estimated at from 25,000 to 30,000 persons.⁴ Dinagepore is distant N. from Berhampore 142 miles,⁵ N. from Calcutta 261.⁶ Lat. 25° 34', long. 88° 38'.

DINAPOOR,^{1†} in the British district of Patna, presidency of Bengal, a town on the right or south bank of the Ganges. It is an important military station, and remarkable for the fine barracks² built by government for the accommodation of the troops. The barracks for the accommodation of the European soldiers are comprised within a magnificent and elegant

* Dinajpur of Tassin. Buchanan observes,¹ that the word means "the abode of beggars."

† Danapur of Tassin; Dinapur, Dinapoor, or Dinapore, of the British writers. Tavernier denominates¹ it Danapour.

DIN.

structure, and those of the officers, though rather inferior, are yet very fine buildings, and of great extent. Many of the officers have built commodious lodges in the vicinity, and the grounds about them are neatly and tastefully laid out. There are also extensive and very handsome barracks³ for the native troops. The church⁴ is capacious and handsome, and the various houses scattered in market-places within the boundaries of the cantonment, and subject to military authority, were stated in 1807 to amount to 3,226;⁵ so that if five persons be allowed to each, the population should be estimated at 16,130, exclusive of military. The markets are well supplied, especially with articles suited to European taste. ² Report on Med. Topography and Statistics of Southern Division of Madras Army, 146.

DINDIGUL,¹ in the British district of Madura, presidency of Madras, a town with a fort,² situate at the north-eastern extremity of the valley of the same name. It is built on a gentle declivity, and is in length from north to south² 987 yards, and in breadth from east to west 927. The streets are wide, the houses well built, and the bazars plentifully supplied with all the necessaries of life. The number of houses a few years ago was stated to be 1,883, and that of the inhabitants (exclusive of the troops) 6,550. The military lines, situate at the north-west corner of the town, are well drained, and always dry and clean. The Court of Justice and collector's lodge are about a quarter of a mile from the town; and between them and the town are the lodges of the officers, surrounded by groves and gardens, inclosed with hedges of euphorbium and aloes. The water is in general good, but the population

DIN.

give a preference for drinking, to that obtained from the Brahmins' Baoli, a large public well at the north of the town. Excellent water is also found in a reservoir situate at the bottom of the rock, and replenished by the rains. The fort³ is situate on a wedge-shaped mass of gneiss 400 feet in length and 300 in breadth, perfectly bare of vegetation, with the exception of a few patches of scanty soil about the summit, in which some stunted trees and shrubs grow. The ascent is on the eastern side by a flight of stone steps, the other sides being nearly perpendicular. Near the summit there is a well of great depth, erroneously supposed by the natives to be unfathomable. The water from it is excellent. Dindigul is the principal place of a subdivision of the same name, forming part of the British district of Madura. Elevation of the town above the sea 700 feet, of the rock 980. Distance from Madura, N., 32 miles; Tanjore, S.W., 88; Trichinopoly, S.W., 60; Cochin, E., 126; Madras, S.W., 247. Lat. $10^{\circ} 22'$, long. $78^{\circ} 3'$.

Petorahgurb to the Unta Dhura Pass, 16 miles north of Petorahgurb, one and a half east of the left bank of the Ramgunga. It was an important position in the survey of Kumaon by Webb, who remained there fifteen days engaged in trigonometrical and meteorological observations. Elevation above the sea 4,443 feet. Lat. $29^{\circ} 49'$, long. $80^{\circ} 12'$.

Corresp. on Sind, 453-453.

DINGEE, in Sind, a fort between Khyerpore and Hyderabad, and 50 miles S. of the former town. It is surrounded by walls fifteen feet high, and has an abundant supply of water from wells. Here, in the beginning of 1843, the ameers of Sind collected an army, preparatory to their final struggle with the British. Lat. $26^{\circ} 52'$, long. $68^{\circ} 40'$.

DINGUR KINGUR.—See DINGARRH.

Garden, Tables of Routes, 296.

DINGYE, in the Rajpoot state of Joudpore, on the route from Nusseerabad to Deesa, and 123 miles S.W. of the former. The surrounding country is in general level and bare, but occasionally with a few small hills. The road in this part of the route is firm and good. Lat. $25^{\circ} 37'$, long. $73^{\circ} 27'$.

E. I. C. M. S. Doc.

DIPAL, or DUTI.—A town in the native state of Nepal, 51 miles S.W. from Jemlah, and 70 miles N.E. from Pilleebheet. Lat. $29^{\circ} 5'$, long. $80^{\circ} 54'$.

E. I. C. M. S. Doc. Ayeen Akbery, II. App. 101.

DIPALPOOR.—A town in the Punjab, situate in the doab between the Ghara and the Ravee, 21 miles from the right bank of the former, 26 from the left of the latter. In the time of the emperor Aebur, it was the chief town of a district which yielded an income of 3,233,353 rupees. Lat. $30^{\circ} 37'$, long. $73^{\circ} 38'$.

¹ Leech, Rep. on Sindh Army, 81. Burnes, Bokhara, III. 291. Masson, Bal. Afg. Panj. I. 25.

DIRAWUL, or DILAWUR¹ (the *l* and *r* being interchangeable).—A fortress of Bhawalpoor, situate in the desert, forty miles from the left bank of the Punjnad. It is strongly fortified, according to the notions of native powers, and with reference to their practical skill in the arts of defence; but its safety principally lies in the difficulty of access to it, the road lying through a parched desert totally devoid of water; so that a besieging army must draw its supply from a distance of fifteen miles. At the time of Atkinson's visit,² it contained the treasure of the late nawaub Bhawl Khan, vaguely estimated at 700,000*l*. Here also was his zenana, and thither he retired for relaxation from the fatigues of business, or for security when threatened with invasion. There is here a manufactory

² Exp. into Afg. 76.

DIR—DIU.

of gunpowder for artillery, but the produce is of very indifferent quality. Lat. $28^{\circ} 44'$, long. $71^{\circ} 17'$.

DIREEAPoor,¹ in the British district of Allygurh, lieutenant-governorship of the North-West Provinces, a town with a bazar, on the route from the cantonment of Allygurh to that of Etawah, and 19 miles² S. of the former. The road in this part of the route is good; the country open, with a soil which, though rather sandy, is well cultivated. Lat. $27^{\circ} 39'$, long. $78^{\circ} 12'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 45.

DISANG.—A river rising in lat. $26^{\circ} 47'$, long. $95^{\circ} 25'$, in the country inhabited by the Naga tribes, through which it flows north for thirty miles to the village of Boorhath, where it turns easterly, and flowing for sixty miles through the British district of Seebpoor, in the territory of Assam, it falls into the Brahmapootra in lat. $27^{\circ} 4'$, long. $94^{\circ} 30'$.

E.I.C. Ms. Doc.

DIU.¹—A seaport town on the south coast of the peninsula of Kattywar, province of Guzerat, belonging to the Portuguese, who obtained possession of the place in 1515. It is situate at the eastern extremity of an island extending in a direction from east to west about seven miles, and having a breadth varying from a mile and a half to two miles. "Off² the point on which the town stands, and which projects to the eastward, there is a rocky ledge, extending upwards of a quarter of a mile farther in the same direction, and protecting to the southward the bay formed by the main coast opposite. The bay or harbour is further protected by two small banks, one a quarter and the other three-quarters of a mile to the eastward of the rocky ledge." The general depth of the anchorage is three and four fathoms, and formerly on the east side there was sufficient for a 74-gun ship; but the depth of water is considered to have decreased latterly. The channel between the island of Diu and the mainland is navigable only for fishing-boats and other small craft, the western entrance, which is defended by a fort, having four or five feet of water on the bar when lowest. The water is brackish, except that preserved from the rainy season. Vegetables and other provisions are plentiful, being brought from the mainland, the soil of the island itself being little productive. The town is well fortified, being surrounded by a wall strengthened with towers at regular intervals. Notwithstanding the excellence of the harbour for ships of

DIWARNUGGUR.—A town in the British district of Silhet, presidency of Bengal, 33 miles W. of Silhet. Lat. $24^{\circ} 59'$, long. $91^{\circ} 20'$.

DOA.—A village in Arracan, on the Aeng route, a little to the east of the Yoomadounng Mountains. Lat. $20^{\circ} 10'$, long. $94^{\circ} 17'$.

E.I.C. Ms. Doc.

DOAREE, in the British district of Gurlhwal, lieutenant-governorship of the North-West Provinces, a town on the route from Rampoor to Sircenuggur, 37 miles S. of the latter. Lat. $29^{\circ} 41'$, long. $78^{\circ} 59'$.

¹ E.I.C. Ms. Doc.

DOBBILI, or **BOBILÉE.**¹—A town in the British district of Vizagapatam, 62 miles N. from Vizagapatam, and 41 miles N.W. from Chieaeole. In 1758 the fort was stormed by a force under the French commander Mons. Bussy. When all hope of maintaining it against the assailants had been abandoned by the garrison, the chiefs put to death their wives and children, and the massacre being performed, "those who accomplished it returned like men agitated by the furies to die themselves on the walls."² Lat. $18^{\circ} 34'$, long. $83^{\circ} 26'$.

² Orme, Hindostan, II. 258.

DOB—DOD.

DOBDUR HAUT.—A town in the British district of Seebpoor, in Upper Assam, presidency of Bengal, 10 miles S. of Seebpoor. Lat. $26^{\circ} 52'$, long. $94^{\circ} 37'$. E.I.C. Ms. Doc.

DOBOORJEE, in the Baree Dooab division of the Punjab, a town situated on the right bank of the Ghara river, 50 miles S. of the town of Lahore. Lat. $30^{\circ} 53'$, long. $74^{\circ} 20'$. E.I.C. Ms. Doc.

DODA,¹ in the territory of Gwalior, or possessions of Scindia's family, a town on the route from Neemuch to Baitool, 51 miles² S.E. of former, 261 N.W. of latter. It is supplied with water from wells, and has a small bazaar with market. Elevation³ above the sea 1,482 feet. Lat. $23^{\circ} 46'$, long. $75^{\circ} 10'$. E.I.C. Ms. Doc.

DODA.—A town in the Punjab, amidst the mountains south of Cashmere, situate on the right or north bank of the Chenaub, nearly opposite its confluence with the river of Budrawar. The Chenaub, here sixty yards broad, is crossed by a *jhoola* or bridge, formed by a cable stretched from bank to bank, and traversed by a suspended seat, drawn backwards and forwards by means of a rope. Doda is a neat, well-built town, with a good bazar, and a square fort having a tower at each angle. Lat. $33^{\circ} 12'$, long. $75^{\circ} 18'$. Garden, Tables of Routes, 68.

DODABALLA, or **DODA BALAPORE**.¹—A town in the territory of Mysore, the name signifying "Balapore the Great," to distinguish between it and Chika Balapoor, or Balapore the Less, which is situate fourteen miles north-east of this place. Dodaballa has a mud fort of great size and strength,² but within, nothing is found but ruins and rubbish. The place has some trade, but it is only for the supply of domestic wants. The traders have neither enterprise nor capital. Distant from Bangalore, N., 25 miles. Lat. $13^{\circ} 14'$, long. $77^{\circ} 24'$. E.I.C. Ms. Doc.

DODAIREE, or **DODDERI**,¹ in the territory of Mysore, a town about eight miles W. of the right bank of the river Vedavutty. Near this place, in 1698, the Mahrattas,² commanded by Suntajee, surrounded, defeated, and destroyed a force commanded by Kasim Khan, whom Aurungzebe had appointed governor of the Carnatic. Distant from Chittel Droog, E., 22 miles; Bangalore, N.W., 110; Seringapatam, N., 130. Lat. $14^{\circ} 18'$, long. $76^{\circ} 46'$. Buchanan, Journey from Madras, through Mysore, Canara, and Malabar, I. 347.

DODHUR.—See **DODA**.

DODOOKEE.—A town in the native state of Nagpoor, or E.I.C. Ms. Doc.

DOE—DOL.

rajah of Berar's dominions, 118 miles S.E. from Nagpoor, and 76 miles E. from Chanda. Lat. $20^{\circ} 5'$, long. $80^{\circ} 33'$.

DOESAH.—A town in the British district of Chota Nagpore, presidency of Bengal, 100 miles S. of Shergotty. Lat. $23^{\circ} 7'$, long. $84^{\circ} 51'$.

DOGHINE, a small river of the Amherst district of the Tenasserim provinces, rises in lat. $16^{\circ} 58'$, long. $98^{\circ} 33'$, and flowing west for forty miles, falls into the Gyein river, in lat. $16^{\circ} 55'$, long. $98^{\circ} 6'$.

E.I.C. Ms. Doc.

DOHRA, in the British district of Bareilly, lieutenant-governorship of the North-West Provinces, a village on the route by Nanak Math, from the town of Pilleebheet to Almora cantonment, 25 miles N. of the former. Lat. $28^{\circ} 57'$, long. $79^{\circ} 49'$.

¹ E.I.C. Ms. Doc.

DOHUD,¹ in the territory of Gwalior, or possessions of Scindia's family, a town on the common boundary of Malwa and Guzerat. W. of the former, E. of the latter, on the route from Mow to Deesa, 118 miles² N.W. of former, 208 S.E. of latter. It is a place of considerable traffic and importance, the road being the channel of considerable and lucrative commerce between Malwa and Upper Hindostan on the one side, and Guzerat on the other. It commands³ the principal pass on the north-east of Guzerat by means of its fort, situate at the east extremity of the town. This building, formerly a great caravanserai, said to have been built by Aurungzebe, is of a square ground-plan, measuring each way 450 feet, and has two strong gates, one on the north, the other on the south, and in the interior contains two wells and a mosque, and some other structures of fine workmanship and durable materials. Distant W. of Oojein 100 miles, N.E. of Baroda 77. Lat. $22^{\circ} 50'$, long. $74^{\circ} 15'$.

DOLANUH, in the British district of Meerut, lieutenant-governorship of the North-West Provinces, a town on the southern frontier, towards the British district of Bolundshuhnr, 28 miles E. of Delhi. Lat. $28^{\circ} 38'$, long. $77^{\circ} 43'$.

Boileau, *Rajwara*, 118, 218.

DOLEH, in the Rajpoot state of Joudpore, a group of three villages on the route from Balotra to the city of Joudpore, and 38 miles N.E. of the former. It is impor-

* Dohad of Tassin. Whence the name, Do, "two," and Hadd, "boundary."

DOL—DON.

tant as containing three wells, supplying the only good water obtainable throughout a considerable tract. The road in this part of the route is good, lying through a country level and fertile. Lat. $26^{\circ} 4'$, long. $72^{\circ} 52'$.

DOLEHKUN.—A town in the British district of Tannah, presidency of Bombay, 59 miles N.E. of Bombay. Lat. $19^{\circ} 29'$, long. $73^{\circ} 36'$. E.I.C. Ms. Doc.

DOLLA.—A town in the British district of Sudiya, in Upper Assam, presidency of Bengal, six miles from the left bank of the Bramapootra, and 12 S.W. of Sudiya. Lat. $27^{\circ} 42'$, long. $95^{\circ} 36'$. E.I.C. Ms. Doc.

DOMEL, one of the principal islands of the cluster known as the Mergui Archipelago: it is twenty-six miles in length from north to south, and five miles in breadth; its centre is about lat. $11^{\circ} 40'$, long. $98^{\circ} 20'$.

DOMEPARRA.—A town in the British district of Pooree, presidency of Bengal, 44 miles N. of Juggurnaut. Lat. $20^{\circ} 23'$, long. $85^{\circ} 40'$. E.I.C. Ms. Doc.

DOMRAIL.—See **DIUMRAH**.

DOMRI, in the British district of Furruckabad, lieutenant-governorship of the North-West Provinces, a town two miles to the left or west of the route from Futtehgurh to Khasganj, and 44 miles W. of the former. The road in this part of the route is heavy and bad for wheeled carriages; the country level, cultivated in some parts, in others overrun with bush-jungle. Lat. $27^{\circ} 32'$, long. 79° .

Garden, Tables
of Routes, 175.

DOMUS, in the British district of Surat, presidency of Bombay, a town situate on the headland bounding the estuary of the river Taptee on the south-east. Distance from the city of Surat, S.W., eight miles; Bombay, N., 150. Lat. $21^{\circ} 4'$, long. $72^{\circ} 48'$. E.I.C. Ms. Doc.

DONABUE.—A town in the recently-acquired British district of Pegu, situate on one of the main streams by which the Irawaddy flows into the sea: it is 65 miles N.W. from Rangoon, 54 miles N.E. from Bassein. The place has attained a degree of celebrity in the annals of Burmese warfare, as well from its successful resistance of Brigadier Cotton's attack in 1825, as from its contiguity to the scene of a more recent disaster which befell the British. Here, on the 4th February, 1853, a detachment of sepoy, accompanied by a party of

DON.

seamen and marines under the command of Captain Granville Loch, of the Royal Navy, suffered a repulse in a struggle with a Burmese force, and lost some of its bravest officers, including its distinguished commander. Lat. $17^{\circ} 10'$, long. $95^{\circ} 27'$.

E.I.C. Ms. Doc.

DONGERPOOR, in the jaghire of Rampoor, lieutenant-governorship of Agra, a town on the north-eastern route from the city of Rampoor to Nugina, and $1\frac{1}{2}$ mile N. of the former. Lat. $28^{\circ} 49'$, long. $79^{\circ} 5'$.

E.I.C. Ms. Doc.

DONGUR MULARNEE.—A town in the Rajpoot state of Jeypoor, 66 miles S.E. from Jeypoor, and 98 miles W. from Gwalior. Lat. $26^{\circ} 16'$, long. $76^{\circ} 41'$.

DONGURPOOR, or **DOONGERPORE**.¹*—A petty native state in the province of Rajpootana, under the political superintendence of the Governor-General. It is bounded on the north and east by Mewar or Oodeypore; on the south-east by Banswarra; and on the south and south-west by the Myhee Caunta district of the province of Guzerat. Its length from east to west is forty miles, its breadth from north to south thirty-five, and it contains an area of about one thousand square miles. It is situate between lat. $23^{\circ} 35'$ — $24^{\circ} 3'$, long. $73^{\circ} 40'$ — $74^{\circ} 18'$. Its chief is descended from a branch of the Oodeypore family, whose ancestors became, at an early period, dependent on the emperor of Delhi, and so continued until subjugated by the Mahrattas, from whose oppressive yoke the prince and his territory were rescued by the British. The treaty¹ by which the British connection was established, was concluded in 1818; and the terms and conditions are substantially the same with those of the treaty concluded about the same time with the chief of Banswarra, and which are described in the article upon that state.

¹ Treaties with Native Princes, 602.

The population of Dongurpoor, estimated at 100 to the square mile, amounts to 100,000. The revenue is stated at 109,000² rupees, or 10,900*l.* per annum. Under the treaty above referred to, the British government is entitled to tribute not exceeding in any case three-eighths of the actual revenue. The armed force of the state is represented to consist of 125 cavalry and 200 infantry, with a police establishment of 100 men; making a total of 425. The tributary chiefs holding lands on military tenure are only eight³ in number.

* Durgarpur of Ali Mohammed Khan.⁴

DON—DOO.

Dongurpoor since its connection with the British government has not been free from those disturbances which seem inseparable from the condition of an Indian state. In 1827,⁴ the Rawul consented to divest himself of the exercise of the government, and to surrender it to his adopted son Dulput Singh; but the latter was reclaimed⁵ by his grandfather, the rajah of Pertaubghur, being his only surviving descendant, and on whose death he was allowed to succeed to the raj of Pertaubghur, still remaining regent of Dongurpoor. On the death of the rawul of the last-named state, however, the question arose whether Dulput Singh should succeed to the dignity by virtue of the adoption. It appeared that the thakoors or nobles of Dongurpoor were greatly averse to the union of the two principalities, and it was therefore agreed that Dulput Singh should adopt a son from among the kindred of the late rawul, who should be placed on the Dongurpoor guddee, Dulput Singh continuing regent during the minority. It seems, however, to have been thought, that in a legal point of view, the reclamation of Dulput Singh by his own family did not annul the rights which had accrued to him by adoption; but for the sake of preserving the peace of the country, he consented to compromise his claim in the manner above described.

² Garden, Tables of Routes, 3.

³ Jacquemant, Voyages, vi. 388.

⁴ Helleu, Tour in Rajwara, 153.

DOO.

in the middle of the town is a very small but neat citadel, about forty or fifty yards square, built of masonry, and faced also with earth, covered with lime-plaster, and furnished with a parapet in such a manner as to form a middle line of defence between the renee and the rampart. The fort has thus a triple line of fire; but the whole is on too small a scale to be formidable to any but a native army. The town-gates on the east and west sides are carefully covered by outworks of mud, with winding entrances. At the east one is a well of good water, and opposite the west gate is a tank; but the town does not seem to be very abundantly supplied with drinking-water, though the wells are only sixteen cubits deep, some of them being brackish." Lat. $26^{\circ} 40'$, long. $75^{\circ} 18'$.

DOODNA.—A river flowing in a south-easterly direction through the native state of Hyderabad, or territory of the Nizam: it rises in lat. $20^{\circ} 2'$, long. $77^{\circ} 5'$, and falls into the Poorna river, a considerable branch of the Godavery, in lat. $19^{\circ} 16'$, long. $76^{\circ} 58'$, after a course of about 120 miles.

¹ E.I. C. Trigon. Surv.

DOODOO,¹ in Bussahir, a village on the route from Mussouree to the Gunas Pass, and five miles N.W. of the former place. It is of inconsiderable size, but before the establishment of the British power was of some importance as the residence of a freebooter, who affected independence, and laid the surrounding country under contribution. Elevation above the sea 8,790² feet. Lat. $31^{\circ} 11'$, long. $78^{\circ} 8'$.

² As. Res. xv. 343, 413—Herbert, Levels of Setlej.

DOODPATLEE, or **DOODPUTLEE**, in Eastern India, a village of Cachar, and the site of a large cantonment of the Burmese during the war of 1825. The post was strongly fortified, consisting of seven stockades of a most formidable nature, which were destroyed upon the occupation of the place by the British.¹ Lat. $25^{\circ} 3'$, long. $92^{\circ} 42'$.

poor, lieutenant-governorship of the North-West Provinces, a small town 52 miles N.W. of the cantonment of Goruckpoor. Buchanan² describes it at the time of his survey, forty years ago, as containing "175 huts, very poor, but forming a straight wide street. It has been surrounded by a ditch and a hedge of bamboos, now neglected. It is finely situated on the banks of the Raptee, but does not possess one boat except for ferry." Distant N. from Allahabad and Benares 135 miles. Lat. 27° 10', long. 82° 43'.

² Survey of Eastern India, II. 387.

DOONA GIREE, in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a town on the route from Almora to Sireenuggur, 19 miles N.W. of the former. Lat. 29° 48', long. 79° 30'.

E.I.C. Ms. Doc.

DOONARA.—A town in the native state of Joudpore, on the left bank of the Loonee river, and 33 miles S.W. from Joudpore. Lat. 25° 55', long. 72° 52'.

E.I.C. Ms. Doc.

DOONDA.—A town in the native state of Hyderabad, or dominions of the Nizam, situate four miles from the right bank of the Payne Gungah river, and 170 N.W. from Hyderabad. Lat. 19° 50', long. 78° 15'.

E.I.C. Ms. Doc.

DOONDEE, in the British district of Barcilly, lieutenant-governorship of the North-West Provinces, a considerable village on the route by Nanakmath to Ruderpoor, from the town of Pillibheet, 28 miles N.W. of the latter. It is situate two miles E. of the left bank of the river Sookhee. Lat. 28° 58', long. 79° 43'.

E.I.C. Ms. Doc.

DOONDIA KHER.—See DAUNDIAKHENA.

DOONEE,¹ in the territory of Jeypoor, in Rajpootana, a populous town,² though of moderate size. It is surrounded by a mud wall, and, though not provided with cannon, was in 1809 so resolutely defended as to baffle all the ill-directed efforts of Doulut Rao Scindia to take it. Distant from Jeypoor S. 70 miles. Lat. 25° 53', long. 75° 47'.

¹ E.I.O. Ms. Doc.

² Broughton, Letters from a Malharatta Camp, 90.

DOONGA,* or TUPI DOONGA,¹ in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a halting-place on the route, by the Unta Dhura Pass, from Almora fort to Hiundes or South-western Tibet, 144² miles N.E. of Almora. It is a singularly desolate place, about four miles S. of the crest of the pass, and eight miles S. of the

DOO.

Chinese frontier. There is no village, but merely a very indifferent encamping-ground, close to the junction of the Gunka and Lusher, two streams descending during summer in a southern direction, from the snow and ice about the pass. Even firewood must be brought from three miles lower down to the southward. The elevation² above the sea, according to Barron's estimate, from the boiling-water point, is 15,450 feet. Lat. $30^{\circ} 32'$, long. $80^{\circ} 17'$.

DOONGERPORE.—See **DOONGERPOOR.**

E.I.C. Ms. Doc.

DOONGRA, in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a village with a small Hindu temple, a mile from the left bank of the Lohoghat river, and two from its confluence with the Kalee (Eastern). Lat. $29^{\circ} 20'$, long. $80^{\circ} 19'$.

E.I.C. Ms. Doc.

DOOPUND.—A town in the British district of Cuddapah, presidency of Madras, 120 miles W. of Masulipatam. Lat. $15^{\circ} 56'$, long. $79^{\circ} 26'$.

E.I.C. Ms. Doc.

DOORAMOW.—A town in the native state of Oude, 60 miles S.E. from Lucknow, and 55 miles N.E. from Futtchpoor. Lat. $26^{\circ} 17'$, long. $81^{\circ} 41'$.

E.I.C. Ms. Doc.

DOOREILA.—A town in the native state of Punnah, in Bundelcund, 26 miles S.E. from Punnah, and 96 miles N.E. from Jubbulpoor. Lat. $24^{\circ} 27'$, long. $80^{\circ} 33'$.

¹ E.I.C. Ms. Doc.

DOORGADAS,¹ in the British district of Cawnpore, lieutenant-governorship of the North-West Provinces, a village on the route from Allahabad to Etawah, and 72 miles² S.E. of the latter. The road in this part of the route is bad, running through deep narrow ravines. Lat. $26^{\circ} 11'$, long. $79^{\circ} 57'$.

Garden, Tables of Routes, 80.

DOORGEENUGRA, in the jaghiere of Rampoor, lieutenant-governorship of the North-West Provinces, a village on the route from Bareilly to Moradabad, and 38 miles N.W. of the former. The road in this part of the route is good, and passes through an open, fertile, and highly-cultivated country. Lat. $28^{\circ} 41'$, long. $79^{\circ} 8'$.

E.I.C. Ms. Doc.

DOORILATTA.—A town in the British district of Hoogly, presidency of Bengal, 32 miles N.W. of Calcutta. Lat. $22^{\circ} 54'$, long. $88^{\circ} 5'$.

¹ E.I.C. Ms. Doc.

DOORUNDA,¹ in the British district of Chota Nagpoor, presidency Bengal, a cantonment on the route from Hazaree

DOO—DOR.

bagh to Sumbulpoor, 60 miles² S. of former, 170 N. of latter. At the cantonment³ is stationed the principal part of the Ramgurn light infantry and four guns, and two squadrons of local horse. A mile and a half north of the cantonment is the civil station of Kishenpoor, where is the Sudder or head establishment of the Governor-General's agent for the South-West Provinces. Doorunda is in lat. 23° 24', long. 85° 20'.

DOORWAI, or DHOORWYE,^{1*} in Bundelcund, a small town, the principal place of the jaghire of the same name, which contains² an area of eighteen square miles, eight villages, and a population of 3,000 souls.³ Its chief has an annual revenue of 15,000 rupees, and maintains a small military force of eight horse and 230 foot. The jaghire is held from the East-India Company by *sunnud* or grant,⁴ dated in 1823. This *raj* was formerly tributary to Jhansi; but in 1821 the jaghire-dars were induced to relinquish their claim to certain villages which had been resumed by Jhansi, in lieu of the annual tribute, which was calculated at 3,500 rupees per annum. Doorwai is 6½ miles S.W. of Calpee. Lat. 25° 28', long. 79° 7'.

DOOSTPOOR,^{1†} in the territory of Oude, a town on the route from the cantonment of Goruckpoor to that of Sultanpoor, 84 miles² W. of the former, 26 E. of the latter. Here is a cantonment for three of the king of Oude's battalions. Supplies are abundant. The road in this part of the route is rough and bad.‡ Lat. 27° 18', long. 82° 30'.

DOOVAH.—A town in the British district of Masulipatam, presidency of Madras, 54 miles N.E. of Masulipatam. Lat. 16° 47', long. 81° 41'.

DOR, a small river of the Punjab, rises in lat. 34° 27', long. 73° 7', in the mountains west of Mazufurabad, which divide the valley of the Indus from that of the Jhelum. It holds a westerly course of about fifty miles, and, uniting with the Sirrun, falls into the Indus on the eastern side, near Torbela, in lat. 34° 8', long. 72° 50'.

DORAILA.—A town in the native state of Bhopal, 18 miles

¹ E.I.C. Ms. Doc.

DOWLUTABAD,¹ * in Hyderabad, or the territory of the Nizam, a town with a celebrated fortress, near the north-west frontier. The fortifications of the town or pettah, which, however, are utterly contemptible, communicate on the east side with those of the stupendous fortress. This stronghold consists of a conical hill, or rather vast rock of granite, scarped all round to a complete perpendicular, for a height of about 150 feet from the base. The summit of this conical rock is a small platform, not many feet in width, on which is mounted a brass twenty-four pounder; and there is also a staff, on which flies the flag of the Nizam. The upper and conical part of the hill is not accessible by any stairs or passage externally visible, but at the base of the scarp an opening gives admission into a low narrow passage, hewn in the solid stone, and leading to a large vault, excavated in the interior of the hill. From this chamber, a ramp or gallery, gradually sloping upwards, and also excavated in the solid rock, winds round in the interior. This ramp or ascending gallery, which has a height and breadth of about twelve feet, terminates above in a recess on the top of

* Daulatabad of the Persian writers: Prosperity-town; from Daulat, "prosperity," and Abad, "dwelling."

DOW.

the rock, about twenty feet square. At the base of the hill, throughout its whole circuit, is a ditch, passable throughout its whole extent only by one causeway, constructed of stone so narrow as to admit the passage of only two men abreast, and defended on the side towards the rock by a battlemented building. At a short distance outside the ditch is a minaret, apparently 100 feet high, said to be erected in commemoration of the first capture of this place by the Mahomedans. On the slope of the hill, and about 100 yards from the summit, is a cistern, hewn in the rock, and holding, it is conjectured, about forty hogsheads. The perpendicular height of the hill above the surrounding plain is about 500 feet. It is altogether isolated, being about 3,000 yards from the nearest hills, which are situate to the north and west.

The original name of this place was Deoghur; and it received that of Dowlutabad from the Emperor Mohammed, son of Togh-luk Shah, who proposed to make it the capital² of the imperial state, to the supersession of Delhi, and who sought to force the inhabitants of the latter city to fix their abode in the former. The attempt, however, was abortive. It may be added, that the present state of Dowlutabad does not exhibit any appearance of the prosperity or good fortune indicated by its name.

² Elphinstone,
Hist. of India,
334-354.

Dowlutabad is distant from Aurungabad, N.W., 10 miles; Hyderabad, N.W., 280; Bombay, N.E., 170. Lat. 19° 57', long. 75° 18'.

DOWLPOORÉE.—See DHOLFURI.

DRAUPA,¹ in the peninsula of Kattywar, province of Guzerat, a town situate in the district of Hallar. There are seventeen² villages annexed to it, and the total population is estimated at 4,000. An annual tribute of 4,000 rupees is paid to the British government. Distance from Ahmedabad S.W. 170 miles. Lat. 22° , long. $70^{\circ} 13'$.

E.I.C. Ms. Doc.

DROOG.—A town in the native state of Berar, or territory of the rajah of Nagpoor, 141 miles E. from Nagpoor, and 22 miles W. from Ryepoor. Lat. $21^{\circ} 11'$, long. $81^{\circ} 20'$.

DRO—DUB.

DROORAJAPATAM, or **DOOGOORAUZEPATAM**,^{1*} in the British district of Nellore, presidency of Madras, a town on the Coromandel Coast, on the western shore² of the northern inlet forming communication between Pulicat Lake and the Bay of Bengal. South-east of the outward or seaward mouth of the inlet, "is a space³ from three to four miles wide, now called Blackwood Harbour, with soundings from four and a half fathoms near the shore, to six or seven fathoms contiguous to the edge" of Arnegon Shoal, which shelters it in certain directions, while Pundi Point and shoal, and the mainland, protect it on other points; so that ships may lie here in safety; and it is stated⁴ by Captain Maxwell, assistant marine surveyor-general, that "it is the only place on the Coromandel Coast which offers the least protection to ships during an easterly gale." "During the north-east monsoon, or stormy season, the sea breaks very high on the shallow ridge of the shoal, rendering the harbour within comparatively smooth." It has recently been determined⁵ to connect this town with the city of Madras, by means of an extension of the navigable line of communication through the Pulicat Lake. Distance from Madras, N., 60 miles; Nellore, S., 34. Lat. 13° 59', long. 80° 18'.

DUB, in the Punjab, a pass over a mountain on the route from Attock to Cashmere, by the Baramula road. While under the dominion of the Sikhs, it was infested by freebooters, who held possession of the fort of Futighur, and spread terror over the whole vicinity. But Hari Singh, an intrepid and energetic Sikh chieftain, attacked them, drove them out of a jungle where they took refuge, by firing it, and put the whole body to the sword. The Dub Pass is situate on the water-line dividing the feeders of the Kishengunga, and consequently of the Jhelum, on the east side, from those of the Indus on the west. Lat. 34° 17', long. 73° 21'.

DUBAREE.—A town on the right bank of the Brahmaputra, in the British district of Goalpara, presidency of Bengal, 46 miles S.W. of Goalpara. Lat. 26°; long. 80° 56'.

DUBBAR, or **DABHA**, an estuary of the Indus, being one

E.I.C. Ms. Doc.

DUBRA,¹ in territory of Gwalior, or possessions of Scindia, a village on the route from the fort of Gwalior to Saugor, 33² miles S. of former, 169 N.W. of latter. There is water from wells and a small stream, and supplies are procurable. Lat. $25^{\circ} 53'$, long. $78^{\circ} 20'$.

DUBWALLEE, in the British district of Bhutteana, lieutenant-governorship of the North-West Provinces, a town on the route from Hansi to the Punjab, 96 miles N.W. of the former. Lat. $29^{\circ} 57'$, long. $74^{\circ} 49'$.

E.I.C. Ms. Doc.

DUCHO.—A town in the native state of Nepal, on the left bank of a branch of the Bori Gunduk river, and 32 miles N. from Khatmandoo. Lat. $28^{\circ} 9'$, long. $85^{\circ} 13'$.

E.I.C. Ms. Doc.

DUDANA.—A town in the province of Guzerat, or territory of the Guicowar, situate on the left bank of the Bunnass river, 39 miles S.W. from Deesa. Lat. $23^{\circ} 49'$, long. $71^{\circ} 42'$.

DUD COOSY, a river tributary to the Coosy, rises in Nepal, in lat. $27^{\circ} 59'$, long. $86^{\circ} 31'$, and, flowing in a southerly

DUD—DUG.

direction for about fifty miles through Nepal, falls into the Coosy, in lat. $27^{\circ} 20'$, long. $86^{\circ} 30'$.

DUDDEE.—A town in the British district of Belgaum, E.I.C. Ms. Doc. presidency of Bombay, 16 miles N.W. of the town of Belgaum. Lat. $16^{\circ} 2'$, long. $74^{\circ} 30'$.

DUDDIAN WALLA, in the Daman division of the Punjab, E.I.C. Ms. Doc. a town situated on the left bank of the Khoorum river, 56 miles N. of the town of Dera Ismael Khan. Lat. $32^{\circ} 35'$, long. $70^{\circ} 52'$.

DUDDUR.—A town in the British district of Hyderabad, E.I.C. Ms. Doc. in Sinde, presidency of Bombay, 70 miles N.E. of Hyderabad. Lat. $26^{\circ} 10'$, long. $69^{\circ} 8'$.

DUDEROO, in the Rajpoot state of Beekaneer, a village on the route from Rutungurh to the town of Beekaneer, 66 miles E. of the latter. It contains 130 houses, and has a supply of excellent water from a well 106 feet deep. Lat. $27^{\circ} 57'$, long. $74^{\circ} 24'$. Balleru, Rajwara, 103.

DUDHIOA, in the jaghire of Jhujhur, lieutenant-governorship of the North-West Provinces, a village on the route from Hansce to Neemuch, and 52 miles S. of the former. Water is good and abundant; there are a few shops, and supplies are procurable after due notice. The road in this part of the route is good. Lat. $28^{\circ} 28'$, long. $76^{\circ} 17'$. Garden, Tables of Routes, 107.

DUDKUNDA.—A town in the native state of Nepal, on the right bank of a branch of the San Coosy river, and 48 miles N.E. from Khatmandoo. Lat. $27^{\circ} 54'$, long. $86^{\circ} 1'$. E.I.C. Ms. Doc.

DUFFLAPOOR.—A town in the native state of Juth, one of the Sattara jaghires, 87 miles N.E. from Belgaum, and 84 miles S.E. from Sattara. Lat. 17° , long. $75^{\circ} 8'$. E.I.C. Ms. Doc.

DUG.—A town of the Rajpoot state of Jhallawur, formerly belonging to Holkar, but transferred in 1818, by the treaty of Mundecor, to the ruler of Kotah, upon the partition of whose dominions it was allotted to the division of Jhallawur. Lat. $23^{\circ} 55'$, long. $75^{\circ} 55'$.

DUGDUGEE,¹ in the British district of Futtchpoor, lieutenant-governorship of the North-West Provinces, a town on the right bank of the Ganges, 88² miles from Calcutta by the river, 74 miles above Allahabad, 22 miles E. of the town of Futtchpoor by land. Lat. $25^{\circ} 56'$, long. $81^{\circ} 15'$. ¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes.

the rivers Sutlej and Jumna, eight miles S.E. from Sabathu, 16 miles S. from Simla. Lat. $30^{\circ} 53'$, long. $77^{\circ} 7'$.

¹ Gubbins, Report on Etawa, 43.

DUHLEE,¹ in the British district of Etawa, lieutenant-governorship of the North-West Provinces, a town situate in lat. $27^{\circ} 2'$, long. $78^{\circ} 52'$.

E.I.C. Ms. Doc.

DUHLEEA, in the British district of Furrukhabad, lieutenant-governorship of the North-West Provinces, a town on the right bank of the Ramgunga, eight miles N.E. of the city of Furrukhabad. Lat. $27^{\circ} 26'$, long. $79^{\circ} 45'$.

¹ Garden, Tables of Routes, 44.

DUHRAON, or **DHERAON**, in the British district of Boolundshuhur, lieutenant-governorship of the North-West Provinces, a village on the route from Allyghur cantonment to that of Delhi, and $33\frac{1}{2}$ miles N.W. of the former. The road in this part of the route is good; the country open, and but scantily cultivated. Lat. $28^{\circ} 18'$, long. $77^{\circ} 53'$.

Garden Tables of Routes, 54.

DUKIA, or **DUKEEA**, in the British district of Moradabad, lieutenant-governorship of the North-West Provinces, a village on the route from Moradabad to Almora, and 29 miles N. of the former place. The road in this part of the route is bad for wheeled carriages, and passes through an open, low, level country, partially cultivated. Lat. $29^{\circ} 12'$, long. $79^{\circ} 1'$.

E.I.C. Ms. Doc.

DUKKA JEUNG.—A town in the native state of Bhotan, on the right bank of the Guddada river, and 62 miles N.E. from Darjeeling. Lat. $27^{\circ} 21'$, long. $89^{\circ} 15'$.

DUKTOWLEE.—See **DEKTOWLI**.

DULASSEREE.—The name assigned in the lower part of its course to the Konnaie, a great watercourse in Bengal.—See **KONAI**.

E.I.C. Ms. Doc.

DULCHIPOOR.—A town in the Boondela native state of Shahgurrh, 33 miles S.E. from Tehree, and 34 miles N.E. from Saugur. Lat. $24^{\circ} 14'$, long. $79^{\circ} 3'$.

E.I.C. Ms. Doc.

DULEELUGUNJ.—A town in the native state of Oude, on the left bank of the Ganges, and 91 miles S.E. from Lucknow. Lat. $25^{\circ} 40'$, long. $81^{\circ} 38'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 235.

DULEEPUNGE,¹ in the territory of Oude, a village on the route by Shahabad from Lucknow to Shahjehanpoor, $24\frac{1}{2}$ miles south of the latter. It has a bazar and abundance of good water. There is encamping-ground and a lake close to it. The road in this part of the route is bad for wheeled carriages. Lat. $27^{\circ} 31'$, long. $80^{\circ} 2'$.

DUL—DUM.

DULEEPGURH,¹ in the Daman division of the Punjab, a fort designed and built by Major Edwardes,² and situated on the right bank of the Khoorum, 63 miles N.W. of the town of Dera Ismael Khan. Lat. $32^{\circ} 41'$, long. $70^{\circ} 41'$.

¹ E.I.C. Ms. Doc.

² Edwardes, Punjab, I. 163.

DULEYNUGUR, or **DULABNAGAR**,¹ in the British district of Etawa, lieutenant-governorship of the North-West Provinces, a village on the route from Calpee to the cantonment of Etawah, and 29^2 miles S.E. of the latter. The road in this part of the route is heavy and bad, but the country is level and cultivated. Lat. $26^{\circ} 31'$, long. $79^{\circ} 26'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 32.

DULGANO.—A town in the British district of Durrung, Lower Assam, presidency of Bengal, 62 miles W. of Bishnath. Lat. $26^{\circ} 34'$, long. $92^{\circ} 12'$.

E.I.C. Ms. Doc.

DULSAEPOOR, in the British district of Muttra, lieutenant-governorship of the North-West Provinces, a village on the route from the city of Agra to Bareilly, and 38^1 miles N.E. of the former. The road in this part of the route is good, the country well wooded and cultivated. Lat. $27^{\circ} 32'$, long. $78^{\circ} 30'$.

¹ Garden, Tables of Routes, 4.

DULSING SERAI.—A town in the British district of Tirhoot, presidency of Bengal, 51 miles E. of Dinapore. Lat. $25^{\circ} 38'$, long. $85^{\circ} 55'$.

E.I.C. Ms. Doc.

DUMAJEE.—A village in Sinde, on the route from Sehwan to Kurrachee, and 60 miles N.E. of the latter town. The road near Dumajee is represented as indifferently good, and forage can be obtained to a considerable extent. The supply of water is rather scanty: there are two wells which afford it, but they are liable to fail in the dry season. After rainy weather, a torrent, called the Dumajee river, flows by the village, and falls into the Dhurwal river about twelve miles to the N.E. Dumajee is in lat. $25^{\circ} 21'$, long. $67^{\circ} 50'$.

E.I.C. Ms. Doc.

DUMBA, or **DOOMBEH**, a small river in Sinde, rises in the southern part of the Keertur range of mountains, about twenty miles north-east of Kurrachee, in lat. $25^{\circ} 4'$, long. $67^{\circ} 16'$, and, after a southerly course estimated at eighteen miles, falls into the river Mularree, in lat. $24^{\circ} 52'$, long. $67^{\circ} 15'$. About ten miles above its mouth it is crossed by the route from Kurrachee to Sehwan, and is at that point, during the rainy season, a small stream. In the dry season, the channel has no stream, though water may be obtained by digging in

DUM.

the bed. The place where it is crossed by the road, as above mentioned, is called the Duumba Camp. The road there is generally good, and forage may be obtained in considerable quantities.

¹ E.I.C. M. D. 5.

DUMDUMA,¹ in British district Purneah, presidency of Bengal, a town 22 miles W. of the town of Purneah. It is situate on the west or right bank of the river Cooy, is the principal place of a pergana of the same name, and has 1,399 houses; which number, according to the usually received average² of inmates to houses, would assign it a population of 6,500. Lat. 25° 11', long. 87° 11'.

² Buchanan, *Survey of L. & M. Ind.*, vol. 23.

¹ E.I.C. M. D. 5.

DUMDUM,¹ in the British district called the Twenty-four Pergunnahs, a town, formerly the head quarters² of artillery for the presidency of Bengal. In its vicinity is the cannon-foundry, of which a military³ writer thus speaks: "This cannon-foundry is in every respect better contrived than that of Woolwich. It contains a boring-room in which twelve brass guns may be bored at the same time, for the government procures the iron guns from Europe. During the time I was there, six guns were cast; and the arrangements are such, that three times the number might have been manufactured." The church "is a very³ pretty building, divided into aisles by two rows of Doric pillars, and capable of containing a numerous congregation." Distant from Barrackpore, S.E., 10 miles; Calcutta, N.E., eight miles. Lat. 22° 38', long. 88° 30'.

DUMDUMA, in the British district of Baraset, presidency of Bengal, a village with a police-station, on the Isamutli, an offset of the Ganges. Distance from Calcutta, E., 42 miles.
Lat. $22^{\circ} 28'$, long. $89^{\circ} 3'$. E.I.C. Ms. Doc.

DUNDUMMA.—A town in the British district of Dinajpoor, presidency of Bengal, 96 miles E. of Bhagulpore. Lat. $25^{\circ} 18'$, long. $88^{\circ} 31'$. E.I.O. Ms. Doc.

DUMDUMINEAH.—A town in the British district of Bhagulpore, presidency of Bengal, 20 miles S.W. of Rajmahal. Lat. $24^{\circ} 55'$, long. $87^{\circ} 31'$. E.I.C. Ms. Doc.

DUMJA.—A town in the native state of Nepal, on the left bank of the San Coos river, and 36 miles N.W. from Khatmandoo. Lat. $27^{\circ} 25'$, long. $85^{\circ} 46'$. E.I.C. Ms. Doc.

DUMKEIRA.—A town in the native state of Nagpoor, or territory of the rajah of Berar, 173 miles E. from Nagpoor, and 94 miles S.E. from Rangurh. Lat. $21^{\circ} 30'$, long. $81^{\circ} 45'$. E.I.C. Ms. Doc.

DUMMOW,¹ in the British territory of Saugor and Nerbudda, a town near the common boundary of Malwa and Gondwana, the principal place of a pergunnah of the same name,² on the route from Jubbulpore to Saugor, 65³ miles N.W. of former, 46 E. of latter. It has a large bazar, and water is abundant from wells. ¹ E.I.C. Ms. Doc.
² Statistics of N.W. Prov. 179.
³ Garden, Tables of Routes, 212.

The area⁴ of this pergunnah is 1,554,058 acres. Of this extent, 807,451 are malgoozaree, or assessed to the land revenue, 406,078 of the land so assessed being cultivated; the remaining 401,373 being capable of cultivation, but not actually cultivated. Of the land unassessed, 215,685 are lakhiraj, or legally exempt from assessment, and 530,922 acres are barren. The jumma, or total land revenue, was for 1847, 4,65,509 rupees; being at the rate of Rs. 0 4a. 9p. per acre on the total area, Rs. 0 9a. 2p. on the malgoozaree, and Rs. 1 2a. 4p. on the cultivated portion. The total population at the period of the latest return was 363,584. The Hindoos greatly predominate; the numbers being, agricultural, 282,079; non-agricultural, 69,416; total, 351,495; while those of all other denominations amount only to—agricultural, 3,626; non-agricultural, 8,463; total, 12,089.

In 1848, the European civil establishment here consisted of one deputy commissioner of the first class, and one sub-

DUM—DUN.

assistant surgeon. The town of Dummow is distant from Calcutta, *viâ* Allahabad, 775 miles.⁵ Lat. 23° 50', long. 79° 30'.

DUMOH.—See **DUMMOW**.

E.I.C. Ms. Doc. **DUMPA.**—A town in the native state of Bhotan, 146 miles N.E. from Dargeeling, and 130 miles N. from Goalpara. Lat. 28°, long. 90° 27'.

E.I.C. Ms. Doc. **DUMUL.**—A town in the British district of Dharwar, presidency of Bombay, 52 miles S.E. of Dharwar. Lat. 15° 18', long. 75° 50'.

Garden, Tables of Routes, 15. **DUNAHAR,** in the British district of Mynpooree, lieutenant-governorship of the North-West Provinces, a village on the route from the city of Agra to the cantonment of Mynpooree, and nine miles W. of the latter. The road in this part of the route is in many places laid under water during the periodical rains in the latter part of summer; at other times it is tolerably good. The country is level, and partially cultivated. Lat. 27° 14', long. 78° 58'.

DUNDEESRUH.—See **DERESURA**.

E.I.C. Ms. Doc. **DUNDOOKA,** in the British district of Ahmedabad, presidency of Bombay, a town 62 miles S.W. of the city of Ahmedabad, 100 N.W. of Surat. Lat. 22° 20', long. 71° 56'.

DUNDORUH.—See **DENDOWRA**.

E.I.C. Ms. Doc. **DUNGAVA.**—A town in the native state of Nagpoor, or the dominions of the rajah of Berar, situate on the left bank of the Hutsoo river, and 208 miles S.W. from Sherghotty. Lat. 22° 28', long. 82° 34'.

¹ **E.I.C. Ms. Doc.** **DUNGHYE,**¹ in the British district Behar, presidency of Bengal, a small town on the route from Hazareebagh to Benares, 43 miles² N.W. of former, 146 S.E. of latter. It is situate at the north-west extremity of the pass of the same name, at the bottom of the descent by which the road passes from the high land of Ramgurbh to the plains of Behar. The road down this descent is, according to Jacquemont,³ execrable, and indicating great want of care and skill in the government engineers who laid it down. The little town itself has a bazar, and is well supplied with water. Elevation above the sea 660 feet.⁴ Lat. 24° 27', long. 85°.

² **Garden, Tables of Routes, 166.** ³ **Voyages, III. 307.** ⁴ **Id. III. 311.** **E.I.C. Ms. Doc.** **DUNGKOT.**—A town in the native state of Nepal, 84 miles N.E. from Khatmandoo, and 137 miles N.W. from Dargeeling. Lat. 28° 10', long. 86° 32'.

DUN—DUR.

DUNHORA.—A town in the native state of Nagpoor, or territory of the rajah of Berar, 102 miles S.E. from Nagpoor, and 67 miles N.E. from Chanda. Lat. $20^{\circ} 14'$, long. $80^{\circ} 21'$. E.I.C. Ms. Doc.

DUNKOUR, in the British district of Bolundshuhur, lieutenant-governorship of the North-West Provinces, a town, the principal place of the pergunnah of the same name, situate on the route from Muttra to Delhi by the left bank of the Jumna, and 28 miles S.E. of Delhi. Lat. $28^{\circ} 21'$, long. $77^{\circ} 37'$.

DUNTOLA.—A town in the British district of Purneea, presidency of Bengal, 45 miles N.E. of Purneea. Lat. $26^{\circ} 9'$, long. $88^{\circ} 6'$. E.I.C. Ms. Doc.

DUNWAR.—A town in the British district of Shahabad, presidency of Bengal, 51 miles S.W. of Dinapoor. Lat. $25^{\circ} 9'$, long. $81^{\circ} 28'$. E.I.C. Ms. Doc.

DUPHA PANEE RIVER, a small stream of the Sudiya district of Upper Assam, rises in lat. $27^{\circ} 38'$, long. $96^{\circ} 50'$, and, flowing in a south-westerly direction for thirty-five miles, falls into the Noh Dihing river near the village of Imjong, in lat. $27^{\circ} 28'$, long. $96^{\circ} 30'$.

DUPHALA.—A tribe inhabiting the country lying between the main range of the Himalaya Mountains and that known as the Sub-Himalaya, and which is situate to the north of the Luckinpoor district of Upper Assam. The centre of the tract is in lat. $27^{\circ} 35'$, long. $93^{\circ} 45'$.

DURA, in the British district of Agra, lieutenant-governorship of the North-West Provinces, a town close to the western frontier towards Bhurtpoor, 19 miles S.W. of the city of Agra. Lat. $27^{\circ} 3'$, long. $77^{\circ} 48'$. E.I.C. Ms. Doc.

DURABUND, or **DERABUND**, in the tract of territory on the right bank of the Indus, a small town and fort in the Derajat, about 42 miles S.W. of Dera Ismael Khan. It is the place of rendezvous of the Lohani and other caravans, which every spring depart westward with the annual supply of British and Indian wares for Central Asia. These Lohanis descend, with their camels and other cattle, to spend the winter in the mild climate and luxuriant pastures stretching along the western bank of the Indus, and at the same time to furnish themselves with articles suitable for supplying their customers in Afghanistan and the countries north and west of it; and they assemble

DUR.

at Durabund to muster their strength for resisting the predatory tribe infesting the roads through which they have to pass. The town of Durabund is a small ill-built place, but bearing evidence of having been more prosperous, until ruined by the predatory attacks of the Vaziris and other marauders from the west. The permanent population is scarcely 1,000. Lat. $31^{\circ} 35'$, long. $70^{\circ} 13'$.

DURAJEE, in the delta of Sind, a small town on the Buggaur, or great western branch of the Indus. When, about 200 years ago, this branch was navigable from the sea to the main channel of the river, Durajee and Lahorybunder, about two miles lower down, were the principal ports of Sind, being accessible for vessels of 200 tons burthen.¹ The Buggaur,² however, has now for many years ceased to be navigable during the season of low water in the Indus, and goods landed at Durajee are,³ by means of camels, conveyed to Tatta overland, a distance of thirty miles. Though, during the season of low water, the Buggaur is unnavigable above Durajee, it has at all times a depth of at least twelve feet⁴ from that place downwards as far as the Pittyance mouth of the Indus, a distance of twenty-eight miles. This easy access from the sea renders Durajee the port of Tatta and the greater part of the delta, as Kurrahee is the general haven for the upper part of Sind. The closure of the port of Vikkur, in consequence of the great alteration which took place in the Hujamaree mouth⁵ in 1839, will probably cause an increased resort to Durajee. Lat. $24^{\circ} 30'$, long. $67^{\circ} 30'$.

DURALAH,¹ in Sirhind, a village on the route from Kurnal to Lodianna, and 17 miles N.W. of the former town. Distant N.W. from Calcutta 982 miles.² Lat. $30^{\circ} 2'$, long. $76^{\circ} 52'$.

DURBUH, or DURBA,¹ in the British district of Bhutiana, lieutenant-governorship of the North-West Provinces, a small town or village near the south-eastern boundary, towards Hurriana. On the restoration of the canal of Feroz Shah in 1825, a branch,² for the purpose of irrigation, was made from it to Durba, a distance of thirty-two miles. It gives name to one of the pergunnahs or subdivisions of the district. Lat. $29^{\circ} 25'$, long. $75^{\circ} 12'$.

† According to Mundy,³ "a beautifully-built stone wall." Tieffenthaler⁴ states it to be a rough wall, in which great unshapely stones are piled over each other, without cement.

DUTTEEAH.

ten acres in area, "crossed⁵ and recrossed at right angles by numerous walks, having rows of plantain and other fruit-trees on each side, and orange, pomegranate, and other small fruit-trees to fill the space between." The inclosing wall, about thirty feet high, with embattled towers at each of its four corners, has, in its eastern face, a fine and large gateway; and surmounting the wall at the opposite side of the pleasant-ground is the pavilion or lodge in which the raja resides. Between the pavilion and the gateway a building rises, in the midst of a fine reservoir, of which the following description is given:—"The shaft⁶ presented an octagon of about twenty feet span, surrounded with columned cloisters, and at each angle a figure of an elephant, sculptured in stone, with uplifted proboscis, spouted water to a vast height into the air." Within the wall of the city is another palace, at present untenanted; and outside, and westward of the city, is a third, of great extent as well as strength; and in a fine style of architecture, but likewise deserted. The population, estimated by Sleeman⁷ at forty or fifty thousand, consists almost exclusively of votaries of Brahminism, though three or four miles from the town is a curious⁸ cluster of temples of the Jains. The Brahminical temples appear to be not much worth notice. The rocky ground around the town for two or three miles is overgrown with copse or stunted forest, abounding in game. Adjacent⁹ to the town is a jhil, or small artificial lake.

The raj or territory of which Dutteeah is the principal place, lies between lat. 25° 32'—26° 18', long. 75° 15'—78° 54'. It is estimated to contain an area of 850¹ square miles, and 380 villages, with a population of 120,000. The revenue was estimated, in 1832, at 120,000*l.*, and in 1847,² at 100,000*l.* The raja pays no tribute. He maintains a military force, consisting of 1,000 cavalry, 5,000 infantry, and eighty artillerymen. This state was formerly part of the dominions of Ooreha, and its raja appears to be descended from Dewada Bir, who, about the end of the fourteenth century, at the head of a colony of warlike Rajpoots, invaded and conquered a considerable tract of country.* Subsequently, Dutteeah, after passing under the overwhelming domination of the Mogul empire, became

* Such appears to be the purport of the account given by Captain Franklin.¹

subordinate to the Peishwa,* as appears from the treaty concluded with the rajah by Lord Lake, wherein the former "professes his obedience and attachment to the British government, and to that of his ligness the Peishwa." By this treaty, the raja "submits³ to the arbitration of the British government in matters of dispute with his neighbours, promises to join the British forces with his troops, and to act in subordinate co-operation. The ancient territories of his house are guaranteed, also protection against foreign aggression." The Peishwa having in 1817, by Art. XIII. of the treaty of Poona,⁴ ceded to the British government all his rights in Bundelcund, the raja of Duttea, in acknowledgment of his zealous friendship and active co-operation, was, by treaty⁵ in 1818, rewarded by the Governor-General with a considerable addition to his territory. The last hereditary raja died in 1839, and was succeeded by a foundling whom he had adopted, and who was recognised by the British government. Dutteah is distant W. of Allahabad, by Banda, Chirkaree, and Jhansi, 260 miles; N.W. of Calcutta 755.⁶ Lat. 25° 40', long. 78° 31'.

nuggur, and 25 miles N.W. of the former.² There is encamping-ground at the temple of Kalka, 200 yards from the village, and supplies are procurable. Here, according to Traill,³ are tombs substantially built of large flat tiles, the memorials of Moguls located on the spot in the course of Tamerlane's expedition into Hindustan. Lat. $29^{\circ} 47'$; long. $79^{\circ} 28'$.

DWARKA, or DWARIKA,¹ called also Jigat, in the peninsula of Kattywar, province of Guzerat, a town on the western shore, in the district of Okamundel. The land towards the sea is moderately elevated, and the place is conspicuous, from the commanding appearance² of the great temple of Krishna or Dwarkamath, "the Lord of Dwaraka." It is the most celebrated of all the shrines raised to Krishna, and is built³ on an eminence rising from the seashore, and surrounded by a fortified wall (which likewise encircles the town), from which it is, however, separated by a lofty partition-wall, through which it is necessary to pass to see it to advantage. "It may⁴ be said to consist of three parts: the munduff, or hall of congregation; the devachna, or ponetralla (also termed gabarra); and the sikra, or spire." "The munduff is square, measuring twenty-one feet internally, and five distinct stories high. Each story is colonnaded, the lower being twenty feet in height, and of the same square form to the last, where the architraves are laid transversely to form a base for the surmounting dome, whose apex is seventy-five feet from the pavement. Four massive pillars on each face of the square form the foundation for this enormous weight; but these being inadequate to sustain it, intermediate pillars to each pair have been added, to the sacrifice of all symmetry. A colonnaded piazza surrounds the lowest story, of about ten feet in breadth, from which to the north, south, and west, portions are projected, likewise colonnaded. Each story of the munduff has an internal gallery, with a parapet of three feet in height, to prevent the incautious from falling. These parapets, divided into compartments, had been richly sculptured." "The sikra or spire, constructed in the most ancient style, consists of a series of pyramids, each representing a miniature temple, and each diminishing with the contracting spire, which terminates at 140 feet from the ground. There are seven distinct stories, before this pyramidal spire greatly diminishes in diameter. Each face of each story is

⁴ Id. 423.

DWARKA.

ornamented with open porches surmounted by a pediment, supported by small columns. Each of these storics internally consists of column placed upon column, whose enormous architraves increase in bulk in the decreasing ratio of the superimposed mass; and although the majority at the summit are actually broken by their own weight, yet they are retained in their position by the aggregate unity." "The entire fabric, whose internal dimensions are seventy-eight feet by sixty-six, is built from the rock, which is a sandstone of various degrees of texture, forming the substratum of the island. It has a greenish hue, either from its native bed, or from imbibing the saline atmosphere, which, when a strong light shines upon it, gives the mass a vitreous transparent lustre." Joined by a colonnade to this temple is a smaller one, dedicated to Deeki, the mother of Krishua; and at the opposite angle of the great temple is another, still smaller, dedicated to Krishna, under his title of Madhu Rae, or the "Prince the intoxicator." The Gumti, a small rivulet which flows by the group, is considered especially sacred, but it is so shallow that it does not reach the angle. The site of the temple was once insulated; but the sea having thrown up a sandbank across the channel, this sacred spot is now connected with the mainland. About eighteen miles north of Dwarka is Amrara, supposed to be Muldwarka or ancient Dwarka, where Krishna met his death. Others, however, consider⁵ Mahadoopoor, ninety-five miles south-eastward of Dwarka, to have been contiguous to Mool Dwarka, which, according to tradition, was swept away by the sea. At this spot, native report declares that a bird annually springs⁶ from the foam of the sea, and having perched and sported on the top of the temple, falls down and dies, and from its plumage the Brahmins prognosticate whether the year will be rainy or otherwise. Dwarka is distant from Ahmedabad, S.W., 235 miles; Baroda, W., 270. Lat. 22° 15', long. 69° 1'.

DWARKA.—A river rising in the British district of Beerbhoom, presidency of Bengal, in lat. 23° 57', long. 87° 21'. Flowing through that district in an easterly direction nearly parallel with the Mor river, which it receives after a course of about sixty miles, the united stream, twenty miles below the confluence, falls into the Bhagruttee, in lat. 23° 43', long. 88° 10'.

ECHIBUL,¹ in Kashmir, a fine fountain, discharging a vast quantity of the most beautifully limpid water. It is situate in the eastern part of the district of Bureng, and has four or five Vigne, Kashmir, I, 317.

orifices, from the principal of which the spring rises with such force as to form what may be termed a mound of water, a foot and half high, and twelve feet in diameter. Vigne, with much probability, supposes it to be the efflux of that portion of the water of the river Bureng which sinks into the ground about ten miles to the south-east. If, however, this opinion be correct, the sunken stream must receive large additions from springs in its subterraneous course, as the volume of water discharged at Echibul far exceeds that which disappears in the bed of the Bureng. According to Vigne, the water is not very good for drinking. Bernier,² on the contrary, who describes this vast fountain under the name of Achiaval, states the water to be excellent (*admirablement bonne*); he adds, that it is so cold as to be almost insupportable to the touch. At the time of his visit (1665), it was surrounded by a superb pleasure-ground, belonging to Aurungzebe, having been made by order of his grandfather, Jehangir; but all is now in utter ruin. Horsburgh,
Directory, I. 616.

EDMONSTONE ISLAND.—An island at the mouth of the Hoogly river. From a mere half-tide sandbank, it became an island two miles long, covered with shrubs, and affording a supply of fresh water. In 1820 it was adopted as a marine station for affording assistance to ships in distress; but was subsequently abandoned, in consequence of the rapid demolition of the island by the encroachment of the sea. Lat. 21° 32', long. 88° 20'.

Garden, Tables of
Routes, 16.

EDMY, in the British district of Mynpooree, lieutenant-governorship of the North-West Provinces, a village on the route from the city of Agra to the cantonment of Mynpooree, and 36 miles W. of the latter. The road in this part of the route is good; the country cultivated, and studded with small villages. Lat. 27° 7', long. 78° 35'.

EDUR.—The principal Rajpoot state of the Myhee Caunta, in the province of Guzerat, tributary to the Guicowar, but under the political superintendence of the government of Bombay.¹ This petty state was founded by Anund Sing and Raee Sing, sons of the celebrated Ajeet Sing, rajah of Joudpore. The districts were assigned to them by their elder brother, the viceroy of Guzerat, under the Moguls; and the

¹ Pol. Disp. to
Bombay, dated
21 Jan. 1846.

EDUR.

brothers, accompanied by several chiefs and 5,000 followers, took possession of their territory about the year 1724.

The revenues of the state, including those of the recently acquired possessions of Ahmednuggur, and of the feudatories of both districts, were estimated in 1847² at 23,484*l.*; of which the rajah's share was 15,000*l.*, subject to the deduction, on account of tribute to the Guicowar, of 3,295*l.*

² Foreign Disp.
from India,
6 Sept. 1848.

The political relations of the British government with this state originated in 1820, under an arrangement with the Guicowar, by which it was stipulated that his troops should evacuate the province; and the British government thereupon guaranteed the payment of his dues free of all expense.

The districts of Ahmednuggur, already noticed, were formerly comprised within the state of Edur, but were bestowed, about sixty years ago, by the ruling prince, upon his second son, Sugram Sing. The late rajah of Ahmednuggur, Tukht Sing, having, however, been elected to the vacant throne of Joudpore, his possessions in the Myhee Caunta reverted to the senior branch of the family, and are now reincorporated with the state of Edur.³

In 1848,⁴ the military force at the disposal of the Edur state, inclusive of the quotas of the feudal chiefs, consisted of 921 horse and foot. These troops are maintained almost entirely for purposes of police.

³ Pol. Disp. to
Bombay, dated
10 Aug. 1848.

⁴ Foreign Disp.
from India,
6 Sept. 1848.

EDUR, in the Myhee Caunta division of Guzerat, presidency of Bombay, the principal town of the district. It is a place of little importance, containing about 1,200 houses. Though encircled by hills on three sides, and defended on the fourth by a wall, the position would be one of no strength, even if the defences were completed, as it is commanded by a hill to the right, which forms part of the range. In the rear, and upon the hill, which there rises to the height of between 400 and 500 feet, is a fort, now in ruins, which in former times afforded shelter to the rajahs of Edur when driven from the town below. The hill is ascended by a steep and stony zigzag pathway, having four gateways, in tolerable repair. The eminence on the right of the town is surmounted by several Jain temples, and also by the remains of a palace, built by the former rajahs of Edur. Population¹ 10,000. Lat. 23° 50', long. 73° 3'.

EEB.—A river rising in lat. $20^{\circ} 50'$, long. $73^{\circ} 42'$, in the territory of the Daung rajahs, on the western slope of the Syadree range, and, flowing westerly for seventy miles through the native states of the Daung, Baunsda, and the British district of Surat, falls into the Arabian Sea, in lat. $20^{\circ} 43'$, long. $72^{\circ} 54'$.

E.I.C. Ms. Doc. EECHOUREEA, in the British district of Bareilly, lieutenant governorship of the North-West Provinces, a village situate on the left bank of the Ramgunga, six miles S. of the town of Bareilly. Lat. $28^{\circ} 17'$, long. $79^{\circ} 29'$.

E.I.C. Ms. Doc. EECTENA.—A town in the British district of Mymensing, presidency of Bengal, 215 miles N.E. of Calcutta. Lat. $24^{\circ} 30'$, long. $91^{\circ} 7'$.

Hollicau, Rajwara, 100. Garden, Tables of Routes, 331. EEKAH, in the Rajpoot state of Jondpore, a village on the route from Phulodde to Pokrun, and six miles N.E. of the latter place. It is situate in an elevated rocky tract, and has a small fort, on a craggy eminence. On the south there is an extensive depression, which after the rainy season becomes a great sheet of salt-water, but is at other times dry. The road in this part of the route is good, though in some places sandy. Lat. $26^{\circ} 56'$, long. $72^{\circ} 4'$.

E.I.C. Ms. Doc. EEKAIREE, or AKHERI,¹ in the territory of Mysore, a decayed town, once the capital of a considerable and flourishing state, is situate amidst the headwaters of the Varada.² * Its walls are of great extent, and form three concentric inclosures. There are besides a citadel, a great temple of Siva, and a mean building, which was the ancient palace of the extinct dynasty of Sedasiva, a personage whose wonderful adventures are preserved in Hindoo fable. Historically, he appears to have been a gauda or chief of Kilidi, in the neighbourhood of Akheri, who received³ a grant of some districts from Krishna Rayara, of Vijayanagar, who also bestowed on him the name of Sedasiva Nayaka, he having previously borne that of Bhadraconda. Kilidi continued the seat of his government for about twelve years afterwards, when he removed it to Akheri, which then attained the highest measure of prosperity which it ever reached, and of which most exaggerated reports are preserved by the natives. In 1645 or 1646, the government was removed

Buchanan, iii. 234.

* Wurda of the trigonometrical survey.

EEN—EES.

to the neighbouring town of Bednore, and subsequently Akheri became deserted. At this time, all the buildings except the temple above mentioned are desolate, and the town without inhabitants. In 1763, Hyder Ali, the usurper of Mysore, took⁴ Bednore, then governed by the widow of the last actual chief, a profligate and shameless woman, who had caused the adopted son of her deceased husband to be murdered; and who, in conjunction with her paramour, had selected another successor to the first place in the state. All the parties were righteously subjected by Hyder to imprisonment, intended to be perpetual, but from which the chances of war subsequently relieved them. Akheri is distant from Bednore, N., 20 miles; from Seringapatam, N.W., 162. Lat. $14^{\circ} 7'$, long. $75^{\circ} 5'$.

⁴ Wilks, *Historical Sketches*, l. 447, 451.

EENDPALSIR-KA-BAS, in the Rajpoot state of Beykaneer, on the route from Ruttungurh to the town of Beykaneer, and 30 miles E. of the latter. It contains fifty houses, and has a supply of brackish water from a well 274 feet deep. It is the largest of seven contiguous villages, with separate wells. Lat. $27^{\circ} 55'$, long. $74^{\circ} 15'$.

Dolleau, *Rajwara*, 193.

EESAE, or HEESEYEE, in the British district of Mynpooree, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Allygurh to that of Mynpooree, and 16 miles N.W. of the latter. The road in this part of the route is good; the country low, level, and but partially cultivated. Lat. $27^{\circ} 21'$, long. $78^{\circ} 55'$.

Gordon, *Tables of Routes*, 50.

EESAGURH, or ESAUGURH,¹ in the territory of Gwalior, or possessions of the family of Scindia, a town, with a fort, in a hilly and difficult country. It was formerly called² Oondee, and belonged to a chief of the Ahir Rajpoots, from whom, at the close of the last century, it was taken by Doorjun Lal, a celebrated chief of the Kaichi Rajpoots, and by him denominated Bahadurghur, or "Hero's Town." It became the capital of his new dominions. Subsequently, in 1803, it was wrested from him by Baptiste, one of Doulat Rao Scindia's officers. It is styled in Malcolm's Index,³ "the fort of Resum or Esaugurh." Lat. $24^{\circ} 50'$, long. $77^{\circ} 55'$.

ELA—ELE.

ELAMBAZAR,¹ in the British district of Beerbhoom, presidency of Bengal, a town on the route from Berhampore to Bancoorah, 63² miles S.W. of former, 52 N.E. of latter. It is situate on the left bank of the river Hadjee, here navigable, and is from this circumstance a great mart for rice, extensively grown in the vicinity. The number of houses was estimated in 1814 at 544,³ the number of inhabitants at 2,950. Distance from town of Burdwan, N.W., 85 miles; from Calcutta, N.W., 90. Lat. 23° 37', long. 87° 39'.

¹ E.I.C. Ms. Doc.

² Garden, *Tables of Routes*, 95.

³ As. Res. xli. 553, 557—Bayley, *Statistical Account of Burdwan*.

ELEPHANTA,¹ in the presidency of Bombay, a small island on the east side of the harbour of Bombay, and distant about five miles from the mainland. It is something less than six miles² in circumference, and is "composed of two long hills, with a narrow valley between them. The usual landing-place is towards the south, where the valley is broadest." About 250 yards to the right of the landing-place is a large clumsy figure of an elephant, cut out of an insulated black rock; and from this circumstance the island (which by the natives is called Gara-pori) has derived the denomination by which it is known to Europeans. This huge figure, which is thirteen feet in length, is represented as much mutilated, and rapidly sinking into total decay, its head and neck having, in 1814, fallen from the rest of the body, which was also fast coming to the ground, an extensive fissure having taken place in the back. On advancing farther from the landing-place, the visitor comes suddenly in front of "the³ grand entrance of a magnificent temple, whose huge massy columns seem to give support to the whole mountain which rises above it," and out of which it is hewn. The geological formation of the rock is probably basaltic.* The entrance is by a spacious front, supported by two ponderous pillars and two pilasters, forming three openings, under a thick and steep rock, overhung by brushwood; and the impression on reaching the interior is rendered very deep and solemn, by "the⁴ long ranges of columns, that appear closing in perspective on every side; the flat roof of solid rock, that seems to be prevented from falling only by the massy pillars, whose capitals are pressed down and flattened, as if by the superincumbent weight; the darkness that obscures the interior of the temple,

* According to Eiskine, "resembling porphyry."

ELEPHANTA.

which is dimly lighted only from the entrances; and the gloomy appearance of the gigantic stone figures, ranged along the wall, and hewn, like the whole temple, out of the living rock." There are three principal parts in this extraordinary work: the great temple, 133 feet broad and 130½ long; and two smaller temples, one on each side of the principal one. These two appendent temples do not range in a straight line with the front of the principal one, but recede considerably from it, being approached by two narrow passes in the hill, one on each side of the grand entrance, but at some distance therefrom. Each of these passes conducts also to a side-front of the grand excavation, exactly like the principal front, consisting of two huge pillars with two pilasters. These two side-fronts are precisely opposite to each other, on the east and west, the grand entrance facing the north; and the plan is regular, there being eight pillars and pilasters in a line from the northern entrance to the southern extremity, and the same number from the eastern to the western entrances. The only striking deviation from this regularity in the chief temple, is afforded by the occurrence of a small square excavation, observable on the right in passing up the temple. At the further extremity of the temple are two small excavations, facing each other on the right and left. "The pillars,⁵ which all appear to run in straight lines, parallel to each other, and at equal distances, are crossed by other ranges running at right angles in the opposite direction; they are strong and massy, of an order remarkably well adapted to their situation and the purpose which they are to serve, and have an appearance of very considerable elegance. They are not all of the same form, but differ both in size and ornaments, though this difference also does not at first strike the eye. They rise to upwards of half their height from a square pedestal, generally about three feet five inches each way, crowned on the top by a broad bandage of the same shape; above this, but divided from it by a circular astragal and two polygonic fillets, rises a short round fluted shaft, forming about a fourth of the column, and diminishing with a curve towards the top, where a circular cincture of beads binds round it a fillet composed of an ornament resembling leaves, or rather cusps, the lower extremity of which appears below the cincture, while the superior extremity rises above, projecting and termi-

⁵ Erskine, ut supra, 212.

ELEPHANTA.

nating gracefully in a circle of overhanging leaves or eusps. A narrow band divides this ornament from the round fluted compressed cushion, which may be regarded as the capital of the column, and as giving it its character: its fluted form coalesces beautifully with the fluted shaft below. This cushion has its circumference bound by a thin flat band or fillet, as if to retain it; and above supports a square plinth, on which rests the architrave, that slopes away on each side in scrolls, connected by a band or riband, till it meets the large transverse beam of rock, which connects the range of pillars."

Fronting and within the principal entrance, is a "gigantic bust, representing some three-headed being, or three of the heads of some being to whom the temple may be supposed to be dedicated. Some writers have imagined that it is what they have called the Hindu trinity of Brahma, Vishnu, and Shiva." Others consider it a triform representation of Siva alone. This bust, which represents the deity down to the breast, and is consequently a third-length, has been ascertained by measurement to the top of the cap of the middle head to be about eighteen feet high; and a notion of its bulk may be formed from the measurement in an horizontal curved line, embracing the three heads at the height of the eyes, and touching them, which is nearly twenty-three feet. This, though the most remarkable, is but one specimen amidst a profusion of carved figures, representing various subjects of Brahminical mythology, though it is puzzling to observe, that one at least appears to be a representative of Buddh, held in abomination by the Brahmins. The precise nature of the worship to which these temples were consecrated, seems, indeed, to be of very disputable character. There are, in different parts, three sanctuaries or shrines, which, in the opinion of a judicious writer⁶ already quoted, were devoted to the adoration of certain emblems, which, though occupying a distinguished place in Hindu mythology, are not fitted to be made the subject of popular disquisition. This opinion is deduced from the position of the emblem in question in various parts of these excavations. The writer above referred to, in explaining the grounds of his belief, observes, that the "use made of temples by the ancient Greeks and Romans, as well as by the modern Hindus, is considerably different from that required of them by Christian

⁶ Estaline, Trans.
Lit. Soc. Bombay.

ELEPHANTA.

nations. A Hindu goes alone, as an ancient Roman would have done, when he finds it convenient, offers his solitary prayers before his idol, prostrates himself in his presence, and leaves his offering: he attempts to bribe his god to prosper him in his trade, whether it be merchandise, or procuration, or theft. There is no stated regular time of teaching, no public prayers said by a priest in the name of a mixed congregation, no gathering of the people to go through a solemn service. Their great festivals are like our ideas of a fair; each man goes in his own time to the temple, makes his offering at the feet of the idol, goes out, and purchases sweetmeats. All teaching or reading of the sacred books is in private houses; or, if it is in the temple, it is in the courts of the temple; never in the consecrated edifice: the verandas or porticos near the temple are used just as any others equally convenient would be. This use, to which the courts of the temple are applied, will throw light on many passages of history and the sacred volumes of the Jews. It is evident that the temples of nations whose worship is so conducted, need not be large, like our churches, since it is not required that they should contain a multitude. In all very ancient temples, however magnificent, the part of the temple in which the deity is supposed to reside is small, surrounded by numerous buildings, in which the priests and servants of the temple reside. This seems to have been the plan of the first temple of Jerusalem; it was that of the older Grecian temples, as we may observe from the Ion of Euripides; and it is at this day that presented by the temple of Mecca. In the temples of the Hindus the great object of worship is not constantly exposed to view, nor placed in the larger outer building; it is always in an inner, small, dark apartment, usually having only one door, requiring to have lights burning before it in order to be seen, and facing the door, so as to be visible from the further side of an intervening saloon." The arrangements at Elephanta appear, as far as can be judged, to have corresponded precisely with this view, and to countenance the conjecture of the writer quoted. All, however, is wrapped in mystery. Even the period and authors of these extraordinary works are totally unknown; but there seem no good grounds for assigning them a very remote antiquity. The stone is of a mouldering nature, and many parts are far gone in decay.

ELE—ELL.

Elephanta is seven miles E. of Bombay. Lat. $18^{\circ} 57'$, long. 73° .

ELEPHANT POINT, on the coast of Chittagong, presidency of Bengal, 85 miles S. of Chittagong, and 89 miles N.W. of Akyab. Lat. $21^{\circ} 9'$, long. $92^{\circ} 8'$.

ELEPHANT POINT.—A headland on the southern coast of the British province of Pegue, situate on the west side of the mouth of the Rangoon river, 23 miles S. of Rangoon: it derives its name from a clump of cocoanut-trees, "which, with the help of the imagination, does somewhat resemble that animal." Lat. $16^{\circ} 28'$, long. $96^{\circ} 25'$.

ELlichpoor,¹ in the territory of Hyderabad, or the dominions of the Nizam, a town, the principal place of an extensive jaghire or feudal possession. The town is situate on the river Purna, a tributary of the Taptce, and is of considerable size, but slenderly fortified, being only partially surrounded by a stone wall, which, though sixty feet high, is but four feet in thickness. It is surmounted by battlements, and entrance is obtained by means of a highly-ornamented gateway, built, as well as the wall, of sandstone. The palace of the nawaub has no great splendour, but in its vicinity are some handsome houses and bazars built of brick. The nawaub holds his jaghire from the Nizam, on condition of furnishing a contingent of "a brigade² of two battalions of infantry, 2,000 horse, and four guns." Of late, the relation between the feudatory and his chief has been disturbed. On the 30th May, 1850, an action took place between the troops of the nawaub of Ellichpoor and a body of those of the Nizam, sent to dispossess the former of his jaghire. Considerable loss was sustained on both sides, but the result seems to have been favourable, on the whole, to the dependent chief. Another action, fought on the 20th July, is reported to have terminated in his defeat. The nawaub, however, rallied, and on the 9th August gained a victory over the troops of his master, which was followed by another on the 28th September. The grounds of the quarrel are not very satisfactorily explained; but the total disorganization of the Nizam's financial arrangements, and the character of the measures to which his ministers have too often resorted to repair their condition, give plausibility to the statement which ascribes the difference to the aggression of the superior

ELLORA.

ruler. Ellichpore forms part of the Nizam's territory which has been recently sequestrated to the British, as a provision for the maintenance of his military contingent.

Distance from Hyderabad, N., 275 miles; from Madras, N.W., 600; from Bangalore, N., 570; from Nagpore, W., 100; from Bombay, N.E., 345; from Calcutta, W., 700. Lat. $21^{\circ} 10'$, long. $77^{\circ} 36'$.

ELLORA.—A decayed town in the native state of Hyderabad, or dominions of the Nizam, situate 13 miles N.W. from Aurungabad, and seven from Dowlutabad. It was formerly a place of some note, deriving its celebrity chiefly from the remarkable excavations in the neighbouring mountain, known as the temples of Ellora.

According to Hindoo legend, the date of these temples is carried back for a period of 7,950 years,¹ and their origin ascribed to Rajah Beloo, the son of Peshfont, of Ellichpore, when 3,000 years of the Dwarpa Yaug were yet unaccomplished. The more rational account of the Mahometans states that "the town of Ellora was built by Rajah Bel, who also excavated the temples. Bel Rajah was contemporary with Shah Momin Arif," who lived 950 years ago. According to Elphinstone, however, the first mention in history of these caves occurs in connection with the Princess Dewal Devi, daughter of the rajah of Guzerat, who was captured by a party who had gone from the camp of Alp Khan to visit the excavations at Ellora.² These wonderful productions of human industry and perseverance, "which," says Elphinstone,³ "have been compared, as works of labour, to the pyramids of Egypt, and which in reality far surpass them as specimens of art," have drawn forth expressions of admiration from all who have studied them. "Whether," says Sir Charles Malet,⁴ "we consider the design, or contemplate the execution of these extraordinary works, we are lost in wonder at the idea of forming a vast mountain into almost eternal mansions. The mythological symbols and figures throughout the whole leave no room to doubt their owing their existence to religious zeal,—the most powerful and most universal agitator of the human mind."

⁴ As. Res. vi. 393.
⁵ Trans. Lit. Soc. Bombay—Sykes, on Caves of Ellora, iii. 265.

From the elaborate notice of a more recent observer,⁵ Colonel Sykes, it appears that the hill containing the excava-

ELL—ELP.

tions takes the form of a crescent, presenting its concavity to the west, and rising in its extremities to an elevation considerably above the intermediate level. The sculptures at the two extremities are those of Dehr Warra and Parusnath, the interval, somewhat exceeding a mile, being occupied by other caves at irregular distances from each other, and seldom on the same level. The very minute and complete account of these celebrated caves which is contained in Colonel Sykes's paper, will furnish the inquirer with the fullest information, and leave him nothing to desire further. To this, therefore, the reader is referred. Ellora was ceded, in 1818,⁶ by Holcar, under the treaty of Mondesoor, to the British, who transferred it to the Nizam in 1822,⁷ by the treaty of Hyderabad. Ellora is in lat. 20° 2', long. 75° 13'.

ELLORE,^{1*} in the British district of Masulipatam, presidency of Madras, a town with a military station, situate on the Jummalaïr, a torrent flowing in a direction south-east from the Eastern Ghats, and which, about three miles below the town, falls into the Colair Lake. On the² right bank of the river are the barracks and the cantonment hospital; on the other side, the officers' houses. Communication between all parts of the station is practicable throughout the year, as the torrent is never unfordable. The town is tolerably well built. The sides of the streets and roads in the town and its vicinity are planted with rows of trees, affording very grateful shade, in a place where the heat has been known to reach³ 110° within-doors, and 120° in tents. The nights, especially during the months of April and May, are very oppressive; and it was in the latter month, when the land wind blows with much violence, that the great degree of heat above mentioned was observed. The official report styles Ellore a "populous town;" but the number of its inhabitants is not stated. Distance from Bombay, S.E., 565 miles; Hyderabad, E., 180; Mangalore, N.E., 500; Bellary, N.E., 300; Bangalore, N.E., 350; Madras, N., 255; Masulipatam, N., 39; Calcutta, S.W., 620. Lat. 16° 42', long. 81° 10'.

ELPHINSTONE ISLAND.—An island on the coast of Tenasserim, thirteen miles long and four and a half broad,

Correspondence on Sinda, 483, 484, 490, 493, 499, 500, 500, 504.

EMAUM GHUR, in Sinda, was lately a strong fortress in the Thur or Great Sandy Desert, separating that country from Jessulmere. As scarcely a drop of fresh water can be had on the route from Sinda after leaving Choonkee, distant about fifty miles from Emaum Ghur, this fortress was generally considered by the ameers as an inexpugnable place of refuge. On this account, when the disputes between them and the British came to extremity, Sir Charles Napier determined at all risks to attempt its seizure. Setting out with fifty cavalry, two twenty-four-pound howitzers, drawn by camels, and three hundred and fifty European infantry, mounted on animals of the same description—two on each, he, after a very trying march of three days, over a succession of steep sandhills, reached the fort, which was immediately surrendered. The captor describes it as “exceedingly strong against any force without artillery. The walls are forty feet high, one tower is fifty feet high, and built of burned bricks. It is square, with eight round towers, surrounded by an exterior wall of fifteen feet high, lately built. There are some bomb-proof chambers.” Twenty thousand pounds of powder were found in various places built up for concealment. These were employed in springing thirty-four mines, which reduced the fort to a mass of ruins, shapeless and irretrievable. The grain found in store had been previously distributed in rations. The British force marched back to the interior of Sinda without any loss. Emaum Ghur is in lat. $26^{\circ} 35'$, long. $69^{\circ} 20'$.

ERICH, or **IREJ**.¹—A town of Bundeleund, in the British district of Jaloun, situate on the south or right bank of the river Betwa, on the route from Saugor to Gwalior, 65 miles S.E. of the latter. It was formerly a place of importance, and had a considerable population, principally Mahomedan, as is indicated by the numerous² mausoleums, surmounted by domes, around it. Here, in the end of November, 1817, the British army, commanded by the marquis of Hastings, governor-general, was encamped³ in its advance on Gwalior, to intimidate Scindia. It was part of the territory of Jhansi until 1843, when it was ceded⁴ by the rao of that place to the East-India Company. At the time of cession, its annual revenue was returned at 7,148 rupees. Lat. 25° 47', long. 79° 9'.

ETAROLI,¹ in the British district of Etawa, under the lieutenant-governorship of the North-West Provinces, a village on the route from Lucknow in Oude, by Nanamow, to Etawa cantonment, and 20² miles E. of the latter place. Water is plentiful there, and supplies may be obtained in abundance after due notice. The road in this part of the route is good: the country is fertile and well cultivated. Lat. 26° 46', long. 79° 25'.

¹ E.I.C. Ms. Doc.

ETAWAH,¹—A British district named from its principal place, and subject to the lieutenant-governorship of the North-Western Provinces. It is bounded on the north by the British districts Mynpooree and Furruckabad; on the east by the British district of Cawnpore; on the south by Bundelkund; on the south-west by the Mahratta territories of Gwalior; and on the west by the British district of Agra. It lies between lat. 26° 21'—27° 9', long. 78° 46'—79° 49', and contains an area of 1,674 square miles. It was formerly part of Cawnpore, but was formed into a separate zillah under the sanction of the home authorities in 1810.² The greater part of Etawah lies in the Doab, a small strip only, forming the pergunnah of Burpoora or Janibrast,³ being separated from the rest by the Jumna, and lying along the right or south-western bank of that river. The Jumna touches on the north-western extremity of the district in lat. 26° 55', long. 78° 47', and, flowing in a south-easterly direction, either bounds or traverses it for 115 miles, leaving it in lat. 26° 21', long. 79° 35'. It is during the rainy season navigable throughout this part of its course for barques of heavy burthen, though even then "the extreme tortuosity⁴ of its channel renders it by no means either a convenient or direct line for traffic. In the dry weather, boats can with difficulty get up higher than the junction of the Chumbul." This last river joins the Jumna on the right side, in lat. 26° 30', long. 79° 18', about 25 miles S.E. of the town of Etawah. So considerable is the accession of water from this source, that the Jumna below the confluence has been known to rise in twelve hours between six and seven feet, in consequence⁵ of a flood in the Chumbul. The obstacles which formerly presented themselves to the safe navigation of the Jumna in this part of its course, were principally shifting shoals and sandbanks, trunks of trees imbedded in the bottom,

ETAWAH.

and numerous boulders, as well as fixed rocks of kankar or calcareous conglomerate. The sunken trees were removed, after a careful search,⁶ in 1833, and during the last twenty years, the clearance of other impediments has been in progress,⁷ under the directions of various officers of the engineer service. In the removal of the rocks, numerous fossil bones have been brought to light, some supposed⁸ to be human; others, those of the camel, buffalo, elephant, hippopotamus, horse, and deer; besides many of reptiles and fishes. The channel is most obstructed at Kurinkhan, ten or twelve miles below the mouth of the Chumbul. Bacon,⁹ writing before the latest improvements, mentions a long reef of limestone rock as very much impeding the navigation of the river, and rendering the passage very dangerous even to small craft; the flood through it at the dry season of the year being only sixty feet in breadth. "Through this narrow channel," he observes, "the current rushes with great violence, boiling and foaming over the submerged shoals, with a roar like that of a cataract; and here it is impossible to pass, if the wind be at all high." The course of the Chumbul through this district is brief. It enters at the south-western frontier, and bounds or traverses the pergunnah of Janibrast for a distance of about forty-seven miles, to the confluence with the Jumna. At the point of junction,¹ the country on the right, or Chumbul side of the Jumna, is overspread with hills; on the left, or Doab side, it is level and unvaried, except by the steep and narrow ravines² which furrow its surface towards the river. The Seyngur or Kurun runs nearly parallel to the Jumna, but ten or twelve miles more to the eastward, and falls into that river on the left side, about twenty miles south of the southern frontier. The Rind flows across the north-eastern extremity of the district, in a direction parallel to the Seyngur, but about fifteen miles more to the eastward. The Pandwa and some other streams of the district are mere torrents during the periodical rains, and cease to flow during the dry season. All the streams run towards the south-east, indicating the general slope of the country to be in that direction; but there is also a slope from³ the middle part of the Doab towards the Jumna, all the streams of the district being ultimately discharged into that river. The levels taken in laying down the Etawah branch of the prolon-

⁸ Roberts, li. 14.

gation of the Ganges Canal, have shown the elevation of the country above the sea to diminish from about 676⁴ at the northern frontier, to 640 at the town of Etawah.

The soil is in general better in the eastern and north-eastern parts of the district, than towards the Jumna; and the natural fertility of the former is also more favoured by irrigation, in consequence of water being obtainable⁵ from wells at a less depth. To the right or south-west of the Jumna, in the pergunnah of Janibrast, the country is very rugged, barren, and wild, and from the inequality of the surface, and the depth at which the water lies from it, irrigation is scarcely practicable. The principal rubbi or spring crops are wheat, barley, gram (*Cicer arietinum*), and other pulse of various kinds. The kurreef or autumnal crop consists of opium, sugarcane, cotton, indigo, rice, jowar (*Sorghum vulgare*), bajra (*Holeus spicatus*), moth (*Phaseolus acutifolius*). The government assessment upon the lands of this district has been fixed for a specified period, and is not liable to increase till the year 1871.⁶ In the vicinity of the cantonment of Etawah, the seeds of European vegetables are sown⁷ after the rainy season, at the close of summer, and peas, cauliflowers, and lettuce are fit for use at Christmas, attaining a high degree of excellence; carrots and other esculent roots are of inferior quality; oranges, citrons, limes, and lemons, are very fine, and grapes succeed tolerably. Melons are abundant, luxuriant, and excellent. The apple, mango, plantain, guava, jak (*Artocarpus integrifolia*), succeed well; but pomegranates are scarcely worth gathering. The ravines and wilder tracts are ornamented by oleanders, acacias, palms, the nim (*Melia azadirachta*), pipal (*Ficus religiosa*). "Every⁸ tree is tenanted by numerous birds; superb falcons look out from their lofty eyries, and wild peacocks sling their magnificent trains over the lower boughs, ten or twelve being frequently perceived upon the same tree. The smaller birds, sparrow-hawks, green pigeons, blue jays, actually crowd the branches. The crow-pheasant whirrs as strange footsteps approach, and wings his way to deeper solitudes; while flocks of paroquets, upon the slightest disturbance, issue screaming from their woody coverts, and, spreading their emerald plumes, soar up until they melt into the golden sky above." Guinea-fowl, and the

ETAWAH.

common gallinaceous poultry, run wild in the jungle. The Jumna and other streams are well stocked with excellent fish. The wild hog, antelope, porcupine, frequent the jungle and desert tracts. Jackals are numerous, and wolves are so bold and ferocious, as frequently at nightfall to rush into the villages and carry off children. Hyænas are not uncommon, and though generally rather shy, are, when driven to bay, ferocious and very destructive.

The unsheltered situation of Etawah affords ample opportunity for the contemplation of the changes of the atmosphere. In no part of India do the hot winds blow with greater fury. They commence in March, and continue during the whole of April and May. The wind usually rises about eight in the morning, and, continuing through the whole day, subsides at sunset, though it sometimes blows throughout the whole night.

"Every⁹ article of furniture is burning to the touch; the hardest wood, if not well covered with blankets, will split with a report like that of a pistol; and linen taken from the drawers is as if just removed from a kitchen fire. The nights are terrible, every apartment being heated to excess, each may be compared to a large oven." The human constitution suffers great exhaustion from this state of temperature. The hot winds are succeeded by the monsoon or periodical rains, the transition being marked by a furious tornado. Even at midday, darkness as of night sets in, caused by the dense clouds and volumes of dust; and so loud is the roar of the storm, that the incessant peals of thunder can be heard only at intervals, whilst the flashes of lightning seldom pierce through the gloom. The rain then descends in torrents, floods the country, and refreshes the animal and vegetable world. "Before the watery¹ pools have penetrated into the parched earth, so rapid¹ is the growth of vegetation, patches of green appear along the plain, and those who take up their posts in the veranda for an hour or two may literally see the grass grow. In the course of a single day the sandy hillocks will be covered with verdure, and in a very short time the grass becomes high and rank." The rains usually continue from the first or second week in June until the middle of October, and in some seasons are very violent, causing extensive and destructive inundations.

⁹ Roberts, II. 10.

¹ Id. II. 21.

ETA—ETC.

wind. These indentations appear to have been formed by the violent torrents caused by the periodical rains washing away the softer parts of the elevated strata, leaving prominent the indurated kankar or calcareous conglomerate, in some instances sixty feet⁵ above the river. Hodges, who visited the place in 1783, describes⁵ it as then "large, but very wretched, having but two tolerable houses." Tieffenthaler⁶ spoke of it, about thirty years before, as "a very ancient and famous town, situate on the east side of the Jumna, and formerly well peopled. At present," he continues, "many old houses have fallen down. The fort, situate on a high sandhill, on the bank of the Jumna, which flows along its southern side, is of moderate size, and has a foundation of brick." In the time of Baber, in the early part of the sixteenth century, it was of much note, and was governed by the son-in-law⁷ of that sovereign, by whom it is repeatedly mentioned.⁸ At present its prosperity⁹ appears somewhat on the increase, in consequence of its favoured commercial position at the junction of the road from Calpce to Agra with that from Cawnpore to the same place. The jail¹ is one of the largest and best secured of any in the North-Western Provinces. The cantonment is a mile north-west of the town.² It is little liked by Europeans, who consider it to be "peculiarly³ desolate, and to exhibit in full perfection the dreary features of a jungle-station. Upon a wide sandy plain, nearly destitute of trees, half a dozen habitable bungalows lie scattered, intermixed with the ruins of others, built for the accommodation of a larger garrison than is now considered necessary for the security of the place, a single wing of a regiment of scpoys being deemed sufficient for the performance of the duties of this melancholy out-station." The population consists of 17,783 persons.⁴ Distant⁵ N.W. from Calcutta 710 miles, N.W. from Cawnpore 100, S.E. from Agra 73, S.E. from Delhi, *via* Allyghur, 183. Lat. 26° 46', long. 79° 4'.

ETIMADPOOR, or ATAMADPOOR,¹ in the British district of Agra, lieutenant-governorship of the North-West Provinces, a town on the route from the cantonment of Etawa to that of Muttra, and 39 miles² S.E. of the latter. It is of inconsiderable size, and surrounded by an indifferent mud wall.³ Here is a large tank, inclosed by massive embankments of masonry,⁴ and having in the middle a polygonal building* two stories high, surmounted by a dome. It is built of stone, and communicates with the land by a bridge of several arches of the same material. Local tradition attributes its construction to a retainer of the imperial court of Delhi, but his name has not been preserved. The town has a bazar, and water and supplies are abundant. The road in this part of the route is, on the whole, good. The country close to the town on one side is much cut up into deep and steep ravines, but the remainder is, for the most part, level and well cultivated. Lat. 27° 14', long. 78° 16'.

ETOUNDA.—A town in the native state of Nepal, 24 miles S.W. from Khatmandoo, and 54 miles N.E. from Bettiah. Lat. 27° 26', long. 85° 3'.

ETOWLEE,¹ in the British district of Shahjehanpore, lieutenant-governorship of the North-West Provinces, a village on the route from Bareilly to Lucknow, 56 miles² S.E. of the former, 100 N.W. of the latter. The road in this part of the route is good; the country open and highly cultivated. Lat. 28° 2', long. 80° 12'.

EYFUH, or ETA.¹—The principal place of the pergunnah of the same name, in the British district of Mynpoorie, under the lieutenant-governorship of the North-West Provinces. It has a bazaar,² and is surrounded by a mud wall. In consequence of the lowness of its site, it is nearly encompassed by a jhil or piece of water during the periodical rains in the latter part of summer. Supplies and water are abundant at all seasons. This place lies on the route from Allyghur to Mynpoorie, and is 34 miles N.E. of the latter. The road in this part of the route is good; the country open and partially cultivated. Lat. 27° 34', long. 78° 43'.

* A view of it is given by Hodges.¹

FEROZPORE.

after these changes, and before any sufficient arrangement could be entered into for insuring accuracy, accounts for the presentation of a statement which does not even offer any pretensions to correctness. The circumstances which have rendered the return as to area unsatisfactory, are equally applicable to the return of population, under which the number is given at 16,890. The district, however, is said to be very thinly peopled, not a thirtieth part, it is alleged, being under cultivation. The remainder is either barren or covered with jungle; but the former populousness and prosperity of the country are proved by the existence of several ruined villages and towns, as well as of fine brick-lined wells, now half-filled with rubbish. The wells at a distance from the river are deep, but much of the soil might be irrigated without recourse to them, as the dry bed of a nullah or watercourse, called the Sukri, traverses the country with a sinuous channel, and it would only require a canal a mile in length to admit the water of the Sutlej or Gharrah.³ In the following extract, the climate is represented as favourable to the European constitution:—"The climate⁴ of Ferozepore promises well: it is peculiar to this part of India, and unlike any other, except Loodiana. Continual cloudy weather, occasionally rainy, and a climate particularly advantageous to Europeans, as well as natives. We can ride out all day without the slightest inconvenience, except that sometimes it is rather too cold than otherwise, to be comfortable without a great coat: scarcely any sick in hospital." The condition of the climate here described was in January. The territory of Ferozepore escheated to the British, upon the demise, in 1835, of Sirdarree Luehmun Kooar.⁵ The claims of Lahore were subsequently compromised by a division of the territory with Runjeet Singh,⁶ the portion then allotted to that potentate again changing masters, as above noticed, upon the conclusion of the Lahore war.

FEROZPORE,¹ in Sirhind, a town and fort so named because built by Feroze² Toghluks, who sat on the throne³ of Delhi from 1351 to 1388. It is the chief place of a portion of the British possessions in that quarter, and is situated three miles from the left bank of the Sutlej. It must have been formerly a large town, as the extensive ruins around it indicate.

FEROZPORE.

The fort is an irregular building,⁴ incapable of defence against a regular attack. It is a hundred yards long, forty broad, and has a dry ditch, ten feet wide and ten deep, with one gateway, which is on the east face.⁵ The interior is filled with earth to half the height of the walls, and the mound thus formed is crowded with mean brick houses and mud hovels, separated by alleys not exceeding six feet wide.⁶ The town is surrounded by a ditch and by a weak mud wall. It is well supplied with water from a hundred and twenty-four brick-lined wells. Before the introduction of artillery, and when in good repair, the fort must have defied attempts to storm it; and even now, according to the report of an eyewitness, when viewed at a distance, its appearance is very striking. "The large, heaped-together, and well-raised round towers of the forts about here," says a visitant, "give more an impression of England than any I have seen in India. At two or three miles distant, in looking on Ferozepore, you might fancy yourself gazing on Arundel, if not Windsor Castle."⁷ The town, though originally very mean, has been improved⁸ since its occupation by the British; bazars have been made, and several good shops established. The population has also greatly increased. Its rapid improvement is thus described by a late⁹ traveller:—"When I was at Ferozepore in January, 1839, the streets were narrow, and in the filthiest state imaginable; the houses all huddled together. When I was there in February, 1841, on my return from Affghanistan, a totally new prospect presented itself. The fort and town had been new-modelled, indeed rebuilt of burned brick; wide streets, with colonnaded rows of shops, had been constructed, and the whole exhibited the promise of an extensive mercantile city. For this improvement, we are much indebted to the zeal and exertions of Captain H. Lawrence, assistant political agent. The native merchants of India and the Punjaub, seeing distinctly the dawn of commercial prosperity in that quarter, at once entered into the speculation of erecting long lines of shops and warehouses, and increasing the town; and there can be no doubt that in a very short period Ferozepore will become one of the most important mercantile entrepôts in the north-west part of India." For this purpose it is well adapted, by its situation near one of the great ferries over the Gharrah,

FEROZPORE.

and the means of easy communication with the lower part of the Punjab, Bahawalpore, and Sind, afforded by that great river, and its recipient the Indus. There is also facility of communication by good roads with all parts of Sirhind. In November, 1838, an interview took place here between Runjeet Singh, then maharaja of the Punjab, and Lord Auckland, the Governor-General of British India, on which occasion 10,000* men, rendezvoused at Ferozpoore previously to their advance to the invasion of Afghanistan, went through the evolutions of a bloodless¹ battle for the amusement of the Seik ruler, as well as to produce on him an impression of the superiority of British discipline and tactics. In the subsequent operations of the Afghan war, it was repeatedly visited by British armies, marching and countermarching. Within the monumental church erected in this town, the names of the gallant officers and men who fell in the Sutlej and Punjab campaigns will be perpetuated on tablets sacred to their memory.² The population of Ferozpoore is about 6,000. It is distant W. of Ludiana 79 miles, N.W. of Calcutta 1,181³ miles. Lat. 30° 55', long. 75° 35'.

FEROZPORE.¹†—The principal place of the pergunnah of the same name, in the British district of Goorgaon, lieutenant-governorship of the North-West Provinces, on the route from Delhi to Alwar, and 74 miles² S. of the former. Jacquemont³ describes it as surrounded by a rather strong wall, flanked with small towers, and inhabited principally by Mussulmans. The fort had strong walls and towers, constructed of mud and mounted with cannon, and contained the nawab's palace, of no great size, but handsomely built, and furnished in the English style. According to the latest official return (1848), the number of inhabitants was 7,989;⁴ but this statement was founded on a census made two three years earlier, and chiefly, if not entirely, through native agency.

The jaghire of Ferozpoore, containing an area of about 138⁵

* Hough states the number at between 14,000 and 15,000 men.¹

† Jacquemont² states that it was built by Feroz Shah, no doubt meaning Feroz Toghlak, who reigned in Delhi from 1351³ to 1358, and was remarkable for the great number of his public works, amongst which, 200 towns⁴ are enumerated. *Perishta*⁵ indeed mentions that he built a fort called Ferozpoore; but this was close to Sirhind, and a hundred miles north of the town which is the subject of the present notice.

FIL—FIV.

square miles, with that of Loharoo, containing 350, were granted, in the beginning of the present century, the former by Lork Lake, the latter by the ruler of Alwur, to Ahmud Buksh Khan; on whose death, in 1827, they descended to his son, Shumsooddeen Khan. The two younger brothers of Shumsooddeen, having well-founded claims on Loharoo, in virtue of an arrangement made by their father Ahmud Buksh, Mr. William Fraser, the British political agent at Delhi, exerted himself to induce the British government to make a partition in their favour. Shumsooddeen, to avert the threatened loss, and in revenge for the proposed measure, as well as for some censure passed, and some coercion exercised, in regard to certain parts of his conduct, caused Mr. Fraser to be murdered, at Delhi, by a hired assassin, in October, 1835. A year afterwards, he was brought to trial for the murder, and, being duly convicted, was hanged.⁶ His jaghires being declared forfeited, Loharoo was granted to his brothers, and Ferozpore embodied with the British district of Goorgaon.

There are works in the town for smelting iron ore, raised at a mine three miles distant. The bazar is well supplied, and water is abundant. The road in this part of the route is good. Elevation above the sea about 840 feet. Distance N.W. from Calcutta, by Agra and Muttra, 895 miles.⁷ Lat. $27^{\circ} 47'$, long. $77^{\circ} 1'$.

FILOR, or FALOUR.—A town in the Juliuder Doab division of the Punjab, on the route from Amritsir to Loodiana, and about six miles N.W. of the latter place. It is situated on the right bank of the Sutluj, and is defended by a fort, built on the high steep rising from the river. The fort, which was constructed by order of Runjeet Singh in 1809, is small, affording accommodation for a garrison of only 150 men, but it is rendered conspicuous by its large barbican. Here is the ferry over the Sutluj, for the communication of Loodiana and its neighbourhood with Amritsir and Lahore. The Sutluj, in inundation, forms extensive sheets of water round the town, and these remain after the river has shrunk to the confines of its usual channel. Lat. $31^{\circ} 2'$, long. $75^{\circ} 49'$.

FIVE SISTERS ISLANDS.—A group of islands on the coast of the Tenasserim province, in lat. $11^{\circ} 25'$, long. $98^{\circ} 9'$, and 82 miles S.W. from the town of Tenasserim.

⁶ D'Cruz, *Pol. Relations*, 82. *As. Journ.*, 1835, Sept. pp. 13, 63; Feb. p. 110; March, pp. 109, 110; April, pp. 203, 204.

FLA—FRA.

FLAT ISLAND.—An island, called by the natives Nega-male, situate about five miles from the south-eastern shore of Cheduba (Arracan), which island in soil and productions it very much resembles. It is about four miles in length from north to south, has a pool or two of fresh water, and is high towards the centre.¹ Lat. 18° 37', long. 93° 50'.

¹ Journ. As. Soc. Beng. 1841, p. 356.
Horsburgh, II. 12.
E.I.C. Ms. Doc.

FORT ST. DAVID.—A town and fort on the coast of Coromandel, in the British district of South Arcot, presidency of Madras. This place, formerly known as Tegnapatam, was purchased by the East-India Company from a native prince in 1691, and became a station of some importance. Upon the capitulation of Madras to the French in 1746, the Company's agent here assumed the general administration of British affairs in the south of India, and successfully resisted an attack made by Dupleix upon the settlement. In 1756, Clive was appointed governor of Fort St. David. It was attacked by the French in 1758, both by sea and land, and capitulated, when the fortifications were demolished, and were never rebuilt. Distant N. from Cuddalore three miles; from Madras, S., 100. Lat. 11° 45', long. 79° 50'.

FORT ST. GEORGE.—See MADRAS.

FORT WILLIAM.—See CALCUTTA.

FOUL ISLAND, off the coast of Arracan, situate about six leagues from the mainland, is two miles in length, its shape conical, with a gradual declivity from the centre towards the sea.¹ The island is covered with a profusion of trees. Lat. 18° 4', long. 94° 16'.

¹ Horsburgh, Directory, II. 13.

¹ E.I.C. Ms. Doc.

FRASERPET,* or **KOOSHALNUGGUR,**¹ in the British district of Coorg, presidency of Madras, a town situate on the left bank of the river Cauvery, here 225 feet² wide, fordable in the dry season, but during the monsoon rising from twenty to thirty feet. It is situate close to the ruins of Jaafarabad, a fort built by Tippoo Sultan on the site of the ancient Kooshalnagar, and is the head-quarters of the sappers and miners employed on the roads and other public works in Coorg. The soil is alluvial but well drained, and the air salubrious, though, in consequence of its comparatively depressed site, warmer than

² Report on Med. Topography and Statistics of Coorg, 5.

¹ Wilkins, Glossary.

* Pet or Peta, in Tamul, means¹ a suburb or town. On the annexation of Coorg to the territory of the East-India Company, Col. Fraser was appointed commissioner.

FRE—FUL.

in most parts of Coorg. The nights, however, are cool and pleasant at all seasons, and during the monsoon little rain falls, and the temperature is moderate, the heat of the sun being mitigated by continual clouds and light fogs. Elevation above the sea 3,200 feet. Distance from Merkara, E., 14 miles; Mangalore, S.E., 81; Bangalore, S.W., 117; Madras, W., 290. Lat. $12^{\circ} 28'$, long. $76^{\circ} 1'$.

FRENCH ROCKS,¹ in Mysore, a British military station for native troops, at a rocky hill,² five miles N. of the river Cauvery at Seringapatam, and 300 feet³ above it. The cantonment is on a gently rising ground, with a gravelly soil and well drained. There are no jungles nor marshes in the vicinity, nor any stagnant water, except that contained in a fine deep tank with a rocky bottom, which yields an abundant and excellent supply throughout the year. The atmosphere is rather moist; fogs and heavy dews prevail at the close of the winter and the early part of spring. The heat is less than at Seringapatam, a few miles distant, and the thermometer is at no time much above 85° . The monsoon rains generally cease about the middle of September. Notwithstanding the many apparently favourable circumstances of its site, it has been from time to time subject to attacks of severe endemic fever, generally of intermittent type. They appear, however, to be in a great degree confined to the native population, the British generally enjoying good health. Elevation above the sea 2,300 feet. Lat. $12^{\circ} 31'$, long. $76^{\circ} 45'$.

FRENCH SETTLEMENTS.—See **PONDICHERRY**.

FULAILEE, in Sind, is a branch of the Indus, leaving the main channel about nine miles above Hyderabad, and in lat. $25^{\circ} 31'$, long. $68^{\circ} 29'$. It flows southward, after proceeding a short distance to the east of Hyderabad, which it insulates, by sending off to the westward a branch which rejoins the main river about fifteen miles below the town. Below this last divarication it bears the name of the Goonce, takes a southeasterly course, discharging its water eastward into the Purana or Phurraun, and ultimately into the sea by the Koreo mouth.

FULJAR TAL, in the British district of Shahjehanpore, lieutenant-governorship of the North-West Provinces, a small lake, the source of the river Goomtee. Lat. $28^{\circ} 35'$, long. $80^{\circ} 10'$.

FUL—FUR.

- ¹ E.I.C. Ms. Doc. **FULTA**,¹ in the British district known as the Twenty-four Pergunnahs, presidency of Bengal, a town on the left bank of the river Hooghly, opposite the mouth of the Damoodah.
- ² Garden, *Tables of Routes*, 174. Distance from Calcutta, S.W., by land, 22² miles; by the course of the Hooghly, 29. Lat. 22° 18', long. 88° 10'.
- ¹ E.I.C. Ms. Doc. **FUREEDABAD**,¹ a town in Bulubgurh or Fureedabad, a jaghire under the lieutenant-governorship of the North-West Provinces, is situate on the route from Delhi to Muttra, and 21² miles S. of the former city. The country around is for the most part barren and disagreeable, but groves³ of tamarinds and other trees enliven the immediate neighbourhood of the town. Here is a bazaar, and also a large tank. The town is surrounded by a wall. At the time of Thorn's visit, fifty⁴ years ago, it was noted for the manufacture of bows and arrows. Water is abundant. The road in this part of the route is good southwards, but northwards, towards Delhi, bad for wheeled carriages, being much intersected by rocky ravines. Lat. 28° 25', long. 77° 23'.
- ⁴ Thorn, *Memoirs of the War in India*, 175.
- ¹ E.I.C. Ms. Doc. **FUREEDGUNGE**,¹ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a village on the old route from the cantonment of Allahabad to Futteh-pore, and 39² miles N.W. of the former. The road in this part of the route is heavy, the country well cultivated. Lat. 25° 41', long. 81° 25'.
- ² Garden, *Tables of Routes*, 55.
- E.I.C. Ms. Doc. **FUREED KOT**, in the British district of Bhutteanna, lieutenant-governorship of the North-West Provinces, a town on the route from Patialah to Bhawalpoor, 116 miles S.W. of the former. Lat. 30° 1', long. 74° 47'.
- E.I.C. Ms. Doc. **FUREED KOTE**, one of the protected Sikh states of Sirhind, is bounded on the north, south, and east by the British district of Ferozepore, and on the west by the native state of Mundote: it extends from lat. 30° 40' to 30° 56', and from long. 74° 22' to 75° 9'; is forty miles in length from east to west, and nineteen in breadth. The area is 308 square miles, containing a population of 45,892. Fureedkote, the chief town, is 60 miles S.W. from Loodiana. Lat. 30° 40', long. 74° 59'.
- Garden, *Tables of Routes*, 49. **FUREEDPOOR**, in the British district of Moradabad, lieutenant-governorship of the North-West Provinces, a village on the route from Allyghur to the town of Moradabad, and

FUR.

four miles S.W. of the latter. It is situate near the right bank of the Gangun, in an open, level, cultivated country. The road in this part of the route is good. Lat. $28^{\circ} 47'$, long. $78^{\circ} 49'$.

FUREEDPOOR,¹ in the British district of Barcilly, the principal place of the pergunnah of the same name, on the route from the town of Bareilly to Shahjehanpoor, and 12 miles S.E. of the former. It is situate close to a grove of very fine mango-trees, in a flat fertile country, well cultivated, especially under cotton. Heber² describes his visit to this place on November 18th as delightful:—"The morning was positively cold, and the whole scene, with the exercise of the march, the picturesque groups of men and animals round me, the bracing air, the singing of birds, the light mist hanging on the trees, and the glistening dew, had something at once so oriental and so English, I have seldom found anything better adapted to raise a man's animal spirits and to put him in good temper with himself and all the world." There is a bazar here, and water and supplies are abundant. The road³ in this part of the route is good. Lat. $28^{\circ} 12'$, long. $79^{\circ} 36'$.

FUREEDPORE.^{1*}—A British district under the presidency of Bengal, named from its principal place. It is bounded on the north by the British district Mymensing; on the east by the British district Dacca; on the south by the British district Backergunge; and on the west by the British districts Jessore and Pubna: it lies between lat. $23^{\circ} 3'$ — $24^{\circ} 5'$, long. $89^{\circ} 30'$ — $90^{\circ} 15'$, and has an area of 2,052² square miles. Fureedpore is altogether an alluvial tract, low and swampy in the southern and north-eastern parts, where it is much subject to inundation; but in the north and north-western portions, rather more elevated, with a deep soil of fine quality.

Few districts more abound in rivers: the Ganges, in this part of its course called the Podda, flowing from west to east, touches on the western frontier at Juffergunge, where that river receives an offset of the Konaie or Jabuna, by which its volume of water is more than doubled. Thence taking a south-easterly course for fifteen miles to Malapora, it enters the district, through which it flows for forty-five miles, to Kagauta, on the eastern frontier, at which place it sends off

* It is also called Dacca Jelalpoor.

FUREEDPORE.

eastward a great branch, called the Kirtynassa; and then taking a southerly course for fifteen miles, it at Hobigunje crosses the southern frontier into the British district of Backergunge. It on the left side receives numerous considerable watercourses, and on the right side sends off many others, especially during the rainy season, when it rolls along with a vast volume of water, four, five, or six³ miles in width. The Konaie or Jabuna, from the north, touches on this district at its north-western corner, and flowing southerly for about five miles, forms its western boundary as far as Ameerabad, where it sends off to the left, or south-eastwards, a large stream, called the Dulasseree, and, turning south-westward, it receives, at a distance of five miles, the Oora Sagar, on the right side; the united stream a few miles lower down falling into the Ganges.

The Dulasseree holds a south-easterly course for thirty-five miles to Sabar, on the eastern frontier, towards the British district of Dacca, where it receives the Bunsî, flowing from the north. From the confluence, the Dulasseree holds a course south-east, forming for twelve miles the eastern boundary of Fureedpore towards Dacca, when it passes into that district. The Barashee or Chundna, a large offset of the Ganges, flowing from north-west to south-east, touches this district on the western frontier, at Moodoocallee, and taking a course very sinuous, but generally southerly, for fifty-five miles, to Gopalgunge, it for that distance forms the western boundary, towards the British district Pubna and Jessore. Rennell remarks⁴ that "the only subordinate branch of the Ganges that is at all times navigable, is the Chundnah river, which separates at Moddapore, and terminates in the Hooringotta;" and Horsburgh states that ships of 500 tons can⁵ enter and load in the Hooringotta estuary. The Barashee or Chundna is the only stream in this district navigable throughout the year; all the others, including the main stream of the Ganges or Podda, during the dry season become in many parts so shallow,⁶ that even small boats cannot traverse them.

The climate during March, April, May, and the early part of June, is characterized by great heat, in consequence of the situation of the district with respect to the tropics, and its depressed level, scarcely raised above the sea. Towards the close of June, the south-west monsoon begins to set in, pro-

FUREEDPORE.

ducing heavy rains, which prevail throughout July, August, and September, when they cease, and the climate gradually becomes comparatively cool, continuing so until the close of February.

No information appears to have been collected respecting the zoology of the district, though from the physical circumstances of the country, it may be inferred that it would be interesting.

The soil is in general very rich, particularly in the northern part, producing fine crops of sugarcane, cotton, indigo, oil-seeds, and some others of less value; while the swampy grounds are fruitful in rice. Sugar is probably the most important crop, being in brisk demand; and it is stated that above 1,000,000 pounds⁷ were exported in 1810, for the British market.

The manufacturing industry of the district is chiefly employed in the preparation of indigo and sugar, and in the distillation of rum. A considerable quantity of coarse cotton cloth is made for home use. Here are mahajans or merchants, reputed to be considerable capitalists, who drive an extensive and lucrative business, there being a brisk traffic in the import, export, and transit departments.

The population is returned at 855,000,⁸ an amount which, compared with the area, indicates a relative density of 416 per mile. Mussulmans are more numerous in the southern part, and Brahminists in the remainder of the district. There are some thousands of native Christians of the Romish persuasion, descended from the offspring of the union of Portuguese with native women. The district of Fureedpore passed to the East-India Company by the grant of Shah Alum, emperor of Delhi, in 1765.

Fureedpore, the locality of the civil establishment, Hobigunge and Jussurgunge, the principal places, are noticed under their respective names in the alphabetical arrangement.

FUREEDPORE,¹—The principal place of the British district of the same name, under the presidency of Bengal, situate on the right or south-west side of the Ganges, here called the Padda. According to Heber, "The huts² of the natives are in no compact village, but scattered thinly up and down a large and fertile extent of orchard-garden, and paddy (rice) ground." There seems to be little more to be said of Fureedpore, and

that little not of the most creditable character, it having formerly been a noted resort of river pirates,³ who made the navigation of this part of the river very hazardous; but the evil has in a great measure ceased since the place has become the locality of the principal government establishments of the district. Here are various buildings for the accommodation of the different branches of the civil department.

Distance from Dacca, W., 38 miles; Calcutta, N.E., 115. Lat. $23^{\circ} 36'$, long. $89^{\circ} 50'$.

E.I.C. Ms. Doc. FUREEDUH, in the British district of Bolundshuhur, lieutenant-governorship of the North-West Provinces, a town, the principal place of the pergunnah of the same name, situate on the right bank of the Ganges, 60 miles E. of Delhi. Lat. $28^{\circ} 38'$, long. $78^{\circ} 17'$.

E.I.C. Ms. Doc. FURRA.—A town in the native state of Gwalior, or possessions of Scindia, five miles from the right bank of the Parbutty river, and 113 miles S.W. from Agra. Lat. $25^{\circ} 57'$, long. $76^{\circ} 59'$.

¹ E.I.C. Ms. Doc. FURRUCKABAD.¹—A British district, under the lieutenant-governorship of the North-Western Provinces, named from its principal place. It is bounded on the north by the British districts Budaon and Shahjehanpore; on the east by the territory of Oude; on the south by the British districts of Etawah and Cawnpore; and on the west by Etawah and Mynpoore. It lies between lat. $26^{\circ} 46'$ — $27^{\circ} 43'$, long. $78^{\circ} 57'$ — $80^{\circ} 2'$, and has an area of 1,009 square miles. The general slope of the country is to the south-east, as indicated by the courses of the Ganges, Esun, and Rind, which run in that direction. The south-western portion of the district is part of the crest or gentle elevation² extending along the Doab at nearly an equal distance from the Ganges and the Jumna. The Rind, which rises on the western side of the line of waterheads, flows into the latter river. The elevation of the stream of the Kali Nadi (east), on the north-western frontier, is 614 feet³ above the sea. It flows for 115 miles, either traversing the district or forming its boundaries, and five miles north of its southern frontier it falls into the Ganges. Cautley⁴ found the general slope of the country to be $1\frac{1}{2}$ foot (1.138) in a mile. If allowance be made for the windings of the stream, the elevation of the spot where it is discharged into the—

² Cautley, Prolongation of Ganges Canal, 2.

³ Cautley, ut supra, App. II. 4.

⁴ p. 9.

FURRUCKABAD.

Ganges may be concluded to be about 520 feet; and it appears probable that no part of the district is more than 200 feet above this. The Ganges, when it first touches on the Furruckabad district, flowing in a south-easterly direction, forms its north-eastern boundary for twenty-five miles, dividing it from the districts of Budaon and Shahjahanpore; then, crossing the frontier, it pursues its course in a more southerly direction through the district for thirty miles, when it recrosses the frontier, and for thirty-five miles again forms the boundary of the district, separating it from the territory of Oude. Furruckabad is thus divided into two very unequal parts, a small portion of not more than 100,000 acres being situate on the north-eastern side of the river, the remainder in the Doab. The Ganges is navigable⁵ throughout that part of its course which touches on or flows through this district. The Kali Nadi, though a small stream,⁶ is also navigable⁷ throughout the district. The Ramgunga flows in a direction from north-west to south-east for about thirty miles, through the north-eastern part, holding a course nearly parallel to the Ganges, but to the eastward of it. The Esun and the Rind are petty streams.

The soil varies a good deal in quality, much of that on the banks of the Ganges being khadir* or marsh, having a deep rich soil, saturated with moisture. The town of Imritpoor, in this tract, is described⁸ as situate in a "country spread for many surrounding leagues with one sheet of luxuriant cultivation, interspersed with beautiful and ancient mango-trees. In the rainy season this rich and fruitful tract is scarcely habitable or passable, the whole country between the Ganges and Barcilly exhibiting one vast lake of water." Even in the driest part of the year, water may be obtained at a very small depth below the surface,⁹ and many ponds and watercourses occur. The most important crop on soil of this description is indigo, which is thought to be indigenous, being everywhere observable wild; and the herb thus produced has been said to yield a finer dye than when cultivated.¹ The culture is generally managed by the natives, who dispose² of the crop to European capitalists for conversion into a marketable state, a process which is largely carried on in the town of Furruckabad. A considerable part of the country is very sandy and sterile,

* Khadir, "moist."¹

especially the northern, and there the soil is so little retentive of moisture, that it becomes perfectly dry³ a few hours after being drenched with rain; yet assiduous culture, and judicious irrigation where water can be obtained from either streams or wells, clothe these unpromising tracts with good crops of grain, pulse, and tobacco. Where unimproved by human industry, the aspect of the country is dismal. "There⁴ are vast tracts without a tree or shrub, which are covered with a cloud of dust as often as the wind blows, which at this season* generally happens from ten to four every day. The bleak, desolate, and dreary aspect of the country, where you are constantly sinking at every step in loose sand, and blinded by showers of dust, gives an idea of the difficulty of travelling through those immense deserts that lie between these countries and Europe." In many places in the midland and southern parts of the district, the soil is fertile, producing fine wheat,⁵ barley, and pulse, and the crops of maize and sugarcane are so luxuriant and dense, as to attain a height of eight or ten feet, and exclude the rays of the sun. The southern part is so well wooded, as, when viewed from some distance, to have the appearance of a forest.⁶ Cotton and tobacco are grown⁷ chiefly for home-consumption. Many vegetables of usual growth in Europe succeed well here, especially potatoes, which are so much esteemed, that they are sent to many other parts.⁸ The land revenue in this district has been fixed by the government for a term of years, and is not liable to be increased until the year 1865.⁹

The population of this district is returned at 854,799;¹ of which number, 514,529 are classed as Hindoo agricultural; 238,895 as Hindoo non-agricultural; 34,792 as Mohammedans and others, agricultural; and 66,583 as coming under the same general head, but non-agricultural. The Mussulmans are said to be descendants of the Patans or Afghans, who early in the last century established² themselves in the tract extending between Oude and the Punjab, and have been reputed to retain some of the sanguinary³ and turbulent spirit characteristic of their ancestors. Lord Valentia⁴ describes the condition of society before the settlement of the district by the British authorities in gloomy terms:—"The state of the country was

* 13th February.

FURRUCKABAD.

then most wretched. Murders were so frequent at Furruckabad, that people dared not venture there after sunset, and the workmen who came out to the cantonments always retired to their own houses during daylight." He adds, that seventy persons were in prison to be tried for murder. Tennant⁵ also, ⁵ il. 368. writing in 1798, complains hearing of the numbers and murderous outrages of the banditti of Furruckabad. Archer,⁶ ⁶ Archer, il. 23. writing thirty years later, and even after the establishment of British rule, says, "No peasant thinks of living out of the village in a cottage by himself: it would not be secure, and would certainly tempt to plunder and murder." Happily, a very different state now prevails. The district is not only tranquil, but prosperous. The recent revenue settlement, effected for a term of thirty years,—a period sufficient to afford opportunity for agricultural enterprise, without surrendering in perpetuity the just rights and interests of government,—has been extended to this district, in common with other portions of the North-Western Provinces. Under it, the rights of all parties being defined and secured, industry is sure of its reward, and consequently flourishes. Honest labour has superseded lawless rapine as an occupation; and person and property are alike safe. The minuter advantages of civilization are in course of introduction, and efforts have been made to communicate to every class some measure of education. The progress of improvement is mainly attributable to the exertions of the late Mr. Thomason, while filling the office of lieutenant-governor of the North-West Provinces. "To him," says a late writer,⁷ "is due an improved executive administration, such as we have never had elsewhere in India."

⁷ Campbell, *Modern India*, 200.

The principal routes in the district are—1. From west to east, from Agra to Mynpooree, whence one branch proceeds to Futteghur, and another (the grand trunk road from Calcutta to Delhi) to Cawnpore. 2. From Allyghur to Futteghur, and thence to Cawnpore. 3. From south-west to north-east, from Etawah to Futteghur, and continued thence to Bareilly.

The principal places are Furruckabad, Chubramow, Imrutoor, Allygury, Kunnoj, Khudaganj, Nawabganj, Jalalabad, which will be found noticed in their proper places.

In the earlier part of the eighteenth century, the Rohilla Patans had established⁸ themselves in the tract comprised in

⁸ Forster, *Journ. from Bengal to England*, l. 127, 128.

FURRUCKABAD.

⁹ Scott, *Hist. of Aurungzebe's Successors*, II. 225.

the present district. In 1749, Ahmed Shah,⁹ of Delhi, urged by his vizier, marched thither, and confiscated the estates of the deceased ruler, who had just fallen in an unsuccessful war with the Rohillas. The country, with the exception of a small portion allotted to the support of the family of the late prince, was bestowed on the vizier, from whom, however, it was wrested by Ahmed Khan, brother of the former ruler, who forthwith proceeded to invade Oude. Expelled from that territory, though not without difficulty, Ahmed sought refuge in the hills, but on his submission was restored to Furruckabad, with a revenue of sixteen lacs of rupees. After being occupied by various classes of adventurers, it appears, however, to have reverted to the vizier of Oude, who, in 1801, transferred his claims to the East-India Company. In 1802 the Company assumed actual possession of Furruckabad, liquidating the claims of the tributary Patan nawaub by a fixed monthly stipend¹ of 9,000 rupees, in addition to which, an annual sum of nearly 180,000 rupees was bestowed in pensions and charitable allowances to his dependants. In 1804, Holkar, at the head of a great body of cavalry, the number of which has been estimated at 60,000,² ravaged this tract, and, flying before the British army under Lord Lake, was surprised at the town of Furruckabad, and having lost 3,000 men, the remainder were so reduced by desertions and other causes, that not above half their number ever rejoined the standard of their leader: the loss of the British was only two dragoons killed, and about twenty wounded. In their march to overtake the enemy, and in the pursuit subsequent to the route, the British traversed a distance of above seventy miles³ in twenty-four hours.

FURRUCKABAD,^{1*} the principal place of the district of the same name, in the North-West Provinces, is situate between two and three miles west of the right bank of the Ganges; its Patan² founders, from their exclusive addiction to military pursuits, attaching no value to the facilities afforded by the great river, navigable upwards for nearly two hundred³

¹ Tiefenthaler, *Beschreibung von Hindustan*, I. 139.
² Elphinstone, *Hist. of India*, II. 534, 540.

* Happy-town; from Farrukh, "happy," and Abad, "town." It received its name from its founder,¹ Muhammed Khan Bangash, who bestowed it in honour of the ill-fated Farrukhsir Padshah of Delhi. That prince ascended² the throne 1713, and was murdered 1719; consequently the town was founded in the intervening period.

FURRUCKABAD.

miles, and downwards to the ocean. Furruckabad is rather a handsome town, and considered healthy,⁴ though many of the streets are shaded by trees, a circumstance usually considered to have in India a tendency to produce malaria. Its population is returned at 56,300 persons.⁵ The healthiness of the place may be owing, in a great degree, to its cleanliness, a point more attended to here than in most Indian towns; and the width of the streets and squares, no doubt contributes towards this good end. The trade is considerable,* and the banking business especially is extensive and important. The surrounding country being fertile and well cultivated, provisions are abundant and excellent. In the town is a mud fort, built as a residence for the nawaub, on a considerable height, commanding extensive views of the Ganges and of the surrounding country. The commercial importance of this town was marked by its having a mint, the coinage of which circulated extensively, especially throughout the North-Western Provinces. The

⁴ Archer, *Tours in Upper India*, i. 52.

⁵ *Statistics of N.W. Prov.* 105.

* Tieffenthaler¹ describes the town as a large and important place in the days of the power of the nawaubs of Furruckabad, about a century ago. "It is surrounded," he says, "by a lime-cemented wall, with battlements, and enriched by a foss, and has twelve gates; three being directed towards each cardinal point. Four are main gates; one towards the Ganges, another towards Mao, a third towards Kannauj, a fourth towards Agra. The houses are low and lime-cemented, except a few built of brick, at least outside. They are tolerably commodious internally, and neatly finished with tiles. The high street, which is inhabited by merchants and tradesmen, extends half a mile from the red gate to the fort; and another street, from the red gate to that towards Mao, is a full mile long. The circuit of the town is, according to some, six miles; according to others, nine. It is the emporium of all commodities for this part of India, from Delhi, Cashmere, Bengal, and Surat. The fort, in which is the residence of the governor, is about a mile in circumference, and is situate to the north-west of the upper part of the high street, and is surrounded with a battlemented mud wall. The site is elevated, and the defences are rendered more effective by towers projecting above the rampart, and by a dry ditch of unequal breadth. The entrance to the place is through an outer and an inner gate." "The new palace, as well as the old, is of square outline, and has low hexagonal turrets along the sides. It has a lofty watch-tower." Hamilton² states that "the town is surrounded by a wall, which has been kept in tolerable order by the magistrates;" and adds, "by the police arrangements, the city is divided into seven wards, which are again partitioned into 104 mohallahs, many of which are narrow, and appear at one period to have had barrier gates."

FUTEHGUNGE (WESTERN),¹ in the British district of Bareilly, lieutenant-governorship of the North-West Provinces, a town on the route from Bareilly to Moradabad, and 12 miles² N.W. of the former. It is a thriving³ and populous village, and has a bazar and market, and is abundantly supplied with water from wells. The road in this part of the route is good; the country open, level, and well cultivated. Here, in 1796,

. FUTEHGUNJE.

the Rohilla Patans were defeated⁴ by a British force under Sir Robert Abercrombie. Within view of the action were about thirty thousand native troops, in the service of the nawaub of Oude, ostensibly an ally of the East-India Company; but they kept aloof until the British, after suffering very severely, totally routed their adversaries, when their treacherous auxiliaries rushed in and seized the greater part of the spoil.⁵ The cavalry of the British army fled on the first charge of the Patans, who, taking advantage of the opening thus made, got into the rear, and cut to pieces six companies of infantry, but ultimately fell before the unshaken courage of the survivors. Ramsay, the commander of the cavalry, who showed the example of flight, saved himself from the punishment due to his delinquency by taking refuge in America, and ultimately was employed by Napoleon in his commissariat. The East-India Company raised a monument to those of their troops who fell in the action. "It is of obelisk⁶ form, and stands on a small mound, the only elevation in this vast plain, on which point of vantage the enemies' guns were ranged, and afterwards taken. The names of fourteen British officers are recorded on the 'storied stone;' among whom were three commanding officers of regiments." Within a stone's throw of this plain and simple monument, rises the carved and minarotted tomb of two illustrious Rohilla chiefs, who fell in the action." A collection of dwellings, the extension of the contiguous village of Betoura, and which were the immediate scene of the conflict, has received the appellation of Futehgunje, or "Victory Market." Lat. 28° 28', long. 79° 24'.

FUTEHGUNJE (EASTERN),¹* in the British district of Barcilly, lieutenant-governorship of the North-West Provinces, a town on the route from the town of Bareilly to Shahjehanpoor, and 23² miles S.E. of the former. It is situate near the right bank of the river Bhagul, and close to a noble grove³ of mango-trees, covering between twenty and thirty acres, but is a poor, insignificant place, surrounded by a ruined mud wall, in which, however, are two handsome brick gateways. It has a bazar, and is well supplied with water. The road in general is good, though heavy in a few places; the country open, level,

* "Victory-market;" from two words signifying "victory" and "market."

FUTEHPOOR.

and cultivated. The town was founded by Shujahuddawlat, the nawab of Oude, in commemoration of a victory which, gained by the British⁴ army in 1774, gave him possession of a large portion of Rohilcund. It is probable that the battle was not, however, fought on the site of the present Futehgunje, but at Tessunah, about four miles north-west of it, and marked as a battle-field, with crossed swords, in Rennell's Bengal⁵ Atlas. The engagement is sometimes called the battle of Cutterah,⁶ or Kuttra, from a town three miles to the south-east of Futehgunje. The successive conflicts in an action so obstinately contested, probably took place in localities at a considerable distance from each other. Hafiz Rahmat Khan, the Rohilla commander, was described to Heber⁷ "as a noble old warrior, with a long grey beard, who led his cavalry on in a brilliant style against the allied armies. When his nobles, at the head of their respective clans, either treacherous or timid, gave way, he remained almost alone on a rising ground in the heat of the fire, conspicuous by his splendid dress and beautiful horse, waving his hand, and vainly endeavouring to bring his army back to another charge, till, seeing that all was lost, he waved his hand once more, gave a shout, and galloped on the English bayonets. He fell, shot through and through." Colonel Champion, who commanded the British, had his body wrapped in shawls, and sent with due honour to his relatives. Futehgunje is in⁸ lat. 28° 4', long. 79° 42'.

² Garden, Tables of Routes, i.

³ As Res. vi. 75—Hunter, Journey from Agra to Oujain.

⁴ Von Orlich, ii. 64. Bacon, ii. 301.

* The correct name might be supposed to be Futhepoor Sikri, or "Little Futhepoor," to distinguish it from Futtehpoor, in the Doab. This last town, previously to Akbar's improvements at the other, was probably the more important of the two; but Baber¹ mentions Sikri as the locality which, on account of the abundance of water, he chose as his place of encampment and battle-field, on which, in 1527, he overthrew² Rana Sanga, of Mewar, at the head of the confederate princes of Rajasthan, and finally established Islam on the ruins of Brahminism, and secured the family of Timur in the sovereignty of Hindustan. On occasion of this victory, he assumed the title of Ghazi,³ or "victorious champion of the faith," and, it may well be supposed, gave the name of Futhepore, or "Town of Victory," to Sikri, contiguous to the scene of the great battle, the event of which had rescued him and his army from a state bordering on despair. The learned translators of the Memoirs,⁴ however, quote, though without affirming the dubious authority of Thevenot, that the name was given by Akbar, the descendant of Baber. "Sikri was a favourite place of Baber; when his grandson Akber made his pilgrimage on foot from Agra to Ajmere, to the tomb of Kwajeh Mundi, and back, to procure the saint's intercession for having male children, he visited a dervish named Selim, at Sikri, and learned from him that God had heard his prayers, and that he would have three sons. This prophecy," says Thevenot, "was so pleasing to Akher, especially when it began to be accomplished, that he called his eldest son Selim, after the dervish, and gave the town, which had formerly been called Sikri, the name of Futhepore, which signifies 'place of joy and pleasure,' and built there a very beautiful palace, with the intention of making it his capital."

¹ Mem. 351.

² Tod, Annals of Rajasthan, i. 305.

³ Mem. 307.

⁴ p. 351.

Ferishta⁵ states a different motive for the name assigned by Akbar. "The king considering the villago of Seekry a particularly propitious spot, two of his sons having been born there, he ordered the foundation of a city to be laid there, which, after the conquest of Guzarat, he called Futtehpoor." And Hodges,⁶ without assigning any authority, states: "The town of Futtypoor was formerly known by the name of Sileri, and received its present appellation from the Mogul emperor Akbar, who entitled it Futtypoor, i.e. 'place of victory,' from a decisive defeat which he gave near it to the Patans in the beginning of his reign."

⁵ ii. 234.

FUTHEPOOR SIKRI.

space is divided by a hilly ridge of considerable* elevation, running nearly from south-west to north-east, and extending beyond the inclosure five or six miles on each side. The scene of desolation is the more awful, as Akbar commenced⁵ those structures as late as 1571; and the fury of victorious enemies, principally Mahrattas, has in the comparatively brief interval reduced them to their present shattered or prostrate state. The most striking object at present is the great mosque, still in tolerable repair.⁶ The aspect of the great front is southwards,⁷ "crowning⁸ the principal height, and overlooking the low country, the face of its walls terminating in a gigantic causeway, surmounted with domes and minarets. From a distant position, the effect of this enormous structure is to cause the hill on which it stands to dwindle into a mere hillock; but when the traveller arrives at its base, and can estimate the magnitude of the building by that of the eminence on which it is exalted, his admiration is raised to wonder and awe at the startling height to which it rises." The height of the gateway, from the pavement to the summit of the interior outline, is 72 feet, and to the exterior summit, 120. The gateway is reached by a flight of steps of almost unrivalled magnificence; but these are becoming dilapidated, the periodical rains, which sweep down the slope of the hill, annually loosening some and dislodging others, so that, if requisite repairs be not attended to, in a few years the whole of this superb portal must become a heap of shapeless ruins. The interior, to which this noble entrance leads, is a quadrangle nearly 500 feet† square, and all round which runs a very lofty and majestic cloister, into which opens a range of cells, intended probably as lodges for dervishes, or for pilgrims. In this quadrangle, and to the left of the entrance, is a large mosque, surmounted by three fine domes of white marble, and opposite the entrance, the tomb of Shekh Selim Cheestee, a Mussulman ascetic, whose intercession by prayer to heaven Akbar had implored, that the imperial couch might be blessed by the birth of a son. The prayer was considered to be answered by the

FUTHEPOOR SIKRI.

timely birth of a prince, named Selim, in honour of the Shekh, and subsequently emperor of Hindostan, under the name of Jehangir. The outline of the tomb is a square of forty-six feet, the material white marble, elaborately carved with much taste, in a florid style. The sarcophagus containing the body is inclosed within a screen of marble, carved into lattice-work and inlaid with mother-of-pearl. Numbers of women⁹ repair to this place to pray at the tomb and implore the saint's intercession in their favour. There is also within the inclosure another tomb of elaborate workmanship, represented to contain the remains of several members of Akbar's family. To the westward of the great inclosure are the massive ruins of the palace. The stables form a long and wide street, with a portico on each side fifteen feet deep, supported with carved stone pillars in front, and roofed with enormous slabs of stone, reaching from the colonnade to the wall. The whole hill on which the palace stands bears marks of terraces and gardens, to irrigate which an elaborate succession of wells, cisterns, and wheels, appears to have been contrived adjoining the great mosque. Numerous other great and remarkable ruins are everywhere scattered over the extensive inclosure of the ancient ramparts of the town. A huge and massive gateway¹ is particularly worth notice, on account of two figures of "astomishing"² elephants," of the natural size, carved in stone with admirable skill and truth. At no great distance is a tower, forty or fifty feet high, built, according to local report, of elephants'³ tusks, but actually of composition, moulded and enamelled into a resemblance of those natural substances. Outside the town, and to the north of the hills on which it is built, is the ruined embankment, extending a circuit of twenty⁴ miles, and formed by Akbar to dam up the torrent Khari. A lake was thus made, and on its margin was built an amphitheatre with high minarets. Abulfazl continues: "The amphitheatre is used for the game of chowgong;* and here also are exhibited the elephant-flights." The wide extent inclosed by the ruined wall of this favourite city of the greatest of the monarchs of Hindostan

is now overspread with "ruined houses⁵ and mosques, interspersed with fields cultivated with rice and mustard, and a few tamarind-trees." The surrounding country is fine, and its character shows the good taste of Akbar, who chose it as the scene of his gorgeous seclusion. "The⁶ scene [from the top of the great gateway] is indeed a lovely one, extending over an immense tract of country, the horizon of which is on all sides thirty miles distant from the beholder on a clear day, such as that which we enjoyed. The low line of hills upon which the place is built is seen creeping through the whole face of the level country from east to west, crowned every here and there with ruined buildings, or a hill fortress. Among these Bhurt-pore is just visible. On the opposite side is the Jumna, winding through the distance, and leading the eye to the glittering, though far-off, towers and domes of Agra. The middle distance is richly wooded, and thickly spotted with ruins of every age, and in every style of design." The town, though so ruinous, has at present a good bazar, and is at all times abundantly supplied with good water from wells and tanks. Population 5,949.⁷ Lat. 27° 6', long. 77° 44'.

FUTICKCHERRY.—A town in the British district of Chittagong, presidency of Bengal, 23 miles N. of Chittagong. Lat. 22° 40', long. 91° 54'.

FUTI PANJAL, a mountain in Kashmir, is one of that range which bounds the valley to the southward. According to the estimate of Vigne, its height must exceed 12,000 feet, as its summit rises above the lake Kosah Nag, which has that elevation. Its name signifies the mountain of victory. Its culminating ridge in some measure resembles the arc of a circle, the extremities of which are east and west, and the northern or concave part directed towards Kashmir. Its total length is about forty miles. Lat. 33° 34', long. 74° 40'.

FUTTEABAD.—A town in the native state of Gwalior, or possessions of Scindia, 134 miles N.W. from Hoosungabad, and 12 miles S.W. from Oojein. Lat. 23°, long. 75° 40'.

FUTTEGHUR.—A fort built by the Sikhs, during the prevalence of their sway, to command the eastern end of the Khyber Pass. It is situate a mile N.E. from Jamrood, and being close to the entrance of the pass, has great command over it. The defences consist of a square of 300 yards, pro-

FUT.

teeting an octagonal fort, in the centre of which is a lofty mass of buildings commanding the surrounding country. The supply of water from the mountain-streams is liable to be cut off by the hostile Khyberces of the adjacent hills. In the hope of providing a remedy for this inconvenience, the Sikhs sunk a well 200 feet deep, but without reaching water. Lat. $31^{\circ} 2'$, long. $71^{\circ} 25'$.

FUTTEGURH.—A town in the Rajpoot native state of E.I.C. Ms. Doc. Kishengurh, 72 miles S.W. from Jeypoor, and 35 miles S.E. from Ajmeer. Lat. $26^{\circ} 10'$, long. $75^{\circ} 10'$.

annual income, according to Tod,² is 64,000 rupees. The town is surrounded³ by a low weak rampart of stone, but the fort is rather strong, and has a roomy interior, defended by lofty ramparts, a *fausse-braie*, and a ditch of masonry. This was a prosperous and important⁴ place during the life of Rao Raja Luchman Singh, who resided here; but since his death it has been much deserted. Water is brackish and scarce, being drawn from wells ninety feet deep. Distance W. from Delhi 145 miles, N.W. from Jeypoor 90, E. from Bikaner 105. Lat. 27° 58', long. 75° 5'.

E.I.C. Ms. Doc. FUTTEHPOOR.—A town in the native state of Oude, 27 miles N.E. from Lucknow, and 96 miles S.E. from Furruckabad. Lat. 27° 8', long. 81° 18'.

E.I.C. Ms. Doc. FUTTEHPOOR.—A town in the Rajpoot state of Kerowly, 8½ miles S.E. from Jeypoor, and 69 miles S.W. from Agra. Lat. 26° 37', long. 77° 12'.

¹ E.I.C. Ms. Doc. FUTTEHPOOR,¹ under the lieutenant-governorship of the North-West Provinces, a British district named from its principal place. It is bounded on the north-east by the Ganges, which divides it from the kingdom of Oude; on the east by the British district of Allahabad; on the south-west by the Jumna, dividing it from the British districts Humeerpore and Banda; and on the north-west by the British district of Cawnpore. It lies between lat. 25° 25'—26° 13', long. 80° 12'—81° 23', and has an area of 1,583 square miles. The whole district is comprised within the tract called the Doab, and the two large rivers which bound it on two sides afford extensive means of inland navigation. The Ganges first touches on it at its north-eastern angle, and holding a south-easterly course of about sixty-two miles, "leaves the district at its south-eastern angle. It has in this part a bed of the average width² of four miles, "within the limits of which it changes its course annually; in the lapse of four or five years shifting from the one to the other limit." The annual rise caused by the monsoon rains at the close of summer, is about thirty³ feet, but the river is at all times navigable for boats, and is now navigated by steamers up to Gurmuktesar,⁴ nearly 300 miles above the northern frontier, and within 100 miles of the base of the Sub-Himalayas. The navigation is, however,

FUTTEHPORE.

difficult, tedious, and often vexatious, from the occurrence⁶ of shoals and rapids. The earth and sand suspended in the water cause quick wear and decay⁶ of the cocks, valves, and other parts of the engines; and so irregular is the depth of the stream, that it cannot be navigated with certainty in every part and in all seasons, except by craft drawing not more than two feet of water. The Jumna, flowing nearly parallel with the Ganges, and forming the boundary of the district on the opposite side, first touches on it at the north-western angle, and holds a meandering course of about 100 miles, generally in a south-easterly direction, until it quits the district. "Its banks⁷ are lofty and precipitous, and ridges of rock in many places advance into the stream, combining with its general shallowness and strong current, to render navigation extremely difficult and dangerous." Much has been done, under the orders of the British authorities, to improve the channel, by removing shoals and blasting and clearing away rocks, and with the most beneficial result, the navigation having "been facilitated⁸ in a degree quite extraordinary," but still not being safe for craft drawing above two feet water. The river is, however, highly useful as affording means of transport, though thus limited; large quantities of cotton,⁹ one of the most valuable products of the lower Doab, being sent down it, especially from Chillah Tara Ghat, a boating station about twenty miles south-west of the town of Futtehpore. Jacquemont¹ describes the Jumna at Humeerpore, just above its contact with this district, as remarkable in the season of low water for its blue tint; as running at the rate of three or four miles an hour, with a channel half a mile wide, and a stream of 300 yards; the right bank as high, precipitous, and consisting of clay mixed with sand; the left low and level, consisting of dark alluvial earth, retaining verdure at all seasons, but cheerless, and devoid of picturesque beauty. The Rind or Urrund,² a small river, passes into this district from that of Cawnpore, over the north-western boundary, and, flowing by the town of Korah, holds a course nearly southerly for thirty miles, finally falling into the Jumna on the left side. The Etawah branch of the Ganges Canal will also pass over the north-western boundary into this district, from that of Cawnpore, and, holding a south-easterly course for about fifteen miles, will join

the Jumna about twenty miles below the town of Humeerpore.

³ Heber, Journ. in India, 1. 336.

The surface of the country is remarkably level,³ but has a gentle declivity towards the south-east, in which direction the Jumna and Ganges flow. The elevation above the sea of the mean watermark of the Ganges, where it first touches on the district, is about 400* feet; that of the Jumna, in the corresponding part of its course, is probably twenty feet higher, as the more marked declivity of its bed is indicated by the greater rapidity of its current, and its more prolonged course to the confluence of the two rivers at Allahabad. From the level aspect of the country, it is probable that no spot within it has an elevation above the sea much exceeding 500 feet. The climate can differ little from that of southern Oude, situate on the other side of the Ganges, and at the same elevation. According to Butter,⁴ the climate of that country is characterized by great dryness, and wide range of variation in the thermometer, which sometimes rises to 112°, at others falls to 28°; the mean daily range being about 30°, and the mean temperature 74°.

⁴ Topography of Oudh, 16, 23.

⁵ Ut supra, 1. 334.

Heber⁵ states, that in 1824, the year in which he passed through this district, no rain had fallen as late as the beginning of October. The statement is, however, made on report, and not on personal observation. As the physical circumstances of the district are so nearly similar to those of southern Oude, the reader may refer to the article on that country for further information. The soil is fertile, and in seasons not afflicted by drought, well repays the tiller's care. Von Orlich,⁶ whose journey took place in the beginning of March, observes, "Its peculiar freshness in this dry season was very remarkable. It is a boundless garden, in which sugarcane, indigo, cotton, poppy, wheat, barley, and many vegetables flourish. Beautiful groves of mangoes, tamarinds, and bananas overshadow the village pagodas, mosques, and tanks, and give an ever-varying beauty to the landscape, which is animated by

travels in India, 10.

¹ As. Res. xv. App. p. 2.—Prinsep (James), Meteor. Journ.

* The elevation¹ of Cawnpore above the sea is four hundred and ten feet, and it is twenty-five miles farther up the river than the frontier of the district. The fall of the bed of the river is about nine inches per mile, and which, in twenty-five miles, would amount to little more than eighteen feet; consequently, the elevation of the average watermark, at the upper frontier, may be taken at four hundred feet, in round numbers.

FUTTEHPORE.

pilgrims, peasantry, travellers on foot and horseback, heavily-laden carts, and camels. Altogether, this district presents one of the most original and picturesque scenes of Indian life." It may be inferred that this part of India has been much benefited by British rule, as Tennant,⁷ who travelled through it in 1798, describes it as then a melancholy waste, though exhibiting in its ruined towns, tanks, seracs, and other scattered works of utility, memorials of former prosperity. Under the existing revenue settlement of the North-Western Provinces, the government demand on the lands of this district has been fixed for a term of years, and is not liable to be increased until the year 1870.⁸

⁷ *Indian Recreations*, II. 327.

The population is officially returned at 511,132,⁹ of which number the Hindoos form by far the larger proportion; viz., 263,191 agricultural, and 197,267 non-agricultural; while the Mussulmans amount only to 21,776 agricultural, and 28,895 non-agricultural. The number of towns containing less than 1,000 inhabitants, is 1,283; those containing more than 1,000 and less than 5,000, are 96; and there is one* containing upwards of 10,000; making a total of 1,380. The principal towns—Futtehpore, Korah, Kundjoo or Cujwa, Hutgang, and Huswa—are noticed under their respective names in the alphabetical arrangement.

⁸ *Act of Govt. of India*, vol. of 1840.

⁹ *Parliamentary Return*, 1851.

The great trunk road from Calcutta to Delhi and the northern Doab, by Allahabad, proceeds through this district, in a direction from south-east to north-west, passing through the town of Futtehpore. From this last town a route proceeds south-westward by Chillatara Ghat to Banda; another westward to Calpee. The route from Cawnpore to Banda by Chillatara Ghat passes through the north-western part of the district in a direction from north to south.

The tract in which this district is comprised, was conquered,¹ in 1194, by the Afghan Mussulmans, under Shahabuddin Muhammad, ruler of Ghuznee. These invaders so well established their power in this quarter, that they were able to offer an obstinate resistance to Baber,² whose son Humayon they expelled, under the conduct of Sher Shah. After Akbar removed the seat of government to Agra, the adjacent part of the Doab became of great political importance, and in 1659,

Aurangzebe and his brother Shuja met in conflict³ for sovereignty and life at Kudjooa or Onjwa, twenty miles north-west of the town of Futtehpore. After a sharp action, Shuja was routed, with the loss of 114 pieces of cannon, and the entire dispersion of his army.* By treaty dated 16th August, 1765, between the East-India Company and Shuja ud Dowlah, the nawaub of Oude, this part of the Doab was assigned to the emperor of Delhi, the fourth article providing, that "the king, Shah Allum, shall remain in full possession of Cora, and such part of the province of Allahabad as he now possesses, which are ceded to his majesty as a royal demesne for the support of his dignity and expenses." Shah Allum having in 1772 given up to the Mahrattas his claims on these provinces, that step was regarded by the British authorities as amounting to a forfeiture, and they agreed by treaty of the 1st May, 1775, that this tract should remain in the possession of the nawaub of Oude,⁴ in as full a manner as the rest of his dominions. Finally, by treaty of the 10th November, 1801, the Nawaub re-conveyed it to the Company, in commutation of the subsidy which he had stipulated to pay for the defence of his territory.

FUT.

Doab, and "of nearly⁶ half of the province of Oude" at the close of the last century and commencement of the present. The environs are crowded with burial-places. Tieffenthaler,⁷ writing a century ago, describes it as having a long street, and formerly populous, but at that time much decayed. At its north-east side was a mud fort, of quadrangular outline, with a round tower at each corner. In the Ayeen⁸ Akbery, its revenue is stated to be 72,317 rupees. Here is the chief seat of the civil establishment of the district, consisting of a judge, collector, deputy-collector, and other functionaries. In the military distribution, Futtehpore is within the Benares division, and a detachment of infantry is usually stationed here.

The Arabic word fath,* forming part of the name, shows that it must have been given subsequently to the overthrow⁹ of the Hindoos by the Affgan Mussulmans, under Shahabuddin, in the year 1194. The place was certainly in existence previously to the invasion of this region by Baber, as it is mentioned by him.¹ Supplies and water may be had here in great abundance, and the road in this part of the route is good. Distance N.W. from Calcutta 571 miles, and from Allahabad 76; S.E. from Cawnpore 48, from Delhi 267. Lat. 25° 57', long. 80° 54'.

FUTTIHPOOR, in the Baree Doab division of the Punjab, a town situated on the left bank of the Ravee river, 92 miles S.W. of the town of Ferozepoor. Lat. 30° 50', long. 73° 5'.

FUTTOOHA, or **FUTWA**,^{1†} in the British district of Patna, presidency of Bengal, a town at the confluence of the Poonpoon with the Ganges, and on the right bank of each river. The Poonpoon is here crossed by "a very² long and handsome bridge." It is on the route from Berhampoer to Dinapeer; 272³ miles N.W. of former, 21 E. of latter. It has a large bazar, and contains 2,000 houses, with a population estimated⁴ at 12,000. The Ganges here is considered especially sacred, and at certain times of the year vast multitudes assemble and bathe here. Futoocha is the principal place of a thana or police division of the same name, comprising—1. Some well-cultivated islands in the Ganges; 2. a portion of the left, productive, and populous bank; 3. a low tract,

power under Perron, required considerable military⁵ resources to be promptly available in this part of India. It is a favourite station with the military, being healthful, and abundantly⁶ supplied with a variety of excellent provisions at a cheap rate. The consequence of this station is likely to be increased on the completion of the projected branch of the Ganges Canal, which, issuing from the main channel on the left side, a little north of Meerut, is continued for the distance of 170 miles to Futtighur.⁷ There is a church at this place. Holar, in the course of his incursion into the Doab in 1804, attacked⁸ the town, burned the cavalry stables and the officers' bungalows, and was proceeding to attack the defences, when the arrival of the British, and his consequent defeat, drove him into precipitate flight. The cantonment is 25 miles to the E. of the great route from Calcutta to Delhi, and 703⁹ miles N.W. of the former, 184 S.E. of the latter. Elevation above the sea 550 feet. Lat. 27° 22', long. 79° 41'.

FUTTYPOOR,¹ in the British territory of Saugor and Nerbudda, lieutenant-governorship of the North-West Provinces, a town 20 miles S. of the south or left bank of the river Nerbudda, and on the Unjon,² a small stream tributary to that river. Its site is picturesque, among the low hills forming the southern boundary of the valley of the Nerbudda, and it is a place of some importance, as three petty Gond rajas or chiefs reside there. Distant from Saugor cantonment 80 miles. Lat. 22° 38', long. 78° 38'.

FUTWA.—See FUTROHA.

FYZABAD, in the British district of Saharunpoor, lieutenant-governorship of the North-Western Provinces, a village in lat. 30° 19', long. 77° 38'.

FYZABAD,¹ called also BANGLA,² in the district of Pachamrat, territory of Oude, a town on the right bank of the Ghoghra, here a great and navigable³ river, expanding in some places in the rainy season to the breadth⁴ of a mile† and a

half, and crossed at the Rai ghat by ferry. Fyzabad, and the ruins of the ancient Ayodha or Oude, adjoining it on the south-east, extend ten⁵ miles along the right bank of the river, and for a distance of two miles from it. Saadat Ali Khan, first nawaub vazir of Oude, and who may be considered the founder of this town, about the year 1730 built here a palace, and adjoining to it laid⁶ out a handsome garden, in the Persian style. It was further embellished by his successors Sefdar Jang and Shujah ud daulah with various buildings and pleasure-grounds. The latter enlarged the market-place, strengthened the fort with a wall, a ditch, and round towers, and collected so great a population, that it became a great city. Subsequently, however, on his acquisition of a large part of Rohil-eund,⁷ he removed the seat of government to Lucknow. This took place in 1775, and since that time Fyzabad has much decayed, the present population consisting almost exclusively of the lower and more indigent classes, the leading men, merchants, bankers, and others, having transferred their residence to Lucknow. The tide⁸ of emigration, which is represented as constantly increasing, is accelerated by the exactions practised on the inhabitants. Everything brought into the town is heavily taxed. The chief manufactures at present are cloth, metal vessels, and arms. The population is estimated by Butler⁹ at 100,000, but is fast diminishing, from the numbers of those who seek an asylum from oppression in the Company's territories, or wherever else peace and security may be enjoyed.

The military route from Goruckpore cantonment to that of Lucknow passes through this place, crossing the river Gogra by ferry at the Rai ghat, where are usually many boats. To the west of the town is an encamping-ground. Distant E. from Lucknow 89 miles, N. from Allahabad 95. Lat. 26° 47', long. 82° 10'.

FYZEPOOR.—A town in the British district of Candeish, presidency of Bombay. Some very elegant and expensive houses, belonging to native bankers and cotton-merchants, have of late years been built in this town.¹ Lat. 21° 11', long. 75° 53'.

GAD—GAN.

G.

GADHWALA, in the Rajpoot state of Bikaner, a village on the route from Ratungurh to the town of Bikaner, and nine miles E. of the latter. It is situate close to the north-eastern extremity of Johur, a tract of jungle twelve cos (twenty-four miles) in circuit, which belongs to the rajah of Bikaner, and is famous for the superior quality of camels and horses bred in it. The village contains forty houses, supplied with very good water from a well 270 feet deep. Lat. $27^{\circ} 57'$, long. $73^{\circ} 30'$. Bolleau, Rajwara, 101.

GAIGHAT,¹ in the British district of Goruckpoor, lieutenant-governorship of the North-West Provinces, a petty² market-town on the small river Manaura, on the route from the cantonment of Goruckpoor to that of Sultanpoor, in Oude, 49 miles³ S.W. of the former, 61 N.E. of the latter. The number of its houses is stated by Buchanan at 115, which, allowing six persons to each house, would give a population of 690. There is good encamping-ground a mile east of the ford, and supplies are abundant from the surrounding country, which, though of a light sandy soil, is well cultivated. The road in this part of the route is good. Lat. $26^{\circ} 35'$, long. $82^{\circ} 47'$. ¹ E.I.C. Ms. Doc.

¹ E.I.C. Ms. Doc.

GANGES.¹—A celebrated river of India, and of which the Bhageerettee is generally and popularly regarded as the remote feeder. The distinction of originating the great mass of waters subsequently termed the Ganges was some years since proposed to be accorded to the Jahnuvi,² a stream which joins the Bhageerettee in lat. $31^{\circ} 2'$, long. $78^{\circ} 55'$. It was then believed that the Jahnuvi took its rise from the north of the culminating range of the Himalayas, within the limits of Chinese authority.³ This supposition turns out, however, to be erroneous. It has been since ascertained⁴ that the remotest source of the Jahnuvi is situate in British territory, on the southern base of the before-mentioned range; and in reference to this discovery, Captain Strachey, to whom its merit is due, contends that the Ganges should be considered to originate in the most distant tributary of the Aluknunda (a feeder of the Ganges having a larger volume of water than the Bhageerettee). But as the distance between the ascertained source of the most remote tributary of the Bhageerettee and the point of confluence of the latter river with the Aluknunda is still believed to be fully equal to the distance between the source of the

GANGES.

Doulee, to which the Aluknunda owes its commencement, and the same point of confluence, there seems no reason for depriving the sacred stream of the Hindoos of its ancient title; and it is therefore proposed in this article to regard the Bhageerettee as the true Ganges. The Bhageerettee first comes to light near Gangotri, in the territory of Gurwhal, in lat. $30^{\circ} 54'$, long. $79^{\circ} 7'$, issuing from under a very low arch, at the base of a great snow-bed, estimated to be 300 feet thick, which lies between the lofty mountains termed St. Patrick,⁵ St. George, and the Pyramid, the two higher having elevations above the sea, respectively, of 22,798 and 22,654 feet, and the other, on the opposite side, having an elevation of 21,379. "From the brow⁶ of this curious wall of snow, and immediately above the outlet of the stream, large and hoary icicles depend. They are formed by the freezing of the melted snow-water at the top of the bed; for in the middle of the day the sun is powerful, and the water produced by its action falls over this place in cascade, but is frozen at night." As in Brahminical mythology, the Ganges is said to flow from the head of Mahadeva or Siva, a Hindoo who attended the English party by whom this place was explored, expressed his belief that these icicles must be the hair of the deity. On the 31st May the mean breadth of the stream was found to be twenty-seven⁷ feet; the mean depth was estimated at fifteen inches. From this spot, which has an elevation of 13,800 feet, the stream holds a direction north-west for ten miles to Gangotri, where the mean breadth,⁸ on the 26th May, was found to be forty-three feet, the depth eighteen inches, and the current very rapid. On the 2nd June the stream was ascertained to be two feet deep, and wider than previously observed. The elevation of Gangotri is 10,300 feet,⁹ and the average descent of the river thereto, from the place where it emerges from the snow-bed, is 350 feet per mile. From Gangotri the Bhageerettee holds a course nearly north-west to Bhairogati, in lat. $31^{\circ} 2'$, long. $78^{\circ} 54'$, the point¹ of confluence with the Jahnuri, holding its steep and foaming course from the north-east. The latter is considerably the larger river. The distance is seven miles from Gangotri to Bhairogati; and as this latter place has an elevation of 8,511 feet,² the average descent of the river in this part of its course is 255 per mile. The united stream holds

⁸ Id. 103.

⁹ Id. 102.

¹ Id. 326*.

² Id. ut supra.

GANGES.

a course first westerly, and then south-westerly, for thirteen miles, as far as Sookhee, in lat. $30^{\circ} 59'$, long. $78^{\circ} 45'$, where it may be said³ to "break through the Himalaya Proper." The elevation of the waterway is here 7,608 feet,* and consequently, the descent of the stream from the confluence is on an average seventy feet per mile. From Sookhee the river holds a very sinuous but generally a south-westerly course, for about thirty-six miles, to Utal, in lat. $30^{\circ} 43'$, long. $78^{\circ} 25'$, where it turns nearly southward for about fifteen miles more to Surota, in lat. $30^{\circ} 33'$, long. $78^{\circ} 24'$. It thence takes a direction south-east, and, at a distance of nine miles, in lat. $30^{\circ} 28'$, long. $78^{\circ} 29'$, receives, on the left side, the Julkar, a considerable torrent flowing from the north-east; and eight miles lower down, on the same side, at Teeree, in lat. $30^{\circ} 23'$, long. $78^{\circ} 31'$, the Bhilling,⁴ another tributary of considerable size, also flowing from the north-east. The elevation of the waterway at this confluence is 2,278 feet,⁵ and the average descent of the river from Sookhee thereto is seventy-eight feet per mile. Continuing to flow south-east for twenty-two miles, it is, at Deoprag, in lat. $30^{\circ} 8'$, long. $78^{\circ} 39'$, joined on the left side by the Aluknunda, a large stream formed by the union of the Vishnoo and the Doulee. The Aluknunda⁶ is a larger river than that whose volume it contributes to swell, bearing to it the proportion of three to two. The elevation at the point of this confluence is 1,953 feet;⁷ and consequently the average descent of the river from Teeree to it is fifteen feet in the mile. From Deoprag, the united stream, now called the Ganges, flows southwards eight miles, to Nougaoon, in lat. $30^{\circ} 3'$, long. $78^{\circ} 38'$, where, on the left side, it receives the Nyar, a considerable stream flowing from the south-east. From this confluence the river holds a course very sinuous, but generally westerly, for twenty-four miles, to Rikkee Kasee, in lat. $30^{\circ} 6'$, long. $78^{\circ} 23'$, where it touches upon the Dehra Dhoon. Rikkee Kasee having an elevation of 1,377 feet,⁸ the fall of the river to that place from Deoprag is on an average eighteen feet per mile. In its passage between the Dehra Dhoon and the province of Kumaon,

⁸ Hodgson and Herbert, ut supra. 327*.

* The height of Sookhee is given in Walker's Map at 8,869 feet; but the river bed was found by barometer 1,261 feet below Sookhee, or above the sea 7,608.

GANGES.

it receives, opposite the village of Kankur, in lat. $30^{\circ} 2'$, long. $78^{\circ} 19'$, on the right bank, the Sooswa, a considerable stream, draining the valley, down which it flows in a south-easterly direction. This is the only stream of importance which falls into the Ganges on the right side, from the confluence of the Jahnuvi to this part of its course, though it receives numerous small torrents on that side. Its descent by the Dehra Dhoon is rather rapid to Hurdwar, in lat. $29^{\circ} 57'$, long. $78^{\circ} 14'$, a distance from Rikkee Kasee of fifteen miles, in a south-westerly direction. The elevation of Hurdwar is 1,024 feet;⁹ consequently, the average descent of the river in passing the Dehra Dhoon is twenty-three feet per mile. The volume of water discharged at Hurdwar when the river is lowest is estimated at 7,000¹ cubic feet per second; being equal to only a small part of the alleged volume of the Dihong or Sanpoo, the principal feeder of the Brahmapootra.²

From Hurdwar, the general course of the Ganges is nearly south for about 120 miles, as far as Anopshuhur, in the British district of Bolundshuhur, in lat. $28^{\circ} 31'$, long. $78^{\circ} 20'$, where it turns to the south-east, and 160 miles lower down, in lat. $27^{\circ} 7'$, long. $80^{\circ} 2'$, receives on the left side the Ramgunga, a considerable river flowing from the north-west. Eight miles lower down, it on the right side receives the Kallee Nuddee, flowing likewise from the north-west; and twenty miles beyond, the Eesun Nuddee. One hundred and seventy miles lower down, at Allahabad, in lat. $25^{\circ} 26'$, long. $81^{\circ} 45'$, it is joined, also on the right side, by the Jumna, from the north-west. From Hurdwar to Cawnpore, the distance is about 348 miles: as the descent³ of the river from the former to the latter place is about 645 feet, the average fall of the river in this part of its course is about one foot ten inches per mile; and as there does not appear to be any marked difference in the declivity of its channel between Cawnpore and Allahabad, the same average descent of the waterway may, with probability, be assumed for the whole distance from Hurdwar to Allahabad. Throughout the whole of its course above Allahabad, the Ganges is "a stream of shoals and rapids."⁴ There are fords across it; as at Sakertal,⁵ in lat. $29^{\circ} 29'$, long. $78^{\circ} 4'$; at Ahar,⁶ seven miles above Anopshuhur; at Kumurooddeennuggur,⁷ in lat. $28^{\circ} 55'$,

GANGES.

long. $78^{\circ} 11'$; in the vicinity of Hurdwar; and without doubt in other places at times, when the water is very low. It is, however, navigable for river craft as far as Hurdwar; steamers conveying passengers and treasure, ply as far as Ghurmuktesur, 393 miles above Allahabad; and as far as Cawnpore, 140 miles above Allahabad, the navigation is plied with much activity, the reach of the river at that military station having the appearance of a port on a small scale. From Allahabad, the stream meanders in a direction generally easterly for 270 miles, to Manjhee, near which, in lat. $25^{\circ} 46'$, long. $84^{\circ} 40'$, it is joined on the left side by the Gogra. Between Allahabad and Manjhee, it on the left side receives the Goomtee, and on the right, the Tons and Kurumnassa; besides many smaller streams right and left. The average breadth in this part during the dry season is from 1,200 to 1,500 feet. At Benares, at that season, a section⁸ of the river is set down as having a breadth of 1,400 feet, and an average depth of thirty-five feet, and the discharge was estimated at 19,000 cubic feet per second. During the periodical rains, the breadth of the river at the same spot is 3,000 feet, and, rising forty-three feet, its average depth is about fifty-eight feet. The mean discharge at Benares throughout the year is estimated at 250,000 cubic feet per second. The depth of the channel is, however, subject to great inequality, in many places exceeding fifty feet during the periodical rains; while, in the dry season, it was found that near Kutchwa, thirty-five miles above Benares, a shoal⁹ extends completely across the river, having only two feet six inches water on its lowest part; so that all craft having a draught exceeding two feet, grounded in attempting to pass; and it is obvious, that at this spot the river must be then fordable. Eighteen miles below the junction of the Gogra, opposite to the town of Cherand, in lat. $25^{\circ} 39'$, long. $84^{\circ} 53'$, it on the right side receives the Sone, a large river flowing from the south-west; and after this addition, "its channel,"¹ when clear of islands, is generally about a mile wide; but in spring by far the greater part is a mere dry sand, covered with clouds of dust, which render all objects at any distance invisible; so that, travelling on its channel, one might imagine himself in the midst of a frightful desert." At Hajeeppoor, on the

⁸ Prinsep, *Steam Navigation*, ut supra, App. K. xxxii.

⁹ Prinsep, ut supra, 62.

¹ Buchanan, *Survey of Eastern India*, i. 7.

GANGES.

left side, twenty miles below the confluence of the Sone, the Ganges receives the Gunduck, a large river from the north-west, and continues to flow eastward for 160 miles, to Kuttree, in lat. $25^{\circ} 20'$, long. $87^{\circ} 17'$, where, on the left side, it receives the Coosy, also a large river flowing from the north, having in its course between the junctions of these two great rivers received right and left several streams of less importance. Below the confluence, for thirty-five miles, to Sikreegali, situate in lat. $25^{\circ} 10'$, long. $87^{\circ} 43'$, numerous tributaries from the north pour their waters into the Ganges; yet such is the enormous loss by evaporation, that, two miles below the above-mentioned place, the river, though a mile² wide, has only five feet of water where deepest, with a current of only a mile and a quarter per hour; and so shallow in several places is the stream, that craft should have a "draught³ little exceeding eighteen inches, to navigate safely and beneficially between Calcutta and Allahabad." At Sikreegali the river turns south-east, a direction which the main stream continues to hold for the remainder of its course; but sixty miles below Sikreegali, and opposite the town of Seebgunge, in lat. $24^{\circ} 44'$, long. $87^{\circ} 59'$, the Bhagarathi, a great watercourse, parts on the right side from the main stream; and seventy miles lower down, the Jellinghee, another watercourse, also of considerable dimensions, diverges on the same side, at the town of Jellinghec, in lat. $24^{\circ} 9'$, long. $88^{\circ} 40'$. The Bhagarathi proceeding southward for 120 miles, is then rejoined by the Jellinghee, after a course of about the like distance, and the united stream, called the Hoogly, continuing to hold the same direction for forty-eight miles, becomes navigable for vessels of considerable burthen at Chandernagore, in lat. $22^{\circ} 50'$, long. $88^{\circ} 21'$, at the distance of 115 miles from the sea, into which it falls about lat. $21^{\circ} 40'$, long. 88° ; its estuary being considered by the Brahminists the termination of the sacred stream, which, rising near Gangotri, and issuing from the mountains at Hurdwar, flows by the holy city of Benares. Its total length of course, from the source of the Jahnuvi to its fall into the Bay of Bengal at Saugor, is about 1,514 miles,* viz. :—

* The distance, reckoned from the snow-bed of Gangotri, would reduce the length of the river by about thirteen miles.

	<hr/> 1,514 <hr/>

Below the divergence of the Bhagirathi and the Jellinghee, the main stream is called the Podda or Ganges; and from that point the joint delta of the Ganges and Brahmapootra may be considered to commence. The Podda or Ganges, flowing south-east, receives some considerable streams on the left side; and on the right, besides the Jellinghee, it throws off, five miles lower down, the Martabhanga; forty miles below this latter divergence, the Gorae; and forty miles still further, the Chundni. At the distance of thirty miles lower down, it is joined on the left side, at Juffergunge, in lat. $23^{\circ} 52'$, long. $89^{\circ} 45'$, by an offset of the Konaie or Jabuna, a vast river, the principal channel of the Brahmapootra, and here much larger than the Podda or Ganges. The united stream takes a course south-east for sixty miles, when it throws off the Kirtynassa, and sixty-five miles below that divergence, it joins the Meghna, after which, flowing southwards for thirty-five miles, it is finally discharged into the Bay of Bengal, in lat. $22^{\circ} 15'$, long. $90^{\circ} 43'$; its total length of course, from the issue beneath the snow at Gangotri, being 1,557 miles, or from the source of the Jahnui, 1,570 miles. In continuation of what has been already stated as to the slope of the river down to Allahabad, it may be mentioned that Prinsep estimated⁴ the fall, in a distance of 139* miles (measured along the continuous course of the stream), from that city to Benares, at six inches per mile; from Benares to Colgong, being 326 miles, at five inches; from Colgong to

⁴ *Steam Navigation, ut supra*, 93.

* In Prinsep's volume, the distance from Allahabad to Benares is said to be only twenty-nine miles, and that between Jellinghee and Calcutta ninety-seven miles; statements so greatly at variance with fact, that they must be presumed to be errors of the press.

GANGES.

Jellinghee, being 167 miles, at four inches; from Jellinghee to Calcutta, being 170 miles, also at four inches; from Calcutta to the sea, about 100 miles, at one or two inches, according as the water may be at its highest or lowest state.

Access at all seasons for any considerable craft from the sea to that part of the Ganges above the Delta can be attained only through the continuous channel of the Meghna and Podda, or through the Chundna, which, diverging from the Podda or Ganges on the right side, in lat. $23^{\circ} 55'$, long. $89^{\circ} 6'$ takes a direction southwards, and falls into the Bay of Bengal by the Hooringottah estuary. During the dry season, neither the Bhagirathi nor the Jellinghee, forming by their junction the Hoogly, is navigable for craft drawing above eighteen⁵ inches water; and at that period the communication by water between the Hoogly below Calcutta and the Ganges above the Delta, is maintained by a circuitous course called the Soonderbund Passage, opening into the Chundna. In the Podda or Ganges the tide is felt as far as Juffergunge,⁶ 160⁷ miles from the sea, and in the Hoogly to a distance of about 150 miles from the sea. Besides the principal channels,—the Hoogly, the Podda, and the Chundna, numerous streams of less importance, parting from the main ones, find their way to the Bay of Bengal through the Soonderbunds, a wonderful maze of sea-islands, separated by numerous channels holding every direction, but principally from north to south. There are upwards of twenty of the estuaries of those channels opening into the head of the bay. The water of the Ganges begins to rise⁷ towards the end of May, and is usually at its maximum in September. The following table, drawn up by Captain Thomas Prinsep, illustrates the rise of the water in the river at various places:—

	Greatest known Annual Rise.		Rise in low Seasons.	
	Ft.	In.	Ft.	In.
At Allahabad	45	6	29	0
Benares	45	0	34	0

At Commercolly and Custee (not quite certain)	22	6	22	0
Agurdeep	23	9	23	0
Calcutta (independent of tide)	7	0	6	7
Dacca, according to Rennell	14	0		

Rennell is of opinion that the rising of the water of the Ganges, is not in any considerable degree⁸ caused by the melting of the snows of the Himalayas, but results principally from the fall of rain in the less-elevated mountains and over the plain. "By the latter end of July⁹ all the lower parts of Bengal contiguous to the Ganges and Burhampooter are overflowed, and form an inundation of more than 100 miles in width, nothing appearing but villages and trees." "Embarkations of every kind traverse the inundation; those bound upwards availing themselves of a direct course and still water, at a season when every stream rushes like a torrent. Husbandry and grazing are both suspended, and the peasant traverses in his boat those fields which in another season he was wont to plough, happy that the elevated site of the river-banks places the herbage they contain within his reach, otherwise his cattle must perish." Many extensive tracts are guarded from being inundated by the river by means of dams, made at an enormous expense, and having collectively a length of above 1,000 miles. With respect to the general breadth of the Ganges, Prinsep¹ states it to be "very unequal, but may be reckoned to average a mile in the dry season on its whole course through the plains, and two miles in the freshes." According to Burnes,² the average discharge of the Indus is four times that of the Ganges during the dry season. Like other rivers subject to periodical inundations, the water of the Ganges carries down earth in a state of suspension. The amount of solid matter in bulk in proportion to the quantity of water, is, according to laborious observations and calculations made by the Rev. R. Everest,³ as follows:—During the rainy season $\frac{1}{256}$ part,* or about two cubic inches in a

* Rennell's statement on this point is quite astonishing: "A glass of water taken out of the Ganges, when at its height, yields about one part in four of mud."

GANGES.

cubic foot; during the winter five months, $\frac{1}{3876}$ th part; and during the rest of the year, $\frac{1}{7632}$ th part; and following out his data, this writer concludes the total annual discharge of earthy matter to be 6,368,077,440 cubic feet in bulk. The total extent of inland navigation connected with the Ganges is not ascertainable with any degree of accuracy, but is unquestionably very large, and will be considerably increased on the completion of the works now in progress for facilitating the irrigation of the Doab by means of the Ganges Canal, and at the same time adding to the means of water-transit. The first idea of a plan of irrigation for the Doab originated as long since as the time of Lord William Bentinck,⁴ by whose orders some steps were taken for ascertaining its practicability; but, upon inquiry, the project did not appear capable of being successfully carried out. Under Lord Auckland the inquiries were resumed, the importance of the subject having been painfully pressed upon the notice of government by the occurrence of severe famine in the districts which the proposed works were designed to benefit. A magnificent plan for irrigation and navigation was laid down by Captain Cautley, comprising a main trunk line, running from the town of Hurdwar, through the centre of the Doab, with a connecting line to Cawnpore, as the inlet and outlet for navigation; the tracts of country lying between the different rivers which run into the Jumna and Ganges being irrigated by branches, extending the benefits of this fertilizing process to every village in the Doab.⁵ This project was subsequently referred to a committee of engineer and artillery officers⁶ for examination and report. Their testimony was highly favourable. The only serious difficulty to the execution of the project was presented by the tract of low land through which the drainage of the Solani river runs before its junction with the Rutmoo. Two methods of surmounting this were suggested: one by an aqueduct; the other by diverting the line so as to cross the Solani and its tributaries by means of dams. The latter was recommended by its being presumed to be less costly; but the former plan, deemed far better in every other point of view, was finally adopted. An account of this magnificent aqueduct will be found under the article "Solani River." The Ganges Canal is now rapidly advancing to completion. The main line has been

⁴ Cautley, Report on Central Doab Canal, 1.

⁵ Cautley, ut supra.

⁶ Report of Special Committee, 1842.

GAN.

constructed from Hurdwar to the vicinity of Allyghur, whence it diverges in two channels, one to Cawnpore, and the other to Humeerpoor, *via* Etawa, with three off-sets, designated the Futtehghur, Bolundshuhur, and Coel branches. The total length⁷ of the canal with all its branches will measure about 810 miles.

⁷ Cantley, Report, 1850, p. 1.

	Miles.
Hurdwar to Allyghur	180

Allyghur to Humeerpoor	180
Branch to Futtehghur	170
Ditto to Bolundshuhur	60
Ditto to Coel	50
	—
	810
	—

The total cost is estimated at a million and a half sterling. No inconvenient diminution of the navigable facilities of the Ganges is anticipated from the abstraction of the larger portion of its waters at Hurdwar for the purposes of the canal, inasmuch as no such result has taken place on the Jumna, where the whole apparent stream has been diverted to feed the two canals diverging from that river. Notwithstanding this, the under-current which percolates the gravelly or sandy bed, together with the drainage of the intermediate country, furnishes a navigable stream of water at Agra, a distance of 290 miles by the river's course; and it is thence inferred that the navigation of the Ganges below Cawnpore will not be injuriously affected; while the navigation above will be carried on by means of the canal. It may be observed, that the discharge of the Ganges at Hurdwar, the place at which it emerges from the hills, is in the dry season in proportion to that of the Jumna as seven to three, the discharge of the Ganges being estimated at 7,000 cubic feet per second, and that of the Jumna at the canal heads at about 3,000.

GANGOOROO.—A town in the native state of Garhwāl,

GANGOTRI.

on the right bank of the Tonse river, and 60 miles N.E. from Dehra. Lat. $31^{\circ} 9'$, long. $78^{\circ} 23'$.

GANGOTRI,¹ in the native state of Gurwhal, a small temple on the right bank of the Bhageerettee, as the Ganges is called in the upper part of its course, and eight or ten miles N.W. of its source. The river here expands a little, and on the bank of a small bay or inlet the temple is built, about fifteen feet² above the water. It is in a small inclosure, surrounded by a wall of unhewn stone, cemented with lime-mortar, and has close to it, and in the same inclosure, a small comfortable house, built for the officiating Brahmins. The temple is a square building, about twenty feet high, and contains small statues of Ganga,³ Bhagirathi, and other mythological personages, supposed to be connected with this locality. There is no village here,⁴ the pilgrims having no other shelter than a few sheds of wood, and caves in the adjoining cliffs. There are several pools, called by the names Brahmakund, Bishnukund, and others of corresponding import. Ablution⁵ in these is considered an important part of the ritual to be observed by pilgrims who visit this spot, considered popularly to be the source of the Ganges, as farther progress up the stream is generally, though erroneously, regarded as impracticable.⁶ Though this ablution, with due donations to the officiating Brahmins, is considered to cleanse from all offences, the number of pilgrims is not considerable,⁷ in consequence of the great length and ruggedness of the journey, and the difficulty of obtaining subsistence by the way. Flasks and similar vessels are filled at Gangotri with the sacred water of the stream, and being sealed⁸ by the officiating Brahmin, are conveyed to the plains, where they are highly prized by the superstitious. Gangotri is below the upper limit of forests; cedars⁹ growing here, though to no great size, and birch-trees thriving remarkably. The mean breadth of the Bhageerettee or Ganges here was ascertained by Hodgson,¹ on the 26th of May, to be forty-three feet, the depth eighteen inches, the current very swift, and over rounded stones. On the 2nd of June following, he conjectured its volume to be doubled, in consequence of the rapid melting of the snow. Rennell's² account of Gangotri would scarcely have been expected from one who usually displays so much information and judgment. "This great body of water [the Ganges] now

forces a passage *through* the ridge of Mount Himmaleh, at the distance possibly of 100 miles below the place of its first approach to it, and, sapping its very foundations, rushes through a cavern, and precipitates itself into a vast basin, which it has worn in the rock at the hither foot of the mountains. The Ganges thus appears to incurious spectators to derive its original springs from this chain of mountains, and the mind of superstition has given to the mouth of the cavern the form of the head of a cow." The Brahmin who showed the holy places to Fraser,³ ridiculed the fancy that the stream issued from a rock like a cow's mouth. Herbert⁴ estimates the length of course of the Bhageerettee or Ganges, from its source near Gangotri to its entrance on the plains of Hindostan, at about 203 miles. The elevation of the temple above the sea is 10,319 feet.⁵ Lat. 30° 59', long. 78° 59'.

GANGPORE.—A petty raj, within the territory superintended by the political agent for the south-west frontier of Bengal. It is bounded on the north by the British district of Chota Nagpoor; on the east by the native state of Bonei; on the south by that of Samba and the British district of Sambulpore; and on the west by the native states of Ryghur and Jushpoor. It extends from lat. 21° 50'—22° 37', and from long. 83° 31'—84° 57', and is ninety miles in length from east to west, and thirty-five in breadth, with an area of 2,493¹ square miles. The latest available reports give a very unfavourable account of the state of the country, which is little better than a great jungle, giving shelter to vast numbers of wild animals, and affording admirable sport to the hunter. The soil is naturally rich, but there is little cultivation, and not even the semblance of any administration of justice. The annual revenue was supposed to be about a lac of rupees (10,000), and the British tribute, which is only 500 rupees, was regularly paid. The prince, at the date of the report, though a young man, was sunk into that condition of sloth and imbecility which almost invariably results from indulgence in opium. The population is believed to be about 112,000.² Gangpore, the principal place, is in lat. 22° 3', long. 84° 43'.

GANISCOTTEE.—A town in the native state of Hyderabad, or territory of the Nizam, 85 miles N.E. from Hyderabad, and 204 miles S.E. from Ellichpoor. Lat. 18° 32', long. 78° 53'.

GANJAM.

GANJAM.¹—A British district under the presidency of Madras, named from the town formerly its principal place. It is bounded on the north-west, north, and north-east, by the territory of Orissa; on the south-east by the Bay of Bengal; on the west by the British district of Vizagapatam; and lies between lat. 18° 13'—19° 52', long. 83° 50'—85° 15'. The area is stated officially² to be 6,400 square miles. The sea-coast, commencing at the estuary of the Naglaudi Nadi, or Chieacole river, is bold and rocky,³ and is marked by a range of rugged* hills, running in some parts close to the shore; in others, nearly parallel to it, but a few miles inland. Those about lat. 19° 25', long. 85° 8', near the northern extremity of the coast, recede gradually from it, and leave space for an extensive sandy plain, partly occupied by the jhil or lake of Chilka,⁴ lying between this district and that of Cuttaek, and separated from the sea for many miles by a long narrow strip of sand, seldom more than three hundred yards in breadth. Though coasting vessels may enter the river Rasikoila,⁵ in lat. 19° 22', long. 85° 8', there is throughout the whole extent of coast no haven for ships of any considerable burthen, which, if trading to places on any part of it, must anchor abreast of them in the open sea. Landwards of the rocky hills extending along the coast, the country for a few miles expands into a plain, beyond which, in the north-west of the district, are numerous intricate rocky groups and ranges, which ultimately, beyond the western boundary, become connected with the great range of the Eastern Ghauts. Their geological formation is generally primitive, principally gneiss⁶ and granite. The streams of the district flow from those hills, and hold a course south-eastward, falling into the Bay of Bengal. The principal are, the Naglaudi or Chieacole river, debouching in lat. 18° 19', long. 84°; the Callingapatam river, debouching about twelve miles farther to the north-east; and the Rasikoila; but all, without exception, are mere torrents, which are dry for a part of the year. The jhil or lake of

Chilka, the greater part of which lies within the limits of the British district of Cuttack, touches part of the northern frontier of this district. It is about forty-two⁷ miles in length from north to south, and fifteen in breadth; of small depth,⁸ its greatest not exceeding six feet, while in most parts it has not more than four. It abounds in fish and aquatic birds, and is valuable from the great quantity of culinary salt obtained from its water through evaporation in shallow tanks, by means of the heat of the sun. The hot season comprises the latter end of March, and the months of April and May, during which the temperature is very high, and the air oppressive. The south-west monsoon sets in about the middle of June, and continues until October, when it is succeeded by a variable⁹ season, ushering in the north-east monsoon, which brings cool weather, that continues through the winter months, and renders them bracing and salubrious. During the hot season, and the close of the rainy one, agues and fevers of very bad type are common; and in 1815 these diseases carried off such great numbers, both of the European and native population, at the town of Ganjam, that the civil and military¹ establishments were removed to Chicacole; and the former place has since been nearly deserted.

There is very scanty information respecting the zoology of the district, which, however, is represented as comprehending the bear,² the chita or hunting-leopard, the hyæna, the jackal, the tiger-cat, and the hare.

The level country is in general extremely fertile, producing abundant crops of rice, sugarcane, maize, millet, pulse of various kinds, oil-seeds, and raji (*Eleusine corocana*); while the hilly country yields wax, lac, gums, dye-stuffs, arrowroot, and great variety of timber and ornamental woods. Cotton is produced³ annually to a considerable extent; and the local demand is such as to leave scarcely any for exportation. The only manufactures of importance are coarse cotton cloths and muslins, which last were formerly in high esteem and extensively manufactured, but are not now produced to the same extent, on account of the diminished demand consequent on the irresistible competition of British fabrics. The population has been stated officially⁴ to be 926,930, an amount which, compared with the area, indicates a relative density of 145 to the

GAN.

square mile. By far the greater part are Brahminists, there being few Mussulmans, and probably no Christians, except those in the service of government. The former prevalence, and recent suppression of human sacrifices in a part of Ganjam, are briefly noticed in the article Goomsoor. Ganjam occupies the northern portion of the territory known as the Five Circars, the possession of which was an object of fierce contention between the French and English about the middle of the last century. They were obtained by the former in 1753, and continued under their dominion for six years, when Clive transferred them to the East-India Company, to whom they were formally ceded in 1765, by the emperor of Delhi.⁵

Chicacole, the principal place of the district, Ganjam and Russelkondah, the towns of note within the district, are described under their respective names in the alphabetical arrangement.

The great route from north-east to south-west, from Calcutta to Madras, runs through the whole length of the district parallel to the seacoast, and generally at a short distance from it. The construction of a macadamized road from Berhampore to Russelkondah has been authorized, at the estimated cost of 14,224l.⁶

GANJAM,¹ in the British district of the same name, presidency of Madras, a town on the left side of the Rosikoila Nuddec, immediately above its fall into the Bay of Bengal.² This town, formerly remarkable for its fine buildings, is now much decayed, the fort and cantonments being in ruins, and the place nearly deserted, in consequence of a deadly epidemic fever, which, in 1815, carried³ off great numbers of the inhabitants, both Europeans and natives. The civil and military stations were then removed to the town of Chicacole. The insalubrity of the situation has, it is said, passed away; but the establishments which formerly caused its prosperity, have not been restored. It has still, however, some coasting trade⁴ by means of the river. Distance direct from Chicacole, N.E., 110 miles; Vizagapatam, N.E., 165; Madras, N.E., 536; Cuttack, S.W., 90; Calcutta, S.W., 315. Lat. 19° 23', long. 85° 7'.

Bengal, a village on the route from the city of Delhi to Kurnal, and 16 miles S.E. of the latter. The road in this part of the route is good. Lat. $29^{\circ} 29'$, long. $77^{\circ} 2'$.

GANTUNG PASS, in Bussahir, over a range of mountains on the north-eastern boundary, between Koonawur and Chinese Tartary. Jacquemont¹ describes it as a vast opening between

¹ Voyage, iv. 303.

² Lloyd and Gerard, *Tours in Himalaya*, II. 133.

summits which overtop it about a thousand feet. The highest part of the pass is covered with perpetual snow. To the west, a declivity extends towards the distant Sutluj, with a surface sloping gradually, but inexpressibly rugged. Nature in few places assumes a form more frightful than that here described by Gerard :²—"We now hurried down to a milder climate, for a short way upon continuous snow, and afterwards on loose rock and snow for a mile, where the head of the dell is formed on each side of us. In this plain of wrecks and horrid scenery, the detached summits of the chain rose in various misshapen forms, dark and naked on their sides, but terminating in spires and domes of perpetual whiteness. Around their bases, which here rest at an elevation of 17,000 feet, are enormous accumulations of snow, containing basins of still water, the dread of travellers who approach them : the scene surpasses description. The dell, nearly half a mile wide, is covered by layers of broken stones, exhibiting extraordinary variety, beautiful to the eye, but severe to the feet." The space to be traversed devoid of wood for fuel is eight miles, and, in consequence of this, the pass is little frequented. Gerard crossed it, at the end of July, amidst falls of snow and sleet, which lasted all day, yet so mild was the temperature, comparatively with the enormous

GARAHUNG.—A town in the native state of Nepal, near the left bank of the Gunduck river, and 102 miles N.W. from Khatmandoo. Lat. 27° 57', long. 83° 41'. E.I.C. Ms. Doc.

GARAKOTA,¹ in the British territory of Saugor and Nurbudda, a town, situate in the angle² formed by the confluence of the rivers Sonar and Guddari. The fort is at the apex of the angle, and is of irregular ground-plan, being washed on two sides by the confluent streams. The interior wall of the fort is thirty feet high, and of thickness varying from six to twenty feet; an outer wall, twenty feet high, surrounds the place, the interval between the two defences being very irregular. A ditch thirty feet deep communicates with both rivers, and, extending between them, strengthens the defences towards the country. The town, which extends from river to river, is separated from the fort by a considerable space of waste ground. In October, 1818, it was held by a garrison for the raja of Nagpoor or Berar, and being invested by a British force under General Watson, in a few days a practicable breach was made, and the place surrendered. Distant 25 miles E. of Saugor, 206 S.W. of Allahabad. Elevation above the sea 1,345 feet. Lat. 23° 47', long. 79° 12'.

¹ E.I.C. Ms. Doc.

GARHA,¹ in the district of Sultanpore, territory of Oude, a fort on the right bank of the Goointee, 14 miles S.E. of Sultanpore cantonment, 106² S.E. of Lucknow. It was, in a remote period, built by a sovereign³ of Oude, of the Bhar race, a low caste of Hindoos, and the stone used in its construction was, according to tradition, brought by water from Nepal. It early fell into the hands of the Patan invaders of Hindostan, who destroyed the upper part of the walls, leaving them standing to the height of eight or ten feet. The ruined portion has been restored, partly in brick, partly in mud. Part of the stone wall rises from the bed of the Goointee, and exhibits many sculptures, as well as inscriptions, some in the Nagari, some in the Persian character, relating the history of the place. Lat. $26^{\circ} 10'$, long. $82^{\circ} 19'$.

E.I.C. Ms. Doc.

GARREE.—A town in the British district of Hyderabad, in the province of Sind, presidency of Bombay, 63 miles S.E. of Tatta. Lat. 24° 18', long. 68° 51'.

GARROW and COSSYAH HILLS.—This group, situated on the north-eastern frontier of the Bengal territory, extends over a tract of country bounded on the north by Goalpara and Camroop; on the east by Jyntea; on the south by Sylhet and Mymensing; and on the west by the last-mentioned district. These territories extend from lat. 25° to 26° 6', and from long. 90° 7' to 92° 11'. The whole tract contains an area of 4,347 square miles. The chief divisions, with the statistical particulars of each, as far as they can be ascertained, are as follows.¹ The Garrows contain by estimation an area of 2,268 square miles; Ram Rye, 328; Nurlung, 360; Muriow, 283; Molyong, 110; Mahran, 162; Osimla, 350; Kyrim and the domains of various petty chiefs, 486. The population of the whole is given at 65,205. The various chiefs who exercise dominion throughout this district are under the protection of the British government, though not tributary thereto. With many of them there are agreements defining² the relative positions of the protecting state and the protected dependency; and with regard to all, this relation is understood and acted upon.³ The character of the country is wild, as is also that of the people; but for some years past the just and liberal policy of the British government has secured the general prevalence of tranquillity; but in 1852, it was deemed necessary to depute Lieutenant Agnew into the Garrow Hills to inquire into a local disturbance.⁴ The portion of this district which is directly British has been noticed under the head "Cossyah Hills."

GAUR,¹ * or LUCKNOUTI.²—A ruined city in the British district of Maldah, presidency of Bengal. It is situate on a range of inconsiderable eminences, extending along the east or left bank of the Bhagruttee, a watercourse formerly the main channel of the Ganges, but now containing a small portion only of its stream. The best description of this vast monument of the industry and resources of India at a remote period, is that given by Rennell,³ who visited the place. "Taking the extent of the ruins of Gour at the most reasonable calculation, it is not less than fifteen miles in length (extending along the old bank of the Ganges), and from two to three in breadth. Several villages stand on part of its site; the remainder is either covered with thick forests,⁴ the habitations of tigers and other beasts of prey, or become arable land, whose soil is chiefly composed of brick-dust. The principal ruins are a mosque, lined with black marble elaborately wrought, and two gates of the citadel, which are strikingly grand and lofty. These fabrics, and some few others, appear to owe their duration to the nature of their materials, which are less marketable, and more difficult to separate, than those of the ordinary brick buildings, which have been, and continue to be, an article of merchandise, and are transported to Moorshedabad, Mauldah, and other places, for the purposes of building. These bricks are of remarkably solid texture, and have preserved the sharpness of their edges and smoothness of their surfaces through a series of ages. The situation of Gour was highly convenient for the capital of Bengal and Bahar as united under one government, being nearly central with respect to the populous parts of those provinces, and near the junction of the principal rivers that compose that extraordinary inland navigation for which those provinces are famed; and, moreover, secured by the Ganges and other rivers on the only quarter from which Bengal has any cause of apprehension." A beautiful minaret,⁵ ninety feet high and twenty-one in diameter, yet remains, surmounted by an open cupola, accessible by internal stairs, and affording a fine view of the surrounding country. There are also some mosques in a state of decay, but still retaining traces

* Gaur of Shakespear; ¹ Gaur of Wilson; ² Gowr of Briggs's Index; Gour of Rennell; ³ Gour of Elliot.⁴

⁴ Supplement to Glossary, 355.

GAUR.

of their original architectural excellence. Of these the most worth notice are the Sonahla Masjit, or golden mosque; the Chhota Sonahla Masjit, or small golden mosque; and the Kadam Rosul, to which votaries throng in the belief that it contains the impression on stone of the footstep of Mahomet, the founder of Islam. Of the numerous bridges formerly traversing the watercourses in and about this wonderful collection of dwellings, one only remains. So vast has been the quantity of building materials drawn from those ruins, as to give rise to a specific phrase* in the fiscal language of India. Their further abstraction has been prohibited, and measures have been taken for arresting⁶ the destruction of the interesting antiquities in the vicinity of the ancient capital of Bengal. Splendid views of the most striking of those objects have been given by Daniel.⁷ Among the ruins are several neglected tanks swarming with alligators; and the dense damp jungles, overgrowing the more depressed parts, are infested with various kinds of snakes, amongst which the boa-constrictor has been killed above twenty feet in length. In the time of Abulfazl, in the latter part of the sixteenth century, there was here a great⁸ fort, to the east of which was a lake of considerable extent; and Tieffenthaler states⁹ that it was surrounded by an earthen rampart twenty ells high, and so broad at top, that horses, elephants, and waggons, could move along it without difficulty. Gaur is probably a place of great antiquity; the researches of Wilford,¹⁰ however, do not appear to establish it as of any great importance until A.D. 648, when its chief became independent, on the fall of the previously paramount sway of Magadha. The chiefs of Gaur from that time were powerful, until the reign of Lakshmana, from whom it probably received the name of Lucknouti, by which it is frequently mentioned in history. In 1202 the city was taken, and Lakshmana driven into flight, by Bakhtiar Khilji,¹¹ a commander subordinate to Kutbuddin

* Kimut Khest-Ghour, "price of bricks of Gaur," "a soubahdarry" impost, established by Ali Verdi Cawn, to defray the expense of conveying away bricks from the ruins of the ancient city of Gaur."

† Dow, as quoted by Rennell,¹ states that it was the capital of Bengal 730 years before the birth of Christ; but his accuracy is to be little depended on.

GAUR.

Eibak, viceroy of Delhi, for Shahabuddin, monarch of Ghor, in Afghanistan. It in A.D. 1212 was made the capital³ of the kingdom of Bengal, by Ghiyasuddin, who built there a fine mosque, a college, a caravanserai, and made numerous embankments to protect the city against inundations. About a century and a half later, the⁴ seat of government was transferred to Pundua or Peruya,⁵ but restored to Gaur in 1409, by Jalaluddin. Nasir Shah, in 1450, surrounded it with the vast rampart of which the extent may still be traced. In A.D. 1536, Shir Shah, the Patan rival of Humayun, having overrun⁶ Bengal, took Gaur, and drove its king, Mahmood, into flight, but was himself, the year after, dispossessed by Humayun, who resided for some months in the city, and changed* its inauspicious name of Gaur to Jennetabad. He, however, found it necessary to retreat to the western part of his dominions, and his rival, Sher Shah, took possession of the city. After the death of Sher Shah, the governors of Bengal assumed the style of independent rulers of that country, until 1574, when Monaim Khan, in command of the troops of Akbar, subjugated⁷ it, and made it the seat of local government, but in a few months perished, with nearly all his troops, by the effects of the pestilential climate. From that period commenced the ruin of the city, and on the acquisition of the country by the British, soon after the middle of the eighteenth century, Maldah, and subsequently English Bazar, became the seats of government of the province. Gaur is distant from Burhampoor, N., 61 miles;⁸ from Calcutta, by Burhampoor, 179; Rajmahal, S.E., 25. Lat. 24° 55', long. 88° 8'.

* The name of Gaur was no doubt Sanskrit; in which language it signifies "sugar." In Persian, it signifies the grave¹ and was thence regarded inauspicious by those who used that language. Rennell is incorrect in stating² that the change of name was made by Akbar, as Abulfazl, who could not have been mistaken, and who wrote in the time of Akbar, states,³ "Jennutabad is a very ancient city, and was once the capital of Bengal. Formerly, it was called Lucknowty, and sometimes Gowr; the name it now bears was given by the late emperor (Humayun)." Ferishta also states:⁴ "Hoomayoon having occupied Goor, he caused that unpropitious appellation to be changed for that of Junutabad." Tieffenthaler mentions, that the monarch gave the name ironically,⁵ in allusion to the pestilential atmosphere, deadly as well to the men as to the cattle of his army.

GAU—GAY.

GAURA.—A town in the native state of Nepal, on the right bank of a branch of the San Coos river, and 55 miles E. from Khatmandoo. Lat. $27^{\circ} 45'$, long. $86^{\circ} 10'$. E.I.C. Ms. Doc.

GAWILGURH,¹ in the native state of Hyderabad, or dominions of the Nizam, a stronghold on the southern declivity of the range of mountains bounding the valley of the Taptee to the south. It consists of two forts,² one of which, fronting the north, where the rock is inaccessible, is defended by an outer fort, that entirely covers it to the north and west. All the walls are very strong, and rendered more formidable by bastions and towers. It is a post of considerable importance, as it commands a route³ much frequented across the mountains from south to north. Its strength is greatly increased by the extreme difficulty of transporting guns of sufficient calibre into commanding positions. Gawilgurh was taken by storm in 1803, by the British troops under Colonel Stevenson. Distance from Nagpoor, W., 114 miles; Ellichpoor, N.W., 15; Aunungabad, N.E., 170; Bombay, N.E., 340; Hyderabad, N., 290. Lat. $21^{\circ} 20'$, long. $77^{\circ} 23'$. E.I.C. Ms. Doc.

GAYAH,^{1*}—A town, the principal place of the British district of Behar, presidency of Bengal. It consists of two² parts, one the residence of the priests and of the population connected with them; the other, the quarters of the great bulk of the population. This last, the name of which was originally Elahabad, was much enlarged by Law,[†] and thence denominated Sahibgunj.[‡] The streets in Sahibgunj are wide, straight, and have on each side a row of trees, between which is a road for carriages, with a footway on each side. The town is well laid out, but the houses are for the most part merely mud-built huts, though there are a few brick-built, having neat gardens. There is an hospital, principally for the relief of sick or wounded pilgrims. The old town of Gayah, which is inhabited by the priesthood and their retainers, “is a strange-looking place,”³ and its buildings are much better than those of Sahibgunj, the greater part of the houses being of brick and stone, and many of them having two or even three stories. E.I.C. Ms. Doc.

* Gaya of Tassin; also of Wilson.¹

† Law commanded the French force in this part of India from 1757 to 1761.

‡ Sahibgunj; from Sahib, “gentleman,” and Ganj, “market.”

GAZ—GEE.

The architecture is very singular, with corners, turrets, and galleries projecting with every possible irregularity." From this style of building, and the elevated site, the appearance of this portion of the town from a distance is picturesque, but on entering it, the streets are found crooked, narrow, and uneven, and withal so filthy, as to be with difficulty passable. The town and its vicinity abound in shrines and places of pilgrimage, the visits of votaries to which are attended with heavy charges, some persons of high rank having been known to expend 4,000*l.* or 5,000*l.* each. The torrent Phalgu is considered a holy stream, and ghats, or flights of stone stairs, give access to the water, for the purpose of ritual ablution. The best-built and most-revered structure is the Vishnupod,* a building in an elaborate style of architecture, eighty-two feet in length, and surmounted by an octagonal pyramid about 100 feet high. It was built at a cost of 30,000*l.* by Ahalya Bai, a superstitious Mahratta princess of Indore. The number⁴ of pilgrims annually has been estimated at 100,000, though in some years there have been double that number. Between the two towns, on an area once called the Ramna or Game Preserve, is the British civil establishment, consisting of the ordinary European and native functionaries. Buchanan estimated the number of houses at the time of his visit, early in the present century, at 6,400; which, according to the usually admitted ratio of inmates, would give the amount of population at about 32,000 persons. A considerable enlargement of the town, and a proportional increase of its inhabitants, appears to have subsequently taken place, a late return giving the number of houses at 9,165, and the population at 43,451.⁵ Gayah is distant 55 miles S. of Patna, 265 N.W. of Calcutta. Lat. 24° 48', long. 85° 4'.

by mountains covered with perpetual snow. The population consists of about twenty families of lamas. Elevation above the sea 9,200 feet. Lat. $31^{\circ} 47'$, long. $78^{\circ} 29'$.

GEEDHORE, or **GIDHOUR**, in the British district of Bareilly, division of Pilleebheet, lieutenant-governorship of the North-West Provinces, a village on the route from Bareilly to Petoragurb, and 48 miles N.E. of the former. The road in this part of the route is good; the country level, fertile, and well cultivated. Lat. $28^{\circ} 49'$, long. $79^{\circ} 56'$.

E.I.C. Ms. Doc.
Garden, Tables of
Routes, 87.

GEEDUR GULLEE, in the province of Peshawur, is a pass between Peshawur and Attock, and has received its name—*The Jackal's Pass*, or *Neck*, from its being so extremely narrow, that the natives, in exaggeration, say that a jackal only can make its way through it. The defile is not more than ten or twelve feet wide, and is bounded on each side by rather high and rugged hills. Though much frequented, it does not appear to be regarded as important in a military point of view, probably from the facility with which it can be turned. It is five miles N.W. of Attock. Lat. $33^{\circ} 56'$, long. $72^{\circ} 12'$.

GEYLA.—A river rising in Kattywar, in lat. 22° , long. $71^{\circ} 20'$, and, flowing in an easterly direction, falls into the Gulf of Cambay, in lat. $21^{\circ} 47'$, long. $72^{\circ} 13'$.

GHAGUR, or **GHUTGARH**,¹ in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a lofty mountain, forming the most southern brow of the Himalayan system, and rising abruptly over the terai or marshy forest north of Pillebheet. It extends in a direction nearly from south-east to north-west, between lat. $29^{\circ} 14'$ — $29^{\circ} 30'$, long. $79^{\circ} 10'$ — $79^{\circ} 40'$; is about thirty-five miles in length, with an average breadth probably of ten or twelve. Though the most southern range of the great Himalayan system, and the most remote from the line of greatest elevation, it exceeds in height some which intervene. This circumstance has been pointed out by Herbert.² "On each side of this line [that of greatest elevation], to the north as well as to the south, the peaks diminish in elevation, yet not equally. To the southward the decrease is more rapid, and is accompanied by an anomaly which is sufficiently striking. The diminution of elevation, which is pretty regular till near the boundary of the plains and mountain-land, is there suddenly interrupted. The peaks shoot up considerably above the mean elevation of those immediately north of them, and as suddenly sink into the plains; so that if we divide the country south of the line of greatest elevation into five parallel zones, the fifth will be as high as the third, while the fourth will be found con-

GHA.

³ Herbert, *ut supra*, xciv.

siderably lower than either." Its rock formation is gneiss throughout, "characterized³—1. by its small proportion of felspar; 2. by the predominance of talcose or argillaceous ingredient; 3. by the singular types under which it sometimes appears, or, in other words, its transitions into very anomalous rocks. It is of a schistose, rather than a slaty structure; has a talcose aspect, varying in colour from a greenish to a yellowish grey, soft though tough, and of that peculiar composition which entitles it to be called gneiss, though of so small a grain as to occasion the separate ingredients to be not easily recognisable. Besides the felspar and talc, it contains quartz, and occasionally hornblende. The strata of which the Ghagur is composed, dip very regularly at some points, varying between east and north, the inclination generally small, though sometimes as high as 40°." The road from Almora to Moradabad passes by Ghagur fort, at the elevation of 7,121 feet above the sea. Budhan Dhoora, a summit of the same range, three or four miles to the north-west, has the elevation of 8,502 feet; Uraka Khan, five miles to the south-east, that of 7,366. The summit of Ghagur is crowned with a noble forest⁴ of cypress, toon, fir, and other timber-trees.

⁴ Heber, *Journ. in Northern India*, I. 509.

E.I.C. Ms. Doc.

GHAIKOOL.—A town in the native state of Nagpoor, or territory of the rajah of Berar, on the right bank of the Wein Gunga river, and 103 miles S.E. from Nagpoor. Lat. 19° 49', long. 79° 48'.

E.I.C. Ms. Doc.

GHARA.—A town in the British district of Kurrachee, province of Scinde, presidency of Bombay, 22 miles W. of Tatta. Lat. 24° 44', long. 67° 39'.

Pott. Belooch. 340.

Panj. I. 409
Kennedy, Scinde
and Kabsol, II.
214.

GHARA.—A stream in Scinde, flowing by the village of the same name, and falling into a long creek opening into the Indian Ocean, ten miles east of Kurrachee. The mouth of the Ghara creek is in lat. 24° 45', long. 67° 12'. As the country on each side of Ghara is low, both westward, to the mouth of this creek, and also eastward, and the stream communicates with the Indus, it seems probable that a ship-canal might be formed to connect Kurrachee with the deep and wide part of the Indus, near Tatta. The country between the Ghara river and the port of Kurrachee, it is to be observed, is also low and suitable for the purpose.

GHA.

GHARA.—The name by which the united streams of the Beas and Sutluj are known, from their confluence at Endreesa to the confluence with the Chenaub, in lat. $29^{\circ} 18'$, long. $71^{\circ} 6'$. The length of course between these points is about 200 miles. After the confluence last mentioned, the united streams are called the Punjuud. At the ferry of Hurekee, a short distance below the confluence of the Beas and Sutluj,¹ Burnes found “the Ghara a beautiful stream, never fordable,” 275 yards wide at the lowest season, and twelve feet deep, running at the rate of two miles and a quarter an hour. In the same locality Vigne found it 200 yards wide. It is remarkably direct in its general course, which is south-west, but tortuous at short intervals. In the lower part of its course, where it forms the boundary, it is a slow muddy stream,² with low banks of soft alluvial earth, overflowed to the extent of several miles on occasion of the slightest swell. The confluence with the Chenaub takes place without any turbulence, in a low marshy tract, in which the channels of the rivers are continually changing.³ Each river is about 500 yards wide, and the united stream about 800 yards. The water of the Chenaub is reddish, that of the Ghara pale; and for several miles downwards, the difference of hue may be observed, the right side of the stream being of a red, and the left of a pale hue.

GHAUTS (WESTERN).¹—An extensive range of mountains of Southern India. Their northern limit is the valley of the Taptec, of which a branch from the Syadree Mountains² (as the upper part of the Western Ghats is called by the natives) forms the southern inclosing range about lat. 21°—21° 15', long. 73° 45'—74° 40', and is connected with groups which diminish in height towards the east until they sink into the table-land of Berar. The northern side of the valley of the Taptec is inclosed by the Satpura range, having an elevation of about 2,000 feet³ above the sea. The Syadree range in this part consists of trappean formations,⁴ which extend to the seacoast, forming the rocks⁵ of Bombay and Salsette, and others in that vicinity. In lat. 21° 10', long. 74°, this great range (the Western Ghats) turns south nearly at right angles to that which forms the south inclosing range of the valley of the Taptee. Its elevation increases as it proceeds southwards, and at Mahabulishwar,⁶ in lat. 18°, long. 73° 40', is 4,700 feet above the sea. In this part, as elsewhere, the western declivity is abrupt, and its base depressed nearly to the level of the sea: on the eastern side, though generally undulating, or even rugged, it slopes⁷ gradually eastward towards the plains of Hyderabad. In respect to geological structure, it may be observed generally, that the great core of the Western Ghats is of primary formation, inclosed by alternating strata of more recent origin. These strata, however, have been broken up by prodigious outbursts of volcanic rocks, and from Mahabulishwar to their northern limit, the overlying rock of the Western Ghats is stated to be exclusively of the trap formation.⁸ The face towards the Concan is not uniformly precipitous, but consists of vast terraces⁹ with abrupt fronts, such a conformation being characteristic of this kind of rock. The scenery is delightful and grand, "displaying stupendous scarps, fearful chasms, numerous waterfalls, dense forests, and perennial verdure." "The Western Ghats," says Elphinstone,¹ "present the charms of mountain scenery on a smaller scale" than the Himalayas; "but it is no exaggeration of their merits to say, that they strongly resemble the valleys of the Neda and

* A contributor to the Asiatic Researches says, "The elevation of this part of the range seldom exceeds 3,000 feet."—Calder, *General Observations on the Geology of India*, vol. xviii. p. 4.

GHAUTS:

the Ladon, which have long been the boast of Arcadia and of Europe." Chasms and breaks in the brows or the culminating ridges of the range, give access to the highlands, and are denominated ghauts or passes, a name which has become generally applied to the range itself. The principal elevations between the eighteenth and nineteenth degrees of latitude, are Poorundhur,² 4,472 feet; Singhur, 4,162; Hurrecchundurghur, 3,894. In consequence of the boldness of the declivities and the precipitous character of the faces of the trap rocks, the summits in many parts of the range are nearly inaccessible. The natural strength of these portions has in many instances been increased by art, and the hill forts in all ages of Indian history have been regarded as the bulwarks of the Deccan. The trap formation terminates southward on the seacoast, in about lat. 18°, and is succeeded by laterite, a ferruginous clay, easily cut when first raised, but by continued exposure to the atmosphere becoming hard as brick. This last-mentioned formation extends southwards as the overlying rock, almost without interruption, to Cape Comorin, covering the base of the mountains and the narrow slip of land that separates them from the sea. South of Mahabuleshwar, and in latitude about 15°, the elevation³ diminishes, so as not to be more than 1,000 feet above the sea; the slopes are gradual, and the outlines rounded. Still farther to the south, however, the elevation increases, and attains its maximum towards Coorg, where Bonasson Hill⁴ is said to be 7,000 feet above the sea;⁵ Tandianmole, 5,781; Pupagiri, 5,682. South of those elevations, the Ghauts join the Neilgherry⁶ group by means of the Nedimula range, which forms the western buttress of the Neilgherry table-land to lat. 11° 15', long. 76° 25', where it rises into the lofty Kunda Mountains, and about twenty-five miles farther south⁷ terminates abruptly in high and nearly perpendicular precipices, forming the northern side of that great valley or depression, which, affording an uninterrupted communication in this latitude between the eastern and western sides of the peninsula, is bounded on the south by the extensive range of mountains of which Cape Comorin is the extremity. South of this valley, the mountains are described as lofty, and pouring down cascades of prodigious height.⁸ The width of this extensive gap, called the

Palghat Valley, from the town of that name, is about twenty miles.²

¹ Report, ut supra, 55.

The length of the Western Ghats, from the northern extremity of the Syadree Mountains, forming the southern side of the valley of the Taptee, to the southern brow, joining the Kunda Mountains on the north side of the Palghat Valley, is about 800 miles. The mountains rising on the south side of Palghat Valley, and which may, with some latitude of expression, be called a continuation of the Western Ghats, have considerable elevation, a spacious table-land, being 4,740 feet¹ above the sea, a peaked summit 6,000, another 7,000; and there are several peaks not measured, but judged by sight to have elevations not inferior. The length of the chain of mountains extending from Cape Comorin to the valley of Palghat is 200 miles. The western brow of the range is, with little exception, abrupt; on the eastern side of the culminating range, the declivity is in general gradual, the surface in many places being extensive table-land, sloping gently, and nearly imperceptibly, eastward. Such a conformation would seem to indicate a volcanic disturbance of the surface, the disruption taking place along the western precipitous face.*

It has been supposed that the steep declivity of the Western Ghats on the seaward side, by presenting a vast front to the violence of the south-west monsoon, is instrumental in arresting and condensing the abundant moisture borne along by that formidable aerial current from the Indian Ocean, and that the excessive rains which fall in the Concan and in Malabar result from this cause. Such a conclusion, however, is at variance with the fact that Chili and Peru, similarly circumstanced with respect to the Pacific Ocean and the Cordilleras, are amongst the driest countries in the world,—a discrepancy the cause of which does not appear to have been explained. But it is not only the countries intervening between the mountains and the sea that are visited with so great a superabundance of rain: the fall on the west brow of the Western Ghats is enormous, and perhaps unparalleled. At Mahabulishwar, in lat. 18°, long. 73° 40', the mean annual fall of rain is 239

* A similar instance, on a scale of less magnitude, occurred in the convulsion which, a few years ago, upheaved the west coast of Chili to a considerable extent.

GHAUTS.

inches. There, however, during a considerable portion of the year, the weather is dry. Not so at Bednore, in lat. $13^{\circ} 49'$, long. $75^{\circ} 6'$, situate on the western verge of the table-land of Mysore, and near the western brow of the verge. There "nine rainy months² in the year are usually calculated on, and for six of that number it is the practice in most families to make the same preparatory arrangements for provision (water only excepted) as are adopted for a ship proceeding on a six months' voyage." In consequence of this excessive moisture, the low tract between the Ghauts and the sea is traversed by innumerable torrents, which, stagnating as they approach the coast, overspread the depressed levels, and form that extraordinary series of shallow lakes called by the British Backwaters.

The word Ghauts, as already mentioned, is an appellation given by the British to the range which in its northern part is by the natives called Syadree,³ in its southern Sukhien.⁴

GHAUTS (EASTERN).—A chain of mountains of Southern India, rising in the vicinity of Balasore, in about the same latitude as the Western Ghauts on the opposite side of the peninsula. This chain may be traced in a south-westerly direction, a little to the west of Ganjam, and thence to Naggery Nose, about 56 miles N.W. of Madras, where it forms a junction with the range, "which¹ sweeping irregularly inland, crosses the peninsula in a south-west direction by Chitlore, Sautghur, and Salem, and joins the Western Ghauts north of the Gap of Paulghautcherry." The direction of the Eastern Ghauts, south of the point of junction with the transverse range, is marked at intervals along the coast of Coromandel, by outliers and detached hills to a point within about twenty miles of Capo Comorin, where the Eastern and Western Ghauts appear united.² It is to be observed, however, that the point of junction between the two great ranges of Malabar and Coromandel is not unusually regarded as taking place at the Neilgherries, "which, rising into the loftiest summits of the peninsula, form the southern boundary of the great table-land" of the Deccan. The average elevation of the Eastern Ghauts is stated to be about 1,500 feet. With regard to geological structure, granite is said to constitute the basis of the whole range, and overlying the granite, gneiss and mica-slate that form the sides of the mountains, are occasionally found

clay-slate, hornblende-slate, flinty slate, and primitive or crystalline limestone. The surface of the level country appears to consist of the debris of granitic rocks, as far north as the Pennar, in approaching which, the laterite or iron-clay formation expands over a large surface. From the Krishna northward, the granite is often penetrated by injected veins of trap and dykes of greenstone. Passing on to Vizagapatam and Gaujam, syenite and gneiss predominate, occasionally covered by laterite.

GHAAZEEPOOR.—The principal place of the pergunnah of the same name, a town 10 miles N.E. of the left bank of the Jumna; 10 miles S.W. of the town of Futtelipoor. Lat. $25^{\circ} 49'$, long. $80^{\circ} 48'$.

¹ E.I.C. Ms. Doc.

GHAAZEEPORE.¹—A British district under the lieutenant-governorship of the North-West Provinces, and named from its principal place. It is bounded on the north-west and north by the British district Azimgurh; on the north-east by the great river Ghagra, separating it from the British district Sarun; on the south-east by the British district Shahabad; on the south partly by the British district Shahabad, partly by the British district Benares; and on the west by the British districts Benares and Jaunpore. It lies between lat. $25^{\circ} 17'$ — 26° , long. $83^{\circ} 8'$ — $84^{\circ} 10'$; is ninety-six miles in length from east to west, and forty in breadth. It embraces an area of 2,187 square miles. The Ganges traverses it with a sinuous course, but generally in a direction from west to east, for about fifty-six miles, first entering the district in lat. $25^{\circ} 30'$, long. $83^{\circ} 22'$, having previously formed its south-western boundary towards Benares for about ten miles. Its course within the district is terminated by its reaching the south-eastern frontier in lat. $25^{\circ} 30'$, long. $83^{\circ} 58'$; but it continues to form the

* "Town of Ghaziddin," or "Town of the Champion of the Faith."

GHAZEPORE.

southern boundary towards Shahabad for seventy miles more; to the point where it receives the Ghagra. The course of the Ghagra along the north-eastern frontier is thirty-six miles, first touching on the district in lat. 26° , long. $84^{\circ} 12'$, and leaving it in lat. $25^{\circ} 48'$, long. $84^{\circ} 46'$. The Karamnasa forms the south-eastern boundary for about forty-five miles; the Tons, called in some places the Sarju, flows for about fifty miles between the Ghaghra and the Ganges, falling into the latter. The Bisu, the Manghi, and the Gangi, flow in some measure parallel to the Tons, and like it, fall into the Ganges. There are, besides, numerous smaller streams, most of which become dry in the hot season. The country on both sides of the Ganges slopes gently, probably in the degree of seven or eight inches in a mile, from north-west to south-east. In the eastern part of the district is one large piece of water, called Surhah Talao; and many jhils or shallow lakes are dispersed over the country. The elevation of the waterway of the Ganges where it is greatest, that is, at the western extremity of the district, is about* 260 feet; and as there are no eminences of any importance, probably no point in the district is much more than 350 feet above the sea. Water in some places is to be had by digging to the depth of ten or twelve feet, in others it is not to be obtained at less depth than fifty or sixty feet. From the resources afforded by wells, tanks, jhils, and rivers, the means of irrigation are derived; and the practice is universally pursued, it being indispensable for the success of the rubbee or crop grown in the cool or dry season, commencing in October and ending in the following March. The climate is in general healthy, except at the close of autumn, when fevers are common, but not remarkably malignant in character. The thermometer² ranges in the coldest months from 58° to 71° ; in April, 86° to 96° ; May, 86° to 98° ; June, 85° to 98° ; July, 86° to 96° .

Agra Guide, 1841,
vol. II. part I. 356.

There are two regular crops off the soil every year: the kurreef, sown at the end of June, being the period when the

* According to Prinsep (James), the elevation¹ of Benares above the sea is 270 feet; the fall of the waterway of the Ganges in this part of its course is estimated² at five inches per mile, and as the place where the river first touches on the district is twenty miles lower down the stream than Benares, its elevation may be taken at 260 feet.

GHAZEEPORE.

rainy season commences, and gathered at the beginning of winter, consists principally of maize, rice, indigo, pulse of various sorts, and oil-seeds. The rubber, or crop sown in the cool season and gathered in summer, consists of wheat, barley, oats, grain, oil-seeds, safflower, opium, cotton, tobacco, and sugar. The sugarcane³ of this district is greatly esteemed, and fetches a high price. According to a statement published in the year 1811, the export of sugar⁴ in one year amounted to 3,639,528 rupees in value. The other principal exports in the same year were cotton, 1,829,522 rupees; opium, 1,463,692 rupees; indigo, 577,660 rupees; nitre, 245,954 rupees; molasses, 218,081 rupees; timber, 19,577 rupees. The imports are comparatively scanty and unimportant; the principal being piece-goods, 36,610 rupees; timber, 12,741 rupees; tobacco, 3,285 rupees.

⁵ Shakespear, Mem. Stat. N.W. Prov. 100.

The number of the entire population is returned at 1,059,287,⁵ and thus subdivided:—Hindoos, agricultural, 673,743; non-agricultural, 271,676; Mahomedans, and others not Hindoo, agricultural, 31,548; non-agricultural, 82,320. It thus appears that the numbers of the agricultural classes nearly double those of the non-agricultural, and that the Hindoos are more than seven times as many as the followers of all other systems. The number of inhabitants to the square mile is about 481. The chief places stand in the following order as to population:—

Number containing less than 1,000 inhabitants	1,833
Ditto more than 1,000 and less than 5,000 ditto	209

GHAZEEPORE.

The language spoken⁶ by the common people, is Hindee of a very corrupt kind. ⁶ Heber, i. 270.

The principal routes are,—1. From Benares⁷ through Ghazee-
pore to Buxar, crossing this district from west to east; 2. from
the cantonment of Goruckpore to that of Ghazee-⁷ Garden, *Tables*
pore, north to south; 3. from Azimgurh to Ghazee-⁷ of Routes, 53.
pore,⁸ north-west to south-
east; 4. from Chupra⁹ through Ghazee-⁸ Id. 58.
pore town to Jaunpore,⁹ Id. 179.
east to west; 5. from Ghazee-
pore, crossing the Ganges at the
eastern extremity of the town, pursuing a direction north to south,
and joining at Sawunt the great route from Calcutta to Benares.

The tract comprised within this district probably formed in
remote antiquity part of the "territory which in ancient
legend is called¹ Maha Kosala," first subject to the sovereigns
of Ayodhya, subsequently to those of Kanouj. On the over-
throw of the Kanouj dynasty, by the victory gained in 1194,
over Jaya Chandra, by Mohammad of Ghor, this tract fell²
under Patan sway, from which it was wrested by the conquer-
ing Baber.³ On the dissolution of the empire of Delhi, con-
sequent on the invasion of Ahmed Shah Durani in 1761, it
formed part of the portion seized by Shujah-ood-dowlah,
nawaub-vizier of Oude. In 1764, the emperor of Delhi, Shah
Allum, granted⁴ the territory of Ghazee-
pore to the East-India

GHAZEETPORE,^{1*} the principal place of the district of the same name, is situate on the left bank of the Ganges, which is crossed by ferry² at the north-eastern extremity of the town. Bishop Heber states³ the river to be here as wide as the Hooghly at Cossipore. Ghazeetpore is surrounded by luxuriant groves of the banyan (*Ficus indica*) and pipal (*Ficus religiosa*), enlivened⁴ by flocks of nightingales, jays, crested sparrows, and many other birds; and by crowds of monkeys, unmolested, and familiar as domestic animals. Ghazeetpore contains a population of 7,022⁵ persons. Viewed from the river, its appearance is very striking; but, on closer inspection, the buildings are found to be mostly in ruins. At the eastern extremity of the town is a palace,† which, though somewhat disfigured by time and neglect, still retains abundant marks of former beauty. It is said to have been built by Meer Cossim Ali, the nawab of Bengal, infamous for the massacre⁶ in cold blood of his British prisoners. "It is raised on a high bank,⁷ and on a point commanding two great reaches of the river, up and down. From the bank, which is full thirty feet from the water, is raised another basement of brick and masonry, fifteen feet high, in which are some apartments; on this is the building, which is an oblong square (rectangle), with great pavilions at the angles, and in the centre of each side; the whole is an open space, supported by colonnades surrounding it. Within, on the floor of the building, is a channel for water, about four feet wide, which encircles the floor; and at equal spaces there were formerly fountains. In the centre of the building is a space sufficient to contain twenty people. Nearly adjoining to this palace is a building for the purpose of raising water for the fountains, and supplying them by means of pipes, which com-

† A view of it is given in Hodges' *Select Views in India*, vol. I. view 7.

GHAZEETPORE.

municate with each other." Heber characterizes⁸ the palace as the best and most airy of any eastern building which he had seen, with magnificent verandas, and capable of being made, at no great expense, one of the handsomest and best-situated houses in India. It is at present a custom-house,⁹ the numerous apartments being converted into store-rooms and habitations for the guards and officials. There is a jail¹⁰ here, reported to be large, strong, and airy. The bazars are well constructed, and well supplied, the skill of the tailors especially being noted. A few Europeans keep shops, duly furnished with wares in demand with the population from home.¹ Ghazeeptore is celebrated for its rose-water, and the rose-fields² in the vicinity of the town occupy several hundred acres. Some attar, or essential oil, is also made, and is sold, even after some adulteration as is believed, at the rate of 10*l.* for one rupee-weight. There is a church,³ represented as a very attractive object, and an hospital.⁴ At the south-west end of the town, and separated from it by gardens and scattered cottages, are the bungalows or lodges of the servants of the Company, here employed on civil duties. These consist generally of spacious⁵ and handsome apartments, mostly on ground-floors. Beyond these are the military cantonments, the buildings in which are low and unsightly, with sloping roofs of red tiles. Contiguous is a cenotaph monument to Lord Cornwallis, who died here in 1805, while in progress up the country. It is constructed of excellent stone, but, according to Heber,⁶ the style and execution are utterly at variance with good taste. It has been suggested, however, that it might be turned to account by being converted into a belfry, in the event of a church being built in contiguity to it. Two miles inland from the river are the remains⁷ of a serai, or lodge for travellers, and nearly adjoining, several tombs, in a handsome style of architecture, and good preservation. Races, held close to the town, are some of the best and most frequented in India. A stud,⁸ which government maintains in the vicinity, supplies the cavalry and horse artillery with many good horses.

From observations⁹ on the thermometer, made in the town of Ghazeeptore, in the years 1831 and 1832, May appears to have been the hottest month (mean temperature 97°), and January the coldest (mean temperature 56°). Bishop Heber¹

says, "Ghazeepore is celebrated throughout India for the wholesomeness of its air." He ascribes this to the advantages of its locality, "the elevated level on which it stands, and the dryness of its soil, which never retains the moisture, and after the heaviest showers, is, in a very few hours, fit to walk on with comfort." Another favourable circumstance he considers to be, "that it has a noble reach of the river to the south-east, from which quarter the hot winds generally blow." Ghazeepore is distant N.W. from Calcutta, by water 598² miles, by land 431; N.E. from Benares, by water 71, by land 46; E. from Allahabad, by water 210, by land 120. Lat. 25° 32', long. 83° 39'.

GHERIAH, or VIZIADROOG,¹ in the collectorate of Rutnagherry (Southern Concan), presidency of Bombay, a town and fort at the mouth of the river Kunvee, which flows west from the Ghauts. This place "has² an excellent harbour, the anchorage being landlocked and sheltered from all winds. There is no bar at the entrance, the depths being from five to seven fathoms, and from three to four fathoms inside at low water. The rise of the tide is about six or seven feet." Gheriah was fortified,³ in 1662, by Sevajee, the Mahratta chief. It subsequently passed into the possession of the Angria branch of the Bosla family, from whom the Portuguese and English in 1722, and the Dutch two years later, in vain attempted to wrest⁴ it. In 1755, it was attacked by a British⁵ force, consisting of three ships of the line, one ship of fifty guns, and one of forty-four, with some armed vessels belonging to the Bombay marine, amounting altogether to fourteen sail, commanded by Admiral Watson, and having on board 800

GHI—GHO.

Europeans and 1,000 native soldiers, under Colonel Clive. A bombardment was immediately commenced; Angria's fleet was totally destroyed, and, in the course of a few hours, the place surrendered.⁶ It was a few months afterwards given up to the Peishwa, under the treaty concluded with the Mahrattas in 1756,⁷ and finally acquired by the British government on the overthrow of that potentate in 1818.

⁶ Thornton, Hist. of British Empire, in India, i. 182.
⁷ Treaties with Native Powers, 350.

The name Gheriah is that by which the fort was denominated by the Mussulmans, Viziadroog being the name more familiar to the Mahrattas. The place is distant S. from Bombay 170 miles. Lat. $16^{\circ} 32'$, long. $73^{\circ} 22'$.

GHIDDORE,¹ in the British district of Monghyr, presidency of Bengal, an ancient fort of great extent. Its walls are from twenty-three² to twenty-four feet in thickness, and thirty feet high. According to Buchanan, it was built at a very remote period by a Hindoo raja, but repaired by Sher Shah, the Patan chief, in his war with Humaion, about 1539. Distant S. from Monghyr city 35 miles. Lat. $24^{\circ} 53'$, long. $86^{\circ} 15'$.

GEOGRAPHY.

THE GANGES. **GEOGRAPHY.**¹ *—A large river, and a considerable feeder of the Ganges. Its remotest head-water, as far as has been hitherto ascertained, is the source of the Kalce (Eastern), on the south-western declivity of the range forming the northern boundary of the British district of Kumaon, towards South-western Tibet. This spot, situate in lat. 30° 25', long. 80° 40', was visited by Webb,² and is thus described by him: "The Kalce river, two furlongs distant, its breadth reduced to four or five yards. At two and a quarter miles, in a north-west direction, it is covered with snow, and no longer to be traced; neither is the road passable beyond this point at the present season. After the middle of July, when the thaw is perfected, it may be traced as a small stream for about four miles more, in the direction last mentioned, and from thence to its head in the snow, north-west two miles farther. The stream scarcely flows in winter, being derived almost exclusively from the thawing snow." The elevation above the sea of the source is probably between 17,000 and 18,000 feet. The river takes a south-easterly direction down the valley of Began, receiving numerous snow-fed torrents right and left; and at thirty miles from its source, the Kalipani, a considerable stream, flows into it on the left side. Two or three miles below that point, the river turns to the south-west, in which direction it continues to flow twenty-three miles farther, to the confluence of the Dhouli, a large river, which falls into it on the right side, in lat. 29° 57', long. 80° 35'. The Kalce, which at the confluence appears to be twice the size of the Dhouli, is previously a vast torrent, and in many places a huge cataract tumbling over vast rocks, which in some spots form natural bridges, being wedged together by their pressure against each other, and against the sides of the precipices inclosing the deep gorges down which the stream rushes. In many places the stream for considerable distances is totally hidden under glaciers. Below the confluence the stream is thirty yards wide; but, swelled by numerous mountain-streams received right and left, it soon attains a width of eighty yards. It continues to flow in a

GHOGRA.

south-westerly direction, and twenty-two miles lower down, or seventy-five from its source, it on the right side receives the Gori or Gorigunga, a river equal in size to the Kalee. This confluence is in lat. $29^{\circ} 45'$, long. $80^{\circ} 25'$, and is 1,972 feet above the sea; so that the river has a descent, so far, of about 15,500 feet in seventy-five miles, or 207 feet per mile. Below this place twelve miles, and eighty-seven from its source, the river is represented in the surveyor-general's map as receiving on the left side, from Nepaul, the Chumulca; and three miles lower down, at the Jhula ghat, a ferry from Kumaon to Nepaul, the elevation of the water's edge is 1,789 feet; so that the declivity of the waterway now diminishes to twelve feet per mile. Sixteen miles below this, at Puchesur, lat. $29^{\circ} 27'$, long. $80^{\circ} 18'$, it on the right side receives the Surjoo (Western), the greatest of its feeders. Thenceforward the united stream is no longer called the Kalee, but, variously, the Sarda,³ the Surjoo, and the Ghogra. At Puchesur it turns a little to the south-east, and ten miles lower down, on the right, receives the Lohoghat river, two miles below the confluence of which a large tributary from Nepaul flows in on the left. Turning southwards at that point, it, at a distance of eighteen miles beyond, receives on the right the Ludheea, a considerable stream. By all these accessions it becomes a great river, and at Birimdeo, twelve miles lower down, in lat. $29^{\circ} 6'$, long. $80^{\circ} 13'$, and 148 miles* from its source, it enters the plain of Hindoostan, 798 feet above the sea. Webb found it "about 150 yards broad on an average, bed stony, very deep, and moderately rapid." Herbert estimates⁴ the discharge of water here during the dry season at 4,800 cubic feet per second; that of the Gauges at 7,000, at Hurdwar. From within a few miles of its source to this place, according to Art. V.⁵ of the treaty of Seegowlee, it forms the boundary between the British district of Kumaon and Nepaul, holding generally in this part of its course a direction nearly from north-east to south-west. From Birimdeo guardhouse, the river, sweeping first for about twenty-three miles in a southerly direction, forms for that distance the boundary between the British district of Pilibheet and the territory of Oude, and subsequently, flowing south-east for forty-five more, forms the boundary between the British

⁹ Butter, Topog. of Oudh, 10.

¹ Ut supra, II. 209.

district of Shahjehanpore and the territory of Oude. In that interval, according to Buchanan,⁶ it becomes navigable for craft of considerable burthen from Mundeya, in lat. $28^{\circ} 40'$, long. $80^{\circ} 18'$, but probably those of lighter description can be brought up as far as the vicinity of the egress from the mountains, or about forty miles higher. One hundred and ten miles below Birimdeo, it on the left side receives the Kurnalli, flowing from the mountains of Nepal, whence much timber is sent by the stream. Buchanan⁷ regards this river merely as a different channel by which the great river Setiganga, descending from the Himalaya of Nepal, discharges itself. Wilford considers⁸ the Setiganga or Swetanganga as identical with the Gunduck.* According to the surveyor-general's map, at ninety-four miles below the last-mentioned confluence, and in lat. $27^{\circ} 10'$, long. $81^{\circ} 25'$, the Ghogra receives on the right side a considerable tributary in the united streams of the Chouka and Woel; twenty-two miles farther down, it on the left side receives the Eastern Surjoo, and thenceforward is known in Oude by the names Deoha,⁹ Surjoo, or Sarayu, as well as Ghogra. Butter describes it as navigable for the largest class of boats in all seasons, and as having an annual rise and fall of thirty feet. Forty-two miles below the confluence of the Surjoo (Eastern), it touches on the British district of Goruckpore, having passed in its course the city of Oude. Thence pursuing a south-easterly direction, it forms for seventy-five miles the boundary between the British district and the territory of Oude. In this part of its course it is considered by Buchanan¹ larger than the Ganges at Chunar, and is from one to three miles in breadth. Like other great rivers traversing low alluvial tracts, it sends off lateral watercourses, communicating in the rainy season by numerous offsets with the parent flood, and with each other. Of these the principal, called the Tons (North-eastern), leaves the Ghogra on the right side, ten miles above the city of Oude, and, taking a south-easterly course, falls into the Ganges near Bhullea. The Ghogra enters the British territory in lat. $26^{\circ} 15'$, long. $83^{\circ} 11'$, and, still pursuing a south-easterly direction for sixty-five miles, forms the boundary between the British districts of Goruckpore

* This evidently is erroneous. In Walker's new map of India the Kurnalli river is represented as forming a junction with the Ghogra in the locality assigned by Buchanan as that of the mouths of the Setiganga.

GHO.

and Azimgurh. In this part of its course, it on the left side, and in lat. $26^{\circ} 12'$, long. $83^{\circ} 46'$, receives the large river Raptée, and at other points a few streams of less importance. Flowing still south-east, it for eight miles forms the boundary between the districts of Azimgurh and Sarun, and for thirty-six miles the boundary between the districts Ghazceppore and Sarun, joining the Ganges, on the left side of the latter river, in lat. $25^{\circ} 46'$, long. $84^{\circ} 40'$. The total length of course of the Ghogra may be estimated at 606 miles. According to Buchanan, an eye-witness² of the confluence, the Ghogra certainly exceeds the Ganges in breadth and rapidity, and equally in depth. Though throughout the year navigable nearly to the mountains,³ the Ghogra is turned to little account in this respect. The navigation is indeed in some places rendered hazardous and intricate by the occurrence of shoals of kunkur or calcareous⁴ conglomerate; but engineering skill, with adequate means, could easily remove such obstructions, and render free the navigation of the Ghogra, as well as throw open that of its tributaries the Raptée and the Chouka.

GHOLAB SINGH'S DOMINIONS.—See CASHMERE.

GHOONGEE.¹ *—A river which has its source beyond² the northern frontier of British India, in the Nepal territory, and in about lat. $27^{\circ} 50'$, long. $83^{\circ} 20'$. It holds a course generally southerly, and at Lotan, about seventy miles from its source, and in lat. $27^{\circ} 15'$, long. $83^{\circ} 19'$, Buchanan³ found it in January to have a deep channel, along which rolled a wide, rapid, fordable stream. It receives many streams right and left, and by lateral channels communicates with numerous pieces of water, stagnant or running; drains or fertilizes, by means of its many branches, a great extent of country, and, running still in a direction generally south-easterly, joins the Dhumela in lat. $27^{\circ} 5'$, long. $83^{\circ} 12'$, and ultimately falls into the Raptée on the left side, in lat. $27^{\circ} 3'$, long. $83^{\circ} 12'$, having altogether flowed about 100 miles.

¹ E.I.C. Ms. Doe.

² Buchanan, Survey of Eastern India, li. 307.

³ Ut supra, 307.

* According to Buchanan, it is in the upper part of its course called the Ghaghar, and after running southwards about seventeen miles, joins a branch of the river called the Tinay; whenceforward the united volume of water is called the Ghoongee. But from a map on a very large scale, recently constructed under government authority, there does not appear to be any connection between the Ghoongee and the Tinay.

GHO.

E.I.C. Ms. Doc. **GHORROUTUH, or GAROTAH,** in the British district of Goorgaon, lieutenant-governorship of the North-West Provinces, a village on the route from Muttra to Delhi, by the right bank of the Jumna, and 55 miles S.E. of the latter city. Lat. $27^{\circ} 56'$, long. $77^{\circ} 28'$.

¹ E.I.C. Ms. Doc. **GHORA TRUP.**¹—An inconsiderable village situate on the right bank of the river Indus, 11 miles S.W. of Attock, and 34 S.E. of Peshawur. The river here has a very dangerous rapid, with a sudden fall of a foot and a half, resulting from the lateral contraction of the high and rocky banks inclosing it, as the depth is no less than 186 feet. Wood² describes the passage as very dangerous. "Though the fall was shot with startling rapidity, the boat, when over, seemed spell-bound to the spot, and hung for some time under the watery wall in spite of the most strenuous efforts of her crew. At last she moved, the men cheered, and out she darted into the fair channel." The breadth of the Indus here is only 250 feet, and through this narrow gut the whole of its immense volume of water rushes at the rate of from nine to ten miles an hour, and with the noise of thunder. Ghora Trup is about six miles below Nilab, and for the whole of this distance the river may be described as one immense and irresistible rapid. Lat. $33^{\circ} 46'$, long. $72^{\circ} 9'$.

E.I.C. Ms. Doc. **GHORAWUL,** in the British district of Mirzapoor, lieutenant-governorship of the North-West Provinces, a town on the route from Sasseram to Rewah, 78 miles S.W. of the former. Lat. $24^{\circ} 46'$, long. $82^{\circ} 51'$.

¹ E.I.C. Ms. Doc. **GHOSEA.**¹—The principal place of the pergunnah of the same name, a town in the district of Azimgurh, lieutenant-governorship of the North-West Provinces, on the route from Ghazeepoor to Goruckpoor, and 47 miles² N. of the latter. Water is obtained from wells, and supplies may be had from the surrounding country, which is low, level, and partially cultivated, but during the periodical rains much cut up by watercourses, and overspread by jhils or shallow pieces of water. The road in this part of the route is rather good. Distance N.E. from Benares 64 miles. Lat. $26^{\circ} 5'$, long. $83^{\circ} 36'$.

¹ E.I.C. Ms. Doc. **GHOSEEA, or GUSIA,**¹ in the British district of Benares, lieutenant-governorship of the North-West Provinces, a village

GHO—GIU.

situate four miles north of the left bank of the Ganges, and where the route from the city of Benares to that of Allahabad is intersected by that from Jounpore to Mirzapore. Distant W. of the city of Benares 29² miles; from Allahabad, E., 45. Water is plentiful, and supplies may be had in abundance from the neighbouring country. The road in this part of the route is excellent;³ the country level, wooded, and cultivated. Lat. 25° 16', long. 82° 36'.

of Routes, 143.

GHURAUNDA, or **GUROUNDA**, in the British district of Panceput, lieutenant-governorship of the North-West Provinces, a village on the route from the city of Delhi to Kurnal, and 12 miles S.E. of the latter. It has a bazar, and is plentifully supplied with water from wells. The road in this part of the route is good. Lat. 29° 32', long. 77° 2'.

E.I.C. Ms. Doc.

GHURCHOOROLEE.—A town in the native state of Nagpoor, or dominions of the rajah of Berar, on the left bank of the Wein Gunga river, and 87 miles S.E. from Nagpoor. Lat. 20° 12', long. 80° 1'.

Bolleau, Tour in
Rajwara, 81, 187.

GHURIALA, in the Rajpoot state of Bickaneer, a small town on the route from the town of Bickaneer to that of Jessulmere, and 50 miles S.W. of the former. It is situate two or three miles from the frontier towards Jessulmere, and contains a small fort, 180 houses, a few shops, and two wells 210 feet deep, yielding brackish water. On the frontier, close to this place, an interview took place in 1835, between the

GHU.

rulers of Bickaneer and of Jessulmere, and by the arrangement made by a British mission under Lieut. Trevelyan, an amicable adjustment of the common boundary was made. Ghuriala is in lat. $27^{\circ} 44'$, long. $72^{\circ} 36'$.

GHURMUKTEESUR.—See **GURMUKTEESUR.**

GHUROUT, in the British district of Goorgaon, lieutenant-governorship of the North-West Provinces, a village on the route from Hansee, by Goorgaon, to Muttra, and 54 miles N.W. of the latter. Lat. $28^{\circ} 5'$, long. $77^{\circ} 16'$.

E.I.C. Ms. Doc.

GHURPARRAI, in the British district of Saugur, lieutenant-governorship of the North-West Provinces, a town on the route from Saugur to Tehree, seven miles N.W. of the former. Lat. $23^{\circ} 55'$, long. $78^{\circ} 47'$.

E.I.C. Ms. Doc.

GHUSIPURA, in the British district Bijnour, lieutenant-governorship of the North-West Provinces, a village on the route from Moradabad to Hurdwar, and 33 miles S.E. of the latter. The road in this part of the route is good, and passes through an open, cultivated country. Lat. $29^{\circ} 35'$, long. $78^{\circ} 25'$.

Garden, Table of Routes, 137.

GHUSPUR,¹ in Sirhind, a village on the route from Loodiana to Ferozpoore, and 10 miles W. of the former town. It is situate close to the watercourse of Loodiana, an offset of the Sutlej, four miles from the left bank of the main channel, and in an open, level country, scantily cultivated. The road in this part of the route is practicable for carriages, and in general good. Distant N.W. from Calcutta 1,112 miles.² Lat. $30^{\circ} 57'$, long. $75^{\circ} 44'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 173, 225.

GHUSUL PASS, in Bussahir, across the range of the Himalaya, forming the southern boundary of Koonawur. It is a quarter of a mile S.E. of the Gunas Pass, and less than half a mile S.E. of that of Niblung. "These three passes," observes Gerard, "lead from Sungla to Choonra, and although they are so near to each other, they can only be crossed at different times: Neebrung is first open, and it had become practicable only a few days before we arrived (June 21); the other two passes were shut, and had not been attempted this year." Elevation of Ghusul above the sea 15,851 feet. Lat. $31^{\circ} 21'$, long. $78^{\circ} 18'$.

GILGIT, in the dominions of Gholab Singh, a small unexplored country on the southern declivity of Hindoo Koosh, lying between Bultistan or Little Tibet on the east, and Chitral on the west. It consists principally of one large valley, down which the stream called the river of Gilgit flows, and falls into the Indus on the right or north-western bank, in lat. 35° 47', long. 74° 31'. The inhabitants of this country appear to be Mahometans of the Shia persuasion, recently converted from idolatry of the same kind as that followed by their neighbours of Kafiristan, whom they still resemble in their social habits, and more especially in their great fondness for potent home-made wine. Their country is very rugged: the mountainous parts are barren; the lower, though sandy, are rendered productive by irrigation and industrious culture. There is also a village of the same name on the right bank of the stream, in lat. 36°, long. 74° 10'.

Garden, Tables of Routes, 54.

GINEEKHERA, in the British district of Moradabad, lieutenant-governorship of the North-West Provinces, a village on the route from the town of Moradabad to Almora, and 28 miles N. of the former. The road in this part of the route is

GIN—GIR.

bad for wheel-carriages, and passes through an open, level, low country, partially cultivated. Lat. $29^{\circ} 11'$, long. 79° .

GINGEE.¹—A town in the British district of South Arcot, presidency of Madras, 82 miles S.W. of Madras. Its fortress, though originally of some strength, which was extravagantly magnified in the estimation of native opinion, was taken by the French in 1750, with extraordinary facility,² but subsequently yielded to a British force under Captain Smith. ³ Id. 870.

⁴ Travels in Western India, 391.

GIRNAR,¹ in the peninsula of Kattywar, province of Guzerat, or territory of the Guicowar, a remarkable mountain of granite, in the north of the district of Sorath, the summit being, according to native account, about ten miles east² of the town of Janagurh. Around its base is a maze of gorges, valleys, and hills of moderate height, richly clothed with a luxuriant and dense jungle, diversified only with black rocks, which occasionally appear through the trees and vegetation. After this belt of vegetation terminates, the sacred mount for the³ rest of the ascent rises as an immense bare and isolated granite rock, presenting all the gigantic masses peculiar to that formation. The whole face of the rock is quite black, with occasional white streaks, probably of felspar. The sides to the north and south are nearly perpendicular scarps; on the extreme point of the northern side is an immense pillar or boulder, which seems as it were poised on its pinnacle, requiring only a slight force to dislodge it. This pillar is sometimes the scene of self-destruction, and is hence called the Beiru Jhap, or leap of death. The number of peaks which crown this mountain is variously stated. According to Tod,⁴ there are six, the most elevated of which is that of Goruknath, having on its summit an area of only ten feet in diameter, surmounted by a small shrine, cut out of a single stone, and dedicated to Goruknath; each of the other peaks has its shrine, dedicated to some imaginary sacred personage. On a small table-land, or platform on the side of the mountain, and about six hundred feet below the summit, is the ancient palace of Khengar, and contiguous to it numerous Jain temples, reached by a pathway generally about five feet wide, with steps of masonry. They are situate within an inclosure, which comprises eight temples, a dharamsala or eleemosynary establishment, and two tanks. The original material of those buildings was granite, but the numerous repairs of the injuries caused by time, or the devastating zeal of the Mussulmans, have been

GIRNAR.

made in a softer stone, brought from the base of the mountain. The temples are dedicated each respectively to some deceased leader, or spiritual pastor of the Jains, considered to have been deified. The largest and most gorgeous, though by no means the most ancient, is dedicated to Nimnath; another is dedicated to the favourite object of reverence, Parisnath. There are many images of those personages, generally of small size; but that of Rikhabdeo is a colossal figure of granite, in a sitting posture, thirteen feet in height from the top of the head to the seat. Besides these, there are three antique temples, apparently of Buddhist origin. The southern end of the inclosure, containing those temples, is flanked by the palace⁵ of Khengar, an ancient monarch of Saurashtra, the present Guzerat. This memorial of ancient greatness has battlemented walls, defended by massive square towers, built of blocks of granite, and commands the sole entrance to the sacred precincts. "The whole⁶ of this extraordinary mount," says a recent writer, "is invested with peculiar sanctity, the origin of which would seem to be of high antiquity. That the present system of worship would seem to be a graft of the ancient Buddhist faith which obtained here, there can be no doubt. The edicts of Pyadasi testify abundantly that the hill of Girinagar and its neighbourhood was originally a stronghold of the Monotheists, whose form of worship has now degenerated into the modern system of Jainism." A mile eastward of the town of Junagarh, and four miles westward of the base of Girnar, is a rock,⁷ on which are engraved three inscriptions. That on the east side of the rock is in the antique Pali character, and sets forth a series of edicts of Pyadasi or Asoka, king of Pataliputra⁸ or Palibothra, and Nagadha, who began his reign B.C. 247.⁹ Those edicts, fourteen in number, vary in length from four or five to fourteen or fifteen lines, of about twenty-five letters each, laying down and enforcing the principal points of Buddhist faith and practice. According to Prinsep,¹ "Reverence to parents, love to neighbours, charity to the poor, and humanity to animal beings, were set forth as the sure and sufficient methods of gaining happiness in this world, and of propitiating heaven." Besides the Jainist edifices, there are a few Brahminical and Mussulmanic, and the whole mountain has no other inhabitants than the ministers

and ascetics of those persuasions. The elevation of the highest peak has been variously conjectured at 3,500² and 2,500 feet³ above the sea. Distance from Baroda, S.W., 175 miles; Surat, W., 145; Bombay, N.W., 230. Lat. 21° 30', long. 70° 42'.

GIRREE,¹ a river of the hill state of Kothkace, and a considerable feeder of the Jumna. It rises in lat. 31° 4', long. 77° 42', and at an elevation of 7,400 feet above the sea, on the concave side of a ridge of a horse-shoe shape, which connects Warts summit with that of the Chur, and which, on the convex or eastern side, throws off numerous feeders to the Pabar. Holding a south-westerly course for about thirty-five miles, during which it receives numerous insignificant feeders, it is joined by the Ushun, in lat. 30° 54', long. 77° 16'. It thence takes a south-easterly course for fifty miles, and falls into the Jumna in lat. 30° 27', long. 77° 44'. At the confluence, this river discharges on an average 100² cubic feet of water per second.

GIRWAR.—A town in the Rajpoot state of Seerooe, 57 miles W. from Oodeypoor, and 51 miles N.E. from Deesa. Lat. 24° 36', long. 72° 45'.

GIRWAREE.—A town in the native state of Gwalior, or territory of Scindia's family, 50 miles S.W. from Gwalior, and 69 miles N.W. from Jhansee. Lat. 25° 48', long. 77° 37'.

GISREE, in Sinde, one of the mouths of the river Indus, receiving a small torrent flowing from the southern part of the mountain-range called, farther north, the Keertar and Lukkee hills. Lat. 24° 45', long. 67° 8'.

GIVAROI.—A town in the native state of Hyderabad, or territory of the Nizam, eight miles from the right bank of the Godavery river, and 51 miles S.E. from Aurungabad. Lat. 19° 17', long. 75° 49'.

GNASANQUA.—A town in the native state of Bhotan, 76 miles N.W. from Durrung, and 83 miles N.E. from Goalpara. Lat. 27° 12', long. 91° 15'.

GNA YOKHYOUNG.—A pass over the Youmadoung range of mountains, from the coast of Arracan to the town of Bassein, in Pegu, 27 miles S.W. from the latter. Lat. 16° 30', long. 94° 35'.

GNETZAZAKAN.—A small village, with an encamping-ground, on the Aeng pass (Arracan), about five miles from

GNO—GOA.

Sarowah, and situate on the edge of a precipitous descent. There¹ is a spring at the bottom of the hill.

¹ Calcutta Journ.
1838, p. 130.

GNOPARAWA.—A village of Arracan, situate on one of the connecting creeks between the Arracan and Kuladyne rivers. Lat. 20° 31', long. 93° 20'.

GOA.—The former capital of the Portuguese possessions in India, once an opulent and powerful city, but now fallen into an apparently irremediable and hopeless state of decay. It is situate in lat. 15° 30', long. 74°. The territory of the same name lies on the western coast of the Indian peninsula, and is bounded on the north by the native state of Sawunt Warrec; on the east by the British districts of Belgaum and North Canara; and on the south-west by the Indian Ocean. It extends from lat. 14° 54' to 15° 45', and from long. 73° 45' to 74° 26'; is sixty-two miles in length from north to south, and forty in breadth, and contains an area of 1,066¹ square miles. The population has been returned at 313,262. Of this number two-thirds are stated to be Christians, of the Roman Catholic persuasion; but these are not under the direct jurisdiction of the Church of Rome, the throne of Portugal claiming the right of appointing its own bishop, and assuming the control and direction of the Catholic Church in its Indian possessions.

¹ Bombay Rev.
Disp. 27 March,
1814.

The settlement of Goa is divided into districts, which are again subdivided into parishes, the largest of which is Pangaum, containing the present seat of government, and about 10,000 souls. The harbour, which is a fine one, is formed by an arm of the sea, into which flows a small river, and is distant about five miles from the old city of Goa. The appearance of the harbour is of imposing beauty; but on reaching Pangaum, which is the new town and nearest to the harbour, all agreeable impressions vanish, the situation being low and sandy, and the houses wretched.² Goa is connected with this place by a stone causeway about 300 yards long: though containing many fine buildings, churches, and monasteries, it is fast becoming a mass of deserted ruins—miserable and squalid indications that there has been here a great city. Its inhabitants are almost entirely ecclesiastics. The military force of the state of Goa consists of 8,300 fighting men, of whom about 400 are Europeans. The revenues are estimated at 710,200 rupees, an amount stated to be annually exceeded by the expenditure. The chief products

² Welsh, *Military
Reminiscences*,
ii. 102.

are rice, but not in sufficient quantity for the consumption of the inhabitants; pepper, coconuts, betelnut, and salt; which latter article is manufactured to a very large extent.

The brilliant career of the Portuguese in regard to India, and their achievements in navigation and conquest during the fifteenth and sixteenth centuries, are thus noticed in a modern historical work.²

² *Monroe, Hist. of Brazil*, 1 vol. 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27.

"The Portuguese, indeed, have made no durable impression on the country, in which they appeared like a brilliant but destructive meteor; but their unswerving exertions to push the arts and discoveries of navigation beyond the limits within which they had been previously restricted, were too beneficial to the world at large to be passed over without notice. Their discoveries received the first impulse from Henry, the fifth son of John, the first king of Portugal of that name. Under his auspices, several expeditions were fitted out for exploring the coast of Africa and the adjacent seas. The first discovery was not very important, but was sufficient to afford encouragement, and stimulate to perseverance. It consisted of the little island of Puerto Santo, so named from its having been discovered on the festival of All Saints. This was in the year 1418. In the following year the adventurers were further rewarded by the discovery of Madeira. For more than half a century, the voyages of the Portuguese were continued in the same direction, but in general without more important results than occasional additions to the small stock of geographical knowledge then existing. Little progress seemed to have been made towards the attainment of the grand object of these enterprises, viz. the discovery of a new route to India, till the latter end of the fifteenth century, when Bartholomew Dias eclipsed the fame of all preceding navigators, by his success in reaching the southernmost point of Africa, and in doubling the famous promontory called by himself Cabo Tormontoso, the Cape of Storms, but more happily and permanently designated by his sovereign, Cabo de Bona Esperanza, the Cape of Good Hope. Linnæus, the successor of John of Portugal, proceeded in the steps of his predecessor. An expedition was fitted out in furtherance of the object in view, and committed to the care of Vasco de Gama. It sailed from Lisbon on the 9th of July, 1497, doubled the Cape on the 20th of November

GOA.

following, and finally reached Calicut; thus achieving the triumph so long and so anxiously sought. The admiral was forthwith introduced to the native prince, a Hindoo, called by the Portuguese historians Zamorin, by native authorities, Samiri; and after a short stay, marked by alternations of friendliness and hostility, set sail on his return to Portugal, where he was received with the honours which he had so well earned.

"The Portuguese returned, and received permission to carry on the operations of commerce. But disputes soon arose, and acts of violence were committed on both sides. The power and influence of the Portuguese, however, continued to extend, and the assistance afforded by them to the neighbouring king of Cochin, in his quarrel with the Zamorin, was rewarded by permission to erect a fort for their protection within the territories of the former prince. Thus was laid the foundation of the Portuguese dominion in the East. An attempt to obtain possession of Calicut failed. Against Goa the invaders were more successful. That city was taken by storm; and although subsequently retaken by a native force, was again captured by the Portuguese, and became the seat of their government, the capital of their Indian dominions, and the see of an archbishop, the primate of the Indies."

The Dutch supplanted the Portuguese as traders, and with their commerce the latter nation lost their power and grandeur. Thus did Goa become the melancholy spectacle which it is now, and which it will continue to present until some further step in downward progress shall sink it still lower into wretchedness and degradation, or unless by some happy incident it should become absorbed into the British territories.

GOA, or GWA.—A populous village in the district of Sandoway, in the province of Arracan. It was formerly a town of considerable importance, but has for some time been on the decline. It possesses a harbour for vessels of 200 tons burden¹ but there is an awkward obstruction at its entrance, occasioned by a bar of sand, which renders it highly dangerous. A route from this place to Henzadah, on the Irawaddy river, is called the Goa route. Lat. 17° 33', long. 94° 41'.

GOA ISLAND, or GWA ISLAND.—A small island situate near the mouth of the river in Arracan bearing the

¹ E.I. C. Ms. Doc. Jenkins and Pemberton, Journ. Wilson, Burmesse War. Govt. Gazette, April, 1827.

GOA—GOB.

same name, and about a mile and a half from the shore. There¹ is a large coral bank three miles to the westward. Lat. $17^{\circ} 34'$, long. $93^{\circ} 38'$.

¹ Horsburgh, H. 14.

Pemberton, Rep. on the Eastern Frontier, 8.

GOA RIVER.—A small river which empties itself in the sea near the village of the same name in Arrican. Its entrance is broad and deep, sufficiently so for ships of 500 tons burden. Its mouth is about lat. $17^{\circ} 31'$, long. $93^{\circ} 40'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 81.

GOALGUNGE,¹ in the territory of Bijawur, in Bundelcund, a town on the route from Banda to Saugor, 93 miles² S.W. of the former, 79 N.E. of the latter. It has a bazar, and is supplied with water from wells. Lat. $24^{\circ} 42'$, long. $79^{\circ} 26'$.

GOALPARA.—A British district of the Bengal presidency, bounded on the north by the native state of Bhotan; on the east by the British district of Camroop, in Lower Assam; on the south by the native territory of the Garrow tribes and the British district of Mymensing; and on the west by that of Rungpore and the native state of Coosli Behar. It extends from lat. $25^{\circ} 40'$ to $26^{\circ} 31'$, and from long. $89^{\circ} 42'$ to $91^{\circ} 8'$; is 100 miles in length from north-west to south-east, and seventy miles in breadth, and contains an area of 3,506 square miles, with a population of 400,000.¹ The principal crops² of the district are cotton, tobacco, and sugar: mustard, also, is said to be extensively grown. Goalpara, or North-Eastern Rungpore, in a geographical point of view, belongs to Bengal proper, having constituted an integral part of that province in 1763, when the British government obtained the grant of the Dewanny from the emperor of Delhi; but from the circumstance of its being placed under the superintendence of the commissioner of Assam, and from its general resemblance in respect of climate and other circumstances to that province, it has sometimes been regarded as one of the districts of Assam.³ Goalpara, the principal town of the district, suffered severely by fire in 1838.⁴ Lat. $26^{\circ} 8'$, long. $90^{\circ} 40'$.

Geol. of Deccan.

Western Ghats, near Nassiek, in lat. $19^{\circ} 58'$, long. $73^{\circ} 30'$,* and 50 miles E. from the shore of the Arabian Sea. Taking a direction south-east for 100 miles, it reaches the western frontier of the territory of the Nizam at Phooltamba, in lat. $19^{\circ} 48'$, long. $74^{\circ} 40'$, and continuing to hold the same direction for ninety miles further, forms the boundary between the collectorate of Ahmednuggur and the territory of the Nizam, to a point ten miles beyond Mongee, in lat. $19^{\circ} 23'$, long. $75^{\circ} 37'$, having previously, at Toka, in lat. $19^{\circ} 37'$, long. $75^{\circ} 2'$, received on the right side the river Paira, flowing from the west. Below Mongee the Godavery enters the Nizam's territory, after which it proceeds in a sinuous, but generally easterly course; for 160 miles, to the vicinity of Lasona, and receives on the left side, in lat. $19^{\circ} 6'$, long. $77^{\circ} 5'$, the Doodna, a considerable stream flowing from the north-west. From that confluence, taking a course south-east for eighty-five miles, in lat. $18^{\circ} 48'$, long. $77^{\circ} 55'$, it receives on the right side the Manjara,² a large river flowing from the south. The course of the Godavery after this confluence is still sinuous, but generally eastward, for about 170 miles, to the town of Veel Sangor, in lat. $18^{\circ} 48'$, long. $79^{\circ} 49'$, near which the Manair river falls into it; thence flowing for about twenty miles to Kulaisur, in lat. $18^{\circ} 52'$, long. $79^{\circ} 55'$, it receives on the left side the Wain Gunga³ (there termed the Prauheeta), a large river from the north, which discharges the great drainage of the southern declivity of the Vindhya range. Thence the Godavery takes a direction south-east for 170 miles, to Kottoor, in lat. $17^{\circ} 29'$, long. $81^{\circ} 34'$, where it crosses the frontier into the British district of Rajahmundry, finding its way through a deep chasm in the Eastern Ghats, with a very slight declivity. About twenty-five miles below Kottoor, it issues from the mountains at Polaveram, in lat. $17^{\circ} 15'$, long. $81^{\circ} 42'$. In passing through the great barrier of hills, it is stated by the boatmen who navigate the river, that there are no falls throughout the length of its channel, nor indeed any obstructions of importance; and the testimony of these persons would appear to be confirmed by the fact, that large timber-rafts from the Nizam's territory are floated down when the river is almost at its lowest, and has

GODAVERY.

not more than two or three feet water at the fords in the low country. From Polaveram the river continues to hold a direction south-east for twenty-three miles, to Peehkalunka, in lat. $16^{\circ} 57'$, long. $81^{\circ} 49'$, where, entering the alluvial country which it has itself formed, it diverges into two great branches, the left flowing to the south-east for fifty-five miles, and falling into the Bay of Bengal at Point Gordeware,⁴ in lat. $16^{\circ} 48'$, long. $82^{\circ} 23'$; the right taking a southern direction for fifty-five miles, and falling into the bay at Narsipur, lat. $16^{\circ} 18'$, long. $81^{\circ} 46'$.

⁴ Hordburgh.
East-India Direc-
tory, i. 603.

The alluvial country traversed by the two streams spreads out on both sides, extending on the west till it meets the delta of the Kistnah, at the Colair Lake, a distance of about forty miles; and on the east side spreading for about thirty-two miles, to the shore of Coringa Bay, where the coast runs for some distance nearly north and south.

From the hills the river has a very moderate fall. At Polaveram, where, as already stated, it issues from the mountains, the alluvial land forming its banks is eighty feet above the level of the sea at high water. This land has a very regular slope, commencing with a foot and a half per mile, and gradually diminishing to one foot as it approaches the sea. But as the rise and fall of the river at Polaveram amounts to thirty-eight feet, its summer surface at that place cannot exceed forty-two feet above the sea-level, which gives an average fall of seven inches and a half per mile. At the head of the delta, the bed of the ford is twenty-two feet above the sea, and the actual distance being about fifty miles, the fall is little more than five inches per mile.

Besides the slope of the land towards the sea in the delta, it has another and much more abrupt slope in a direction lateral to the course of the river. The banks of the river on both sides form ridges, rising several feet above the level of the land beyond. This ridge-like character is common to rivers which overflow their banks without restraint, as for instance the Nile, and is well known to arise from the deposit of the heavier matter near to the margin of the river, while the finer and lighter is carried to the limits of the inundation. The delta inclosed between these two great arms is traversed by many smaller branches diverging from them. An offset from the

GODAVERY.

⁵ Horsburgh,
i. 605.

great north-eastern branch flows by the town of Coringa,⁵ and admits vessels of ten or twelve feet draught. The branch which disembogues at Narsipur is less suited for the purposes of navigation, admitting only vessels drawing eight or nine feet water. In December, 1816, the sanction of the Court of Directors was given to the construction, at an expense of 47,500*l.*, of a dam or annicut of sufficient height to command the delta of the river, and to supply to the rich alluvial soil of which that tract is composed, the means of constant irrigation. In 1818 the amount had been expended, but the works were far from completion, and a further sum, equal to 13,000*l.*, was assigned for that object. The annicut, 4,200 yards long, has been thrown across the river near the village of Dowlaswaram on the east bank, and Wadapilly on the west. For boats and timber that may be required to pass down or up the river when there is neither so much water as to allow of their passing over the annicut, nor so little as to prevent their navigating the river, locks are constructed at the heads of the irrigating channels, by means of which a communication between the upper and lower stream is maintained round the annicut. At the town of Rajahmundry, a few miles above the point where the river divaricates, the channel is of great width, and during the periodical inundations in the close of summer, is filled from bank to bank with a vast and rapid body of water, bearing down great quantities of timber, wrecks of wooden houses, and carcases of animals; but during the dry season the current shrinks so much, that it might in most places be forded.⁶ The construction of the annicut already noticed has, however, changed this, by retaining, for the benefit both of agriculture and navigation, a never-failing supply of water,⁷ previously suffered to flow in useless abundance to the sea.

⁶ Report on Med.
Topography and
Statistics of
Northern Division
of Madras Army,
41, 42.
⁷ Madras Rev.
Disp. 23 Dec. 1840.

The long gorge by which the river finds its way through the Eastern Ghats, though having so slight a declivity as to admit of navigation, allows the channel a space of not more than a quarter of a mile, with banks rising on each side into mountains so steep and high, that travelling along the stream by land is altogether impracticable, and communication can be maintained by navigation only. Above the gorge, the volume of water in the upper or more level country expands during inundations to a width of from three to six miles on each side

GOD—GOG.

of the river, and on the retiring of the stream, the soil remains covered with a black alluvial mud, which imparts to it great fertility. The total length of the Godavery from its source to Narsipur is 898 miles.

The value of this river as an instrument of communication for commercial and military purposes is perhaps not yet fully appreciated. It appears, that from Mahadepoor to Rajahmundry⁸ the voyage in boats properly adapted to the purpose has been performed in fifty-two hours; and it is inferred, with great appearance of probability, that steamers similar to those used on the Ganges might ascend the Godavery to a considerable distance, affording great facility for conveying troops and stores to Nagpore and Jubbulpore, as well as a mode of transmitting to the eastern coast the produce of Berar and the Nagpore territories, far more advantageous than the land route by carts and bullocks. The passage from Chanda, on one of the feeders of the Godavery, to Mahadepoor, has been performed in eighteen hours; and it has been suggested, that by means of this great river and its tributaries an uninterrupted water-communication might be obtained from the coast into the heart of the Deccan. The experiment of navigating the Godavery by means of steam has been entertained by the government of Madras,⁹ and measures for carrying it into effect are under consideration.

¹ E.I.C. Ms. Doc. **GOGAREE.**¹—A river traversing the British district of Tirhoot, presidency of Bengal. In the upper part of its course it is denominated Kamala or Kumla, and, according to Buchanan,² rises in Nepal, in the Sub-Himalaya, about lat. $27^{\circ} 20'$, long. $85^{\circ} 40'$. Taking a course south-east for about seventy miles, it passes through the Terai or marshy forest in the southern part of Nepaul, and in lat. $26^{\circ} 35'$, long. $86^{\circ} 15'$, crosses the British frontier into the district Tirhoot, through which it flows in a southerly and south-westerly direction for about thirty-five miles, and subsequently for fifty miles in a south-easterly direction, when, passing from Tirhoot, it flows for forty miles through the district of Monghyr, and for twenty-five miles through Bhaugulpore; then, forming for fifteen miles the boundary between the districts of Purneah and Bhaugulpore, it falls³ into the Coosy, on the right side, in lat. $25^{\circ} 24'$, long. $87^{\circ} 16'$; its total length of course being about 235 miles.

² Id. Survey of Eastern India, III. 14.

GOGGOT RIVER.—An offset of the Attree, quitting it a few miles after its divergence from the Teesta, and in lat. $26^{\circ} 19'$, long. $88^{\circ} 45'$. It maintains a south-east direction, and, flowing through Coosh Behar, Rungpore, and Bograh, falls into the Konaie, a main branch of the Brahmapootra, after a total course of 145 miles, in lat. $24^{\circ} 55'$, long. $89^{\circ} 41'$.

¹ E.I.C. Ms. Doc. **GOGHA,**¹ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a village close to the route by the Kutra Pass from Allahabad to Rewa, and 29² miles S.E. of the former. The road in this part of the route is good; the country level, well cultivated, and studded with small villages. Lat. $25^{\circ} 13'$, long. $82^{\circ} 13'$.

² Garden, Tables of Routes, 54.

¹ E.I.C. Trigon. Surv. E.I.C. Ms. Doc. **GOGHPOOR,**¹ in Sirhind, a village on the route from Kurnal to Loodianah, and 32 miles N.W. of the former town. It is situated in a level tract, insulated by two branches of the river or torrent Markunda. Distant N.W. from Calcutta 997² miles. Lat. $30^{\circ} 5'$, long. $76^{\circ} 49'$.

² Garden, Tables of Routes, 172.

E.I.C. Ms. Doc. **GOGI.**—A town in the native state of Hyderabad, or dominions of the Nizam, 126 miles S.W. from Hyderabad, and 68 miles S.E. from Beejapoor. Lat. $16^{\circ} 43'$, long. $76^{\circ} 49'$.

¹ E.I.C. Ms. Doc. **GOGO,**¹ in the British district of Ahmedabad, presidency of Bombay, a town situate in the peninsula of Kattywar, on the western shore of the Gulf of Cambay. About three

GOG—GOH.

quarters of a mile east of the town, is an excellent anchorage, in some measure sheltered by the island of Perim, which lies still further east. "The² best Lasears³ in India are natives of this place, and ships touching here may procure water and refreshments, or repair damages. It is a safe place for vessels during the south-west monsoon, or to run for if they part from their anchors in Surat Road, being an entire bed of mud, three quarters of a mile from the shore, and the water always smooth. The land about Gogo being generally low, is inundated at high spring-tides, which renders it necessary to bring fresh water from a distance of four or five miles: firewood is scarce." Distance from Bombay 190 miles. Lat. $21^{\circ} 39'$, long. $72^{\circ} 15'$.

GOH.—A town in the British district of Behar, presidency of Bengal, 30 miles N.W. of Shergotty. Lat. $24^{\circ} 58'$, long. $84^{\circ} 41'$.

E.I.C. Ms. Doc.

GOH, in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a town on the right bank of the Dhoul river, and 69 miles N.E. of Almora. Lat. $30^{\circ} 15'$, long. $80^{\circ} 35'$.

E.I.C. Ms. Doc.

GOHIADEE, in the British district of Bareilly, lieutenant-governorship of the North-West Provinces, a village on the route from the town of Bareilly to Almora, and 43 miles N. of the former. The road in this part of the route is indifferent; the country open and cultivated. Lat. $28^{\circ} 52'$, long. $79^{\circ} 27'$.

Garden, Tables of Routes, 50.

GOHALA,¹ in the Rajpoot territory of Shekhawatee, a town on the route from Hansce to Nusserabad, 127² miles S. of former, 116 N.E. of latter. It has a large bazar, and water is abundant. Lat. $27^{\circ} 39'$, long. $75^{\circ} 43'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 110.

GOHANUH,¹ in the British district of Rohtuk, lieutenant-

E.I.C. Ms. Doc.

GOH.

governorship of the North-West Provinces, a town, the principal place of the pergunnah of the same name. It is situated on the Rohtuk branch of the Delhi Canal, and near the northern extremity of a great depression² of the soil, extending about fifty miles southwards. In the course of the original formation of the canal by Ali Mardan Khan, the water being introduced as far as Gohanuh, could proceed no farther along the channel, in consequence of an error in the level, and, accumulating at this spot, overflowed and swept away the embankment intended to form the waterway. The great body of water which thus escaped, extensively inundated the country, and destroyed Lalpoor, a considerable town, the ruins of which may still be seen. The town of Gohanuh is 50 miles N.W. of Delhi, with a population³ of 6,668. Lat. $29^{\circ} 8'$, long. $76^{\circ} 47'$.

E.I.C. Ms. Doc.

GOHAR TULAO, in Siude, a tank on the summit of a strong pass on the route from Kurrachee to Schwan, and 3½ miles N.E. of the former place. The importance of the place results merely from its having a supply of water: in other respects it offers nothing to the traveller, the country around having a rugged surface of bare rock, and yielding neither forage nor provisions. Lat. $25^{\circ} 5'$, long. $67^{\circ} 33'$.

¹ E.I.C. Ms. Doc.

GOHILWAR,¹ in the peninsula of Kattywar, province of Guzerat, or territory of the Guicowar, a district named from the Gohil Rajpoots, by whom it is principally peopled. It is bounded on the north by the British district of Ahmedabad; on the east and south-east by the Gulf of Cambay and Ahmedabad; on the west by the districts of Babriawar and Kattiwar; on the north-west by the district of Kattiwar; and lies between lat. $20^{\circ} 56'$ — $22^{\circ} 3'$, long. $71^{\circ} 14'$ — $72^{\circ} 13'$. It is eighty-five miles in length from north-east to south-west, and sixty in breadth. The seacoast, commencing at its southwestern extremity, at the mouth of the small river Jullanu, in lat. $20^{\circ} 56'$, long. $71^{\circ} 30'$, extends in a direction nearly due north-east about forty miles, to Jaunjmeer, in lat. $21^{\circ} 12'$, long. $72^{\circ} 6'$. It is rather bold in some places, but it is not in general safe for large ships to approach, being beset with detached rocks from² half a mile to three quarters of a mile from the shore. Towards the north-eastern part, however, there are fewer of these obstacles to coasting navigation; but though many small estuaries occur, there is no shelter for

² Harbours, East-India Directory, L. 478.

GOHILWAR.

shipping. In Mowat³ Bay, one of the few places where a large vessel can put in, "the anchorage³ is bad, the bottom being sand, from seven to ten fathoms; and with the flood tide a vessel must lie with a reef of rocks right astern." At Jaunj-meer, or Gopnath Point, as that part of the shore is also called, the coast takes a direction nearly northward, as far as Alung, at the southern extremity of an isolated portion of the British district of Ahmedabad, and in lat. $21^{\circ} 24'$, long. $72^{\circ} 10'$. The coast here forming part of the western shore of the Gulf of Cambay, is rather dangerous, requiring much vigilance for its safe navigation, in consequence of a shoal⁴ of considerable extent nearly level with the water at neap-tides. The coast belonging to the British district terminates at the estuary of the river Gaila, near Bhownuggur, and in lat. $21^{\circ} 48'$, long. $72^{\circ} 12'$, and that of Gohilwar recommences, extending in a northerly direction for ten miles, to its extremity at Gondalla; but this is of no great avail for the purposes of navigation, in consequence of the great shallowness⁵ of the Gulf of Cambay in its northern part. Like most other parts of the peninsula⁶ of Guzerat, this district abounds in streams, all rising in the high land in the interior, and discharging themselves into the Gulf of Cambay. Of those the most considerable is the Setroonjee, which, rising on the eastern declivity of the Girnar Mountain, near Junagarh, holds an easterly course of about thirty miles through the district of Kattiwar; thence in the same direction for twelve miles, through that of Und Surna; and touching on this district in lat. $21^{\circ} 26'$, long. $71^{\circ} 46'$, flows nearly due eastward for about ten miles, forming the boundary between this district and that of Und Surna; and at that distance entering Gohilwar, it turns south-eastward, and flows sixteen miles to its embouchure in the Gulf of Cambay. It has probably the largest perennial volume of water of any stream in the peninsula. The other streams, though large torrents during the rains, are generally nearly devoid of water in the dry season. The principal mountains are the Wulluk group, in the southern part of the peninsula, and the Palitayna group, in the middle. There is another group, the Seroi, of less magnitude. This district is a fertile one, producing most kinds of grain known in India, and exporting a considerable quantity. It, amongst other fruits, pro-

GOHUD.

duces the mango in perfection, and has the only forest of those trees to be met with in the peninsula. The principal towns—Limri, Palitayna, Mowa or Mahowa, and Tulaji or Taloja—are noticed under their respective names in the alphabetical arrangement. The district contains 690 towns and villages, and the aggregate population⁷ has been computed to be 247,980. The chief, styled the Rawul Raja, or Thakoor of Bhaonagar, has an income estimated⁸ some years since at 740,000 rupees annually, and pays a tribute of 81,950 rupees to the British government, and 39,202 to the Guicowar. Bhaonagar, his capital, is within the jurisdiction of the British district of Ahmedabad; and this being regarded an humiliating circumstance, has sometimes suggested to this affluent chief the removal of his residence to some town within his own.

GOHUD,¹ in the territory of Gwalior, or the possessions of the family of Scindia, a town on the route from Etawa to Gwalior, 55² miles S.W. of the former, and 28 N.E. of the latter. Its fortifications consist of an outer curtain of mud, faced with stone, and inclose an extensive area, between which and the citadel are two other walls.³ The citadel is lofty, with massive towers, and has spacious and commodious apartments. Around the outermost rampart runs a ditch,⁴ which can be filled with water from the small river Besulee. Tieffenthaler, describing the condition of the place seventy years ago, states it to be then populous and rich. It is now, however, much decayed, though there are a few good modern houses, especially that of the Mahratta governor. The rana of Gohud was originally a Jat zemindar or landholder, who, in the early part of the eighteenth century, rose to considerable power by taking advantage of the opportunities for aggrandizement which were common during that troubled period. In 1779, he secured the alliance of the British government, from whom, in the following year, he received most valuable aid against the Mahrattas. Among other services, the fort of Gwalior, previously reputed impregnable, was captured by a British force under Captain Popham, and placed in the possession of the rana of Gohud. Here, however, in 1784,⁵ the rana was besieged by Madhjee Scindia, and obliged to surrender. His capital, Gohud, also

* Gohad of Tassin; Gohad of the Urdu writers; Gohud generally of the British writers.³

GOH—GOK.

passed into the hands of the enemy. In 1803, negotiations were opened by the British government with the rana of Gohud, and a treaty was concluded,⁶ by which certain territorial possessions were guaranteed to that chief. The right of the British thus to deal with the territory in question was, however, impugned by Scindia, and, in consequence, a new arrangement was effected. Gohud was transferred to Scindia, and the rana received from the British government the territory of Dholpoor,⁷ which his descendant still enjoys. Distance S.E. of Agra 60 miles; N.W. of Calcutta, by Etawah, 700. Lat. 26° 25', long. 78° 26'.

¹ E.I.C. Ms. Doc.

GOLCONDA,¹ in the territory of the Nizam, a fortress and ruined city, seven miles W. of the city of Hyderabad. The fortress, situate on a rocky ridge of granite, is extensive, and contains many inclosures. It is altogether very strong,² and in good repair; but is commanded within breaching distance by the summits of several of the enormous and massive mausolea of the ancient kings of the place. Being the depository of the treasures of the Nizam, and also used as a state prison, it is very strictly guarded, and entrance cannot be obtained by any but official persons in confidential capacity. The ancient mausolea form a vast group, about 600 yards from the fort, in an arid, desert, rocky ground, the stern features of which heighten the impressiveness and grandeur of those astonishing buildings. "Desolate,"³ and abandoned to the ravages of time, they rear their stately domes and pinnacles on the bare plain, no outward defences now existing to ward off the approaches of any assailant, who, through ignorance or wantonness, may hasten the progress of decay. The most ancient of these tombs is not more than 300 years old; but they have been subjected to so many and such barbarous attacks, that nothing save the great solidity of their walls has preserved them from utter ruin. Each mausoleum stands in

² As. Journ. xxvi.
New Series, part I.
233.

³ Id. 232.

GOLCONDA.

the centre of a spacious quadrangular platform or terrace, approached on all sides by flights of steps, entering upon a rich arcade, formed of an equal number of pointed arches on each front, and finished with a lofty balustrade, and a minaret at each angle. The body of the building, also quadrangular, rises about thirty feet above the upper terrace of this arcade, and is also surrounded by a balustrade, flanked with minarets of smaller dimensions than those below. From the centre of this portion of the building springs the dome, forming by its magnitude a distinguished feature in a structure equally remarkable for the splendour and symmetry of its proportions. The principal material employed is grey granite, ornamented in some parts with stucco, and in others with the porcelain tiles for which India was at one time so famous. The colours retain their brilliancy to the present day, and the extracts from the Koran, formed of white characters on a polished blue ground, have all the richness of enamel. There is a mosque attached to each of these tombs, which formerly possessed the privileges of sanctuary; and those religious edifices not only supported a considerable number of priests, but also afforded a daily meal to the neighbouring poor." "These tombs were erected at a great expense, some of them being said to have cost 150,000*l*. The enamelled-work with which they are ornamented is reported to have been the production of artists brought from China for the purpose; but there is every reason to believe that these decorations are of native workmanship, similar ornaments being to be found at Beejapore, Agra, Behar, Bengal, and other places." The diamonds of Golconda have obtained great celebrity throughout the world; but they were merely cut and polished here, having been generally found at Partcall, in a detached portion of the Nizam's dominions, near the southern frontier, in lat. 16° 40', long. 80° 28', a place which affords no favourable indication of the wealth to be derived from the avocation of seeking diamonds, as it is in ruins,⁴ and the inhabitants ill-clothed, and half-starved in appearance.

Golconda, in former times, was a large and powerful kingdom of the Deccan, which arose on the dissolution of the Bahmani empire, but being subdued by Aurungzebe, was incorporated with the empire under his rule. Even in its

⁴ Journ. As. Soc. Beng.—Voysey. Second Report on Geology of Hyderabad.

GOL—GON.

extinction, however, it was able to maintain some struggle, and even to venture on an attack upon the imperial army, and to plunder its baggage. The confusion consequent upon the breaking up of the empire almost obliterated the recollection of the once flourishing kingdom of Goleonda. The fort is in lat. $17^{\circ} 22'$, long. $78^{\circ} 29'$.

E.I.C. Ms. Doc.

GOLUGONDA.—A town in the British district of Vizagapatam, presidency of Madras, 56 miles W. of Vizagapatam. Lat. $17^{\circ} 40'$, long. $82^{\circ} 31'$.

E.I.C. Ms. Doc.

GOLYGAIRA.—A town in the native state of Mysore, 67 miles N.E. from Seringapatam, and 118 miles W. from Arcot. Lat. $12^{\circ} 51'$, long. $77^{\circ} 38'$.

GOMATI.—A river of the hill state of Kooloo, rising in lat. $32^{\circ} 2'$, long. $77^{\circ} 34'$, and, flowing in a south-westerly direction for fifty-five miles, falls in the Beas river near the village of Hurla, in lat. $31^{\circ} 49'$, long. $77^{\circ} 12'$.

GOMBELA, or **TOCHEE**, a river of Bunnoo, rising in lat. $32^{\circ} 53'$, long. $70^{\circ} 1'$, on the eastern slope of the Suliman range of mountains, and, flowing easterly for about 100 miles, falls into the Indus near the village of Kafer Kote, in lat. $32^{\circ} 30'$, long. $71^{\circ} 20'$.

GONDAGHAON, in the British province of Saugor and Nerbudda, lieutenant-governorship of the North-West Provinces, a town on the route from Bhopal to Aurungabad, 52 miles S.W. of the former. Lat. 22° 31', long. 77° 10'.

E.I.C. Ms. Doc.

GONDWANA,¹ or the land of the Gond race, an extensive imperfectly-defined tract of Southern India. It may, however, be considered as lying between lat. 19° 50' and 24° 30', long. 77° 38' and 87° 20', and as comprising part of the British districts of Saugor and Nerbudda, and also those of Singrowli, Chota Nagpore, and Sirgooja, with the petty native states on the south-west frontier of Bengal, the Cuttack Mehals, and the greater portion of the northern part of the dominions of the rajah of Berar or Nagpore. It is throughout a hilly tract, comprising within its limits the eastern portion of the Vindhya and Mahadeo Mountains, and having in some places a considerable elevation, stated, though perhaps without sufficient grounds,² to be at Amarkantak 5,000 feet above the sea. Its great elevation in some parts is, however, proved by the fact that rivers take their course northward, as the Betwa and others of less importance, which flow into the Jumna or Ganges; eastward, as the Mahanuddy, to the Bay of Bengal; and westward, as the Nerbudda and Taptee, with their tributaries, to the Indian Ocean.

¹ E.I.C. Ms. Doc. Duff, Hist. of Mahrattas, i. 1, 2.

² Bengal and Agra Guide, 1842, vol. ii. part 1. 322, 323.

Many extensive tracts, especially the eastern, are pathless³ jungly wilds, regarded⁴ by the more civilized borderers on them as "the abode only of wild beasts, demons and savage Goonds." So difficult, indeed, is the eastern part of the country, that perhaps no instance occurs of a large body of troops marching through it between the Deccan and Hindostan; and so little known is the route which Garden⁵ lays down through it from Hazareebagh to Nagpore, that merely the distances of the halting-places are given, unaccompanied by

Agra (Guide, 1842,
vol. II. part I. 34).

descriptions. It is observed⁶ in a late publication, that "this belt [Gondwana], which has in all ages formed a marked barrier between the great and fluctuating empires prevailing in the northern and southern portions of Hindostan, and which further west forms but a narrow strip between the two great arenas, here [eastward] commences expanding into much more formidable dimensions. We find that very rarely was any portion of it chosen as the route by which armies passed to and fro, and as rarely was the eye of the foreign despot or adventurer directed towards its then uninviting wilds as an object of conquest." The western part, however, bordering on Malwa, Bhopal, and Berar, is in many places fertile and well watered; and the vicinity of Nagpoor, Hoshungabad, and Sangor, is the seat of considerable civilization, and has been the scene of many important political and military events. The Goonds, who form the greater portion of the population of Gondwana, have been conjectured⁷ to be the aborigines of Hindostan, and speak a language radically different from Sanserit and its dialects, introduced from regions west of the Indus. Many of the Goonds seen by Blunt⁸ in his passage through the country were so devoid of any approach to civilization as to live in a state of entire nudity. They appeared, however, to be an athletic,⁹ well-looking race.*

on Country be-
tween Hoshung-
abad and Makrai.

The soil and climate, though not remarkable for salubrity, are in many places very favourable¹ to productiveness, while the rocks abound in iron and the forests contain fine timber. Perhaps, however, the savage, neglected aspect of a large part of the country, and the barbarism of its population, may be attributed rather to the insalubrious air brooding in the jungly valleys, and to obstacles to communication caused by the

¹ Gazetteer, I. 618.

² p. 616.

* Hamilton states: "They have usually broad and rather flat noses, and thick lips, with not unfrequently curly hair when young." He makes a farther statement,² which is, however, of little value, from the want of definite localities and authorities:—"The old designations of the principal tracts, up to 1817, were the following, commencing at the northern extremity:—1. Chandail; 2. Boghela; 3. Billounja; 4. Singrowla; 5. Raja Chohans; 6. Manwas; 7. Canroody; 8. Solagepoor; 9. Sirgooja; 10. Odeypoor; 11. Koorba; 12. Jushpur; 13. Gangpoor; 14. Sumbhulpoor; 15. Sohnpoor; 16. Choteesghur; 17. Mundlah; 18. Gurra; 19. Mehkoor; 20. Kheirlah; 21. Gundwana Proper; 22. Nagpore; 23. Chanda; 24. Bustar."

numerous ridges, ravines, and torrents, rather than to any inherent inaptitude of the Goonds for civilization.² Where encouraged, they readily and efficiently toil at timber-cutting, mining,³ and other laborious tasks. Their present state is described by a recent traveller in their wilds, who, however, does not agree on all points with a traveller already quoted. "This caste⁴ of Hindoos are almost jet black, and dirty and forbidding in their appearance, while they are short in stature and thickset in point of make: their dialect is peculiar to themselves. The whole race appears wretched and poor; a small dhotee (breech-cloth), and a coarse chadar (sheet), to wrap over their bodies, form their outward garments. Their tenements consist of huts, whose walls are built of stakes cut from the neighbouring forests, entwined with rude wickerwork, and plastered and besmeared over with mud; while the roofs consist of a thin layer or coating of dried grass, over which are spread some leaves, and a few battens made of bamboo fastened over all, to prevent it from being acted upon by the wind. The Goonds are remarkably fond of swine and buffaloes; they are fond also of rearing fowls. When leaving the road and penetrating the forest depths, an occasional hut is met with completely isolated; and from such I have seen a Goond issue forth, its only human tenant, while a favourite pig has met my eye not far from the threshold. This race of human beings are little better in the human scale than demi-savages; they are very superstitious, and, like all dark minds, place great confidence and belief in the charms and quackery of their gooroos or priests. They have rites peculiar to themselves, and tread the jungle-depths at dead of night without the slightest feeling of dread or fear from tigers or other wild beasts. It has often been a matter of surprise to me that these men should dare, both by day and night, to traverse and thread these deep forests unapprehensive of danger from wild beasts, especially tigers, which in these parts are fearfully abundant." Among the more secluded tribes, human sacrifices are frequent; and a late writer charges⁵ them with the incredible atrocity of cutting the throats of sick persons, and devouring their carcases. Whether or not the latter abomination was at any time customary, it is certain that the former prevailed until a very late period. The meri-

GONDWANA.

torious, and it is believed successful, efforts of the British government to put an end to human sacrifices are adverted to in the article "Goomsoor." A learned writer⁶ sententiously, and in some respects more favourably, describes these people as "the aboriginal inhabitants of the Sangor territory, a simple primitive race, now chiefly confined to the hilly tracts, though some have been tempted to settle in the plains. Their great characteristics are the love of truth, drunkenness, and superstition."

⁶ Elliot, Supplement to Glossary, 311.

⁷ As. Res. xv. 203. Stirling⁷ says: "The Khoonds are found in great numbers in all the hill estates south of the Mahanadi. They form the principal part of the population of Killah Raupur, which has thence been called Kandreh Daudpat. The natives also have the idea of a district situated between Duspalla, Boad, and Goomsoor, inhabited entirely by this tribe of hill people, which they call Khondra. I believe that the vast unexplored tracts of mountain and forest lying at the back of the Ganjam and Vizagapatam hill estates, down as far as the Godavari, are peopled chiefly by Khoonds in a very savage state, who differ probably very little from their neighbours the Gonds, though Captain Blunt observes, on the authority of the jaghireedar of Malwa and Manikpatam, that the Coonds (Khoonds) and Goonds (Gonds) are to be considered quite distinct races."

⁸ Bengal and Agra Guide, 1812, vol. II. part I, 311.

In Bundelcund,⁸ to the north of Sangor, the chief of the Raj-Goonds, claiming royal lineage, is regarded with great deference by the Goonds of that quarter. The representative of the Goond family, formerly sovereign of Deogarh, receives a pension from the Nagpore government: the Goond family of Garha Mandla has a similar provision from the British. The history of a race so rude must obviously be scanty and obscure. The Goond rajah Narsing Rae is represented⁹ in 1399 to have been powerful and wealthy; but his greatness was overthrown¹ in 1433, by Hooshung, the Mussulman monarch of Malwa, who, having slain him in battle, reduced Kehrta, his capital. Subsequently, in 1513, the Goond chiefs are found forming² a powerful confederacy against the king of Malwa. The western part was subjugated³ by Akbar, and included within the fiscal organization of his empire; Kehrta, the capital of the principal Goond rajah, being mentioned in the Ayceen Akbery⁴ as chief place of a circar of the south of

GON.

Berar. The eastern part, as remarked by Rennell,⁵ "was neither reduced by Akbar, nor even known in particulars to the author of the *Ayeen Akbery*." * The rajah of Deogarh, in this part of Gondwana, was, in the latter part of the seventeenth century,⁶ induced to profess Muhomedanism by the influence of Aurungzebe; and in 1744, his sons having embroiled themselves with Ragoghee Bhonsla, were by him deprived of their possessions, which he incorporated with his own.⁷ Ragoghee in the previous year had overrun and partially subjugated Western Gondwana. There is henceforward little to relate until the operations of the British forces in the Nagpore dominions in 1818-19. Appa Sahib Bhonsla, the rajah of Berar, having fled from Nagpore, his capital, took refuge⁸ among the Mahadeo Mountains, in Western Gondwana. The British forces tracked him with unwearied perseverance through those intricate wilds, and, successively gaining his fastnesses and lurking-places, obliged him to fly in disguise. Another British armament overrunning Southern Gondwana, stormed the fortified town of Chanda;⁹ a third marching into South-eastern Gondwana, stormed the town of Kompta,¹ and took military occupation of the neighbouring country. By the treaty of Nagpore, in 1818, the British government acquired the extensive tract now denominated the Saugor and Nerbudda territory, with other considerable tracts in the northern portion of Gondwana. It may, however, be observed in conclusion, that the name Gondwana must be regarded as obsolete.

a ridge of the Sub-Himalaya, bounding the Patlee Doon to the north-east. It is situate three miles to the right of the route, by the course of the Ramgunga (Western), from Moradabad cantonment to Fort Almorah, 80 miles by route N.E. of the former, 26 W. of the latter. Lat. $29^{\circ} 35'$, long. $79^{\circ} 16'$.

E.I.C. Ms. Doc.

GOOLAH.—A river rising in the southern or outer group of the Himalaya, in the British district of Kumaon, lieutenant-governorship of the North-West Provinces. Lat. $29^{\circ} 23'$, long. $79^{\circ} 44'$. It leaves the mountains close to Khera, in lat. $29^{\circ} 15'$, long. $79^{\circ} 37'$, after a tortuous course, generally in a south-westerly direction, for a distance of thirty miles, in which it receives the drainage of Nyni Tal, Bhim Tal, and some smaller lakes. From its entrance on the plain, it takes a further course a little west of south for eighty miles, to its junction, under the name of Sunka, with the Ramgunga, on the left side of that stream, in lat. $28^{\circ} 17'$, long. $79^{\circ} 27'$.

¹ Burnes, Trade of the Derajat, 93.
Leech, App. 42.
Vigne, Ghuznee, 83.

GOOLAIREE.¹—An important pass across the Suliman range, from the Derajat into Kabool. It holds its course along the channel of the Gomul river, or (in the words of Burnes) "leads by broken rugged roads, or rather the watercourses of the Gomul, through the wild and mountainous country of the Muzarees." It is a pass of great importance, being the middle route from Hindostan to Afghanistan, as the Khyber is the northern, and the Bolan the southern. Immense caravans, consisting principally of Lohani Afghans,² every spring traverse it westward from the Indus and the adjacent countries, and, returning in autumn, winter in the Derajat. The Goolairee Pass enters the Suliman Mountains at their eastern base, in lat. $32^{\circ} 6'$, long. 70° . Its course is very winding: for about twenty miles from its entrance into the mountains, the direction of the road is north-west; then for about forty miles it proceeds in a westerly direction, though with numerous deviations at short intervals: it then turns to the north-west, in which direction generally it holds a sinuous course to Ghuznee. It is much infested by freebooters of the Vaziri Afghan tribe, and the caravans have often to fight their way with much loss of life and property.

GOOLUREEA, in the British district of Moradabad, lieutenant-governorship of the North-West Provinces, a village on the route from the town of Moradabad to Meerut, and 22 miles W. of the former. The road in this part of the route is indifferent; the country open, flat, and partially cultivated. Lat. $28^{\circ} 54'$, long. $78^{\circ} 31'$. Garden, Tables of Routes, 230.

GOOMA.—A town in the British district of Ramgur, presidency of Bengal, 33 miles N. of Hazareebagh. Lat. $24^{\circ} 25'$, long. $85^{\circ} 35'$. E.I.C. Ms. Doc.

GOOMA.—A river of the peninsula Kattywar, presidency of Bombay, rising in lat. $22^{\circ} 18'$, long. $71^{\circ} 30'$, and, flowing in an easterly direction for seventeen miles through the territories of native chieftains, and fifty-three miles through the British district of Ahmedabad, it turns south-east, and after a further course of eighteen miles, falls into the Gulf of Cambay, in lat. $22^{\circ} 3'$, long. $72^{\circ} 17'$.

GOOMANOOR.—A town in the British district of Bellary, presidency of Madras, 23 miles E. of Bellary. Lat. $15^{\circ} 10'$, long. $77^{\circ} 19'$. E.I.C. Ms. Doc.

GOOMGAWN.—A town in the native state of Bhotan, 57 miles N.W. from Nowgong, and 48 miles N.N.E. from Gowhatty. Lat. $26^{\circ} 47'$, long. $92^{\circ} 3'$. E.I.C. Ms. Doc.

GOOMGONG, in the British province of Saugur and Nerbudda, lieutenant-governorship of the North-West Provinces, a town on the route from Hoosungabad to Boorhaunpoor, 59 miles S.W. of the former. Lat. $22^{\circ} 5'$, long. $77^{\circ} 9'$. E.I.C. Ms. Doc.

GOOMLA.—A town in the district of Singboom, on the south-west frontier of Bengal, 106 miles S. from Hazareebagh, and 111 miles W. from Midnapoor. Lat. $22^{\circ} 30'$, long. $85^{\circ} 41'$. E.I.C. Ms. Doc.

GOOMSOOR, in the British district of Ganjam, presidency of Madras, a town situate 43 miles N.W. of Ganjam. It was formerly the principal place of a feudal possession of the same

GOOMTEE.

name, tributary to the British, but the native chief failing in his feudatory obligations, and subsequently rising in rebellion, the zemindary, in 1835, was declared forfeited to the paramount power.¹ A period of disorder ensued, during which atrocious acts of violence and outrage were perpetrated, and at length it was found necessary to appoint a special commission, with a view to the restoration of order and tranquillity.² Among the beneficial measures arising from these proceedings, is the suppression in this part of India of human sacrifices. A discovery had been made that this horrible practice prevailed to a considerable extent among the Khoonds, a barbarous people inhabiting the adjacent frontier tracts. Recourse was had in the first instance to conciliatory means, by which it was hoped the civilization of the Khoonds might be effected; but the experiment, though continued through a series of years,³ failed in presenting any prospect of ultimate success; and in 1845, a commission for the suppression of Meriah sacrifices was appointed by the Indian government.⁴ Disturbances again broke out, attended with great destruction of life and property, and it became necessary to call in military aid.⁵ The insurgents were defeated, and peace restored. Several chiefs have been induced to enter into formal engagements to abandon the practice⁶ of human sacrifices and female infanticide, on condition of British protection; and these barbarous rites are now considered as effectually suppressed.⁷ The town of Goomsoor is in lat. 19° 50', long. 84° 40'.

GOOMTEE.—A river rising in lat. 23° 43', long. 92° 24', in the native territory known as Independent Tipperah, and flowing through that state in a westerly direction for eighty miles, and for sixty miles through British Tipperah, falls into the Megna or Brahmapootra river, in lat. 23° 32', long. 90° 42'.

GOOMTEE.^{1*}—A river rising in the British district of

* Gumti of Tassin; Gumti of Richardson; ¹ Gomati and Gumti of Wilford, ² and also Vasishti of the same author; the river of Jônpur, and also the Gûi of Baber or his translators. Hamilton styles ³ it "Gomati;" and adds, "it is named the Goomty, from its extremely winding course;" probably following the authority of Lord Valentia, who states, ⁴ "the Goomty river, so named, like the ancient Meander, from its winding course." Ritter, ⁵ too, adopts this view: "The Gumty (Gomati, that is, winding, in Sanskrit), which is denominated from its serpentine course, like the Meander."

GOOMTEE.

Shahjhanpore, lieutenant-governorship of the North-West Provinces, in an alluvial tract between the rivers Deohah or Gurrah, and Ghogra. According to the surveyor-general's map, Fuljur Tal, the source of the Goomtee river, is a small* lake or morass, in lat. $28^{\circ} 35'$, long. $80^{\circ} 10'$, and nineteen miles east of the town of Pilleebheet. As the elevation of Pilleebheet above the sea is estimated at 517 feet, and the intervening country is remarkably level,† the source of the Goomtee may be assumed as about 520 feet above the sea. It takes a course sinuous, but generally to the south-east, for the distance of forty-two miles, when it crosses into the territory of Oude, and according to the surveyor-general's map, it, at the distance of about ninety-four miles from its source, in lat. $27^{\circ} 28'$, long. $80^{\circ} 27'$, receives on the left side a stream flowing from the north, and having a course of about forty miles. From this confluence the Goomtee continues its progress in its previous direction for about eighty miles, to Lucknow, receiving during its course the Suraru. It is at that city navigable, and crossed by a bridge either of brick‡ or of stone. Rennell describes² it to be at that place "a small river," and Lumsden,³ "a paltry and narrow stream;" but according to Von Orlich,⁴ a bridge of boats traversing the stream, below that of masonry, is 240 paces in length; and the same traveller states that an iron bridge of three arches, sent out in pieces from England, to traverse the river, was calculated for a width of 200 paces. The river certainly admits of navigation to an important extent; a small§ steamer belonging to the king of Oude having

GOOMTEE.

^a Spry, *Modern India*, i. 233.
^b Beschreibung von Hindustan, i. 183.
^c Topography of Oudh, 12.

tested^b its capability in this respect. Tieffenthaler^c observes that the breadth of the river is more remarkable than its depth. Though its value for the purposes of navigation and irrigation is great, the water, according to Butter,^d is often contaminated by gross impurities, and occasionally becomes the source of disease. "During the rainy season, the water of the Goomtee is loaded with an immense quantity of yellow clay, and becomes unfit for drinking; and when any great mortality prevails at Lucknow, or along the banks of the river, a putrid seum forms on its surface, occasioned by the number of dead bodies thrown into it." Fish, however, so abound in it, that Butter^e estimates that a fifth of the population draws its subsistence from that source. It is greatly affected by the periodical rains, rising and falling annually from that cause about fifteen feet;^f and according to tradition, the variation formerly was much greater. At all times "it is excellently adapted¹ for navigation, its waters never dispersing themselves over a greater breadth than 140 yards, and having generally a depth of four feet in the driest season; while its excessive windings, which lengthen its course seventy-five per cent., answer the purpose of canal locks in diminishing slope and rapidity. It is, however, intersected at every four or six miles by kankar (calcareous conglomerate) ridges of two or three yards in width, which in the dry season sometimes diminish the depth to two feet. These ridges might be removed at no great expense, were the political condition of the country such as to give its natural importance to the trade between central Oude and the British provinces. At present, the few boats which convey supplies to Lucknow return empty. During the rainy season, boats of 1,000 or 1,200 maunds (forty tons) are sometimes seen proceeding to Lucknow." The river continues its course in a south-easterly direction from Lucknow, and about seventy miles below, it, according to the surveyor-general's map, receives on the left side, in lat. 26° 42', long. 81° 40', the Kuliani, a stream flowing from the north-west, and having a course of about eighty miles. Below this confluence, the river's right bank is in general high, and consists of solid kankar; the left, low and sandy. At the station of Sultanpore, about 170 miles south-east of Lucknow by the river's course, eighty in direct line, the stream is in the dry season 100 yards² wide, with a mean depth of four feet, and a current of

two miles an hour. About fifty-two miles lower down, and in the same direction, it passes over the frontier into the British district of Jounpoor, and flows through it thirty miles, to the town of the same name, where its breadth is such as to require a bridge³ of sixteen fine arches. About eighteen miles below that town, on the right side, it receives the river Sai; thirty-three miles lower down, in its course by the district of Benares, on the same side, the Nind; and five miles below the last confluence, and in lat. $25^{\circ} 29'$, long. $83^{\circ} 15'$, it falls into the Ganges on the left side, after a total course of 482* miles. Close above its mouth, it is crossed by means of a bridge⁴ of boats from the middle of October to the middle of June, and during the rains by ferry.

GOONASS PASS,¹ in Bussahir, across the southern range of the Himalaya, which hold a direction from east-south-east to west-north-west. In approaching this pass from the south side, the road first proceeds upwards by the course of the Rupin, a feeder of the river Tons. The valley through which this river flows is terminated abruptly by a steep ridge, down which the stream pours in a cascade above 100 feet high. The ascent is by a path winding up by this stream, and proceeding over an expanse of snow to the crest of the pass, 16,026² feet above the sea. The inclination of the mountain-slope on the northern side is more gradual, but still very difficult, being, as far as the eye can reach,³ a dreary expanse of snow. The Goonass Pass lies in lat. $31^{\circ} 21'$, long. $78^{\circ} 13'$.

Mem. on Stat. of
N.W. Prov.

GOORGAON.

of whom 176,328 are returned as Hindoo and agricultural; 105,180 Hindoo non-agricultural; 109,792 as Mahomedans, and others not being Hindoos, agricultural; and 69,026 of the like classes non-agricultural. There are four towns,* containing each between 5,000 and 10,000 inhabitants, and two† containing upwards of 10,000. The climate is for the greater part of the year dry³ and hot. The general elevation of the country is about 820 feet above Calcutta, or 840 above the sea; that of the town of Goorgaon being fixed by a scientific observer at 817.⁴ Some parts are, however, considerably higher. Jacquemont⁵ estimates the height of the hills about Soonah at more than 400 feet above the general level of the country; and Fraser⁶ mentions some which rise 600 feet above it. The part extending along the right bank of the Jumna⁷ is low, level, and in many places rather fertile, though, long after the cause had ceased to operate, it continued to be overrun with jungle, the consequence of the neglect of cultivation, produced by the incessant devastation by the Mahrattas and other freebooters, previously to the conquest of the country by the British. Heber,⁸ who passed in 1825, observes, it "is still but badly cultivated; but fifteen years ago it was as wild, I am assured, as the Terrai, as full of tigers, and with no human inhabitants but banditti." The progress of improvement, however, seems to have been rapid, as Jacquemont,⁹ five years later, describes the country as rather well cultivated; and more recently a further stimulus has been given to agricultural industry by the revenue settlement of the district, under which the rate of the government assessment on the land has been fixed for a series of years, and is not liable to be increased until the year 1872.¹ Six or eight miles west of the Jumna, the country rises into a sort of table-land of rocky and quartzose formation, containing oxydes of iron² and manganese, and bearing scanty and stunted jungle of acacias, of zizyphus, and *Butea frondosa*. This wild growth, dry and withered during the greater part of the year, shoots out with considerable luxuriance during the rainy season, and affords excellent browsing to goats, the principal stock of the natives. In a few places, gneiss and mica schist crop out. In the vicinity of

the town of Perazapore, iron-ore is extracted and smelted;² but the quantity diminishes annually, in consequence of the great difficulty of obtaining charcoal, the country being very scantily wooded; and the miners and iron-workers earn but a very wretched subsistence. The surface of the country is furrowed by numerous deep chasms and ravines, usually indicating the course of a torrent. The air in many of these ravines is, in autumn, deadly in the extreme, especially where the course of the torrent is marked by the growth of bamboos,³ which are invariably signs of the insalubrity of the situation. Yet each generally contains a hamlet of goatherds, now of necessity peacefully dwelling under the powerful but mild restraint of British rule, but until lately the pests of the surrounding districts, which they incessantly harassed with their incursions, sweeping away all moveable property, and seizing the inhabitants, with the view of extorting ransom. This rude people are of the Meo or Mewatti race, for the most part nominally professing Mahomedanism, but intermingling it with innumerable Hindoo superstitions. They are very fond of animal food, especially goat's flesh, and also of spirits, but are not addicted to opium. Jacquemont,⁴ who considers them the aborigines of this part of India, describes them as very black, with the lower extremities long, the features in general not strongly marked, but the nose approaching to the aquiline form, lips rather prominent, moderately-sized mouths, and oval eyes, the cast of their countenances altogether resembling that of the North-American Indians. Westward of the first rocky table-land, rising from the valley of the Jumna, and inclosed between it and the rocky range still further west, is a valley or depressed sandy plain, stretching from north to south, about twenty miles in length and six or eight in breadth. In many places, the ground is so saturated with salt, that in the hot dry weather the surface is covered with an efflorescence⁵ of it; the soil is barren, or produces merely a scanty growth of mimosa, and a few other products, common under such circumstances. These tracts are so abruptly defined, that, in the immediate neighbourhood of them the soil will be found free from saline impregnation, and fertile, the wells also yielding fresh water. In many places, by digging to the depth of twenty or thirty feet, fresh water is found; but if the well be sunk ten

GOORGAON.

or twelve feet lower, salt springs are reached, the water of which is less saline than that of the sea, but more bitter, in consequence of containing a large quantity of sulphate of soda and muriate of magnesia. The salt water of each well being raised in a large leathern bucket, worked by rope and pulley, and set in motion by the labour of oxen and buffaloes, is conveyed through a small channel into a reservoir two or three feet deep, and lined with clay or mortar; and the moisture exhaling by the heat of the sun, the crystals are collected for sale. The quantity of salt produced in this way was formerly very considerable, but the article is now almost excluded from the market by the cheaper produce of the Sambhar Lake. In this sandy tract is a jhil or lake, about eight miles in length from north to south, and four in breadth. It is shallow, and its water, though without outlet, is fresh.* It is frequented by great numbers of water-fowl, especially pelicans.

The greater part of the district of Goorgaon passed to the British by the treaty of Serjee Anjengum, dated 30th December, 1803, by which Doulut Rao Seindia ceded⁷ to the East-India Company his territories "northward of those of the rajahs of Jeypore and Joudpore, and of the rannah of Gohud." Part of it, containing about a hundred and eighty square miles, was held in jaghire by the Kashmirian adventurer Zebal Nisaa, more generally known under the name of the Beegun Sumroo, and lapsed⁸ to the British on her death in 1836. Another portion of about 200 square miles, termed the jaghire of Ferozepore, from its principal place, was held with Loharoo by Shamsuddin Khan, who took it by descent from Ahmad Buksh Khan, to whom it had been granted⁹ by the British government early in the present century, on account of services rendered against the Mahrattas. Shamsuddin Khan having, with the view of defeating some contemplated measures which would affect his jaghire, caused the murder of Mr. William Frazer, the British political agent at Delhi, was hanged¹ at

* It has been somewhat hastily taken for granted, that extensive pieces of water without outlet are always salt; but in addition to the fact instanced in the text, and vouched for by Jacquemont, Humboldt mentions an extensive fresh-water lake in South America without outlet, and Burnes states the water of the Sea of Aral to be drinkable.

mits of the inclosing rocks are connected by a rampart, and the access to the town within is through two openings,³ secured by fortified gateways, one on the south-east, the other

⁴ Id. 15.

on the south-west; and there are besides two footpaths, affording a communication through sallyports. In the northern

⁵ Report, ut supra.

part of the circuit of inclosing rocks is an immense smooth rock, which, "fortified⁴ by gradations surmounted through

fourteen gateways, overlooks and commands the whole of the other works, and forms a citadel which famine or treachery can alone reduce." On the summit⁵ of this fortified hill are

several tanks and reservoirs for water, and various buildings, in which are detained some state prisoners. About half-way

down the northern side of this huge rock is a projecting shoulder of considerable extent, called Mha Gooty, on which

are barracks, formerly occupied by part of a European regiment, but now fast falling to decay. External to this circular

inclosure of rocky hills, and on the west side, are the present cantonments, with a contiguous pettah, consisting of one principal street, well drained, and having tolerably good houses.

The cantonment, once of considerable size, is now in ruins, with the exception of two or three houses. There is a good parade-ground, on the north of which are a place of arms, store-rooms, and huts contiguous, for accommodating native infantry. On the west of the cantonment is a large tank, which is devoid of water during part of the year. This place, formerly the head-quarters of a brigade, including one European regiment, is now garrisoned by two companies of native

GOP.

infantry, who enjoy excellent health, the air being in general salubrious. The population of the town is stated to be 4,386, of whom one-fourth are Mussulmans, the rest Brahminists of various castes, with the exception of about forty Christians. Elevation of highest summit above the plain 989 feet,⁶ above the sea 2,171. Distance from cantonment of Bellary 48 miles; from Bangalore, N., 146; Madras, N.W., 215. Lat. 15° 7', long. 77° 42'.

route from the cantonment of Agra to that of Etawah, and 20 miles² N.W. of the latter. Water is plentiful in this part of the route, and the road is in general good, though in some places sandy; the country is cultivated, and studded with small villages. Lat. 26° 59', long. 78° 51'.

E.I.C. Ms. Doc.

GORBOONJEE.—A town in the native state of Calahandy, 153 miles N. by W. from Vizagapatam, and 153 miles W. by N. from Ganjam. Lat. 19° 50', long. 82° 51'.

E.I.C. Ms. Doc.

GOBEYEE, in the British district of Allygurh, lieutenant-governorship of the North-West Provinces, a town, the principal place of the pergunnah of the same name. Lat. 27° 42', long. 77° 54'.

¹ E.I.C. Ms. Doc.

GORI, or GORIGUNGA,¹ * one of the most considerable feeders of the great-river Ghogra, rises within and near the northern boundary of the British district of Kumaon, lieutenant-governorship of the North-West Provinces, about twelve miles from the southern base of the Unta Dhura Pass into Hiundes or Chinese Tartary, and in lat. 30° 34', long. 80° 16'.

² In note to Manson, ut supra, 1106.

It flows from a vast glacier, apparently of very remote formation. This is thus described by Weller:²—"The river comes out in a small but impetuous stream, at the foot of apparently a mass of dirt and gravel, some 300 feet high, shaped like a half-moon. This is in reality a mass of dark-coloured ice (bottle-green colour), extending westward to a great distance, and covered with stones and fragments of rock, which in fact form a succession of small hills. I went along this scene of desolation for a long space, but could not nearly reach the end. Here and there were circular and irregularly-shaped craters (as it were), from 50 to 500 feet diameter at top, and some of them 150 feet deep. The ice was frequently visible on the sides; and at the bottom was a dirty sea-green-coloured pool of water, apparently very deep. Into one of these craters I rolled down numerous large stones from off the edge, and in a few seconds huge masses of ice rose from below, seemingly detached by the agitation of the water." Webb³ found the stream at its exit

GOR.

from the glacier twenty-eight feet wide and four deep, and from its coldness and great rapidity altogether unfordable. There is no passage up the gorge beyond the glacier. The elevation above the sea of the point of emergence from the glacier is, by barometer, 11,543 feet.⁴ The great accumulation of snow in the gorge results from the fall of avalanches, which Webb observed to cause in a few days an increase in the thickness of the stratum of upwards of forty feet. Hence, notwithstanding the extraordinary rapidity of the stream, resulting from a fall⁵ in some parts of its bed of 800 feet per mile, the river is overlaid with deep snow for a considerable distance below its source. It first takes a southeasterly direction for four miles, to its confluence with the Ghunka, which, rising⁶ on the southern declivity of the Unta Dhura Pass, has a course nearly south, and in lat. $80^{\circ} 24'$, long. $80^{\circ} 12'$, joins the Gori on the left side of the latter. Though the Ghunka has a greater length of course by about twelve or fourteen miles, and a greater⁷ volume of water than the Gori, the latter gives its name to the united stream. For some miles below the confluence, the stream varies in width from twelve to twenty yards, and runs with such extraordinary violence and rapidity, as in many places to resemble a cascade tumbling down a rugged face of rocks; in others it is hid below a continuous mass of ice and snow. In forty miles, the declivity of the waterway is 6,599 feet, or upwards of 160 in a mile. It receives on the right and left many torrents, none very considerable; and, continuing its course in a southerly direction, so as totally to run about sixty miles, falls into the Kalce on the right side. Webb, who crossed it at this place by a sangha or spar bridge, found it unfordable, 102 feet wide, very violent and rapid. A short distance lower down, it is, however, fordable in three and a half feet water. The confluence is 1,972 feet above the sea. Lat. $29^{\circ} 45'$, long. $80^{\circ} 25'$.

GORIHAR, or GOURIHAR,¹ in Bundelcund, the principal place of the jaghire or feudal grant of the same name, a small town or village 16 miles S.W. of Banda, 66 S.E. of Calpee. Lat. $25^{\circ} 16'$, long. $80^{\circ} 15'$. The jaghire² is stated to comprise an area of seventy-six square miles, and to contain nineteen villages, with a population of 7,500 souls, and yielding a revenue of 65,000 rupees (6,500*l.*). It is held of the East-India Company, under grant dated November, 1807, and the

GORUCKNATH, in Sirhind, a village on the route from Pinjor to Malown, and 12 miles N.W. of the former place. It is situate at the base of the Sub-Himalaya, near the right bank of the river Sursa, and on the north-eastern border of the Pinjor Doon. Lat. $30^{\circ} 54'$, long. $76^{\circ} 54'$.

¹ E.I.C. Ms. Doc.

GORUCKPORE,¹ a district under the lieutenant-governorship of the North-West Provinces, is named from its principal place. It is bounded on the north by the territory of Nepaul; on the east and south-east by the district Sarun; on the south by the British district of Azimgurh; on the south-west and west by the territory of Oude. It lies between lat. $26^{\circ} 7'$ — $27^{\circ} 30'$, long. $82^{\circ} 12'$ — $84^{\circ} 30'$, and includes an area of 7,346 square miles.^{2*} The district is in general remarkably^{3†} level, but at a few spots in the east and south-east, there are some ridges of slight elevation, seldom exceeding sixty feet in perpendicular height above the plain, with a breadth of from 100 to 300 yards. They consist of a light soil, well suited for the growth of trees, but are not cultivable, the steepness of their slopes precluding irrigation. The more southern are visible to those passing up and down the Gauges.⁴ Their crest has an uneven outline, and they are rendered the more remarkable by the fact that no similar elevations are visible in navigating the river from the vicinity of the Himalayas. From calculations founded on the slope of river-beds, the average

³ Buchanan, Eastern India, II. 205.

⁴ Skinner, Excursions in India, II. 260.

* The extent of this district was formerly larger. In 1832 a portion of it, and a portion detached from Ghazee pore, were formed into a separate collectorate, called Azimgurh.

† Buchanan mentions an exception to the generally level character of the country,—the mountain of Maddar, in the north of the district; but that tract was ceded to the Goorkahs in 1816.

GORUCKPORE.

appears doubtful. Wild elephants are very destructive, and have been often seen within a mile or two of the large town of Goruckpore. They do much injury to the grain, and sometimes kill persons in the less-frequented parts. The rhinoceros is not so common as the elephant;^{*} but wild buffaloes are frequently seen in herds of several hundreds. Wild swine, deer, and antelopes are abundant. Monkeys are common in the woods, and porcupines are met with in all parts. The goshawk or baz is tamed for falconry. The parrot, paroquet, peafowl, bustard, partridge, quail, lovebird, jackdaw, and lark, abound. The number and variety of waterfowl is astonishing; and they are used as food to a great extent. Among them are cranes, ducks, coots, and grebes. Porpoises are found in the large rivers, and tortoises in both running and standing water. The ghariyar or Gangetic crocodile, and the nak or alligator, are very numerous and dangerous, penetrating into every stream and piece of water during the rains. Serpents exist in great numbers; and it is reported that between 200 and 300 persons die every year of their bites. Scorpions swarm in many places, but their bite is never fatal. Fish are abundant, but usually small, the ravages of the crocodiles preventing any considerable supply of those of large size. According to Buchanan,² 1,625 families, employing 395 small boats, are engaged in fishing. Honey is produced in considerable quantities, and the lac insect abounds; but little care is taken to collect its produce. 2 H. 510.

Buchanan estimates the extent of woodland at 1,450³ square miles. The trees comprise the sal (*Shorea robusta*), the pipal (*Ficus religiosa*), the harra, prized both for its fruit and timber, mahua (*Bassia latifolia*), the esculent flowers of which yield a spirit in much request; various species of mimosa, tamarind, and many others. The *Bauhinia scandens*, a climbing shrub, attains the size of a man's waist in girth, is sometimes trained across a stream or a chasm, thus forming a swinging bridge that lasts for years. Bamboos are used intermixed with other plants, to form fences round plantations. Of fruit-trees, the mango is everywhere cultivated, though its produce is of poor quality; there are also species of citrons, 3 Ut supra, 512.

^{*} The Terai, or marshy forest stretching along the southern base of the Sub-Himalaya, is probably the principal habitat of the rhinoceros.

GORUCKPORE.

peach, and pomegranate: long pepper grows spontaneously. The lands liable to inundation are cultivated with rice, which is the staple crop of most parts of this district, though in some wheat⁴ is more extensively grown. A few years since, inquiries were made by the local government as to the probability of the latter becoming a profitable article of export to the United Kingdom, but the results were not such as to afford encouragement to the trial of the experiment.⁵ Other crops are barley, millet, maize, the opium poppy, arhar (*Cytisus cajanus*), gram (*Cicer arietinum*), peas, and various other kinds of pulse; some species of amaranthus, mustard, and other oil-plants; ginger, turmeric, and betel. Cotton⁶ is grown, though not to a sufficient* extent for the home demand. In the experimental farms of the government, native sorts were found to succeed well, but the American kinds failed. Indigo is cultivated by grantees⁷ of the East-India Company. Tobacco is extensively grown, principally for home consumption. The sugarcane is well⁸ suited to the soil and climate, though more remote from the equator than the generality of tracts in which sugar is successfully cultivated. The attention of British capitalists has latterly been directed to the planting of mulberry-trees.⁹

The domestic animals of Goruckpore are camels, horses, asses, kine,† sheep, goats, and swine.

The population being very indigent, and in a low state of civilization, the manufactures are few and simple, being nearly restricted to coarse cottons,‡ woollens, tanning, dyeing, rude workings in metals, sugar-boiling, and extraction of soda and nitre from soils impregnated with those substances. The exports are represented¹ to be grain, pulse, oil-seeds, oil, sugar, melasses, ginger, turmeric, tobacco, lac, honey, wax, indigo, cotton cloth, nitre, ghee or clarified butter, elephants, kine,

* A proprietor and cultivator to great extent states¹ that the cotton of Goruckpore is not fit to be sent down to Calcutta, and is only adapted for local consumption.

† Buchanan gives the numbers of the live stock in great detail; but the statements, if liable to no other objection, are now obsolete.

‡ A proprietor and cultivator (Mr. Sym), who gave evidence before a select committee of the House of Commons on East-India produce, believed¹ that most of the cloth worn by ryots was woven in the villages, and that as much as was made was consumed; but he disclaimed any accurate knowledge on the subject.

GORUCKPORE.

buffaloes, goats, fish, and timber. The imports are said to consist of cotton wool, thread, and cloth, chintzes, silks, broad-cloths, blankets of wool and cotton,* hardware, and some other articles of less importance.

The principal routes are—1. from west to east,² from Fyzabad, through the town of Goruckpore, to Betiya; 2. from south-east to north-west, from Dinapoor³ to the town of Goruckpore, and thence continued in the same direction to Sekrora, in Oude; 3. in a direction nearly from north⁴ to south, from the town of Goruckpore to Azimgurh; 4. in a direction nearly from north to south, from the town⁵ of Goruckpore to Ghazceppore; 5. from north-east to south-west,⁶ from the town of Goruckpore to Sultanpore, in Oude. Great improvements, calculated to develop the resources of the country, have been effected in the district within the last few years, by the Road Fund Committee, resulting in an increase of the government rental, the amount of which was subsequently fixed for a series of years, and is not liable to a further increase until 1859.⁷ A plan adopted by the local government for bringing the waste lands into cultivation, which first came under the notice of the home authorities in 1836, did not, when the details came to be understood, secure their approbation. Vast grants of waste land at a progressive rental, increasing from the fourth to the twenty-fifth year, were made to various individuals, four-fifths of whom were Europeans, and the remainder Anglo-Indians. These grants were stated to have amounted to nearly 418,000 British statute acres, or 653 square miles; and it appeared that three individuals were concerned, either directly or indirectly, in no less than 208,480 acres, or 345 square miles; an area exceeding that of the county of Middlesex. These enormous allotments were judged by the home authorities to have been made without due regard either to the circumstances of the country transferred, or to the means possessed by the

⁷ Act of Govt. of India, VIII of 1840.

* From former notes, it will be seen that the cotton of Goruckpore is unfit for the Calcutta market, but that it was believed that the cloth used by the villagers was mostly of home fabrication. Notwithstanding the badness of the quality, cotton cloth is mentioned as an article of export; but some descriptions of cotton manufactured goods appear also to be imported. Either the export is of coarse goods, and the import of fine, or the representation that Goruckpore exports cotton cloth must apply to a state of things that no longer exists.

GORUCKPORE.

grantees for effecting the required improvement; and orders were given to cancel the grants as far as might be practicable. For the guidance of the local government in future, certain rules were enjoined, and others recommended, for the purpose of avoiding on future occasions the errors committed in regard to these grants. Among the objects proposed by these rules, were the prohibition of any grant of land without previous survey; the prohibition of any grant to a European, unless he engaged to reside on the land himself, and to bring it into cultivation within a specified period; the prohibition of sale or transfer until the land had been brought into cultivation; the limitation of the extent of grants made under general conditions, and the annexation of special conditions to additional grants; the resort to public competition, by inviting tenders for the purchase of waste land; the admission of natives to a share in the distribution; the preservation of all ancient rights; the maintenance of roads and drains, and the due apportionment of water for irrigation. Some of these points were enforced in orders issued in 1836, and final and peremptory orders on the subject were sent out in 1842.

* Shakespear,
Mem. Statistics of
N.W. Prov. 137,
170.

The population, according to a census taken in 1848, amounts to 2,376,533.⁸ Of these, 1,779,678 are returned as Hindoos engaged in agriculture; 331,247 Hindoos employed in other occupations; 198,765 Mahomedans and others, not being Hindoos, agricultural; 66,843 non-agricultural. It will thus be seen that the great majority of the inhabitants of Goruckpore are Hindoos. The Mahomedans of course form the next largest number. There are, it is said, a few Sikhs; and a small number of the rich merchants and tradesmen profess the doctrine of the Jains. Men of all classes and descriptions formerly went armed for the purpose either of outrage or defence; but since the country passed into the hands of the British government, all the strongholds of freebooters have been demolished, and no open resistance is now shown to the ruling authority.

* Oude Papers, xx.

The tract constituting this district was formerly part of the possessions of Oude, and was comprised within the transfer of territory made under the treaty of the 10th November, 1801,⁹ by the nawaub vizier, to the East-India Company, in commutation of their claims for subsidy and other charges.

GORUCKPORE.

The district contains three towns having more than 5,000 inhabitants but less than 10,000, and two (Goruckpore and Jungul Purowna) having more than 10,000. Some notice of them will be found in the proper places under the alphabetical arrangement.

GORUCKPORE.¹*—The principal place of the British district of the same name, within the limits of the lieutenant-governorship of the North-Western Provinces. It is situated on the left bank of the Raptee, which is here a fine navigable river, with a channel about 200 yards² wide, at all seasons containing deep water, and consequently passable only by ferry,³† there being no bridge. "Only a corner of the town⁴ is adjacent to the bank, the extent of high ground being there small, and widening farther back from the river. The situation, however, is good and healthy, and would be more agreeable were the forests and plantations cleared away, as they exclude ventilation, occasion many musquitoes, and harbour great numbers of monkeys, which are exceedingly troublesome. But the natives object strongly to any such measure." This favourable report of the place must, however, be received with some qualification, as there is much marsh in the vicinity of the town, and in the rainy season the whole country southwards for six miles, as far as the river Ami, is often laid under water.⁵ Tieffenthaler⁶ estimates its circuit at three miles, but mentions that the natives reported it to be seven. A few of the houses are of brick, and tiled; the larger portion of the remainder have mud

⁶ I. 183.

* From Gorukh, the proper name of a Hindu teacher, and Pur, "town." Buchanan says¹ the name "is no doubt derived from the personage named Gorakhuath in the vulgar language, and Gorakshanath in the Sanskrit, who is said to have resided some time at the place, performing penance. The fables which his followers relate concerning this person, are so extravagant, from their supposing that he is the only true God, who has always existed, that nothing satisfactory can be derived from this source concerning the duration of the town of Goruckpoor." Buchanan appears to deem this personage purely imaginary. It is said, however, that a person² named Gorakh flourished in the beginning of the fifteenth century; that he was a man of some acquirements, and has left specimens of his scholarship in two Sanskrit compositions. According to the authorities³ of the sect, "Gorakh is but one of nine eminent teachers or naths." Tieffenthaler⁴ also mentions Gorenath, "a hermit held in very great esteem among the heathen."

GORUCKPORE.

walls, but are tiled; but a small number are mere hovels of hurdle, and thatched. "When new,⁷ like others in this district, the tiled roofs are uncommonly neat, but they are very soon spoiled by the monkeys, who, from their insatiable curiosity and restless mischief, turn over the tiles, and render the roofs the most unseemly and useless in the world." There are two mosques; one completely ruinous; the other, which is in better preservation, and is still frequented, is built of brick, in a remarkably heavy, tasteless style.⁸ Both buildings are mentioned by Tieffenthaler,⁹ who describes the former as ancient a century ago. The Imam-barah,* built by Shoojah-oo-Dowlah, nawaub of Oude, is handsome and spacious, and is kept in excellent repair by a person who has a large endowment. It would have a striking and fine effect, were it not surrounded by a chaos of filth and misery. The fort bears the name of Basantpoor, and is situate close to the left bank of the Raptee. The ground-plan given by Tieffenthaler¹ is a regular square, with a bastion at each corner, and two intermediate, at regular intervals on each face; and consequently twelve altogether. When the English took possession, in 1802, the fortifications had become ruinous, and part of the fort was then demolished, and some rooms built in the European style. Buchanan² adds—"But still it is a very sorry place, although it serves the collector as an office and treasury. Round the town the magistrates have made some good roads, and the houses of Europeans are scattered on the east, south, and west sides of the town, especially on the last, where the military cantonments and jail are situated. I have seen no station where the houses of the Europeans have so poor an appearance, or where the grounds about them are so destitute of ornament." The cantonment is at present on the east side³ of the town, on the highest ground that could be appropriated for the purpose; and from the sandiness of the soil, water⁴ seldom lodges on it for more than a day or two. But this high ground immediately rises from the Ramgatal, a jhil or shallow lake situate on its south-east side, which is six miles long⁵ and three broad, and from the channels by which this

GORUCKPORE.

expanse of stagnant water receives the drainage of a great jungle lying on the north, and stretching eastward of the cantonment. When this jhil and the river Raptée rise to a certain height, a communication is formed between them, and the level of the stagnant water is regulated by that of the river. If, however, the communication be long interrupted during hot weather, the whole surface of the jhil becomes a mass of decayed vegetable matter. The cantonment⁶ affords accommodation for a detail of native artillery, a detachment of light cavalry, and a regiment of native infantry. The civil establishment consists of the usual European officers and native functionaries. The population of the town of Goruckpore, according to a census taken in 1848, amounted to 45,265.⁷

⁶ Bengal and Agra Guide, 1841, vol. II. part III. 161.

⁷ Mem. Stat. of N.W. Prov. 140.

A short distance from the town is the sthan or place of Gorackhnath,* near which is a tank intended for ritual ablutions, and said to have been miraculously formed.

This town is mentioned in the Ayceu Akbery⁸ as having a brick fort. Elevation† above the sea between 330 and 340 feet. Distance direct from Calcutta, N.W., 430 miles; from Hazarcebagh 230; from Dinapore 180. Lat. 26° 42', long. 83° 23'.

⁸ II. App. 33.

GORUCKPORE, in the British district of Furruckabad, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Bareilly¹ to that of

¹ Garden, Tables of Routes, 84.

* According to Wilson,¹ "the present temple is situate to the west of the city of Goruckpore, and attached to it on the south side are three temples, consecrated to Mahadeva, Pasupatinath, and Hanuman."

¹ As. Res. xvii. 191.

† Colebrooke estimates¹ the elevation of Goruckpore above the sea at 400 feet. Prinsep,² from barometrical observation, estimates the elevation of Benares above the sea at 270 feet. Revelgungo is 165³ miles lower down the Ganges than Benares, and, assuming with Prinsep the slope of the water-line of the Ganges⁴ in that part of its course to be five inches per mile, the elevation of Revelgungo may be estimated at 270—69 feet, or, in round numbers, at 200 feet, and that of the mouth of the Ghaghra, ten miles nearer Benares, at 20½ feet. Now, from the mouth of the Ghaghra to Goruckpore, by the continuous course of part of that river and of the Raptée, is about 130 miles; and allowing a foot per mile for the slope of the water-line, which is perhaps as much as is admissible for streams thoroughly navigable either way, it will be found that the elevation of Goruckpore cannot exceed 20½ + 130 = 334 feet; and consequently, the estimate made by Colebrooke must be regarded as erring in excess.

GOTKEE, in Sinde, a small town on the route from Subzulcote to Shikarpoor, and 34 miles W. of the former place. It is situate six miles from the left bank of the Indus, in a low, level, alluvial country, much overspread with jungle. Though the houses are meanly built of mud, there is a showy bazar, with numerous verandas, decorated with various fantastic devices. The town also possesses a mosque of considerable size, surmounted by a cupola covered with glazed tiles. The vicinity is infamous on account of the predatory and sanguinary character of its inhabitants. Lat. $28^{\circ} 2'$, long. $69^{\circ} 20'$.

* Gosainganj, Saints-town; from Gosain, "a reputed Hindoo saint," and Ganj, "a mart, or market-town."

GOT—GOU.

GOTRA.—A town in the native state of Gwalior, or territory of Scindia's family, 83 miles S.W. by W. from Gwalior, and 99 miles W. by N. from Jhansee. Lat. $25^{\circ} 39'$, long. $77^{\circ} 5'$. E.I.C. Ms. Doc.

GOTTARAO, or **SURDHAR GHUR**, in Sind, a fort on the route from Roree to Jessulmair, and 50 miles N.W. of the latter place. It is situate near the eastern frontier, in the Thur or Sandy Desert, the surface of which undulates in a succession of sandhills, not totally barren, as they produce a spare vegetation of stunted bushes and tufted grass. Water in this district is scarcely to be had except during rains, and even then in small pools barely capable of supplying 100 men. The fort of Gottarao is built of brick, and forms a square of about 200 yards. The wall is from twenty to twenty-five feet high, and a keep in the interior is about ten feet higher. On the east and the greater part of the north side is an outer wall of about ten feet high. There are about a dozen round bastions in various parts of the walls. The fort is supplied with water from a depth of 150 feet by five wells. Two of these are within the walls; the remaining three without, but close to them. During the sway of the Talpoor dynasty, this place belonged to the ameers of Khyerpoor, and was defended by two guns and a garrison of 150 matchlock-men. An inconsiderable village is attached to the fort. It is frequently called Sirdar Ghur (the Sudur Ghur of Walker's map). Lat. $27^{\circ} 16'$, long. $70^{\circ} 4'$. E.I.C. Ms. Doc.
End. Map.

GOUHANEH,¹ in the British district of Banda, lieutenant-governorship of the North-West Provinces, a town three miles² left or S.E. of the route from Allahabad to Kallinger, 65 miles W. of the former, 57 N.E. of the latter. Supplies are abundant, the neighbouring country being level and well cultivated. Lat. $25^{\circ} 18'$, long. $81^{\circ} 9'$. ¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes, 33.

GOULLY, in the British district of Bijnour, lieutenant-governorship of the North-West Provinces, a village on the route from Moradabad to Mozuffernuggur, and 37 miles N.W. of the former place. It is situate in an open and partially-cultivated country, in which water and abundant supplies can be obtained. The road in this part of the route is sandy and heavy for wheeled carriages. Distant N.W. from Calcutta, by Moradabad, 925 miles. Lat. $29^{\circ} 7'$, long. $78^{\circ} 23'$. Garden, Tables of Routes, 204.

GOVERDHUN.

them."* In the Great Indian Atlas,⁵ published by authority,⁵ No. 60. the site of the town is represented in an opening in a range of mountains running north-east and south-west, on the western boundary of the district of Muttra; but Garden,⁶ in his remarks on the surrounding country, states it to be "flat and cultivated." That this, however, is a mistake, appears from the account of Sleeman,⁷ who lately visited this place, and states that "the town stands upon a narrow ridge of sandstone hills, about ten miles long, rising suddenly out of the alluvial plain, and running north-east and south-west." The extremities of this ridge† slope gradually to the plain, from which the sides

* Hamilton relates the following legend :—"Near to Bindrabund there is a mountain named Goverdhana, bent on one side, owing to the following cause. During a great drought, when the people were worshipping Indra, the god of the heavens, Krishna recommended them to propitiate the deity of the mountain, which they accordingly did. Krishna then assuming the form of a god, sat on its top, from whence he stretched out his hand and devoured the food offered; but the weight of his body was such, that the mountain bent under it; in which shape it still continues. In the months of August and October, great multitudes of his votaries, having illuminated the mountain, ascend to its summit, and then perform certain solemnities."

† Sleeman¹ recounts the legend respecting these hills :—"This range of hills is believed by Hindoos to be part of a fragment of the Himalah Mountains, which Hunnooman, the monkey general of Ram, the sixth incarnation of Vishnoo, was taking down to aid his master in the formation of his bridge from the continent to the island of Ceylon, when engaged in the war with the demon king of that island, for the recovery of his wife Seeta. He made a false step by some accident, in passing Goverdhun, and this small bit of his load fell off. The rocks begged to be either taken on the god Ram, or back to their old place; but Hunnooman was hard pressed for time, and told them not to be uneasy, as they would have a comfortable resting-place, and be worshipped by millions in future ages; thus, according to popular belief, foretelling that it would become the residence of a future incarnation, and the scene of Krishna's miracles. The range was then about twenty miles long, ten having since disappeared under the ground. It was of full length during Krishna's days, and on one occasion he took up the whole upon his little finger, to defend his favourite town and its milkmaids from the wrath of Judar, who got angry with the people, and poured down upon them a shower of burning ashes." "It was² night when Hunnooman passed this place, and the lamps were seen burning in a hundred towns upon the mountain he had upon his back." Sleeman³ states that it was the birth-place of Krishna,⁴ but Shakespear

rise abruptly. The population is at present scanty, consisting in a great measure of Brahmins, supported on the endowments annexed to the tombs of the Jat rajahs of Bhurtpore and of Deeg, whose bodies are burned and their ashes inhumated at this town. The tomb of Suraj Mul, the eminent Jat ruler of Bhurtpore, is on the north-eastern extremity of the rock ridge, about two miles from the town, and is a handsome⁶ building, tastefully designed, and elaborately executed in fine white sandstone, little inferior to marble. Connected with this principal building are various subordinate temples, and the whole group extending along one side of a fine tank, full of clear water, and on the other side overlooking a large and beautiful garden. In the middle of the town is the handsome tomb of Ranjit Singh, the rajah who successfully defended Bhurtpoor against British assaults in 1805. On each side of the tomb is a tank, one being full; the other, though deeper, is dry, the contents having been drunk off by Krishna, when heated and thirsty, after dancing with his milkmaids; and never since has it had any water.⁹ Lat. $27^{\circ} 30'$, long. $77^{\circ} 32'$.

GRINGAVARPUNTA.—A town in the British district of Vizagapatam, presidency of Madras, 18 miles W. of Vizianagaram. Lat. $18^{\circ} 6'$, long. $83^{\circ} 13'$.

GUASUBA.—The name of one of the channels by which the waters of the Ganges flow into the sea. Though of considerable size, it is "the most difficult to enter of any on the coast."¹ Its mouth is in lat. $21^{\circ} 35'$, long. $88^{\circ} 55'$.

¹ Horaburgh, i. c33.

GUDDADA.—A river rising in lat. $27^{\circ} 52'$, long. $89^{\circ} 8'$, on the southern slope of the great Snowy Range of the Himalaya Mountains, and, flowing in a southerly direction for 120 miles through Bhotan, and forty miles through the British district of Goalpara, falls into the Brahmapootra on the right side, in lat. $27^{\circ} 3'$, long. $89^{\circ} 57'$.

GUD—GUG.

GUDDRA.—A town in the British district of Hydrabad, province of Scinde, presidency of Bombay, 139 miles E. by N. of Hydrabad. Lat. $25^{\circ} 40'$, long. $70^{\circ} 37'$. E. I. C. Ms. Doc.

GUDNEYREE, in the British district of Mynpooree, lieutenant-governorship of the North-Western Provinces, a village on the route from the cantonment of Allypore to that of Mynpooree, and six miles N.W. of the latter. The road in this part of the route is good; the country open, level, and but partially cultivated. Lat. $27^{\circ} 15'$, long. $79^{\circ} 2'$. Garden, Tables of Routes, 50.

GUDJUNTURGURIL.—One of the Southern Mahratta jaghires. The town of the same name, and its principal place, is situate 98 miles E. of Belgaum, and 74 miles N.W. from Bellary. Lat. $15^{\circ} 43'$, long. $76^{\circ} 2'$. E. I. C. Ms. Doc.

GUDKA.—A town in the province of Guzerat, or territory of the Guicowar, 11 miles S. from the Gulf of Cutch, and 84 miles W. by S. from Rajkote. Lat. $22^{\circ} 9'$, long. $69^{\circ} 33'$. E. I. C. Ms. Doc.

GUDUK.—A town in the British district of Dharwar, presidency of Bombay, 43 miles E. of Dharwar. Lat. $15^{\circ} 26'$, long. $75^{\circ} 43'$. E. I. C. Ms. Doc.

GUDURPOOR, in the British district of Barcilly, division of Pilleebheet, lieutenant-governorship of the North-West Provinces, a town, the principal place of the pergunnah of the same name, on the route by Nanakmath and Rooderpoor from the town of Pilleebheet to Kashipore, 21 miles S.E. of the latter. Lat. $29^{\circ} 2'$, long. $79^{\circ} 17'$. E. I. C. Ms. Doc.

GUERMANDA, in the British district of Kumaon, lieutenant-governorship of the North-Western Provinces, a halting-ground on the route from Almora to Greenuggur, and 48 miles N.W. of the former. It is situate on a considerable stream, crossed here by a sangho or wooden bridge. Supplies are abundant, and the road well made. Lat. $29^{\circ} 58'$, long. $79^{\circ} 9'$. Garden, Tables of Routes, 51.

GUGGUR.¹—A river or great torrent of Sirhind, and the principal stream of that territory. It rises beyond the north-east frontier, in Pateevala, about lat. $30^{\circ} 52'$, long. $77^{\circ} 7'$. In consequence of the extent of the hilly country which it drains, its volume of water in time of inundation is very considerable. After forming the boundary for a short distance between some of the hill districts and Sirhind, it finally enters ¹ E. I. C. Trigon. Surv. Journ. As. Soc. Beng. 1838, p. 753 — Edgworth, Botanic Agricultural Account of Protected Sikh States.

GHUMUR.

the latter, in lat. $30^{\circ} 43'$, long. $76^{\circ} 57'$, whence its course is mainly in a south-west direction through a shallow, level valley, about twenty-nine² miles wide. The Markunda and Sursooty, farther east, flow down the same valley, which, in time of inundation, is deluged with water, forming a close network of streams, and sometimes causing the three rivers to coalesce into one great stream. In the season when lowest, it becomes a "small thread of water."³ Jacquemont,⁴ who crossed it at that time, describes the channel as narrow, but very deep, being, in fact, a ravine scooped by the torrent out of the alluvial soil. The water was then about two feet deep, but appearances indicated that in time of inundation it might be eight or nine. Having received the Sursooty, and some streams of less importance, it, after a course of about 110 miles, generally in a south-west direction, passes into the British district of Hurreemah, and subsequently into that of Butteemah; its course through these two provinces measuring about 110 miles. It then crosses the Beekaneer frontier, close to which, near Badhopal, and twenty-two miles south-east of Bhatnir, in lat. $29^{\circ} 21'$, long. $74^{\circ} 14'$, it is joined by a water-course, the continuation of the celebrated canal of Feroz Shah.⁵ Hereabouts it becomes totally exhausted by evaporation, absorption, and diversion for the purposes of irrigation, but formerly reached the Sutlej, about twenty miles north-east of the town of Bahawalpoor, by a channel which, though now devoid of water, can still be traced to that extent. In the dry season, however, the water does not flow beyond Dandhal. The country about the lower part of its course, though now quite barren and depopulated, abounds in ruins, the evidence of former prosperity.⁶ The river is mentioned by Baber,⁷ under the name of Kagar, and by Rennell,⁸ under that of Caggur or Kenker.

GHUMUR.—A town on the right bank of the river (above), in the British district of Ghazeepoor, lieutenant-governorship of the North-West Provinces, containing a population of 7,420 inhabitants.¹ The place is of comparative importance, there being only ten towns in the whole district of Ghazeepoor containing a population exceeding that of Ghumur. Distant S.E. from Ghazeepoor 14 miles. Lat. $25^{\circ} 28'$, long. $83^{\circ} 51'$.

GUJ.

GUJELHATTI, or GAJELHATTI,¹ in the British district of Coimbatore, a fort in a pass between the territory of Mysore and the district of Coimbatore. This fort, formerly looked upon as of great importance, has of late years been much disregarded, and the pass is scarcely frequented,² those farther north being preferred, as more convenient* for the lines of communication with Madras and Tanjore. The valley through which the pass lies, is the great gorge down the bottom of which flows the Moyar, a large torrent, and the sides of which are formed towards the south-west by the precipitous brow of the Neilgherries, having an elevation of from 3,000 to 4,000 feet above the torrent, and towards the north-east by the steep declivities of the mountains rising towards Mysore. The fort of Gujelhatti, situate on the left bank of the torrent Moyar, was,³ in 1768, taken from Hyder Ali by a British force commanded by Colonel Wood, but was retaken⁴ in the same year. It is distant from Seringapatam, S.E., 63 miles; Coimbatore, N., 38 miles; Madras, S.W., 240. Lat. 11° 33', long. 77° 4'.

GUJERAT.—A considerable walled town of the Punjab, about eight miles from the right bank of the Chennab, and on the great route from Attock to Lahore. It was invested by Maha Singh, who sickened and died in the course of the siege. It subsequently fell into the hands of his more fortunate son, Runjeet Singh, early in the course of his career. Near this place, on the 21st February, 1849, a battle was fought between a British force, under the command of Lord Gough, and a Sikh army, under two chieftains, described as Sirdar Chuttur Singh and Rajah Shere Singh, combined with some troops belonging to the ruler of Cabool, the entire number being estimated at 60,000. This apparently overwhelming force was vigorously attacked by the British, greatly inferior in point of numbers, and driven in succession from point to point, until, utterly defeated, the enemy took to disorderly flight, abandoning their camp, artillery, baggage, and magazines. In addition to

P. Von Hugel, III. 147.

* Hamilton, however, states,¹ that about twelve years before the appearance of his work (1828), the passage had been improved by the formation of a broad practicable carriage-way, winding along the face of the mountain; and refers to a handsome bridge of three arches at the foot of the declivity. But the authority on which his statement rests, is not ascertainable.

GUJURU-WALLA, or GOOJERAWALA, in the Punjab,

GUJ—GUL.

a town on the route from Amritsir to Vazeerabad, and 20 miles S. of the latter place. Here is a large square fort with mud walls, surrounded by a ditch. It was the original residence of the family of Runjeet Singh, whose grandfather, born at this place, was a common soldier. The ashes of Runjeet Singh's father and mother are deposited here in tombs of plain appearance. It a few years ago was the residence of the celebrated Hari Singh, the most dauntless of all the Sikh chieftains. The interior of the fort is very highly decorated, and the garden is described by Baron Von Hügel as one of the finest he saw in India. It abounds in fine fruit-trees, especially orange-trees, covered with fruit superior to that of China. The fragrance from the superb collection of trees, shrubs, and flowers, is described as almost overpowering. Numerous ornamental buildings, appropriately embellished, and a fountain always playing, so as to send forth a broad sheet of limpid water, complete the attractions of the scene. Gujuru-Walla is in lat. $32^{\circ} 10'$, long. $74^{\circ} 13'$.

GUNBHUR.¹—A river rising in the south-western declivity of the Himalaya, in about lat. $30^{\circ} 52'$, long. $77^{\circ} 8'$. It takes a north-westerly course, and flows along the south-western base of the height on which Subathoo stands, and 1,300 feet² below that station, about five miles beyond which, it receives from the north-east its most considerable feeder. It continues its north-westerly course down the deep valley which separates the ridge of Ramgurh from that of Malown, and, after a course of about forty miles, falls into the Sutlej in lat. $31^{\circ} 17'$, long. $76^{\circ} 47'$.

² Lloyd, Journ to Himalaya, i. 135.

GUNDEVEE, in the district of Broach, presidency of Bombay, a town and port situate on the estuary of the river Eeb, at which the British government possess the right of levying customs-duties. As the port, however, belongs in sovereignty to the Guicowar,¹ the provisions of the British customs-laws have not been introduced therein. Lat. $20^{\circ} 46'$, long. $73^{\circ} 2'$.

¹ Bombay Rev. Disp. 24 April, 1840.

GUNDLACAMA, a river of the Madras presidency, rising in lat. $15^{\circ} 40'$, long. $78^{\circ} 49'$, and, flowing in a very circuitous course for 155 miles, through the British collectorates Cuddapah, Nellore, and Guntoor, falls into the Bay of Bengal thirteen miles west of the town of Ongole, and in lat. $15^{\circ} 33'$, long. $80^{\circ} 18'$.

E.I.C. Ms. Doc.

GUNDLAPETTA.—A town in the native state of Mysore, 42 miles S. from Seringapatam, and 89 miles E. from Cannanore. Lat. $11^{\circ} 50'$, long. $76^{\circ} 44'$.

Garden, Tables of Routes, 206.

GUNDOUS, or **GOONDOSE**, in the Rajpoot state of Joudpore, a town on the route from Nusseerabad to Deesa, and 120 miles S.W. of the former. It contains a good bazar, and is abundantly supplied with water. The road, which is firm and good, passes over a level, bare country. Lat. $25^{\circ} 39'$, long. $73^{\circ} 31'$.

GUNDUCK.

GUNDUCK,* SALAGRA, or NARAYANI.¹—A large river, flowing from the Himalaya, and falling into the Ganges. The position of its remotest source has probably not yet been indubitably ascertained. Buchanan² says: "This is a grand river, the most remote source of which, named Damodarkund, is beyond the Snowy Mountains, in the territories of a chief of Bhotan or Thibet, named the Mastang Raja, and now tributary to Gorkha." The position of the source thus assigned is lat. 29° 40', long. 83° 14'. Colebrooke, however, expresses³ a wish "that some traveller may be induced to visit the Himalaya in that quarter, and explore the great Gandhaki river to its source at the foot of Dhawalagiri;" a position laid down from trigonometrical operations in lat 29° 11', long. 82° 59', or about half a degree farther south. After a long and winding course through the immense chasms of the Himalaya and the hills of inferior height south of them, and during which it receives numerous tributary streams, it is joined, at Nayakot, in lat. 27° 31', long. 84° 5', by the Trisoolgunga,†

³ On the Height of the White Mountain of Himalaya, in Brando's Journal, vol. xi. 1st series, p. 243, A.D. 1831.

* Gainda, in Sanscrit, means "rhinoceros;"¹ and Ritter² supposes that hence is the name of the river, but gives no reasons in support of his opinion. Hamilton says, "In northern Hindostan, the term Gunduck is a general appellation for river."³ He quotes Rennell; but though search has been made, no mention of this river has been discovered in Rennell; and the passage quoted by Hamilton, is erroneously given from Wilford, who observes,⁴ "The Gandaci or Gandacavati is called Gandac in the spoken dialects, and is the Condochates of Megasthenes;" and adds, "The⁵ river Gandaca is so called, because it proceeds from a mountain of that name. The people of Nappala call it Cundaci, because it proceeds from the Cunda-Sthala, or the two cavities or depressions of the temples of Vishnu, in the shape of a mountain. It is also called Salagrama, because of the stone of that name found in its bed. Another name for it is Naraynni, because Vishnu or Narayana abides in its waters, in the shape of the above stone." Buchanan observes,⁶ that "all the upper part of the river is usually named Narayani, after the Supreme Being, or Salagrūni, after stones which the Hindoos worship, and which are found in its channel;" and adds, that the name Gandak is given to it in the plains; "nor is it ever used among the mountaineers, except by such as are acquainted with the continuity of the stream, and adapt their conversation to the understanding of the people in the low country."

GUNDUCK.

which comes from the higher parts of the Himalaya north of Kathmandoo, and is considered by Buchanan to have the greater volume of water, though its course is the shorter of the two.* From this point downwards it is navigable⁴ for canoes; and at Bhelaunji, ten miles below the confluence last named, becomes so for boats of considerable burthen. The length of course from its remotest source down to this point will be 200 miles. A short distance below this, it sweeps round the base of Maddar Mountain, in the Sub-Himalayan range. Buchanan⁵ describes the scenery there, as not to be surpassed. "The utmost magnificence, however, of rude nature that I have ever seen, is the view from the Gandaki, in passing up that river by the foot of Maddar. The river is larger, I think, than the Thames at Chelsea, and much finer, being perfectly clear. Its banks are partly abrupt rocks, partly levels covered with very stately forests, while every turn opens a new view of the snowy peaks seen over an endless variety of dark, shaggy mountains, which in most countries would be considered as stupendous." He adds, that upon reaching the plains, it appears in the dry season to have quite as much water⁶ as the Ganges after the junction of the Jumna at Allahabad. In consequence of the height of the banks, the breadth does not much increase in the rainy season, but the current becomes so rapid as to give rise to danger. In the dry season the water is ten or twelve feet deep, and the current, although equable, is very strong, approaching near, but not reaching that degree of rapidity which occasions a rippling noise; the water is perfectly clear, and the bottom consists chiefly of large water-worn pebbles. Though navigable continuously through its whole course downwards from Bhelaunji, there are in the part of its channel nearer that place many rapids and passes, where, the course being obstructed by

* Wilford¹ relates a legend respecting the origin of those two head-waters of the Gunduck. Vishnu dreading the power of the planet Saturn, had recourse to Maya or illusion, and assumed the form of a rocky mountain, but still did not deceive his enemy, who, in the shape of a worm, pierced and gnawed every part of this illusive body. Vishnu was thus tormented for one revolution of Saturn, and through pain and vexation, sweated most profusely, especially about the temples, from each of which issued a stream,—the Crishna or Black, and the Sweta or White Gauduk; the one to the east, the other to the west.

GUNDUCK.

rocks, navigation becomes difficult and dangerous. Near Bhelaunji it first touches the British territory, which for fifteen miles it divides from Nepaul; thence taking a south-easterly direction, forms for twenty miles the boundary between the districts of Goruckpore and Sarun; then for forty miles flows through Sarun, and again for seventeen miles forms the boundary between the two before-mentioned districts, when it again enters Sarun, through which it holds a circuitous course, but generally in a south-easterly direction, for forty-five miles, to lat. $26^{\circ} 18'$, long. $84^{\circ} 58'$, where it touches on the British district of Tirhoot, and continuing its circuitous but generally south-easterly course for sixty miles, during which it forms the boundary between the districts of Sarun and Tirhoot, it falls into the Ganges⁷ * on the left side, in lat. $25^{\circ} 39'$, long. $85^{\circ} 16'$, at the town of Hajepore, situate on the left bank, and opposite the city of Patna. According to the view of Buchanan, its length of course† should be estimated at 407 miles. At its confluence with the Ganges, the latter is a wide expanse of water, probably not less than four miles⁸ in breadth, from Hajepore on the north bank to Patna on the south, and having two large shifting banks⁹ or islands, which much perplex the navigation. It does not appear that the Gunduck, after leaving the mountains, receives any feeder of importance; but during the rainy season it inosculates right and left with many watercourses then traversing that alluvial country. Buchanan,¹ in his report, drawn up above forty years ago, adverts to the great changes which the river-channel had undergone in the thirty years which had then elapsed since Rennell laid down the survey of that part of the Ganges. "The island, when Major Rennell made his survey, which was opposite to the cantonment of Danapur, seems to have been carried away; and that which was then situate east from it, in the middle of the river, now, in a great measure, adheres to the southern bank. In the rainy season, a passage still continues open; but in the fair season, its upper end becomes perfectly dry, and boats can no longer reach the Company's cloth-factory, situated on the former bank of the river. This island is now about six miles long, and where largest, about

GUNDUCK CHOTA.

one broad. The main channel, passing round the north side of the above-mentioned island, does not now receive the Gandaki at Hajipur; a long, wide, and cultivated tongue of land projects from the west side of the Gandaki, and passing east about six miles from Hajipur, separates the stream of the Gandaki from the Ganges; but as in the rainy season a small channel separates this tongue from the northern shore, the union of the two rivers is still supposed to take place where it did formerly, and on the full moon of Kartik (seventh lunar² month), the holy spot is frequented by immense multitudes; and at Hariharahat, on the west bank of the Gandaki, opposite to Hajipur, there is then held a very great fair, especially for horses." In Tassin's great map of Bengal and Behar (Calcutta, 1841), the tongue of land mentioned above is represented as severed from the northern bank by the main stream of the Ganges restored to its former channel. In lat. 27° 9', long. 84° 9', 160 miles above its mouth, the Gunduck is crossed, at the village of Butsura, by the route from Goruckpore to Mullye, the passage being made by ferry.³ The Gunduck is mentioned by Baber⁴ as a line of defence taken up by the Bengalees to resist his invasion.

GUNDUCK CHOTA,* or LESSER GUNDUCK,¹ so called in distinction from the greater Gunduck, flowing a little farther to the east. It is called Burha† Gunduck, or Old Gunduck, from a notion of the natives that it at one time formed part of the course of the Great Gunduck, though, as Buchanan² observes, it is impossible, in consequence of intervening mountains, that there could have been any communication between the streams. The Chota Gunduck rises from a fine perennial fountain at the base of a mountain, near the northern boundary of the district of Goruckpore, and about lat. 27° 20', long. 83° 50'. It holds a sinuous course, but generally in a southerly direction, and, fifty-two miles‡ from its source, according to Buchanan,³ is "little sunk below the surface, and towards the end of February (dry season)

² *Survey of Eastern India*, ii. 316.

³ *Ut supra*, ii. 317.

* Chota, "little."

† Burha, "old."

‡ These distances from the river's source do not correspond with the statements of Buchanan; the reason being, that they are ascertained by measurement along the course of the river, while those of Buchanan are measured directly across the country.

GUN.

contained a pretty clear stream, about forty feet wide, and more than knee-deep;" and fifty-six miles lower down, or 108 from its source, "the Lesser⁴ Gunduck in some parts is a channel 100 yards wide, which in March contains a clear, gentle stream, thirty yards wide and two feet deep, running on pure sand; in other parts it is much narrower, the channel being clay; and there the water is deep, but even in November (close of the rainy season) nearly stagnant, and rather dirty." At about 150 miles from its source, and seventeen from its mouth, according to the same author,⁵ "this river may be 150 or 200 yards wide. At all seasons it may be navigated by canoes, although it has little current and is full of weeds; and in the rainy season boats of 1,000 maunds (thirty-six tons) burden could frequent it." It receives numerous small streams right and left, and communicates by lateral channels with several of the watercourses which abound in this level and alluvial tract, and, having flowed altogether about 170 miles, falls into the Gogra on the left side, in lat. $26^{\circ} 1'$, long. $84^{\circ} 12'$.

GUNDUK (THE LITTLE).—A river rising on the northern boundary of the British district of Sarun, presidency of Bengal, near Fort Soomeysur, in lat. $27^{\circ} 22'$, long. $84^{\circ} 22'$. Flowing in a south-easterly direction for about 120 miles, it, in lat. $26^{\circ} 16'$, long. $85^{\circ} 18'$, leaves the district of Sarun and enters that of Tirhoot, which it traverses in the same direction for about seventy miles, to its junction with the Bagmuttee, in lat. $25^{\circ} 45'$, long. $86^{\circ} 2'$.

GUNGA.—A considerable watercourse of the Ganges, leaving that river in lat. $28^{\circ} 6'$, long. $78^{\circ} 34'$, and flowing in a south-easterly course for fifty miles, during which it divides the GUNJ collectorate from those of Allygurh and Mynpooree, enters the district of Furruckabad, which it traverses for forty-five miles, and then rejoins the parent stream, in lat. $27^{\circ} 26'$, long. $79^{\circ} 39'$.

GUNGA BAL.—A small lake in Cashmere, on the Haramuk Mountain, on the north-eastern boundary of the valley. It is a mile and a half long, and two or three hundred yards wide. Its appearance presents nothing remarkable, and its dimensions, it has been seen, are inconsiderable; but it is regarded with a superstitious veneration of the deepest kind by the Hindoos. Pilgrims flock to its banks, and into its waters are thrown such

GUN.

fragments of bone as remain undestroyed by the fires lighted by Hindoo feeling to consume the fleshly habitation from which the spirit has departed. Lat. $34^{\circ} 27'$, long. $74^{\circ} 58'$.

GUNRORA.¹—A small river, rising in the hill state of Hindoor, amidst the lower range of the Himalaya,² about lat. $31^{\circ} 9'$, long. $76^{\circ} 54'$. It takes a north-westerly direction, along the north-eastern base of the high steep ridge of Malown,² which separates it from the Gunbhur, holding a parallel course at a distance of about three miles. The Gunrora, after a course of about fifteen miles, falls into the Sutlej, in lat. $31^{\circ} 17'$, long. $76^{\circ} 48'$.

¹ E.I.C. Ms. Doc.

GUNTOOR,¹ a collectorate under the presidency of Madras, is bounded on the north by the Kistna river, which separates it from the Nizam's dominions and the British district of Masulipatam; on the south by Nellore and the Bay of Bengal; on the east by Masulipatam; and on the west by the Cuddapah collectorate and the territory of the Nizam. It lies between lat. $15^{\circ} 37'$ and $16^{\circ} 50'$, and long. $79^{\circ} 15'$ — $80^{\circ} 59'$, and the area, according to official return, is 4,960* square miles.² The seacoast of this district extends from Gollapalem, in a direction from south-west to north-east, for

² Parl. Return, April, 1851.

¹ Report on Med. Topog. and Stat. of Centre Division of Madras, 17.

* According to another¹ return, however, only 3,500 square miles; but this is obviously below the actual extent.

GUNTOOR.

thirty miles, and subsequently in a direction, first eastward, and afterwards south-eastward, for about twenty-five miles more, to the principal mouth of the Kistna. This coast is generally called the Golconda³ coast, which is understood to commence at about lat. 15° 20', and to proceed northwards, in contradistinction to the coast of Coromandel, which extends from the limit just named to the vicinity of Adam's Bridge. The coast is so low as not to be easily distinguished at a safe distance, and is, moreover, beset by an extensive and dangerous bank, called the Shoal of Motapilly. In consequence of these dangers and impediments to navigation, this coast, for an extent of fifty-four miles, is scarcely frequented by shipping, especially during the north-east monsoon, which prevails throughout October, November, and December. In the extensive division of Palnad, forming the western part of the district, the country is very hilly, the geological formation being generally basaltic, and earthquakes,⁴ and other volcanic phenomena, have occasionally occurred. Farther eastward are extensive deposits of limestone, interspersed with syenite. The limestone in some places has a foliated texture, like slate, and is wrought by the native population for roofing their houses. In many places are extensive mines of rich iron-ore: malachite, and other indications of copper-ore, are of frequent occurrence. The soil in Palnad, or the western part, being stony, and of a rugged nature, is rather unproductive, and in most places overrun with jungle; in the vicinity of the sea, it is sterile and sandy; but the intervening portion, in the middle of the district, is dark-coloured loamy; and in the vicinity of the river Kistna, it is deep, alluvial, and very fertile. The principal river is the Kistna, which, coming from the territory of the Nizam, flows, on its entrance into this district, first in a northerly direction for twenty-three miles, then has an easterly course for fifty-seven miles, to Govindpur, and subsequently proceeds in a north-easterly direction for twenty-one miles, to Kautamuddi, separating for the whole of that distance the territory of the Nizam from the district of Guntloor. -At the last-named point, it takes a direction south-east, and for 110 miles, to its mouth, forms the dividing line between this district and the British district of Masulipatam. This river, formerly little available for irrigation, has recently, through

³ Horsburgh, *East-India Directory*, i. 599.

⁴ Heyne, *Tracts on India*, 296. *Report on Med. Topography*, ut supra, 17.

GUNTOOR.

the liberal efforts of the government, become an important and valuable instrument for diffusing fertility over the adjacent country. To navigation,⁵ the violence of its current, and the varying, uncertain depth of its stream, are great impediments. The other rivers are the Gundama,⁶ the Nullamuda, which rises in the Innacoondah hills, in Palmand, and traverses a course of 100 miles before it reaches the sea, filling several tanks in its way; and also the Nagoler and the Pillaur; but these are merely torrents, nearly or entirely dry during the hot season. Tanks, or artificial lakes, are not numerous, though of importance for irrigation. This district lies within the influence of the south-west and north-east monsoons. The former commences in May, and occasional rains continue till the month of August, moderating the heat of the land winds, which blow sometimes with great force across this part of the country. A great quantity of rain also falls in the months of September, October, and November. The heat at Guntloor is greatest from the middle of March to the middle of June.

The zoology⁷ of Guntloor is meagre, there being fewer wild animals in this part of India than in almost any other. Cholum (*Holcus sorghum*) is the staple alimentary crop of the district, and rice in considerable quantity is grown in the low tracts along the seashore and the courses of the river; bajra (*Holcus spicatus*) is also grown in considerable quantities; besides oil-seeds, turmeric, onions, capsicum, and various esculent vegetables. The principal commercial crops are betel, tobacco, and cotton. Cotton cloths are manufactured to a considerable extent, and exported to the territory of the Nizam, as well as to the British districts. The cattle⁸ of Guntloor are in great repute, and bullocks are exported in great numbers. The price of a pair of the best breed varies from 77. to 141.

Of the population, various estimates, widely distant from each other, have been at different times put forth. The severe famines which have repeatedly visited the country, and the consequent diminution of numbers by mortality and emigration, may account for part of the discrepancey. Little advantage, however, would result from any attempt to reconcile the conflicting statements on the subject. It may suffice to state, that in a recent official document,⁹ the population of Guntloor is given at 570,089. Of the inhabitants, about one-eighteenth

GUNTOOR.

are Mussulmans, the rest Hindoos; and of these last about a seventh are of the Brahmin caste.

The cirear of Guntoor proper is composed of five large zemindaries, which were permanently assessed, in 1801,¹ at 122,545*l*. This assessment was light almost beyond example: it was below the estimates² founded on the collections of the seven preceeding years, and even to the extent of 2,450*l*. below the offers made by the zemindars themselves; the revenue authorities of the day being determined that, whatever error was committed in fixing the future pesheush, should be on the side of extreme moderation. The result was, that for many years some of the zemindars realized from sixty to sixty-five, and others from seventy to ninety per cent. above the pesheush. Waiving all reference to the irregular profits derived from the extortionate cesses and compulsory contributions which the zemindars appear to have systematically levied from the ryots, the difference between the rental received by the former, and the demand of the state, was, on an average of years, so considerable as to admit of their sustaining, without difficulty, any loss which an unfavourable season, or even a succession of such seasons, might occasion to them. The principle of compensation is indeed the very basis of the permanent settlement, and the zemindar has no more right to claim a relaxation in the terms of his contract, on the ground of unfavourable seasons, than the government has to enhance its demand when cultivation is extended, crops are abundant, or prices high. The assessment under the permanent settlement was paid in full, and with great regularity, until 1830. In that year, the zemindars began to fall into arrear, and thenceforward their embarrassments continued to increase. The impression upon the minds of the home authorities was, that these zemindaries had been depopulated and impoverished by the famine and pestilence which raged throughout the Northern Cirears, and especially Guntoor, in the years 1832, 1833, and 1834; and their zemindars were consequently regarded as the victims of misfortune, deserving of indulgent consideration. In 1836, the experiment was tried of employing the zemindars as managers of their estates (then under attachment) on behalf of the government. The results disappointed the expectations which had been formed of this plan, the balances having

¹ Madras Rev. Disp. 21 June, 1842.

² Id. 31 Jan. 1810.

GUNTOOR.

increased under it from 154,718*l.* to 342,370*l.* This continuing, the zemindars were called upon, in 1842, to surrender their zemindarry rights into the hands of government, on condition of receiving a sufficient maintenance, the estates to be managed by the collector till brought into a state of prosperity, and, this result attained, to be restored to the zemindars. But the manifold abuses prevailing under the management of the zemindars, and which had led to the ruin of their estates, were not at that time detected. More recent investigations fully established the facts, that the zemindars had acted from first to last with systematic dishonesty and breach of trust; that of their avowed collections during the period of their management, a portion only reached the public treasury; that the sum sanctioned for the maintenance of the zemindars, and for charges, was considerably exceeded, and the annual accounts were so framed as to make the results tally with their representations; that they let villages at ostensibly reduced rents, with secret conditions for the payment of an additional sum, which was often secured by a bond executed as if for a debt; that they granted away the revenue lands as rent free to their servants or dependants, to dancing-girls, to Brahmins, or to bankers who had lent them money; and some of the zemindars went even a step farther, and executed ante-dated leases, with the reservation of a beneficial interest to themselves. These various instances of bad faith naturally raised the question how far the parties guilty of them were entitled to claim the restoration of powers, the conditions of which they had so grossly violated. It was shown upon undoubted authority, that these zemindars wasted, in a long-continued course of extravagance, excess, and litigation, not only those legitimate resources of their estates, which were amply sufficient to meet the occasional occurrence of calamitous seasons, but the additional sums which they extorted from the ryots under various pretences. Looking, therefore, at all the circumstances, which became fully known in 1849, at the faithless and fraudulent conduct of the zemindars as managers of their estates on account of the government; at the direct and positive loss therefrom, amounting to not less than 800,000*l.*, which their vices and mismanagement had entailed upon the finances of India; at the disastrous consequences spread thereby over

GUNTOOR.

succeeding years in the exhaustion of the resources of the district, which, under the careful management of able and experienced revenue officers, for a considerable period had not revived sufficiently to afford the fixed amount of the pesheush, the home authorities resolved that the zemindarry rights should not be restored, but an annual allowance of 3,480*l.* be granted for the maintenance of the several zemindars' families, to be distributed as follows:—To Vasseyreddy, 1,200*l.*; Mulrauze, 1,200*l.*; Chickaloorpau, 360*l.*; Sultanapilly, 360*l.*; Raypillay, 360*l.*

Guntoor constitutes the southern portion of the maritime tract known as the Five Northern Circars, which were ceded to the East-India Company, in 1765, by the emperor of Delhi.² The grant, however, was not rendered available in respect to Guntoor until 1788, when the Nizam surrendered the circar, and the British thus became possessed of the whole line of coast from Juggernaut to Comorin.⁴

² Treaties with Native Powers, 1812, p. 361.

⁴ Life of Sir T. Munro, i. 70.

The great northern route from Madras to Masulipatam and the Northern Circars passes through this district, and sends a branch to the left, or north-west, to Hyderabad.

Guntoor, the principal place, Nizampatam, and Vinukonda, are described under their respective names in the alphabetical arrangement.

GUNTOOR,¹ the principal place of the British district of the same name, in the territory subject to the presidency of Madras, is situate about 18 miles² S.W. of the right bank of the great river Kistna, and 30 from the Coromandel coast, or western shore of the Bay of Bengal. The surrounding country is open and flat, but free from swamps or stagnant water; and to these circumstances is owing the salubrity by which it is characterized. The soil of the country around is black, and produces luxuriant crops of gram (*Cicer arietinum*), cholam (*Holcus sorghum*), and cotton. The place is divided into what are called the Old Town and New Town, both very irregularly built, and in general much overerowed, especially in those parts inhabited by the poorer classes. The population is estimated at 20,000.³ Distance from Bangalore, N.E., 300 miles; Masulipatam, W., 47; Ongole, N., 63; Nellore, N., 133; Madras, N., 225. Lat. 16° 18', long. 80° 30'.

Kashmir, II. 6

GUNYSII BUL, in Cashmere, a place of Hindoo devotion, at the eastern extremity of the valley, on the route to the celebrated cave of Amur Nath. According to Vigne, the name signifies "the place of Gunysh," or Ganesa, the only son of Siva. The object of superstition is a large fragment of rock lying in the Lidur river, and worn by the current into what the Hindoos fancy a representation of an elephant's head, to which a trunk, ears, and eyes have been added by human art. The superstitious feeling caused by this object results from the belief that Ganesa has the head of an elephant. Here, the pilgrims proceeding to Amur Nath make their preparatory ablutions and prostrations. Gunysh Bul is in lat. $33^{\circ} 58'$, long. $75^{\circ} 31'$.

GURMUKTESAR, or **GURMUKTESWAR**,¹ in the British district of Meerut, the principal place of the pergunnah of the same name, on the route from the town of Meerut to Moradabad, and 31 miles S.E. of the former. The population is returned at 7,168 persons.² It is situate on the right bank of the Ganges, four miles below the reunion of the Burha Gunga, or old course of the Ganges, with the present main channel, which, a mile and half above the town, is crossed by a much-frequented ferry, on which fifteen boats³ constantly ply. It may be regarded as the port of Meerut and the adjoining part of the Doab, as the Ganges is the channel of considerable inland navigation⁴ from the sea to this ferry, and in a less degree to Sukurtal, fifty miles higher up. Both banks of the river are for several miles in width overgrown with a thick grassy jungle,⁵ infested in the dry season with tigers and other wild beasts, and in the rainy season laid extensively under water by the swollen stream. Even in the dry season, when the larger craft cannot proceed higher than Furruckabad,⁶ about 150 miles lower down, Gurmuktesar can be reached by boats admitting of some comfortable accommodation to the traveller. That in which Lumsden⁷ proceeded in the dry season from this place to Calcutta, was of about twenty tons burthen, forty feet in length, ten in breadth, and navigated by a master and eight rowers. The road from Gurmuktesar westward towards Meerut is good. Distance N.W. from Calcutta 887 miles. Lat. 28° 47', long. 78° 10'.

GURRAH, or **DEOHA**.¹—A river rising at the northern base of the Sub-Himalaya, in lat. $29^{\circ} 9'$, long. $79^{\circ} 49'$, in the British district of Kumaon, under the lieutenant-governorship of the North-Western Provinces. It takes a southerly course of 240 miles, passing by the towns of Pilleebheet and Shahjehanpoor, and through the British districts of Bareilly and Shahjehanpoor, into the Oude territory, in which it falls into the Western Ramgunga on the left side, in lat. $27^{\circ} 12'$, long. $79^{\circ} 58'$. At Pillibheet, in lat. $28^{\circ} 38'$, long. $79^{\circ} 51'$, and sixty miles from the source, its bed² is 250 yards wide, with a sandy bottom, and the depth so inconsiderable, that it is fordable from December to June; but for the rest of the year it can be crossed only by ferry. Forty-five miles lower down, in lat. $28^{\circ} 13'$, long. $79^{\circ} 47'$, where crossed by the route from Bareilly to Mahomdy, its dimensions are the same as above mentioned. At Shahjehanpoor, forty-five miles farther, and in lat. $27^{\circ} 53'$, long. $79^{\circ} 58'$, it is fordable at some seasons, but generally crossed by ferry. Fifty miles still lower down, where crossed by the route from Futteghur to Seetapore, in lat. $27^{\circ} 32'$, long. $79^{\circ} 55'$, it is sometimes forded, sometimes crossed by ferry.

E.I.C. Trigon.
Surv.

GURWIAL,¹ * a hill state under British protection, is bounded on the north by Bussahir and Mundes or South-western Thibet; on the east by British Gurwial; on the south by British Gurwial and the Dehra Doon; and on the west by the Dehra Doon, the pergunnah of Jaunsar, and Bussahir. It is about ninety-five miles in length from north to south, and seventy in breadth from east to west; contains about 4,500² square miles, and lies between lat. $30^{\circ} 2'$ — $31^{\circ} 20'$, long. $77^{\circ} 55'$ — $79^{\circ} 20'$. It extends over the south-western declivity of the Himalaya, and is throughout a vast range of mountains of enormous height, intermingled with several valleys, the drainage of the whole ultimately finding its way to the Ganges. The principal channels are those of the Tonse, of the Jumna, and of the Bhageerettee, one of the remote sources of the Ganges. The most elevated part of the country is the north and north-east, where the peaks about the Tonse, the Jumnotri peaks, and several others, are more than 20,000 feet³ above the sea.

Himalaya.

* The appellation is said to be derived from Ghers (fort), and to have been bestowed on account of the number of such edifices formerly existing in the country.

GURWIAL.

The highest summit is probably the peak of Kedarnath, having an elevation of 23,062 feet.⁴ Rikkee-Kasee, nearly parallel with the southern boundary, is the lowest spot in the territory, being only 1,377 feet⁵ above the sea. It is the point where the Ganges touches upon the Dehra Doon. The confluence of the Tonse and Jumna, which is the lowest point of the aggregate of valleys drained by those rivers, is rather higher than Rikkee-Kasee, being 1,686 feet⁶ above the sea. A few small tracts, extending along the lower courses of the Bhageerettee and Aluknunda, and the Jumna previously to its confluence with the Tonse, have elevations less than 5,000 feet; but by much the greater part of the country lies considerably above that height. The only alluvial tract of any considerable extent is that stretching southwards from Teeree to the southern frontier, in length about twenty-five miles, and in breadth about twelve, having an elevation above the sea of from 2,500 to 1,400 feet. The lower and more south-westerly mountains, rising over the Dehra Doon, are of the formations called by geologists transition⁷ or secondary; such as compact limestone, alternating with soft earthy slate, and in some places with roofing slate. Trap⁸ rocks occur in great abundance, cutting the other strata in dykes. The limestone is overlaid extensively by a stratum of quartzose sandstone, which is continued to a considerable distance eastward, where it forms the elevated summit of Soorkunda.⁹ The slate in some places becomes a distinct greywacke. Great beds of gypsum are sometimes observable in the limestone. A little farther north are enormous strata of quartz.¹⁰ Twelve or fifteen miles north of Mussoorie, or about lat. 30° 40', the mountains assume a primitive¹ character, passing into talcose schist, talcose gneiss, and mica-slate; and still farther north, or in about lat. 30° 50', becoming a real gneiss. Northward of this, and about the sources of the Bhageerettee, the nature of the formation seems to be a point greatly contested. Hodgson² pronounces it granite. Everest³ also states that, "from Gangotree to Dilaree (a distance of above twelve miles), the river runs through a

* On this point Jacquemont¹ observes: "Elle [la roche] me paratt une de celles que, faute de les connaître, on a appelées autrefois du nom de Trapp. La différence de certaines grauwnacks quartzouses à cette est légère."

GURWHAL.

gloomy chasm in the granite;" and enumerates, as follows, the succession of formations, from Gangotri downwards: "1. Granite; 2. gneiss and mica-slate; 3. talcose gneiss and talc-slate; 4. clay-slate; 5. Mussooree limestone; 6. quartz rock, or rather quartz sandstone, and greywacke slate." Herbert,⁴ however, maintains most peremptorily, that the formation which has usually been considered granite, is gneiss, and that granite is only found in fragments. *As this difference has been more largely adverted to in another* place, it will be less necessary to dwell upon it here.* In the north-east of the district, south of the upper part of the Bhageerettee, and between the river and the frontier of British Gurwhal, a great number of summits of enormous elevation, and covered with perennial snow, will probably for ever exclude human footsteps. On the eastern frontier, however, along the course of the Mandakini,⁵ † or Mundagnee,⁶ the formation is generally gneiss, which Herbert, from the following passage, appears to regard as also forming the summit of the great mountain Kedarnath. "The correspondence of appearance between the nearer ridges, which have evidently furnished these fragments [of gneiss] and the great Soomeroo or Kedarnath peak, attests the fact that here also, as at the head of the Ganges, this rock attains an elevation of nearly 23,000⁷ feet." ‡

The metallic deposits of Gurwhal are either scanty or have been little explored, as scarcely any mineral wealth is obtained from its territory. Herbert⁸ states that he found at Kedarnath a specimen of granite in which occurred specks of native gold; and adds, "Considering, indeed, all the circumstances of the case, it is far from improbable that gold will yet be found in its native matrix within our mountains." The sands of the Alaknunda, flowing along the eastern frontier, contain gold; and when Moorcroft⁹ passed, in 1819, about fifteen persons were employed in searching for the grains. He states that, under proper encouragement, it might afford profitable employment for hundreds; and in this view he is supported by Herbert.¹

* See article KUMAON.

† Called the Kalee by Herbert:—"We have now reached the Kalee (branch of the Alaknunda), and here the recent examination of this tract equally established the prevalence of gneiss, from Okee Muth Ioola (rope bridge) to Kedarnath, the source of the river."

‡ This is stated by the author to be merely conjectural.

¹ Herbert, ut supra, xliiii.

GURWHAL.

The quantity, however, obtained by searching the sands of rivers in British Gurwhal, has been so trifling that the government has remitted² the per-centage paid on the produce under the rule of the Goorkhas. Herbert² states that the mountain region between the Sutlej and the Brahmapootra, and consequently Gurwhal, which lies between those limits, is rich in copper, iron, lead, and antimony. The rivers of Gurwhal,—the Tons, Jumna, Bhageerettee, Bhilung, Mandakini, Aluknunda, Aglar, Pabur, Rupin, Soong, Budiar, and Banal,—are separately adverted to in the alphabetical arrangement.

The climate of Gurwhal is hot in the low tracts along the banks of the Aluknunda, on the southern frontier, where Raper,³ in the beginning of May, found the thermometer to reach 101° in the shade. In the lower mountains, having an elevation of from 5,000 to 8,000 feet, the climate is moderate, the thermometer seldom exceeding 75°⁴ in the hottest part of the year. In midwinter, frosts⁵ are frequent, with occasional falls of snow. The periodical or monsoon rains are very heavy, commencing in the middle of June and ending towards the middle of September. The northern part of the territory, containing the lofty peaks of the Himalayas, rises beyond the limits of perpetual congelation.

In the higher mountains bears* are common; the lower are infested, in addition to these, by leopards and tigers.⁶ Monkeys⁷ are numerous, even as high as Sookhee, which has an elevation of 8,869 feet,⁶ and is in lat. 31°. According to Skinner, they are not venerated by the inhabitants of the mountains, as in some other parts of India.

The rural economy of the natives of Gurwhal varies with the nature of the soil and the degrees of elevation. Scarcely any fruit-trees are cultivated except the walnut, apricot, and mulberry; but the second is of very indifferent quality, and the last-named is cultivated for the leaves, not with a view to the production of silk, but to be used as fodder for cattle. In the low ground, capable of irrigation and having a warm climate, rice is the principal crop. Besides small quantities of sugarcane⁸ and of cotton, there are raised ginger, turmeric, sweet potato, and hemp, the latter cultivated for the supply of bhang, as well

* The zoology and botany of Gurwhal do not differ from those of the other hill states. See notice on Bussahir.

as for the fibre. In more elevated tracts, where the surface on the mountain-slopes is generally formed into artificial terraces by embankments, the crops are wheat, barley, buckwheat, battu or amaranthus, mundua or Eleusine corocana, a remarkably prolific⁹ plant; pulse of various sorts, and oil-seeds. The poppy¹ is very generally cultivated, either for opium or the seed, which is a favourite food of the natives. The plough is no better than a forked log, drawn by oxen, guided by women;² and the ground is rather scratched than ploughed. The ears of corn when ripe are cut off the stalks, which are then eaten down by kine, kept either for their milk or for labour, as the influence of Brahminical prejudices causes their slaughter to be regarded as impious. They are very small, of dark-brown colour, short-horned, and with a hump on the withers like those of Hindostan. The sheep, also small, are of a brown colour and coarse-woolled; the goats large, and generally white. No family is without a dog, of dark-brown colour, middle size, well covered with strong hair, and of a mongrel aspect. Horses are rare,—even the ghunt or mountain pony; and asses are unknown.

The houses are substantially built of layers of stone and squared beams placed alternately. They have generally three stories, each from six to seven feet high. The lowest shelters the cattle, the middle is used as a granary, and the family resides in the upper story, the accommodation of which is enlarged by a strongly-constructed gallery all round. The roof, nearly flat, is generally of slabs or coarse slate laid on thick beams, and projects over both walls and gallery. The communication between the floors is by steep stairs, or rather ladders.

The natives of Gurwhal are in general below the middle size, their stature (according to one traveller) rarely exceeding five feet.³ Their complexions are less dark than those of the Hindoos of the plains: on the other hand, while red or brown hair may sometimes be observed among the latter, the hue of the hair and beard in Gurwhal is almost invariably dark. The beard is scanty, especially on the cheeks, not strong on the upper lip, fullest on the chin. It is most deficient in men having the Mongolian aspect, who in some instances show no trace of this appendage of the male. On the contrary, those

³ *Id.* 110.

GURWIAL.

who have long narrow faces, prominent aquiline noses, and fully-developed foreheads, are best provided with beards. They are, according to Jaequemont,⁴ a mild, peaceable, timid race, remarkably devoid of mental energy, and living tranquilly, without any control from fixed law, and very little from authority of any kind. Others, however, do not represent them as so strongly marked with those features of the golden age. Frazer relates, that coming to a village where only women, children, and decrepit men were found, on asking them what had become of the able-bodied part of the population, he received for answer, "that they had gone⁵ to buy corn or steal sheep," with a tone and manner indicating that they spoke of nothing extraordinary or requiring apology. Hodgson⁶ also states that they plunder their eastern neighbours of the Kedarnath districts, and pride themselves on such exploits. This writer reports them to have neither fire-arms, swords, nor war-hatchets; their only weapons being bows and arrows.

Goitre is common here, as in the other Himalaya tracts, and cannot be traced to any certain, or even apparently probable cause. Perhaps the most plausible opinion is that of Traill,⁷ who attributes the disease to the pernicious effects of the damp cold blasts of the mountains on the glandular structure of the naked throats of the mountaineers. Their clothing is made of thick warm woollen cloth, produced for the most part by the joint labours of the men and the women; the former, when stationary, being generally occupied in spinning; the women assisting in the weaving department. A piece of this cloth, seventeen or eighteen yards long and two feet wide, is sold for six or seven shillings. It is manufactured to such extent as to form a small article of traffic to the plains. The dress consists of trousers of this cloth, and a frock gathered in folds about the loins, and reaching to the knees, being girt about the waist with a narrow woollen scarf. The upper part of the shoes worn is of woollen cloth, the soles are of leather. The head-dress is a brown woollen cap or bonnet. No part of the dress is ever washed; and a large portion of the population being in extreme poverty, they are often wretchedly ragged. The women, in addition to pounding corn and other toilsome domestic pursuits, perform the greater part of the agricultural labours, and in consequence are broken-down, haggard, and

filthy.⁸ Their hair is plaited at the back of the head, and interwoven with a quantity of dark-coloured wool, so as to form an enormous tail, depending behind nearly to the ground. They wear the nath or metallic ring in the nose, and enormous rings of silver or copper round their ancles. Hodgson⁹ states that polyandry is not known; and Skinner,¹ on the contrary, that it is universal, each woman having four husbands. The population generally claims Rajpoot descent, and Brahmins are numerous, but often so poor as to be obliged to share the labours of the ordinary peasantry.

* Fraser, *Tour in Himalaya*, 422, 423.

The religion is Brahminism, Gurwhal containing several places of pilgrimages for the Hindoos; such as Jumnotri, Devaprayaga, Kedarnath, and Gangotri, probably the most distinguished of any. Shrines of minor sanctity are very numerous, every mountain or remarkable spot having its local divinity. But, however intense and enthusiastic the devotion to Brahminism, little regard is shown to the maintenance of the purity of its dogmas and practices; all (Brahmins not excepted) eat every sort of flesh except that of kine. The manner in which they celebrate their most sacred festivals is not unworthy of the purpose of their assemblage. "They dance² to the sound of strange music, and intoxicate themselves with a sort of vile spirit, brewed here from grain and particular roots, sometimes, it is said, sharpened by pepper. The dance is most grotesque and savage; a multitude of men taking hands, sometimes in a circle, sometimes in line, beating time with their feet, bend with one accord, first nearly to the earth with their faces, then backwards, and then sidewise, with various wild contortions. These and their uncouth dress of black and grey blankets, give a peculiar air of brutal ferocity to the assemblage; the men dance all day, and in the evening they are joined by the women, who mix indiscriminately with them, and keep up the dancing and intoxication till the night is far advanced. They continue this frantic kind of worship for several days; and in truth it is much in unison with their general manners and habits." Of their ridiculous superstitions, one of the most extraordinary is the rite or exploit of barat, performed in honour of Mahadeva. A cable of grass, about two inches in diameter, is stretched from the edge of a lofty cliff to the valley below, where it is securely fastened by means of posts driven into the ground.

GURWHAL.

A wooden saddle, constructed with a deep groove below, which fits on the cable and slides along it, serves as a seat for a man called the badi, who, after the sacrifice of a kid, is started from the upper extremity, with stones or sandbags fastened to his feet, and descends along the inclined rope with such velocity that the friction produces a volume of smoke, through the greater part of his course. Persons are stationed at the lower extremity to receive the badi, and moderate the shock which he must otherwise experience. He receives a rupee for every hundred cubits of rope, which is sometimes 2,000 cubits long. Formerly, if the badi were thrown to the ground by the breaking of the rope, or any other cause, and he retained life after the shock, the spectators immediately despatched him with a sword; but this is now prohibited by the British authorities. The bast or cable is cut into pieces, and distributed amongst the villagers, to be hung as charms from the eaves of their houses; and the ceremony is expected to confer fertility on the crops of those thus provided.

The language is a patois of Hindostanee,³ and is readily understood by the natives of the plains.

³ Jacquemont, *ut supra*, iv. 111.

According to the traditional account given to Frazer,⁴ Gurwhal was originally divided into above twenty petty states, which, about 500 years ago, were consolidated into one by a bold and rapacious adventurer from the plains. Previously to the Goorkha invasion in 1803, the dominions of the rajah of Gurwhal comprised, in addition to his present territory, the fertile district of Dehra Doon,⁵ and the western portion (being about one-half) of the present British province of Kumaon. The Goorkha force which invaded the country, conducted by several veteran commanders, was very inadequately opposed by Purdumim Sah, the rajah, an indolent and unwarlike prince, who, at the head of 12,000 men, was defeated and slain at Gurudwara,⁶ in the Dehra Doon. On the occurrence of this event, the inhabitants of Gurwhal discontinued all resistance to the Goorkhas, who made ruthless use of their victory. According to Frazer, they in the course of about twelve years sold 200,000 of the people into slavery; but this is palpably an exaggeration, as a population not exceeding 300,000 could scarcely have been capable of supplying two-thirds of that number of saleable slaves in twelve years. The number, how-

ever, of the unhappy victims of the cupidity of the conquerors. There was no doubt very great, as Moorcroft⁷ found the fertile tract about the Terai quite depopulated, in consequence of the deportation⁸ and sale of the natives as slaves by the Goorkhas. Sheero Dursun Shah, the son of the slain rajah, had fled the country after the fatal battle which had given it to the Goorkhas. In 1815, when the success of the East-India Company's army had put an end to the Goorkha dominion, this prince was restored to the western portion of the territory formerly enjoyed by his family. The Dehra Doon, on the south, was reserved to the East-India Company, as was also Eastern Gurwhal. The portion of Gurwhal restored to the rajah is divided from the remainder, on the east, by a line which, commencing in lat. 31° 5', long. 79° 20', with a south-westerly direction, skirts the great glacier, giving rise to the Bhageerettee, and thence continued southward to the source of the Mandakini,⁹ follows the course of that river to its confluence with the Aluknunda, along the line of which it proceeds to its junction with the Bhageerettee, and in a westerly direction down the last-mentioned river to Rikkee-Kasee, where it touches upon the Dehra Doon. The rajah holds his territory subordinate to the East-India Company, and the following conditions were attached to the grant:—1. The abolition of the slave-trade. 2. The furnishing of labourers and supplies for British troops when required, to the extent of the rajah's ability. 3. The extension of every facility to British subjects and others trading in the Gurwhal territory, or in the countries beyond it, and a general conformation on the part of the rajah to the directions of the British government. 4. The obligation not to alienate or mortgage any part of the territory without the consent of the British government. The grant,⁹ subject to the above conditions, was made in perpetuity, and

* Raper¹ gives a description of the practical working of this cruel system of oppression, as he witnessed it at the fair of Haridwar about the year 1808. "At the foot of the pass leading from Harca-Pairi, is a Gurchali Choki, or post, to which slaves are brought down from the hills and exposed for sale. Many hundreds of poor wretches of both sexes, from three to thirty years of age, are annually disposed of in the way of traffic. Those slaves are brought down from all parts of the interior of the hills, and sold at Haridwar at from ten to 150 rupees (from 1*l.* to about 15*l.*)"

GUR—GUT.

is dated March 4th, 1820. The rajah's dominions are under the inspection of the political agent in the Dehra Doon.

The amount of the population of native states can rarely be ascertained with any approach to precision: that of the rajah's portion of Gurwhal probably does not much exceed 100,000. This, however, is an estimate based on grounds purely conjectural; but, if near the truth, it will give a proportion of about twenty-two* to the square mile. The annual income is stated by Prinsep¹ at 40,000 rupees (4,000*l.*); by Moorcroft,² at 60,000 (6,000*l.*); by De Cruz,³ at a *lac* (10,000*l.*).

GUTPURBA.—A river, rising in lat. $15^{\circ} 50'$, long. $74^{\circ} 3'$, on the eastern slope of the Western Ghats, and, flowing in a north-easterly direction for 160 miles through the British district of Belgaum, and intersecting the Southern Mahratta jaghire of Moodhul, falls into the Kistnah, in lat. $16^{\circ} 20'$, long. $75^{\circ} 52'$. The material for a wire-rope bridge, proposed to be thrown across this river, at Sootguttee, by a native

* British Gurwhal, according to a census made in 1810, appears to have a population of about twenty-six¹ to the square mile; but the results of this census are believed to be greatly below the fact. Traill estimates the population of the entire of Kumaon at between twenty-seven and twenty-eight² to the square mile. In a recent official publication, the population³ of Kumaon, exclusive of British Gurwhal, is estimated at something more than twenty-three to the square mile. As Kumaon much exceeds the territory of the rajah in fertility and other natural resources, and more abounds in towns and villages, there can be no reasonable doubt that it has also a greater relative population. The natural resources of Koonawur are probably as well suited for maintaining population as those of the greater part of Gurwhal; yet Gerard⁴ estimates the relative density at less than five persons to the square mile.

The British government, on the conquest and dethronement of the Peishwa, acquired the rights of tribute which that potentate had enjoyed in parts of Guzerat. For the sake of convenience, the right of collecting the tributes due to the Guicowar was, by mutual agreement, transferred to the British government; but the pecuniary claims of the Guicowar are untouched by the arrangement, the British government merely performing the functions of receiving the tributes and paying them over. The general

GUZERAT.

the extensive region marked out by those boundaries, a considerable portion is occupied by the Gulf of Cambay, and by the British district of Ahmedabad, which, extending about the gulf, is on all sides, except seaward, inclosed by the territory of the Guicowar. Of the whole territory, 19,850 square miles are stated to be comprised within the peninsula,³ or that part which may be marked off from the continent by a line drawn from the head of the Gulf of Cutch to the head of the Gulf of Cambay. The peninsula, with a small portion adjoining to it on the north-east, along the head of the Gulf of Cambay, are the only parts of the territory which have the advantage of sea-coast. The Gulf of Cutch, which bounds the peninsula on the north and north-west, joins the Runn, or Salt Marsh, at Maliya, and from this point, which may be considered its head, its south-eastern shore, forming the north-western coast of the peninsula, is indented with numerous creeks, but so shoaly as not to admit the approach to land of ships of burthen above Nowanuggur, distant from Maliya about thirty miles. There ships may anchor in five or six⁴ fathoms, sheltered in some measure by a reef off shore; and, from possessing this advantage, the town is a place of considerable commerce.⁵ From Nowanuggur, the coast extends south-west twenty-eight miles, to Serryah, situate on the estuary of a small river, not admitting large vessels, which must anchor three⁶ miles at sea. From Serryah, the coast extends still in a direction south-west thirty miles, to lat. 22° 16', long. 69° 20', where a small runn or salt marsh joins the sea; and from the junction takes a southerly direction, nearly insulating the district of Okamandal, lying west of it. From the place where this small runn joins the Gulf of Cutch, the coast takes a direction north for ten miles, after which it suddenly turns south-west, and thus continues for twelve miles, and then bearing northward for eight more, it forms a bay, in the mouth of which, towards the north, is situate the island of Boyt, with its fort, once of considerable

management of the estates of the tributaries remains with themselves; but the British government has been enabled to effect much good by procuring the abolition of infanticide, suttee, slave-trading, and other enormities, and by the establishment of a court of criminal justice, under the resident, assisted by the chiefs of the several states within the jurisdiction of the court, acting as assessors.

tory, I. 481.

strength. "Abreast" the castle, about midchannel between the islands, there are six and seven fathoms in one place, and three, four, and five fathoms around; the bottom being mostly rocky and uneven throughout the harbour." This harbour has the disadvantage of a shallow entrance, there being only about nine feet water on the bar at low water spring tides, but the rise of the tide is about fourteen feet. The headland forming the bay to the north-west, is called Soomia or Sonia, and is, in fact, an island separated from the mainland of Guzerat by a narrow navigable channel. The whole of the southern part of the Gulf of Cutch, along the north-west coast of Kattywar, is difficult and perilous for navigation by large vessels, being shallow, and having many islets, reefs, and rocks. From the headland opposite the island of Soomia, and forming the north-western angle of Guzerat, the coast turns first south-westward, subsequently southward, and lastly south-eastward, for a total distance of twenty-five miles, to Dwarka, called also Jigat, the shore being safe to approach, and of moderate height, with regular soundings from thirty-four to thirty-six fathoms, at the distance of seven or eight leagues, to ten or twelve fathoms near the coast. The shoal of Kulcheegud, seven or eight miles north of Jigat or Dwarka, interferes with the coasting navigation, and much vigilance is required to ascertain its limits, and to work round it. From Dwarka, the coast holds a direction south-east for 175 miles, to Diu Head, and is generally bold and safe to approach, though there are no good⁸ harbours for large ships. There are, however, several towns on the coast frequented by small trading vessels, and formerly some of them were places of resort for pirates infesting the Arabian Sea. Proceeding in a south-easterly direction from Dwarka, the towns occur in the following order:—First, Meeanee, at the distance of forty-two miles, on the estuary of the river Boortoo; second, twenty miles beyond Meeanee, in the same direction, Poorbunder; third, twenty miles distant, Nurveebunder; fourth, thirty miles distant, Mangroal; fifth, ten miles farther, Chorwaur; sixth, fifteen miles farther, Somnath Puttun; seventh, eighteen miles farther, Korynaur; twenty miles beyond which is Diu Head, the most southern point of the peninsula, in lat. 20° 42', long. 70° 51'; and close to it, eastward, the island and harbour of

⁸ Id. I. 480.

GUZERAT.

Din. Thence the coast takes a north-easterly direction for eighty miles, to Gopnath, and in this interval, at the distance of thirty miles, is the port of Jafferabad, on the estuary² of a small river, which, though shoal, affords shelter to ships, as, when the tide is out, they lie without injury on a bottom of soft mud. Mowah, a town about thirty miles farther to the north-east, is on the inmost or most northerly shore of a small bay, where ships may anchor in from seven to ten fathoms, but have no shelter from south-westerly or westerly winds. North-east from this port twenty miles, is Gopnath Point, the south-western headland of the Gulf of Cambay, in lat. $21^{\circ} 12'$, long. $72^{\circ} 6'$, marked by a dangerous shoal, projecting four miles eastward and nine miles northward. Between Jafferabad and Mowah are numerous small islets and rocks, from half to three-quarters of a mile from shore, the principal being Searbett, between which and the mainland vessels may lie sheltered from the south-west monsoon. For the remainder of the distance to Gopnath, the coast is clear, the water deepening rapidly. At Gopnath, the coast turns northward for ten miles, then for a similar distance north-eastward to Allung, on the southern limit of a portion of the British district of Ahmedabad (of which it forms part), for thirty-five miles, to the estuary of the river Geyla, where the territory of the Guicowar again closes down on the sea, the coast holding a northerly direction for twelve miles, to Gondalla. This place is situate at the southern limit of another portion of the British district of Ahmedabad, the coast of which extends northward thirty miles, to the head of the Gulf of Cambay, at the estuary of the river Saburmuttee. In the vicinity of this point, the sea is joined by the south-eastern extremity of the Ruin,¹ a salt marsh which, extending in a north-westerly direction about seventy-five miles, with a breadth varying from five to twelve miles, joins the Northern Ruin, communicating with the Gulf of Cutch, about lat. $23^{\circ} 5'$, long. $71^{\circ} 45'$. From the estuary of the Saburmuttee, the coast, holding a direction generally eastward for about fourteen miles, along the head of the Gulf of Cambay and the mouth of the estuary of the river Myhee, as far as Kurode, belongs to the territory of the rajah of Cambay. Thus the sea-coast, extending from the head or inmost extremity of the Gulf of Cutch round the peninsula, and across the head

GUZERAT.

of the Gulf of Cambay to Kurode, is 531 miles in total length; and if sixty-five miles (the length of the British portion of the coast) be deducted, the remainder, or 466 miles, will be found to be the length of coast belonging to the subordinate chieftains of Kattywar and the nawab of Cambay. In that length, it has been stated that there are numerous small havens and creeks, admitting coasting craft and other vessels of moderate size, and many roadsteads, where ships of considerable burthen may lie at anchor in fine weather; but with the exception of the harbours Diu and Beyt, there are none which afford shelter for large ships. The Gulf of Cambay especially is very shoaly, and of difficult navigation; and about fifty or sixty square miles of its northern part is left dry by the tide at low water. About two miles off the eastern shore of the peninsula, and midway between the head of the gulf and the mouth of it, are the island² and reef of Perim, useful to navigators, as affording shelter to shipping anchored in the road of Gogo. It is not improbable that at some remote period, beyond record, the peninsula may have been an island separated from continental India by a narrow and shallow channel, which, in a long succession of ages, has been silted up by deposits from the sea, and thus converted into the present Runn. In the vicinity of the Runn, and all round the coast, the country is but slightly elevated; and of the numerous hills and mountains in the interior, none appear to stretch down in bold headlands to the sea. Though there are many groups of mountains or hills variously arranged, the general elevation of the surface is toward the middle of the peninsula, whence streams flow in every direction—north-eastward to the Runn; eastward to the Gulf of Cambay; south-eastward, southward, and south-westward to the Arabian Sea; north-westward and northward to the Gulf of Ouch. In this internal elevation, there is, however, a sensible depression, constituting the extensive valley of the river Bhader, which rises at Kirkoon, about lat. 22° 10', long. 71° 17', and sixty miles from the Runn, at the north-eastern limit of the peninsula, the source being close to the position of the water-heads, throwing the streams north-eastward to the Runn and south-westward down the valley of the Bhader to the Arabian Sea. North-west of this valley is an elevated rugged country, consisting of irregular ranges of hills,

GUZERAT.

- of no great elevation, but in the aggregate forming a group, the greatest length of which, being from west to east, is about 120 miles, with an average breadth of about forty miles. At its eastern extremity, it joins, near Chotecla, a low range, in few parts reaching an elevation³ of 400 feet, and running from that place in a direction slightly inclined eastward of due south. The southern extremity of this low group expands into the Geer, a rugged, rocky, undulating tract, covered with woods and stunted jungle, and of surface so exceedingly difficult and uneven, that for perhaps twenty miles a space cannot be found large enough to pitch a tent. The innumerable gorges and ravines of this rugged tract afford beds to a great number of streams or torrents, having considerable volumes of water in the rains, but becoming either greatly shrunk or quite devoid of currents during the dry season. The numerous fastnesses furnish lurking-places for banditti, who are the more secure in them, from the fact of the atmosphere a great part of the year being almost inevitably fatal to strangers attempting to penetrate into the Geer. Eastward of the Geer, and isolated from it, is the mountain of Palithana, 1,500 feet high, and noted for the great number of Jain temples and monastic establishments by which it is surmounted. But the most elevated and important among the mountains of the peninsula is the steep granitic clump of peaks called the Geernar, near the ancient city of Joonagurh, in the prant or district of Soruth, famed for the vast number, magnitude, and costliness of the shrines, places of pilgrimage, and monastic retreats which it possesses, of the Jains, Brahminists, and Mussulmans. Besides these, the only noticeable mountains in the peninsula are those of the Burda group, near Poorbunder, on the western coast—a circular cluster, about thirty miles in circuit, and at the loftiest part, near Goomlee, having an elevation of nearly 2,000 feet.

³ Jacob, Report
on Kattywar, 7.

The mainland of Guzerat, as contradistinguished from the peninsula, has some considerable rivers. The Saburmuttee, rising at Meerpoor, in the Rajpoot state of Odeypore, holds a generally southerly course of about thirty miles, crosses the frontier into Guzerat about lat. 24° 19', long. 73° 11', and flowing generally southward through this territory for about 180 miles, passes in its course by the city of Ahmedabad, and falls

GUZERAT.

⁴ Trans. of Med.
and Phys. Soc. of
Bombay, 1. 7—
Gibson, Sketch of
Guzerat.

into the Gulf of Cambay. It is described⁴ as a broad rapidly-flowing river. About forty miles farther west, the Bunass, rising in Mount Aboo, crosses the northern frontier into Guzerat, through which it holds a south-westerly course of ninety miles, falling into the Great Runn or Salt Marsh. To the eastward of the Saburmuttee, and between it and the Myhee or Muhi, which flows in some degree parallel and at the distance of about forty-five miles from it, are several intervening streams, the most important of which are the Seri, the Meshwa, the Watruk, the Karree, and the Hautmuttee, all falling into the Saburmuttee. The Myhee or Muhi, rising near Amjherra, takes a circuitous course, first northward, in which direction it flows through the dominions of Holkar, and then forms the boundary between the native states of Banswarra and Pertaubghur. Subsequently turning south-westward, it divides the petty state of Dongurpore from that of Banswarra. After a course of about 200 miles, it crosses into Guzerat, through which it holds the same direction for about seventy miles, to lat. $22^{\circ} 53'$, long. $73^{\circ} 22'$, where, touching on the British district of Kaira, it flows along its south-eastern boundary for eighty miles, dividing it from the territory of the Guicowar, as far as its fall into the Gulf of Cambay, in lat. $22^{\circ} 10'$, long. $72^{\circ} 30'$. It is a considerable river, running generally between high banks much indented by ravines. The tides are felt for a distance of thirty miles from its mouth, and during spring tides and in the rainy season, it for ten miles above that outlet forms a magnificent body of water six miles in breadth. About forty miles south of its mouth, is the estuary of the great river Nerbudda, which, rising in Amarakanta, in the British territory of Saugor and Nerbudda, about lat. $22^{\circ} 40'$, long. $81^{\circ} 44'$, takes a westerly course of about 594 miles, to lat. $22^{\circ} 3'$, long. $74^{\circ} 20'$, where, crossing the eastern frontier of this territory (Guzerat), and continuing to hold a course nearly due west for about 146 miles, it passes into the British district of Broach, which it divides into two nearly equal portions, and about thirty-five miles farther westward, falls into the Gulf of Cambay. The Taptee, rising in Gondwana, within the British Saugor and Nerbudda territory, takes a westerly course, in a great measure parallel to the Nerbudda, for about 321 miles, to the eastern frontier of this territory,

GUZERAT.

which it enters near Kookurmoonda, and continuing to hold a westerly course for about ninety-three miles, passes into the British district of Surat, through which it flows for about twenty-two miles, to its fall into the Gulf of Cambay. Besides those large rivers, a great number of torrents pour down from the mountains, and, holding a course due west, fall into the Arabian Sea.

Of the mountains, the most important are the Western Ghats, which, running in a direction from south to north, constitute the eastern boundary of the territory from its southern limit, in lat. 20° , to lat. $21^{\circ} 28'$, where, turning eastward, they form the lofty brow inclosing the valley of the Taptee on the south. The average elevation of these mountains is about 1,200 feet, though the height of some summits is probably not less than 2,000 feet. From the western face of the Ghats proceed numerous spurs or ridges of inferior elevation, a few of them reaching to the sea; and in some parts they are replaced by isolated hills or rocks, such as those of Parnera, Rola, and several others, the elevation of which seldom exceeds 300 or 400 feet. North of the Taptee, the Satpoora range, dividing the valley of that river from the valley of the Nerbudda, extends for some distance into this territory, terminating to the westward near Rajpeepa. North of the valley of the Nerbudda, is the western extremity of the Vindhya Mountains, expanding into the Barreca Hills, low and irregularly grouped; and still farther north, into those of Loonawara. Beyond these, in the same direction, are those of Dongurpore, becoming ultimately united to Mount Aboo. The overlying formation of the northern section of the Ghats is volcanic, as is also that of the Satpoora range, and consists for the most part of trap. The trappean formation extends into the peninsula of Kattywar, where it forms the bold mountain of Palithana, celebrated for its numerous Jain temples. Farther westward, granite is met with, rising to an elevation of 2,500 feet, in the celebrated Girnar Mountain, "an immense⁵ bare and isolated granite rock, presenting all the gigantic masses peculiar to that formation." The lower parts of the mountain, as well as the vicinity, are overlaid with soft limestone. The island of Perim, in the Gulf of Cambay, formed of sandstone, is remarkable for containing numerous organic⁶ remains.

GUZERAT.

The mineral wealth of this extensive tract is but scanty, and calls for little notice; the most important production is iron-ore, raised in the peninsula.⁷ The mouth of the Taptce, and probably the whole bed of the Gulf of Cambay, abounds in a black sand, very rich in iron,⁸ and containing some platina. At Rajpeepla, the finest cornelians⁹ are obtained in great abundance.

⁷ Journ. Roy. As. Soc. xiii.—Jacob, Report on the Iron of Kattywar.

⁸ Gibson, ut supra, 38.

⁹ Transacts. of Lit. Soc. of Bombay. i. 294—Copland, Account of Cornelian Mines in the Neighbourhood of Broach.

In the southern districts, the proximity of the sea, and the mountains covered with jungle or forests, moderate and equalize the temperature. The most disagreeable season is during the south-west monsoon, when the atmosphere, loaded with moisture, causes very distressing sensations and maladies, the effects being most severely felt during the night. In the inland districts, in the north of the territory, between the rivers Nerbudda and Saburmuttee, the average temperature is greater than in the southern districts. In this sultry tract, the hot winds blow from about the 20th of March to the 20th of May, and at this time the thermometer in a double-walled tent rises often to 115°, and in the house to 103°. Many, as well natives as Europeans, suffer from coup de soleil, and in parts where the soil is loose, the heat is rendered more annoying by the profusion of fine sand borne along by the wind. Throughout the district, the weather becomes cooler towards the end of October, and in the cold season hoar frosts are not uncommon. The climate of the peninsula, particularly in the Geer, is marked by insalubrity to such an extent as almost inevitably to cause death¹ to those who are so rash as to expose themselves to it in the season following the autumnal monsoon. The shores of the Gulf of Cambay are also generally malarious. "The constant exhalation² of noxious effluvia throughout the year, from the extensive tracts of salt marsh, which, covered with profuse and rank vegetation within the limit of the tides, surround the head of the Gulf of Cambay, and project for many miles inland, must doubtless exert a pernicious influence on the atmosphere in its vicinity."

¹ Jacob, Report on Kattywar, 9.

² Trans. of Med. and Phys. Soc. of Bombay, i. 101—Gilder, on a Disease in Zillah of Ahmedabad.

The zoology of Guzerat is varied and interesting. The lion is not uncommon, and equals in size and strength the same description of animal in Africa. It is observed to have a less mane; but this circumstance is considered to result from its frequenting the thick jungles instead of the open desert, the

GUZERAT.

usual resort of his African fellow. Tigers and leopards are very numerous, and destructive of both men and cattle. There are also the wolf, hyena, antelope, and deer in great number and variety. The nylgau (*Antilope picta*) is common in the northern parts, where there are large herds of them. Of birds, there are the flamingo, argala or adjutant-bird, sarus or gigantic crane, and a great variety of aquatic birds. Of domestic animals, the principal are the camel, most common north of the Sabarmuttee and in the plains in the vicinity of the deserts of Rajpootana. It is also met with in the western part of the peninsula. The buffalo is everywhere to be met, but in greater abundance and excellence in the south. Kine are numerous, but in the southern part are of inferior quality, while in the northern the breed is very fine, not being excelled by any in Britain; and the bullocks are so much esteemed for draught or burthen, that prices equal to 50*l.* or 60*l.* are not unfrequently given for a pair. The ass is small and weak; but in the wilds of the north-west, the wild ass is a creature of great speed, as well as of considerable beauty, and is sometimes tamed for purposes of show and pomp. The horse of Kattywar was formerly highly prized; but the breed has degenerated, and the Guzerat horse at present bred by the natives, is in no esteem, being small, weak, and ugly. In some of the jungly valleys and wilds, there is a breed of wild cattle, different from the bison, and far less fierce.

The soil of this extensive district is very varied: in the south there is much reddish and yellowish soil, formed from the disintegrated rocks, and in general fertile, being extremely favourable for the growth of both herbs and trees; but towards the mountains, there is a considerable extent of rocky ground, producing only grass or jungle. On the banks of the rivers, more particularly about their estuaries, the soil is generally deep, black, and very productive, especially of cotton. In the middle part of the country, between Baroda and Champancer, is an uncommonly rich district, having in some places a deep, black, tenacious soil, in others a reddish brown, both very fertile. Forbes³ considers the fine tract in the vicinity of Baroda as far surpassing in beauty, fertility, and luxuriant vegetation, all the countries which he had ever seen. In the level but rather elevated tract about the upper part of the

³ Oriental Mem.
i. 409; ii. 228.

GUZERAT.

Sabarmuttee, the soil is of a deep-brown hue, in some places verging to a greyish tinge, very favourable for the growth of all sorts of produce, especially tobacco, castor-oil plants, maize, carrots, and opium-poppies. Towards the northern boundary, in the vicinity of the Runn or Great Salt Marsh, the soil is so light and sandy as to be not worth cultivation, and affords no return, except in the profits of grazing. The crops, alimentary as well as commercial, grown in this territory, are very important. Of the alimentary, rice is more or less common in all districts under the hills, and in the alluvial soil along the seacoast throughout the whole extent of the province. It is also much cultivated about the river Sabarmuttee. Wheat is very extensively grown, especially in the northern part, and in the country between the Taptee and the Nerbudda. Barley thrives in many parts, jowar (*Holcus sorghum*), in the light lands in the north; bajra (*Holcus spicatus*) is cultivated on inferior lands throughout the whole territory, and is the staple article of food for the poorer classes of the people. In the peninsula of Kattywar, jowar and bajra are the chief alimentary crops, but wheat is also cultivated to considerable extent; as are kodra (*Paspalum scorbiolatum*) and gram (*Cicer arietinum*). Sugarcane flourishes in every part of the territory: it is one of the principal products in the south, and the quality is considered fine; but cotton may be regarded as the staple commercial crop. The date-palm (*Phoenix dactylifera*) and palmyra (*Borassus flabelliformis*) are extensively planted in the vicinity of the sea, on account of the sap, from which, when fermented, the ardent spirit toddy is drawn by distillation. The mhowa (*Bassia latifolia*) grows in great abundance, and its flowers are in great request, as the petals when dried afford a pleasant food, resembling raisins, and by distillation yield an ardent spirit, which, though nauseous to Europeans, is consumed largely by the lower classes of the native population. Mango-trees are in great abundance, and produce fine fruit. Towards the coast are many fine specimens of *Adansonia*, with its grotesque and huge stem, large white flower, enormous fruit, valuable to fishermen, for whom it serves as floats for their nets; while the wood is so light that a man often carries on his shoulder a large log of it, to be used as a raft in fishing, or in taking water-fowl. The pulp of the fruit

GUZERAT.

also yields a pleasant acid, which is used in medicine and in making sherbet. The jak (*Artocarpus integrifolia*), with its huge fruit; the tamarind, and the *Buchanania latifolia*, yielding fruit resembling an almond in taste, abound in this well-wooded country. The great wonder, however, of the vegetable creation is the cubbeer-bur,⁴ or great banian-tree (*Ficus indica*), situate on an island in the Nerbndda, covering an area estimated at from three to four acres. So great is its height, that at a distance it resembles a hill, and so numerous, large, and close its branches, that in the season of inundation, the population dwell amidst them, until the subsidence of the river leaves their usual homes free from water. Esculent products are numerous and excellent, especially the water-melon, considered the best in India; but the plantain is not abundant, and the produce is of no great excellence.

The manufacturing industry for which this territory was formerly noted, has much decayed, and in general has nearly disappeared, from the greater cheapness of the wares thrown into the market by British competition.

Of the population inhabiting these extensive dominions, there are no means of ascertaining the precise numbers. Nothing exists beyond mere estimates, and those estimates probably rest but on vague grounds. According to the best information available, the population may be considered as something less than 3,000,000. They are of various lineage and characters, but no census having been made, the comparative numbers of the respective castes, classes, and tribes, could be assigned only conjecturally. Though the Mahrattas are the ruling race, they appear to be surpassed in number by other tribes, especially in the peninsula. The Rajpoots are very numerous; Brahmins abound, and are mostly landed proprietors or village officers. Mussulmans are to be found principally in the towns, and the Bora sectarians of that faith are in general industrious, wealthy, and influential members of society. The Parsees, though a few are engaged in agriculture, in general resort to the larger towns, where they are distinguished by their industry, quiet demeanor, and commercial sagacity. Coolies, a race settled here from remote antiquity, are especially numerous in the districts north of the river Myhee, and of the tracts about the upper parts of the various rivers in the north. Along

⁴ Forbes, *Oriental Mem.* i. 305, 473; ii. 100, 260, 271. *Transact. of Lit. Soc. of Bombay*, i. 280—Copland, *Account of Corneil Mines*.

GUZERAT.

the north-west frontier of the territory, they constitute the bulk of the population. They are in general a robust race, and, though professing the Brahminical faith, eat flesh, particularly that of the buffalo, and are much addicted to intoxication, as well by opium and bang, as by ardent spirits. Many of them are depredators of various classes, some secret plunderers, others highway robbers; yet they are said to be trustworthy when expressly hired, either as guards of property, or to convey money to some destined place. The Koombies are an agricultural tribe, who exist in great numbers in the south and midland parts of the territory, but to a less extent in the north. Besides those just enumerated, are some anomalous tribes of less importance; such as Danyas, a small, well-knit, active race, engaged to some extent in cultivation, but by choice deriving their subsistence as far as practicable from the chase, fishing, or the collecting of wild fruits and the marketable produce of the jungles for sale. Their peculiar pursuits, little relished or shared in by the rest of the community, cause them to be viewed with dislike and dread; and the reputation of possessing great power in sorcery subjects them to much cruel treatment. Sometimes, in the true spirit of native barbarity, they are punished for such imputed delinquency by having their noses cut off, or by other mutilations. The Katties, who at a rather remote period emigrated from the banks of the Indus to the peninsula, form a majority of the inhabitants in a considerable prant or district to which they have given their name. They are considered to have been originally from Central Asia, and their northern origin is believed to be evidenced by their fair³ hair and complexions, blue eyes, tall stature, and athletic frame. Over the population in general, but especially over the Rajpoots, two classes⁴ of men, Bhats and Charuns, exercise wonderful influence. The Charuns, who, as well as the Bhats, boast of celestial origin, are divided into two tribes,—the Machilee being merchants, and the Maroo bards; and these two have in the aggregate 120 subdivisions. The men of those numerous subdivisions profess to understand the rites and observances which propitiate Siva and his consort Parvati, the favourite deities of the Rajpoots; and as few of the population except these pretenders to sanctity can read or write, they add to their other means of influence acquaintance with the genealogies of

³ Transactions of the Soc. of Bombay, l. 277—Mac-murdo, Remarks on Province of Bombay.
⁴ Malcolm, Central India, II. 122, 129.

GUZERAT.

chiefs and tribes, and with laudatory legends, which they chant in their honour. It is represented, that amongst the Rajpoots there is a deep impression that certain destruction results from being instrumental in shedding the blood of a Charun, or of any member of his family. In reference to this impression, one of the class intent on attaining an object which he cannot otherwise bring about, will not scruple to murder a relative; and instances have not been wanting in which, in extreme cases, a Charun has destroyed himself. The aged⁷ and the young among the Charuns are taught, not merely to be ready to part with life whenever the honour of their family or the class to which they belong calls for the sacrifice, but it is said that, "from the feeble female of four-score, to the child of five years of age, they are eager to be the first to die;" and this, it is added, "is no rare feeling, but one which appears to belong to every individual of this singular community." Under influence, acquired from the dread of the consequences of urging the Charun to such frightful extremities, the members of this community guarantee the performance⁸ of contracts entered into by the most faithless freebooters, and also become security for the payment of sums sometimes of very large amount. They also attend travellers as safeguards, and hesitate not to inflict on themselves wounds, or even death, should they fail in insuring protection to those whom they escort. Their influence, however, on such points has latterly been on the wane; probably because it has become less requisite since the establishment of greater security⁹ to life and property, by the advance of British power and influence in the dominions of the Guicowar. The Bhats, according to the imperfect information which we have concerning them, appear to differ little from the Charuns, except that they have less influence and fame. The portion of either which they possess results from their officiating as chroniclers, bards, flatterers, or lampooners. "They give¹ praise and fame in their songs to those who are liberal to them, while they visit those who neglect or injure them, with satires, in which they usually reproach them with spurious birth and inherent meanness. Sometimes the Bhat, if very seriously offended, fixes the figure of the person he desires to degrade on a long pole, and appends to it a slipper, as a mark of disgrace. In such case the song of the Bhat records the infamy of the

GUZERAT.

object of his revenge. This image usually travels the country, till the party or his friends purchase the cessation of the ridicule and curses thus entailed." Those singular religionists, the Jains, are rather numerous, especially in the peninsula, where there is scarcely a village² of any size which has not several of their families; and their innumerable beautiful temples, shrines, and monastic establishments on the mountains of Geernar and Palithana, are amongst the most interesting architectural works in India. The Bheel tribe exist in considerable numbers in the wilder tracts of the eastern and north-eastern part of the territory, especially about the river Myhee. They are considered a people³ of remote origin, and formerly possessed of power, and of a considerable degree of civilization, until subjugated and oppressed by both Rajpoots and Mussulmans. At present some of them have settled into habits of fixed residence, and are engaged in agriculture; thus being raised above the savage state of the majority of their fellows.

² Jacob, *ut supra*, 20.

³ Graham, *Sketch of the Bheel Tribes*, 2.

Throughout the more civilized parts of Guzerat, the population is rather comfortably lodged, in earthen or brick houses, with tiled roofs; but in the jungly tracts the houses are made of mud, with grass roofs. The food of the population is also in general plentiful, consisting of rice, wheat, and other grains, pulse and cucurbitaceous products, fruits, and milk; to which such of the upper classes as are not restricted by any scruples, add flesh, especially that of sheep and buffaloes, as well as fish, which may be obtained in abundance from the numerous streams and tanks.

Hereditary slavery is not uncommon in parts of Guzerat; and those claiming ownership over the unfortunate beings reduced to this state, not only avail themselves of the advantage of their services, but hire them out to others. In deference to the philanthropic views of the British government, the Guicowar has lately, indeed, issued a proclamation, prohibiting, under penalties, the future sale or purchase of children within his dominions, except under express permission of the durbar. This, however, is a very imperfect and unsatisfactory measure, perhaps a merely colourable one; and the home authorities have justly expressed regret that the prohibition was not made absolute.

The vernacular language, denominated Guzeratte, is an

GUZERAT.

offset from the great Sanskrit stock, and closely resembles the Hindee.

The principal towns—Baroda the capital, Pahlunpore, Cambay, Radhunpore, Chowrar, Baunsda, Peint, Hursool, Dhurrumpore, Thurraud, Sucheen, Wusravee, Deesa, Rajkote, Poorbunder, Dwarka, Loonawarra, Barreah, Daunta, Dongurpore, Banswarra, Jabbooa, Oodoporo, Rajpeepla, Saunte, and Beyt—are noticed under their respective names in the alphabetical arrangement.

There are scarcely any made roads in this territory; but most parts of the country are very level, so that communication for half the year is easy, and wheeled carriages traverse it in all directions. The principal lines of route are—1. From south-east to north-west, from Mhow, through Deesa, to Jessulmere. 2. From east to west, from Mhow, through Baroda, and thence through Limree, across the peninsula, to the south coast of the Gulf of Cutch, at Jooria. 3. From south-east to north-west, from Baroda to Ahmedabad, and thence across the Rann to Hyderabad, in Scindo. 4. From south to north, from Surat, through Baroda, to Beerpoor, where the route is joined with that already noticed, running from Mhow to Deesa. 5. From the north-east to the south-west of the peninsula, from Bujana, through Rajkot, to Poorbunder. A railway is projected from Baroda to Tunkaria: the line has been surveyed, and a favourable report as to its practicability been given. Such a work would be a source of great benefit to the country; and there can be little doubt that it will be effected at no distant period.

The early history of Guzerat presents no features of greater interest than those which usually occur in the records of the eastern nations of the like periods. It formed part of the Mahomedan empire of Delhi;⁴ but in the reign of Mahmood Toghluq, was separated from it by Mozuffer Khan, previously governor, but thenceforward king. About the year 1572 it was the seat of great confusion, and was re-annexed to the empire by Akbar. When the Mahratta fortune prevailed, the chief officer of the confederacy, the Peishwa, secured a large amount of tribute from it; while another chief, called the Guicowar, became the ruler of the principal state in Guzerat,

¹ E.I.C. Ms. Doc.

G-WALIOR TERRITORIES,¹ the possessions of the family of Scindia, have a singularly irregular outline, and consist of several detached districts, the principal of which is bounded on the north-east by the Chumbul, dividing it from the British districts of Agra and Etawah; on the east, in a very tortuous direction, by Bundelcund and the British districts of Saugor and Nerbudda; on the south by the native states of Bhopal and Dhar; on the west by those of Rajgurh, Jhalawur, and Kotah; and on the north-west by the Chumbul, separating it from Dholpore and Rajpootana. The extreme points of the Gwalior territory are in lat. $21^{\circ} 8'$ — $26^{\circ} 50'$, long. $74^{\circ} 45'$ — $79^{\circ} 21'$. The length of the principal portion above described is 246 miles from north to south, and 170 in breadth. The area of the whole comprises 33,119 square miles,² and comprehends part of the ancient province of Agra, most of Malwa, and part of the Deccan. The extreme north-eastern part adjoining Agra

⁸ Dangerfield, in Appendix II to Malcolm, Mem. on Central India, II. 340.

is generally level, bare, of no great fertility,³ and much cut up by deep precipitous ravines in the vicinity of the streams. A little further south, in the vicinity of the town of Gwalior, and about lat. $26^{\circ} 20'$, the surface rises into hills, which on the east approach those of Bundelcund;⁴ on the south the great Vindhya range, and on the west the hilly country⁵ of Rajpootana. The "country,"⁶ as far as the eye can range, is dotted over with small hills, which, unconnected by any chain of heights, start abruptly and independently out of the level plain." On one of these is the celebrated fortress of Gwalior. The geological formation of those rocky eminences is a very fine-grained sandstone, disposed in horizontal strata, and yielding an excellent building-stone,⁷ for which purpose it may be had in slabs of great length and breadth. The middle part, comprising a considerable portion of Malwa, is a plateau, having probably an average elevation of about 1,500 feet, though there are some points rising greatly above that amount, as in the instance of Shaizgurh, in the Mandoo range, which is 2,028 feet⁸ above the sea. The general slope of the plateau is very gentle from the Mandoo range towards the north or north-east, as indicated by the course of a number of streams

G·WALIOR.

flowing in those directions, to the Chumbul, by the channel of which the water flowing through them is discharged into the Jumna, and ultimately into the Bay of Bengal. The Mandoo range, which, running east and west, forms the southern boundary of the plateau, and slopes very gently northwards towards it, dips precipitously southwards towards the Nerbudda, and a narrow strip of Scindia's territory stretches across the valley of that river, and even to the south of the river Taptee.⁹ The rock underlying the diluvial or vegetable strata in Malwa, according to Dangerfield,¹ "appears to constitute the northern termination of a very extensive secondary trap formation, which extends from the extremity of the Deccan, and probably even Mysore." The upper or northern part of Malwa is chiefly occupied by sandstone and sandstone-slates, on which in some places repose low ranges of hills, consisting generally of hornstone. Iron-ore abounds, especially in the hills on the frontiers; and east of the river Chumbul is a narrow bed of cellular clay iron-ore, extending from south-east to north-west about eighty miles. Dangerfield² states that "the ore is poor in metal, and is not worked." No decisive indications either of other metal or of coal appear to have been found in the territory. The diluvial or vegetable soil in the Malwa portion of the country varies³ from three to ten feet in depth, and in a few places is as much as twelve or fifteen feet. "It is⁴ either a red ferruginous, or a rich black loam; the former compact, the latter light, with deep cracks or fissures in every direction." Having great natural fertility,⁴ and ample and ready means of artificial irrigation, few parts of India enjoy greater natural advantages than this part of Scindia's territory.

The rivers of the Gwalior country are numerous. The Taptee, flowing west, traverses the most southern part of the territory; and parallel to this, but about forty miles farther north, the Nerbudda flows in a similar direction: but by far the greater portion of the drainage of the territory is discharged into the river Chumbul, which, receiving the waters of the Chumbula, Seepra, Chota Kallee Sind, Newuj, Parbutty, and some others of less importance, flows along the north-west frontier of the country, separating it from the Jeypoor, Kerowly, and Dholpore territories; subsequently

Gwalior.

turning south-east, it forms the north-eastern boundary, towards the British districts of Agra and Etawa, and joins the Jumna in the latter district, twenty miles distant from the north-eastern course of the Gwalior territory. The Sindu, a considerable river, but less than the Chumbul, flows in some measure parallel to it, but farther to the east, and after forming for a considerable extent the south-eastern boundary towards Bundelcund, intersects for thirty miles the north-eastern corner of Gwalior, and finally falls into the Jumna a short distance below the confluence of the Chumbul with that river. In the northern part of the territory, forming a tract extending between the Chumbul and the Sindu, rise the Kooree, Asun, Sank, and some other torrents of less importance, which, flowing east or north-east, fall into the Sindu on the left side. This northern part, though not remarkable for natural fertility, is probably not inferior in this respect to the contiguous parts of Dholpore and of the British district of Agra, which, by means of artificial irrigation and other skilful processes of culture, are rendered very productive.⁵ In the Gwalior territory, on the contrary, the soil has been everywhere stripped of trees for the purposes of the ordnance. In consequence of the oppression exercised by the ruling powers, and the licentiousness and rapacity of the soldiery, "there is nothing⁶ left upon the land of animal or vegetable life to animate or enrich it; nothing of stock but what is necessary to draw from the soil an annual crop, and which looks to one harvest for its entire return. The sovereign proprietor of the soil lets it out by the year in farms or villages, to men who depend entirely upon the year's return for the means of payment. He in his turn lets the lands in detail to those who till them, and who depend for their subsistence and for the means of paying their rents upon the returns of the single harvest. There is no manufacture anywhere to be seen, save of brass pots and rude cooking-utensils; no trade or commerce, save in the transport of the rude produce of the land to the great camp at Gwalior, upon the backs of bullocks, for want of roads fit for wheeled carriages. No one resides in the villages save those whose labour is indispensably necessary to the rudest tillage, and those who collect the dues of government, and are paid upon the lowest possible scale." The writer here quoted, and who was British

GWAJIOR.

political resident at the court of Scindia, adds—"Such is the state of the Gwalior territories in every part of India where I have seen them." Perhaps, however, the situation of affairs is somewhat better in the south-western portion of the territory, or that comprising part of Malwa, as there is produced⁷ a great quantity of the fine opium for which the country is celebrated, besides wheat, gram (*Cicer arietinum*), pulse of various kinds, jowar (*Holcus sorghum*), bajra (*Holcus spicatus*), mung (*Phaseolus mungo*), maize, rice, linseed, and other oil-seeds, garlic, turmeric, ginger, sugar-cane, indigo, aal (*Morinda multiflora*), yielding a fine red dye. The vicinity of Bhilsa is famed for producing the finest tobacco,⁸ though in no great quantity. There is much cotton grown;⁹ but Chandhairee, noted for fine fabrics of this article, is stated to have been supplied¹ with the raw material from Berar.

Arts and manufactures are few and depressed. The cotton fabrics of Chandhairee, which were very considerable before those of Britain were brought into competition with them, are now, from this cause, in little demand.² At Boorhaunpoor are manufactures of fine cottons, silks, and kamkhab or brocade, very rich and beautiful. The raising and reducing of iron-ore is practised in many places. Brass guns are cast in the maharajah's arsenal at the fort of Gwalior; but neither the material nor workmanship is good. Petty handicrafts, necessary for supplying the simple wants of the population, are everywhere practised in the towns and villages.

The imports are of scanty amount, and consist principally of British woollens, cottons, silks, cutlery, Cashmere shawls, pearls from the Persian Gulf, Ceylon diamonds, and agates from Bundelcund; gold, silver, mercury, copper, lead, and zinc. The muskets used by the army are of French make, and a considerable quantity of French bijouterie finds a sale among the higher orders. Opium is the principal export, and is sent abroad by way of Bombay. Cotton is also largely exported to Bombay, and to the towns on the Jumna and Ganges. The tobacco of Bhilsa has been mentioned as of fine quality: a portion of this, though the entire production is small, is exported. The other exports of any moment are dye-stuffs and iron.

The northern part of the country, of moderate elevation, and

GWALIOR.

in most places either rocky or sandy, has a climate partaking of the torrid character of the neighbouring tracts of Agra or Rajpootana. In these parts the climate, during the rainy season, and for a short time afterwards, is exceedingly unhealthy, fevers being then very rife, in consequence, according to an intelligent writer,³ of the moisture imbibed by the superficial diluvial soil being prevented from passing off by an impermeable substratum of sandstone. Hence results great damp, indicated by mouldiness on all substances susceptible of it. During the dry and hot seasons, the climate is not unhealthy. The middle, the southern, and the western parts, or those comprised within Malwa, with little exception, have a mild and rather equable climate, resulting from the elevation of the surface. The range⁴ of the thermometer is unusually small, except during the latter part of the year, when great and sudden changes often take place. The cool season comprises the period between the beginning of November and the end of February; the hot season succeeds, and continues to the middle of June, when the periodical rains set in, and last to the close of September, the average fall being about fifty inches. During this season the thermometer has a very moderate range, rarely more than from 72° to 78°. The climate becomes cooler after the rains, and in proportion to the approach towards the winter solstice, when the coldest weather commences, and continues through January and the early part of February, the thermometer sometimes falling three or four degrees below the freezing point. During the sultry season the hot winds are comparatively mild and of short duration, though the thermometer sometimes rises to nearly 100° during the day; but the nights are invariably cool and refreshing. According to Malcolm,⁵ "though during the two months immediately succeeding the rainy season (when the hilly and woody parts should be shunned) fevers prevail here, as in other parts of India, yet the climate must on the whole be considered as salubrious, and to those enervated by a long residence in the lower and warmer plains of India, pleasant and invigorating." He adds, however, that cholera always is endemic in this province. A medical authority,⁶ already quoted, gives a less favourable description of the climate of the southern division; stating that the rains are sometimes so redundant about the time of the winter

G-WALIOR.

solstice as to rot the crops; that malaria prevails in a greater or less degree, according to situation; and that from October to December the jungly tracts cannot be traversed without peril to life. "Both the hot season and the cold are often liable to very fatal epidemics. As a general rule, it may be remarked, that the nearer we approach the southern border and the Nerbudda, the greater is the fatality of epidemics when they appear." The most prevalent diseases are fevers, constant and intermittent; and those contracted in the jungles at the close of the year are almost universally fatal. The virulent cholera sets in annually with dreadful intensity, causing death in less than an hour after the commencement of the attack. The average duration of human life is extraordinarily short, so that it is quite rare to meet a person of very advanced age; and so great, it is stated, is the mortality among children, that not more than one out of five is reared. Hence, as well as from other causes, the population is very disproportionate to the productive capability of the country.

The wild animals enumerated are, the tiger, leopard, bear, wolf, hyæna, wild dog, jackal, fox, ounce, lynx, badger, ichneumon, civet, otter, rat, bat, mouse, wild hog, nylgau or white-footed antelope, and various other kinds; deer of several species, the wild buffalo, the ape⁷ and the monkey, the squirrel, the porcupine, and the hare. Of birds, there are the vulture, eagle, hawks of various kinds, the kite, the buzzard, the owl, the hornbill (*Buceros*), the raven, the crow, daws and pies, the parrot, the jay, the cuckoo, humming-birds, the wild goose, the wild duck, the pelican, the cormorant, the spoonbill, the stork, the crane, the heron, the adjutant, the curlew, the snipe, the bustard, the floriken, the penfowl, the pheasant, the partridge, the quail, the pigeon, the dove, and the sparrow. The rivers abound in fish,⁸ especially of the carp kind. The most remarkable of the snake race are the bon, water-snake, cobra, black spotted snake, spectaeled snake, yellow clouded snake, whip-snake, and leaping snake. The magar or round blunt-snouted crocodilo infests some of the rivers.⁹

The population of the north-eastern part of this territory is

* In the Bengal and Agra Guide, 1842,¹ a scientific list of above 130 botanical productions of this tract is furnished; but the necessary limits of this work preclude further notice of it.

Gwalior.

of a mixed kind, comprising, besides Mahrattas (the ruling order), Boondelas, Jauts, Rajpoots, with some less distinctly defined divisions of Hindoos, and Mussulmans. Until the Mahratta inroads in the last century, the country was from an early period a possession of the Mahomedan rulers of Delhi; and in no part of the territory, except the small tract south of the Nerbudda, do the Mahrattas form⁹ any large proportion of the people. In the greater part of the southern and south-western parts, comprising a portion of Malwa, a very considerable section of the population is Brahminical; and Malcolm remarks:¹ "There is perhaps no part of India where the tribes of Brahmins are so various, and their numbers so great." He, however, adds, "but there is certainly none where there are so few of them either wealthy, learned, or where there is less attention paid to the religious rites of the Hindoo faith, or to its priests, by the rest of the population." Rajpoots exist in large² numbers, and pay little regard to the Brahmins, whose place as to moral and religious influence is supplied by the cognate tribes of Bhats and Charuns. There are many petty Rajpoot rajahs, who yield ostensibly fealty and tribute to the family of Scindia, but display from time to time evidence of a refractory disposition, which would render them perilous subordinates in case of any reverse happening to the paramount power. They are described by Malcolm³ as an indolent, sensual race, living habitually under the besotting influence of opium; while the atrocious practices of infanticide and suttee find toleration. The Mussulman population is estimated at about a twentieth of the whole. The relative density of the population assumed⁴ by Malcolm for Central India is ninety-eight* to the square mile; and this ratio, compared with the area, would make the amount 3,228,512.

There are probably no places of public instruction in this territory; but private schools, both in the towns and villages, are very numerous.⁵ At some of the principal towns Persian is taught, as a qualification to act as moonshees, and perform

* In a periodical work¹ published some years ago, the relative density of population in Central India was set down at 283 to the square mile; but there can be no reasonable doubt that this is a great exaggeration. In a more recent work, a calculation giving to Scindia's territories a population of 168 to the square mile is quoted, and justly condemned as excessive.²

Gwalior.

similar official duties. Sanscrit is taught at Oojein and a few other towns. In the vicinity of Gwalior, Mahratta is the language spoken; in the southern and the western part of the territory, the common language is the Hindee. The general course of study comprises reading, writing, account-keeping, mythology and ritual lore, astronomy according to the Ptolemaic system, and astrology. The cultivation of the Mahratta language appears to be rather limited, in consequence of the small numerical proportion which the ruling race bears to the great mass of the population.

The sources of revenue are—1. Mal,* including what is collected on land and customs, the latter comprising taxes on spirits, and other charges of a similar nature; and, 2. Abwab.† which “includes the difference of the exchange between that of the market and the fixed rate at which the revenue of the district is paid; casual aid or support of government officers employed by the minister or manager; fees to the potdar or treasury servant, who examines the money; contributions to expenses at the feasts and marriages of the princes or principal ministers.” There is another class, denominated extraordinary taxes, comprehending a house-tax, or an income-tax, levied every second or third year, principally on the trading part of the community; besides fines, impositions, and temporary supplies. Malcolm considers⁶ the amount of taxation moderate, ⁶ *ib.* 48, 49. but the mode of collecting it objectionable, principally on the score of inequality and uncertainty. The total revenue of Scindia's territory is stated by Malcolm⁷ to have been ⁷ *Ut supra*, 375. 1,27,68,459 rupees in 1819, and 1,43,20,227 in 1824. According to Colonel Sleeman, late British political resident at Gwalior, it appears, that “in the year 1833, the Gwalior territory yielded a net revenue to the treasury of ninety-two laes of rupees (92,00,000), after disbursing all the local costs of the civil and fiscal administration of the different districts, in officers, establishments, charitable institutions, military fees;” and adds that, in the districts near the capital, the net revenue is about five-sixths of the gross collection, but that in the

* Mal, “rent.”

† Abwab: Wilkins states, “This term is particularly used to distinguish the taxes imposed subsequently to the establishment of the Assul, or original standard rent.”

¹ In v. in Glossary accompanying Appendix to Report of Select Com. of House of Lords, 1830.

G-WALIOR.

remoter parts, where government is weaker, population thinner, and predatory outrage more prevalent, the net revenue is about one-third the whole collection. He says, "These collections are equal to the whole annual rent of the land; for every man by whom the land is held or cultivated is a mere tenant at will, liable every season to be turned out, to give place to any other man that may offer more for the holding." At present, the revenue is stated to amount to sixty⁸ lacs of rupees, exclusive of eighteen lacs assigned to the British government for the payment of the military contingent. Of the 29,606 men which, in 1824, formed⁹ the military force of Scindia, 9,471 were horse; showing a relative diminution in that force subsequently to 1817, when the army consisted "of about¹ 26,000 regular infantry, 13,000 cavalry, and 396 pieces of cannon," besides a large body of Pindarries, over whom Scindia had control, if not command, some local corps, and the garrisons and guns of his fortresses. In 1833, according to Sleeman,² the regular army at Gwalior camp comprised thirty regiments of infantry, each having 600 men and four field-pieces; the artillery consisted of 200 guns, of different calibre; there were but few corps of cavalry, and those were not considered very efficient. In 1843, at the time of the military operations against the troops of Scindia at Gwalior, the number of infantry was estimated³ at 18,689, the number of guns was 215. Respecting the efficiency of this last arm, the commander-in-chief of the British forces remarked, "I may safely assert that I never witnessed guns better served, nor a body of infantry apparently more devoted to the protection of their regimental guns, held by the Mahratta corps as objects of worship." At an earlier period, the severe loss suffered by the British at Assye and Laswaree was mainly from the fire of the enemies' artillery. The present military⁴ force consists, first, of the contingent, paid by the British government from funds derived from territorial assignments, and numbering 8,400, forty-five of whom are European officers, selected from the Bengal army; and, secondly, of the troops maintained by the Gwalior government, and at its disposal, amounting (cavalry, infantry, and artillery) to upwards of 9,622; thus rather exceeding the maximum fixed by the treaty of 1844, which (exclusively of the contingent) was 9,000.

GWALIOR.

The founder of the Scindia dynasty was Ranojee Scindia, a Soodra, of the Koombi or cultivator tribe,* and hereditary potail or headman⁵ of a small rural district. He appears to have first come into notice as a domestic⁶ of Balaji Wiswanath, who was Peishwa from 1714 to 1720. Ranojee Scindia, being considered by his master trustworthy in his humble avocation, was advanced to a station in the body-guard; subsequently rising rapidly, he became a chief of considerable importance, and on his death, about 1750,⁷ was succeeded⁸ in his position, as head of the Scindia family, by Madhaji Scindia, one of his natural sons, who was present at the great battle of Paniput, in 1761, in which Ahmed Shah Dooranee defeated the confederated Mahrattas. Madhaji escaped the carnage with difficulty,⁹ and not without a desperate wound, which rendered him lame for life. This great national disaster of the Mahrattas did not, however, operate unfavourably for Scindia; for the shock given to the power of the Peishwa actually removed a principal obstacle out of his way. He recovered some possessions in Malwa, which had been wrested from him after the battle of Paniput, levied contributions very extensively, enforced tribute from the chiefs of Rajpootana and others in the vicinity of his dominions, and maintained a large and effective force in the Deccan, to control the Peishwa and other parties opposed to the growth of his power. He seems to have first come into serious collision with the British forces in 1779, when, in concert with the troops of the Peishwa and of Holkar, he baffled¹ the Bombay army in an attempt to march to Poona, and subsequently, in a convention with the managers of the expedition, exacted a cession of a portion of Broach. The growth of Scindia's power up to this period is thus described² by Malcolm:—"Madhaji Scindia took full advantage of the dissensions that occurred at Poona, after the death of Ballajee (1761), to usurp, as far as he could, the rights and lands of the head of the empire to the north of the Nerbudda. The detail of the progress of this system of spoliation of both friend and foe, is not necessary; suffice it to say, this able chief was the principal opposer of the English in the war they carried on in favour of Ragobah. He was the nominal slave, but the rigid master, of the unfortunate Shah Allum, emperor

of Delhi; the pretended friend, but the designing rival, of the house of Holkar; the professed inferior in all matters of form, but the real superior and oppressor, of the Rajpoot princes of Central India, and the proclaimed soldier, but the actual plunderer, of the family of the Peishwa." His extensive possessions in Malwa, however, formed the main basis of his power. Mohammed, the weak emperor of Delhi, having, in 1741, granted³ the province of Malwa in jaghire to the Peishwa, who intrusted⁴ its management to Ranojee Scindia, that chief, and subsequently, still more effectually, Madhaji, succeeded, by constantly-repeated encroachments, in acquiring complete dominion over the greater part of the province. Madhaji Scindia having succeeded in making himself master of the strong hill-fort of Gwalior, about 1779,⁵ lost it in 1780, when it was surprised⁶ in a night attack by a British force under Major Popham,* assisted by Captain Bruce. In the following year, Colonel Camac, in command of a British force, having invaded Malwa, and penetrated⁷ as far as Seronje, was so beset by Madhaji Scindia, as to be compelled to make a precipitate retreat, in the course of which, however, he succeeded in surprising and defeating his pursuer. Consequent on this defeat, a treaty was concluded, by which the British authorities agreed to evacuate all the territory claimed by Madhaji Scindia to the right of the Jumna, he also engaging to leave the rann⁸ of Gohud in unmolested possession of Gwalior and of the adjoining country. By the treaty of Salbye, concluded⁹ between the East-India Company and the Peishwa, in 1782, Madhaji Scindia was recognised as a sovereign prince, and declared the guarantee of its conditions. The fort of Gwalior was, in 1781, invested¹ by him, at the head of 70,000 men, and ultimately fell into his hands by surrender. In the succeeding year he entered Delhi, and was, by Shah Allum, made² minister, but soon after expelled by a hostile confederacy. In 1788, however, he vigorously pushed his fortune, and, among other successes, acquired³ Agra. His most formidable force at this time was that commanded by De Boigne, a Savoyard⁴ by birth, but trained in the Irish brigade in the service of the king of France.

GWAJIOR.

This able soldier, by means of funds supplied by Scindia, kept on foot an army⁵ of 18,000 regular, and 6,000 irregular infantry, 2,000 irregular horse, and 600 Persian cavalry, with 200 cannon. By these means, in 1790, were gained, within a few weeks of each other, the battle⁶ of Patun, and that of Mairta, in Joudpare, by which its rajah was effectually humbled. Delhi, and its immediate dependencies, had, in 1788, been occupied by Scindia, who expelled and punished with tortures, ending in death, Ghulam Kadir, the brutal oppressor and mutilator of Shah Allum. Madhaji Scindia at the same time maintained a preponderance⁷ at the court of the Peishwa at Poona, and at the time of his death, in 1791,⁸ his dominions extended from the river Taptee south, to the northern limit of the district of Delhi, and from the Gulf of Cambay on the west, to the Ganges in the east; including Candeish, a portion of the Deccan, the greatest part of Malwa, the districts of Agra and Delhi, and the central and finest part of the Doab. He was succeeded in his possessions by his grand-nephew Dowlut Rao Scindia, then in the fifteenth⁹ year of his age. The early years and efforts of Dowlut Rao were expended principally in contests at Poona and its vicinity, for obtaining influence over the Peishwa, or the means for overawing him, with the view of wielding the power derived from his ostensible protection and countenance, thus playing a chief part in "a scene¹ of intrigue, art, and treachery, which is perhaps unparalleled." Dowlut Rao, joining his forces with those of Ragoji Bhonsla, rajah of Berar, the allied chiefs, in 1803, invaded the territory of the Nizam, protected by the East-India Company, and on the 23rd of September in that year, the Mahratta army, unskillfully encamped, was surprised at Assye by a British force of about an eighth of its number, commanded by General Sir Arthur Wellesley, subsequently the illustrious duke of Wellington, and, after a prolonged and fiercely-contested battle, was totally defeated.² The overthrow of Scindia's military resources in the Deccan was completed by the defeat which the confederated Mahrattas received from Sir Arthur Wellesley at Argaum,³ in Berar, on the 28th of November following.

The destruction of the Mahratta power in Hindoostan north of the Nerbudda had, in the mean time, been not less signally effected by General, afterwards Lord Lake, the British com-

mander-in-chief, who having, in the beginning of September, 1803, stormed ⁴ Allygurh, a few days afterwards, at Patparganj, ⁵ on the left bank of the Jumna, nearly opposite Delhi, totally defeated Scindia's disciplined army, commanded by the Frenchman Bourquien, and effectually cleared the Doab of the Mahrattas. Delhi was immediately occupied by the victorious army, to which, before the close of the same year, Agra yielded, after a brief attempt ⁶ at defence. General Lake, indefatigably following up his advantages, destroyed at Laswaree, ⁷ a few weeks afterwards, the remnant of Scindia's disciplined force. To avert impending ruin, Doulut Rao, at the close of the year 1803, acceded to the treaty of Serji Anjengaum, dictated by the British government, ceding on the left bank of the Jumna "all his forts, ⁸ territories, and rights in the Doab;" and on the right bank of the river, "all his forts, territories, rights, and interests in the countries which are to the northward of those of the rajahs of Jeypore and Jodepore;" or, substantially, all tracts which, eastward of long. 76°, are situate north of the Chumbul. Ambajee, a feudatory of Doulut Rao, had at his ostensible instance ⁹ engaged to yield to the British the fort of Gwalior; but it was found necessary to commence military operations against the place, and the Mahratta garrison, rendered tractable by this measure, consented to receive a bribe, and depart. The fort was by the British government transferred to the rana of Gohud; but some difficulties arising, the grant was revoked, and the place, "from considerations ¹ of friendship"—such was the phrase—was in 1805 ceded to Doulut Rao Scindia by the second article of the treaty of Mustafapore. The Mahratta prince so highly appreciated the advantages resulting from the strength of the place, that he regarded it as his capital, and fixed his residence in a permanent camp ² at the base of the rock. In 1817, when the Peishwa ³ confederated with Appa Sabib Bhonsla of Nagpore, and Holkar, for the overthrow of the British power, the marquis of Hastings, governor-general, took the command of a formidable army, and advancing ⁴ to the river Chumbul, so far overawed Scindia that on November 5th, 1817, a treaty ⁵ was executed, binding this chief, among other conditions, to concur with the British in effectually quelling the Pindarries and other freebooters, and for this purpose to furnish a body of 5,000 horse, to act

G-WALIOR.

under the control of British officers. Doulut Rao Scindia died in 1827, and as he had no male issue, Mugut Rao, a boy eleven years old, and nearest relation of the late maha-rajah who could from his age be adopted, was declared sovereign by the name of Ali Jah Junkojee Scindia. This youth displayed a trait of character of no common atrocity on occasion of his marriage, when he discharged arrows among the assembled people, one of whom was killed.⁶ He died childless in 1843,⁷ when Bhagerut Rao, his nearest male relative, eight years of age, was declared successor, and proclaimed under the title of Ali Jah Jyajee Scindia. The maternal uncle⁸ of the deceased maha-rajah became regent, under the title of the Mama Sahib,^{*} but was quickly displaced by court intrigue and military violence, and the reins of government were thrown ostensibly into the hands of the maha-ranee, widow of the late maha-rajah, "a passionate girl⁹ of twelve years of age." Her ignorance, caprice, and froward petulance accelerated the progress of anarchy inevitable in such a juncture, and the more alarming, as the most active promoters of the turmoil were numerous and determined, well trained to arms, amply equipped with them, and actuated by a Mahratta love of violence and spoil. This state of things naturally and justly excited the apprehension of the government of British India, Scindia's dominions being extensively conterminous with those of the East-India Company, and likely, in case of outbreak, to share in the calamities and suffer from the deeds of rapine and blood sure to be perpetrated by a lawless soldiery, associated with freebooters more lawless than themselves. The actual minister was the Dada Khasji Wala,[†] who was seized by the soldiery, probably less from any hostile feeling than a desire to employ him as the tool of their rapacity. Hence ensued a military conflict between those who seized the minister and those supporting the maha-ranee and her party; but after a brief and feeble engagement, the soldiers agreed to make

GWALIOR.

common cause, intelligence having arrived that a large British force had been concentrated at Agra. Reinforcements were thereupon called in from every side, ammunition in large quantity was served¹ to the troops of all arms, and extensive preparations of every kind made for war. The Dada Khasji Wala was given up to the British authorities; but all order had now ceased in Scindia's territories; the zemindars refused to pay in the rents, and any semblance of rule that remained, depended altogether upon the will of the soldiery. The British government then resolved² upon advancing, for the purpose of obtaining full security for the future tranquillity of the common frontier, for the maintenance of order within the territories of Scindia, and for the conducting of the government of those territories in accordance with the established relations of amity towards the British government. It was required³ that the army of Gwalior should be reduced within reasonable limits. These objects were avowed in the proclamations⁴ issued by the Governor-General on the entrance of the British forces into the Gwalior territory, towards the close of the month of December, 1843. On the 21st December, the British army, led by Sir Hugh Gough, commander-in-chief, accompanied by Lord Ellenborough, governor-general, commenced⁵ crossing the Chumbul near the town of Dholpore, and by the 26th of the same month the whole had passed to the right side, and encamped at Hingona, twenty-three⁶ miles north-west of the fort of Gwalior. This force advancing on the 29th, came in front of the Mahratta army about fifteen miles north-east of Gwalior, and in a position supported by the neighbouring villages of Maharajpore and Chonda. After an obstinate engagement, in which the British suffered very severe loss from the well-served artillery directed against them, the Mahrattas were dislodged from all points of their position, and the survivors of the carnage retreated to Gwalior, having lost fifty-six pieces of artillery⁷ and all their ammunition-waggons. The total loss on the side of the British was 106 killed, 684 wounded, and seven missing. The numbers engaged were probably nearly equal,—about 14,000 on each side. Simultaneous with the march of the commander-in-chief from Dholpore was that of Major-General Grey, with an army probably of about 8,000 or 9,000 men, from Bundelcund.

GWALIOR.

Crossing the river Sindé at Chandpore, this force marched to Puniaur, twelve miles⁸ south-west of Gwalior, and there, on the 29th December, encountered a Mahratta army, despatched from the capital, and estimated at 12,000 strong,⁹ with twenty-four guns. The Mahrattas, after a severe struggle, were defeated, with the loss of all their artillery and a great number of men. The loss on the part of the British was twenty-five killed,¹ and 189 wounded. On the 4th of January, 1844, the fort of Gwalior was occupied by the contingent force, commanded by British officers; and thus passed into the power of the East-India Company this celebrated stronghold, which effectually commanded the Lashkar,* or stationary camp, at its base, where 5,000 refractory troops, amply supplied with artillery, still held out; but all hope of successful resistance having ceased, they accepted the offer made to them of full liquidation of all arrears, with the addition of a gratuity of three months' pay, and, surrendering their artillery and small-arms, they quietly dispersed.² It has been recently determined that no further repairs shall be made to the fort.³ On the 13th January, 1844, was concluded⁴ a treaty, by which various previously existing treaties were confirmed, except so far as they might be affected by the stipulations of the new one. The contingent force for the protection of Scindia's territory, originally provided for in the treaty of Serjee Angengau (1803), by the assignment of certain districts for its maintenance, was to be increased,† and the revenues of other districts, in addition to the former, were, by a schedule to the new treaty, appropriated to that purpose, as well as, it would appear, to defray the charges of the civil administration of such districts, which was to be conducted by the British government for Scindia. To meet sundry debts due to the British government, and to cover various charges incurred by

* Lashkar, "army," in Persian.

† The accounts between the British government and Scindia had long before this period become much complicated and very intricate. Certain arrangements were made in 1817 for defraying Scindia's share of the expenses of the Pindari war; but the payments fell short of the charges, and it was consequently agreed (1820) to reduce the contingent, and to make an assignment of territory in liquidation of the debt. Subsequently (1836) a part of the assigned territory was restored, in consideration of an annual payment.

GWALIOR.

the misconduct of that of Seindia, a sum of twenty-six lacs was to be paid within fourteen days from the date of the treaty; in default of which, territory described in another schedule was to be assigned as provision for the payment of the principal debt, and the interest accruing thereon, together with the charges of the civil administration. The military force maintained by Seindia beyond the contingent was not to exceed 9,000 men, of whom not more than one-third were to be infantry. During the minority of the maharajah, all acts of government were to be under the control of the British resident, the administration being vested in a council of regency. Three lacs of rupees were set apart as a provision for the maharanees. Such was the position of the relations under the treaty between Gwalior and the British government. The exemplary character, however, of the young maharajah, and his high promise of qualifications for government, led to his being intrusted with the administration of his dominions before the expiration of his minority.⁵ The formal act of coronation was postponed until the attainment of his majority in 1853, when, by its performance, the young rajah was solemnly confirmed in the authority which he had previously exercised. His conduct subsequent to his assumption of power has fully justified the high opinion previously entertained of this prince.⁶

GWALIOR.^{1*}—A celebrated hill-fort, the capital of the possessions of Seindia's family. The rock on which it is situate, is completely isolated, though 700 yards to the north is a conical² hill, surmounted by a remarkable building of stone; and on the south-east, the south, and the south-west, are similar hills, which form a sort of amphitheatre, at the distance of from one to four miles. Near the place, and on the east of it, runs the small river Soowunreeka,³ nearly dry, except during the rains. The rock of Gwalior, and the ranges in its vicinity, are of ochreous sandstone, capped in some places with basalt, which appears to have formerly universally overspread them, and the fragments of which lying at their bases,⁴ form slopes for a considerable distance up their sides. The

* Gwaler of Tassin; Gualiar of Briggs's Index, and of the Ayeen Akbery; Gualior of the translators of Baber; Gwalior of Elphinstone, and generally of the British writers.

GWALIOR.

sandstone of the hill-fort is arranged in horizontal strata, and its face presents so steep a fracture, as to form a perpendicular precipice, rising above the upper limit of the slope. Where the rock was naturally less precipitous, it has been so scarped as to be rendered⁵ perpendicular; and in some places the upper part considerably overhangs the lower. The greatest length of the rock, which is from north-east to south-west, is a mile* and a half, the greatest breadth 300 yards. The height at the north end, where it is greatest, is 342 feet. On the eastern face of the rock, several† colossal⁶ figures are sculptured in bold relief. A rampart runs round the edge of the rock, conforming to the outline of its summit; and as its height is uniform above the verge, its top has an irregular appearance. The entrance within the inclosure of the rampart is towards the north end of the east side; first, by means of a steep road, and higher up by steps⁷ cut in the face of the rock, of such a size and of so moderate a degree of acclivity, that elephants easily make their way up. This huge staircase is protected on the outer side by a high and massive stone wall, and is swept by several traversing-guns pointing down it; the passage up to the interior being through a succession of seven gates. The principal gate is called Hatipul, or the elephant's gate, from the figure of that animal sculptured⁸ over it. The citadel is at the north-eastern extremity of the inclosure, and has a very striking⁹ appearance. The outline of the great

* According to Hunter¹ and Sleeman;² but, according to Scott,³ "four miles." Sleeman gives the breadth at a quarter of a mile, which somewhat exceeds that given by Hunter.

† They are described by Baber, who mentions¹ one forty feet high, which he ordered to be destroyed; but, losing² power soon after, his power of enforcing his mandate ceased, and the image remains. A writer in a recent publication,³ states it to be an image of Parswanath, the twenty-third Jaina. He adds, "One object of curiosity is a massive Jain temple, built 700 years since, now in ruins;" and proceeds: "The only other object worthy of attention, is the Thalleo ka lath (Toli ka lath), a lofty temple now in ruins, built with a part of the accumulated wealth of an oilman in Aker Shah's time." The temple and lath are perhaps the structures described by Hunter:⁴—"About the middle of the fort are two remarkable pyramidal buildings of red stone: they are in the most ancient style of Hindoo architecture, and are said to have been built for the residence of the mother-in-law and sister-in-law of a rajah who reigned in a very remote period, when this fortress was the capital of an extensive empire."

Gwalior.

masses of the antique palace surmounted by kiosks, is strongly marked against the sky, and adjoining is a series of six lofty round towers or bastions, connected by curtains of great height and thickness. Along the eastern side of those buildings extends horizontally,¹ in the upper part, a course of bricks or tiles of brilliant blue colour, like coarse porcelain; and the effect produced by this great vivid streak is singular, but not unpleasing. There are within the inclosure of the rampart several spacious tanks, capable of supplying an adequate garrison, though, according to a military author,² 15,000 men would be required fully to man the defences. The old town of Gwalior is situate along the eastern³ base of the rock. It is of considerable size, having⁴ a street a mile long, and has many good houses of stone; but is very irregularly built, and extremely filthy. It contains a very beautiful building⁵ of white sandstone, with a cupola covered with blue porcelain tiles, beneath which lie the remains of Muhammad Ghous, a famous sage, celebrated for his sanctity in the time of Akbar. The Lashkar, or stationary camp of the maharajah, is represented as extending several miles⁶ from the south-west end of the rock, and as being a place of considerable traffic and wealth; but the great reduction of the military force of the state must cause a diminution of the prosperity of this establishment. It has been described as a very filthy collection of rude buildings, even the residence of the maharajah being of mean⁷ exterior, and those of the rest, in appearance little better than hovels, though much wealth, the proceeds of a long course of rapine, was stored within them.

There are scarcely any manufactures in Gwalior, except artillery-founding, and the making of gunpowder and fireworks for the prince and court.

According to the researches⁸ of Wilford, the fort of Gwalior was built in 773, by Surya-Sena, rajah of a small territory lying about the rock. Ferishta, however, assigns⁹ it a date antecedent to the commencement of the Christian era. In 1023,¹ it was besieged by the celebrated Mahmood of Ghuznee, who found the attempt to capture it hopeless, and marched away, taking a present. After a long siege in 1196, it was taken²

* Scott, quoted in Hodges,¹ appears to be in error in stating "at the north-west foot of the mountain is the town."

G'WALIOR.

by Bahauddin, or Kutbuddin Eibak, lieutenants of Shaha-buddin, or Muhammad, of Ghor. In 1211, it was lost³ by the Mussulmans, but recovered in 1231, after a blockade for a year, by Shamsuddin Altamsh, the slave king of Delhi.* Narsingh Rae, a Hindoo chief, taking advantage of the troubles produced by the invasion of Tamerlane in 1398, took Gwalior,⁴ which was not recovered by the Mussulmans until 1519, when it was retaken⁵ by Ibrahim Lodi, the Patan sovereign of Delhi; after whose defeat and death in battle against Baber, it was seized by a Patan adventurer. In 1526, Baber⁶ gained it by stratagem, and in 1543, after the expulsion of his son Humayon, it fell into the hands⁷ of his successful rival Sher Shah; but, after the return and re-establishment of Humayon, it was, in 1556,⁸ recovered by his successor Akbar, who made it the state prison for captives of importance. Here he confined, and subsequently put to death, his first cousin, Abul-kasim, son of the ill-fated Kamran. Here also Aurungzebo confined⁹ his brother Morad, and shortly after put him to death. The same suspicious and cruel sovereign consigned to this prison the son of Morad, and his nephews Soliman and Sepelir Sheko, the sons of Dara, who here quickly found a grave. In the dismemberment of the empire of Delhi, Gwalior was† seized¹ by the Jat rana of Gohud. It subsequently changed hands, and in 1779² was garrisoned by Scindia, from whom it was taken by the forces of the East-India Company, on the 3rd August, with little trouble and small loss. At midnight, ladders and all other auxiliaries for scaling having been prepared, the party for the attack was formed. Two³ companies of grenadiers and light infantry led the van, under Captain Bruce;‡ Major Popham followed with twenty Europeans and two battalions of sepoys. A battalion, two guns, and a small body of cavalry, were ordered to march at two o'clock, to cover the retreat of the English party, in case of

* Respecting this event, Ferishta adds, that an officer, "who was present at the capture, has commemorated the date of the transaction by four lines, carved on a stone, over one of the gateways;" on which, Briggs observes, "the stone and the lines are still to be seen."

† If, however, the account of Busawun Lal¹ be correct, the fort had been garrisoned by the Maharrattas in 1737.

GYA—GYN.

premature discovery, or, in the event of success, to prevent the garrison from escaping. At break of day, the van arrived at the foot of the scarped rock, the spies ascended by wooden ladders, and having made fast ladders of ropes, the troops followed. Some resistance was offered, but the garrison was intimidated by the unexpected attack, and the assailants were soon masters of the place. Transferred by the British government to the rana of Gohud, it was in 1784 recovered⁴ by Madhajeo Scindia, from whom it was again taken in 1803,⁵ but restored in 1805, "from considerations,⁶ [it was said,] of friendship." Finally, in January, 1844, subsequently to the battle of Maharajpore, it was occupied by the Gwalior contingent, commanded by British officers; and thus has virtually⁷ been placed within the power of the British government. It has been determined that no further repairs shall be made to the fort.⁸ Distant S. from Agra 65 miles, S. from Delhi 175, W. of Calpee 100, N.W. of Allahabad 277, N.W. of Calcutta, by Allahabad, 772.⁹ Lat. 26° 13', long. 78° 15'.

route from Dinapore to Khatmandoo, 15 miles² N.E. of former, 182 S. of latter. The Ganges is here crossed by ferry from Patna, which is immediately opposite. It is the station of a police division of the same name. Here is annually held a large fair³ for the sale of horses and country cattle. The place is also much frequented by pilgrims, and from that circumstance has doubtless received the name, signifying pilgrim's town. Lat. 25° 40', long. 85° 17'.

HAJIGUNJE, in the British district of Fureedpore, presidency of Bengal, a town on the right or south-west bank of the Ganges, described by Heber as here six miles wide during the rainy season. Distance from the town of Fureedpore E. five miles. Lat. 23° 36', long. 89° 56'.

HALABAK.—A town in the native state of Cashmere, or dominions of Gholab Singh, 163 miles E. from Sirinagur, and 158 miles N.E. by N. from Kangra. Lat. 33° 55', long. 77° 46'.

HALAN SYUDS, in Sinde, a village on the route from Hyderabad to Schwan, by way of Kotrec, and 32 miles N. of the last-mentioned place. It is situate about a mile and a half from the right bank of the Indus, and close to a shikargah or hunting preserve, formerly belonging to one of the ameers of Hyderabad. Lat. 25° 54', long. 68° 18'.

HALEESHUR, in the British district of Baraset, presidency of Bengal, a populous town situate on the left bank of the Hooghly river, and celebrated for the number of Sanscrit¹ colleges, founded by a former rajah of Nuddea. Lat. 22° 55', long. 88° 23'.

HALIPOOTRA, in Sinde, a village on the route from Sehwan to Larkhana, and four miles N. of the former place. It is embosomed in high trees, and is situate two miles from the right bank of the Indus, in a tract overrun with jungle, and interspersed with pools and watercourses supplied from the river. Lat. 26° 27', long. 67° 54'.

HALLA,¹ in Sinde, near the left or eastern bank of the Indus, is situate in a tract of no great fertility, the soil being impregnated with salt. The new town is larger and more wealthy than the old one, which is contiguous to it. There is here a much-frequented shrine of a reputed Mahometan saint. The bazar, which is partially roofed over, is well supplied, and considerable business is transacted there. Sindian caps, the

HALLAR.

general head-dress of all in the country except the Hindoos, are made here in great numbers, and of excellent quality. Halla new town is celebrated for its earthenware, the coarser kinds of which are manufactured from clay taken from the bed of the Indus. In the finer kinds, this material is mixed in a large proportion with ground flints: the decorations are very showy, and sometimes tasteful; the colours, which are obtained from the oxydes of copper, lead, or iron, being remarkable for brilliancy and richness. A sort of unctuous earth, called "chunniah," is obtained from lakes near the town, and is eaten in considerable quantities, especially by the women. Estimates of the population differ widely, and Burnes² upon this point is not consistent with himself. In one place (vol. iii. 264), he states it at 2,000, and in the same volume (p. 227) at 10,000. The latter seems the more probable amount. Lat. 25° 39', long. 68° 24'.

² Bokhara.

HALLAR, or HALLAWAR,¹ in the peninsula of Kattywar, province of Guzerat, a district named from the Halla tribe of Rajpoots. It is bounded on the north by the Gulf of Cutch; on the north-east by the districts Muehoo-Kanta and Jhallawar; on the east by the district of Kattywar; on the south by the districts of Kattywar and Soruth; on the south-west by the district of Burda and the Arabian Sea; and on the west by the district of Okamundal, from which it is divided by a small runn or salt-marsh. It lies between lat. 21° 39'—22° 50', long. 69° 9'—71° 3'; is about 130 miles in length from east to west, and 75 in extreme breadth. Its area may be stated at about 4,960 square miles. Nearly equidistant from the northern and southern boundaries, the ground rises into rocky hills, along which lies the line of waterheads; the streams flowing from it northwards into the Gulf of Cutch, and southwards into the Arabian Sea. Of the streams which flow northward, the principal are the Ajee and its tributary the Mari, the And, the Nagne, and the Gbi; of those flowing in the other direction, the principal are the Phohun and the Mun, tributaries of the Bhadur, a large river flowing south-westward into the Arabian Sea. The smaller streams being very numerous, the district is remarkably well watered. The eastern part is hilly and rocky, yet nearly devoid of wood, which is but scanty throughout the district. The soil is in general light, and well suited for the

³ Jacob, Report
on Kattiwar, 60.

growth of wheat, millet, and maize. A considerable quantity of cotton is also grown in the north-western part, towards the seashore, and exported principally to Cutch. At Naunagar, a seaport, and the principal town of the district, are considerable manufactories² of cloths of various kinds; and the dyes given to fabrics there are considered of a very superior kind, their excellence being attributed to the quality of the water of the river Nagne, which flows by the town. Piece-goods are also manufactured there, for the Arabian and African markets. The only other seaports of any importance are Juriya and Serria. Those, as well as the other towns,—Balumba, Rajkot, Lalpoor, Gondul, Draupa, Dhurul,—are noticed under their respective names in the alphabetical arrangement. The greater part of this district belongs to the thakoors or chiefs of Naunagar, Gondul, Rajkot, Dhurul, and Kotra Sangani. The total population is estimated at 358,560;³ an amount which, compared with the area, indicates a relative density of seventy-two to the square mile. The annual tribute by the various chiefs and landholders is stated to be 345,778 rupees; of which the sum of 161,598 rupees is paid to the British government, 167,495 to the Guicowar, and 16,685 to the nawaub of Joonaghur.

HANGO, or **HUNG**,¹ in Bussahir, a village of Koonawur, in the Tartar division called Hungrung, is situate near the

HANLE.

north-eastern base of the Hungrung² Mountains. It consists of three or four hamlets or small subdivisions, and is situated at the head of a fertile and cultivated dell, a mile long, and about half that breadth, bearing luxuriant crops of corn and pulse, and watered by three never-failing streams, which flow down it to the river Li. The fertility of this spot appears to result from irrigation acting upon debris of limestone, and forms a striking and delightful contrast with the surrounding country, which, according to the description of Gerard, is dreary in the extreme. "To the south-west, the faces of the mountains assume a less savage character, but they are arid and stripped of soil. No grass covers them, but a few tufts of aromatic plants and broom is all the vegetation they present. The want of moisture in the bowels of the mountains, the gravelly nature of their surface, which reverberates the fierce rays of the sun, and the dry state of the air, give a parched feature to the country, which is more bleak and desolate than the regions of perpetual snow."³ Hango is noted for a temple,⁴ of high repute among the natives, and apparently devoted to a mongrel superstition, half Brahminical and half Lamaic. It is a large building, crowded inside with grotesque idols, the principal of which is a large earthenware figure of a hideous man, wearing⁵ a diadem of human skulls, and an enormous necklace of the same, reaching down to the ground, and in his right hand the hilt of a sword, in his left a human skull, cut down to the form of a drinking-cup. An enormous serpent, with protruded tongue, is twined round his neck, and is of such a length as to reach the ground with its head. The idol holds in its arms a woman, whose head is also crowned with a chaplet of skulls, and who bears in her hand a skull, formed into a drinking-cup, the group being apparently intended to represent incarnations of the deities in a state of wrath. The village contains thirty families of Tartars and a few nuns, and, according to Herbert, gives names to the surrounding district of Hungrung. Elevation above the sea 11,400⁶ feet. Lat. 31° 49', long. 78° 34'.

HANLE.—A town in the native state of Cashmere, or dominions of Gholab Singh, 154 miles N.E. from Simla, and 166 miles E. by N. from Chamba. Lat. 32° 43', long. 78° 56'.

HANSEE.

¹ E.I.C. Ms. Doc. **HANSEE.**^{1*}—A town in the British district of Hurreannah, lieutenant-governorship of the North-Western Provinces. It is situate on the watercourse made, in 1356, by Feroz Toghluk,² king of Delhi, who, in some places clearing and deepening³ the bed of the Chitang torrent, and in others excavating a channel, conducted a branch from the Delhi Canal westward beyond Hissar, until it either disembogued into the Gagur, or was lost by evaporation or absorption in the arid waste. Hansee appears to have been an important place as early as 1036, when Massaoud, the son of the renowned Mahmud of Ghuznee, invaded India; as, according to Ferishta,⁴ “the Hindoos reckoned it impregnable, and were taught to believe that it could never fall into the hands of the Mahomedans. On this occasion, the India soothsayers, like those of other nations, deceived their followers, for, in the space of six days, the king escalated the place, and took it by storm. Herein he found immense treasure.” Tieffenthaler,⁵ writing about the middle of the last century, describes it as having a ruinous brick-built fort, situate on a hill. The canal must also, at that time, have been in a ruinous state, as the place suffered from want of water insomuch that there was only one crop in the year, and that dependent on the periodical rains. In 1798, when for a short period it was the capital of the adventurer George Thomas, it was supplied with water from wells, none other being procurable for above a dozen miles.⁶ “Here,” says Thomas, “I established my capital, rebuilt the walls of the city, which had long since fallen to decay, and repaired the fortification. As it has been long deserted, at first I found difficulty in procuring inhabitants, but by degrees, and gentle treatment, I selected between five and six thousand persons, to whom I allowed every lawful indulgence. I established a mint, and coined my own rupees, which I made current in my army and country; cast my own artillery, commenced making muskets, matchlocks, and powder.” In 1801, Thomas, being besieged here by a vastly superior force of Mahrattas, under the French adventurer Perron, evacuated the place, and took refuge in the territory of the East-India Company. The population has been recently

returned at 9,112.⁷ The road to the south-east of the town, or in the direction of Delhi, is good; to the west, it is also good, running the whole way to Hissar along the bank of the canal. Hiansee is distant N.W. from Delhi 89⁸ miles, N.W. from Calcutta 989 miles. Lat. 29° 6', long. 76° 3'.

⁷ Statistics of N.W. Prov. 20.

⁸ Garden, Tables of Routes, 142, 109.

HIANSOUTEE.—A river, rising in lat. 27° 58', long. 76° 7', in the native state of Jhujhur, a few miles south of the town of Narnol, and flowing in a north-easterly direction for seventy-five miles, alternately through Jhujhur and the British territory of Goorgaon, and for twenty-two miles through that of Delhi, falls into the Delhi Canal, a few miles north of the town of Delhi, in lat. 28° 40', long. 77° 15'.

HIANSOTE,¹ in the British district of Broach, presidency of Bombay, a town near the south-eastern bank of the estuary of the river Nerbudda. Population 5,000.² Distance from Surat, N., 28 miles. Lat. 21° 32', long. 72° 50'.

¹ E. I. C. Ma. Doc.

² Transactions, of Med. and Phys. Soc. of Bombay—Gibson, Sketch of Gujarat, 48.

HAPOOR.—See **HAUPUR**.

¹ Vigne, Kashmir, II. 151.

HIARAMUK.—A lofty summit in the range bounding Cashmere on the north. Vigne states, that "Hiaramuk signifies all mouths or faces, and that the application of the word in this case is either derived from the square-sided, rick-shaped figure of its summit, or from its being visible from all sides, by reason of its isolated situation and superior height." Its mass appears to consist principally of basaltic amygdaloid, though granite has been observed on it, but not *in situ*. In a depression on the northern declivity is a small lake, called Gungu Bul,—“the place of the Ganges,” which, like many other reservoirs of water, is held in high veneration by the Hindoos. The elevation of Hiaramuk above the level of the sea is estimated by Vigne at 13,000 feet. Lat. 34° 26', long. 75°.

HIARAPA.¹—A village of the Punjab, close to the left bank of the Ravee, and seated amid very extensive ruins, the most striking being the relics of a large brick fortress. This is considered by Masson to be the site of the Sangala of Arrian, where the Indians made such an obstinate defence against Alexander; but this opinion is regarded by eminent authority as open to question. Professor Wilson observes,² “Whether they (the Macedonians) followed the course of the Iravati (Ravee) to Hiarampa, may be reasonably doubted.” Hiarampa is in lat. 30° 40', long. 72° 53'.

HAR.

Vigne, Kashmir,
I. 220.

HARAWUG.—A castle in the north of the Punjab, on the route from Lahore to Cashmere by the Banihal Pass, and 28 miles S. of the last-mentioned place. It is built of wood, in a ravine on the right bank of a stream which, at a short distance below, falls into the Chenaub. From the hill above is a noble view up that river, which here flows for fifteen or twenty miles in a straight line. The coldness of the water of the Chenaub causes its course in hot weather to be marked by dense vapour, which floats over it. Harawug is in lat. $33^{\circ} 12'$, long. $75^{\circ} 3'$.

¹ E.I.C. Ms. Doc.

² Buchanan, *Surv. of Eastern India*, II. 314; also Appendix, 17.

HARIHARPOOR,¹ in the British district of Goruckpore, lieutenant-governorship of the North-West Provinces, a petty market-town² on the Jamura, a small river, a feeder of the Rapti. According to Buchanan's report, thirty years ago, it contained 150 houses; and allowing six persons to each, consequently a population of 900. Distant S.W. from Goruckpore cantonment 22 miles. Lat. $26^{\circ} 45'$, long. $83^{\circ} 2'$.

¹ E.I.C. Ms. Doc.

² Journ. As. Soc. 1837, p. 170—Wade, *Voyage down the Sutluj*, by Mackeson, Atkinson, Exp. into Afg. 62.

³ Wade, *ut supra*.

HARIKE,¹ in the Punjab, a village situate on the right bank of the Ghara river, three miles below the confluence of the Sutluj and Beas. The name Ghara is in this instance given to the river with some latitude, as it is not usually so called above a spot twelve miles below Harike.² The site of the village is on the high bank of the river, and, when the water is low, distant a mile and a half from the ferry. Though a small place, the trade is important, and twenty years ago, nearly the whole traffic with Hindostan, from Afghanistan, Kashmir, and the Punjab, passed through it.³ There is besides great local traffic between the districts in its immediate vicinity on both sides of the river. During some days that Wade remained there, thirty-two boats, with three men to each, were incessantly employed, from morning till night, in transporting loaded carriages and beasts of burthen from one side to the other. No diminution of activity was observable during the period, but there was throughout a uniform scene of bustle and business. Harike is in lat. $31^{\circ} 10'$, long. $74^{\circ} 59'$.

F. Von Hügel,
III. 67.

HARIPOOR, in the Punjab, a town on the great route by the Dub Pass into Cashmere, is a populous and thriving place, with a handsome and well-supplied bazar. Von Hügel considers it one of the wealthiest places in the Punjab, the streets being thronged with a busy, and cheerful crowd, exhibiting evident

HAR.

indications of prosperity, and the shops supplied with all that can contribute to the gratification of Indian taste. It is situate on the river Dor, which, about ten miles westward, falls into the Indus near Torbela. Lat. $34^{\circ} 14'$, long. $72^{\circ} 57'$.

HARIPOOR, in the north-east of the Punjab, among the lower mountains of the Himalaya, is a fort, surrounded by a small town, which contains a good and well-supplied bazar. The name signifies the town of Hari, one of the incarnations of Vishnu, and Hindoo superstition here flourishes in the highest degree of vigour. The town and its vicinity are crowded with apes and peafowl, considered to be under the protection of the deity, and enjoying in consequence such a measure of respect as secures them from all molestation. Haripoor is in lat. $31^{\circ} 56'$, long. $76^{\circ} 11'$.

F. Von Hugel,
i. 100.

HARIPOOR,¹ in the British district of Jaunsar, at the southern frontier, where it joins the Dehra Doon, a village in the bifurcation at the confluence of the Tons and Jumna. Though the Tons loses its name, and the united stream continues to be called the Jumna, the former is the larger, its discharge per second, when surveyed by Hodgson, being 2,827 cubic feet, and that of the latter 1,045. Elevation above the sea 1,686 feet.² Lat. $30^{\circ} 30'$, long. $77^{\circ} 54'$.

¹ E. I. C. Ms. Doc.

² As Res. xlv. 323*
—Hodgson and
Herbert, Trigon.
Surv. of Hima-
laya.

HARIPOOR, in Cashmere, a small town situate in the Punch Pass from the Punjab into that valley, and near the spot where the pass opens into the low ground of Cashmere. It is close to the right bank of the Rembeara, a considerable feeder of the Veyut or Jhelum. Hence the Rembeara is sometimes called the River of Haripoor. The town is small and mean, remarkable only for its picturesque site beneath the Pir Panjal mountain, which on the south rears its towering summit, covered with snow during the greater part of the year. Lat. $33^{\circ} 40'$, long. $74^{\circ} 51'$.

F. Von Hugel,
i. 199.

HARNHULLY.—A town in the native state of Mysore, 64 miles N.W. by N. from Seringapatam, and 96 miles E.N.E. from Mangalore. Lat. $13^{\circ} 14'$, long. $76^{\circ} 16'$.

E. I. C. Ms. Doc.

HAROWTEE.—See KOTAH.

HARREEPOOR.—See AREERPOOR.

HARRIORPOOR.—A town in the Cuttack Mehal of Mohurbunge, 30 miles N.W. from Balasore, and 56 miles S.W. from Midnapoor. Lat. $21^{\circ} 51'$, long. $86^{\circ} 46'$.

E. I. C. Ms. Doc.

HAR—HAS.

HARRISON'S ISLAND.—A small island lying off the coast of Arracan, situate about ten miles from the shore, and among the cluster of islands to the south of Ramree. Lat. $18^{\circ} 40'$, long. $94^{\circ} 2'$.

HARU, a small river of the Punjab, rises at the base of the Himalaya, and receiving the Nilab from the north-east, and several smaller streams, flows in the Indus on the eastern side, a few miles below Attock, after a course of about sixty miles. This confluence is in lat. $33^{\circ} 49'$, long. $72^{\circ} 16'$.

HASHTNUGGUR, in the Daman division of the Punjab, a town situated on the left bank of the Lundy, 20 miles N. of the town of Peshawur. Lat. $34^{\circ} 15'$, long. $71^{\circ} 43'$.

HASSAN,¹ in the territory of Mysore, a town on the route² from Bangalore to Mangalore. In 1690 it was conquered by Chikka Deo,³ rajah of Mysore, and incorporated with his dominions. Distant from Bangalore, W., 102 miles; from Mangalore, E., 88. Lat. 13° , long. $76^{\circ} 9'$.

HASSAN ABDAL,¹ in the Punjab, so called from containing the tomb of a reputed Mahometan saint of that name. It is situate in a delightful valley,² watered by numerous springs, which gush from among the rocks.³ Here are the ruins of a pleasure-ground and small palace, tastefully formed by the Mogul emperor Akbar, and though much decayed, displaying yet an exquisite combination of elegance and refined luxury. Lat. $33^{\circ} 48'$, long. $72^{\circ} 45'$.

HASSAN KE GHURREE.—A town in the British district of Shikarpoor, province of Sindh, presidency of Bombay, 47 miles N. of Sukkur. Lat. $28^{\circ} 20'$, long. $68^{\circ} 44'$.

HASTINGS (FORT), in the British district of Kumaon, lieutenant-governorship of the North-West Provinces. It is a small well-built fort, on the summit of a conical hill, three miles and a half W. of Lohugbat or Rikhesnur. Water can be

* Burnes states, "some hundred springs;" Von Hügel, three (iii. 97). This last writer (iii. 71) denies that the place is a valley; he also reproves Moore and Hamilton for giving too flattering a description of it; but it is not to be forgotten that the gorgeous Akbar expressed the feelings excited in his mind on the view of the spot, by exclaiming *Wah!* the usual interjection of admiration; and hence the ruined garden is still so named. Elphinstone styles it a valley; and the authorities to which we have referred, and even the baron himself subsequently (98, 99), are warm in their praises of the beauties of the place.

HAT.

obtained only from the bottom of the hill, at a distance of half a mile of steep descent, so that the post, if regularly invested, must speedily fall. The artillery attached to Fort Hastings consists of two field howitzers, two brass six-pounders, four iron twelve-pounders, with an ample supply of ammunition. Elevation above the sea 6,210 feet. Lat. $29^{\circ} 25'$, long. $80^{\circ} 5'$.

HATEE, in Baghelcund, a town in the native state of Rewah, on the route from Mirzapoor to Lohogaon, 110 miles direct S.W. of Mirzapoor, 58 S.E. of Banda. Elevation above the sea 1,070 feet. Lat. $24^{\circ} 42'$, long. $80^{\circ} 58'$.

As. Res. xviii. 27
—Franklin, Geol.
of Bundelkhand.

HATEE OOSTEE.—A town in the British district of Bhagulpoor, presidency of Bengal, 63 miles N.N.W. of Bhagulpoor. Lat. 26° , long. $86^{\circ} 31'$.

E.I.C. Ms. Doc.

HATH KA PEEPLA.—A town of Malwa, in the native state of Dewas, 28 miles E. from Indoor, and 95 miles W. from Hoosungabad. Lat. $22^{\circ} 45'$, long. $76^{\circ} 17'$.

E.I.C. Ms. Doc.

HATIMABAD, in the British district of Bolundshuhur, lieutenant-governorship of the North-West Provinces, a village on the route from Muttra to Meerut, and 48 miles¹ S. of the latter. The road in this part of the route is good; the country open, and partially cultivated. Lat. $28^{\circ} 21'$, long. $77^{\circ} 56'$.

¹ Garden, Tables
of Routes, 236.

HATIYA.—A town in the native state of Nepal, on the right bank of the river Arun, and 97 miles E. by N. from Khatmandoo. Lat. $27^{\circ} 58'$, long. $86^{\circ} 50'$.

E.I.C. Ms. Doc.

HATRAS,¹ the principal place of a pergunnah of the same name, in the district of Allygurh, within the limits of the lieutenant-governorship of the North-Western Provinces, lies on the route from the cantonment of Agra to that of Allygurh, 33 miles² N. of the former. It is built in the form of a square of about 500 yards, and is surrounded by a mud wall and a very deep dry ditch. The old fort is situate half a mile due east of the town, and though now a heap of ruins, was once regarded as formidable.³ When approached by the British troops in 1804, while in pursuit of Holkar's army in the Doab, Thorn⁴ describes it as built* on a small hill, with a gradual ascent; and he continues: "In the centre of it stands a very

of Routes, 3.

³ Fitzelarence,
Route across
India, 18.

⁴ Mem. War in
India, 400.

* Hamilton¹ says, "The fort is an oblong, its long diameter running nearly from west to east, measuring 1,600 yards round the glacis. The ditch is 120 feet wide and 85 deep, and the body of the place 400 or 500 yards in compass."

¹ Description of
Hindostan, i. 403.

HAT.

high brick building, considerably overtopping the surrounding bastions. The glacis is about 100 yards wide; and a renny-wall (*fausse-braie*), with a deep, dry, and broad ditch behind it, surrounds the fort." The owner, a talookdar or renter of the surrounding district, on the occasion of Holkar's invasion, as well as at other times, acted with hostility towards the British; and at length his assumption of independence was found so mischievous and alarming, especially in the threatening state of affairs at the commencement of the Mahratta war in 1817, that it was found necessary to dislodge him. Dya Ram, who held the place at that time, was accordingly summoned to surrender the fort, and allow measures to be taken for its being dismantled. Trusting in the defences, which had been strengthened in imitation of those of the neighbouring British fort of Allygurl, by preparing a covered way, raising a glacis, and diminishing the height of the ramparts, the occupant refused compliance; whereupon, on the 23rd February, 1817, the town was breached⁵ and evacuated; and on the 1st of March fire was opened on the fort from forty-five mortars and three breaching-batteries of heavy guns. At the close of the same day, a magazine in the fort exploded, and caused such destruction of the garrison and buildings, that Dya Ram, terror-struck, abandoned the place in the course of the night, and it was forthwith dismantled, as well as the neighbouring fortress of Mursan, and some others. The population of this town, always considerable,⁶ has much increased since its direct subjection to British sway, the number of its inhabitants in 1848 being returned at 22,903.⁷ It is the chief mart for the cotton of the neighbouring tracts, which is forwarded by easy land-carriage to Furruckabad on the Ganges, and conveyed by that river to the lower provinces. Distance S.E. from Delhi, by Allyghur, 106 miles; N.W. from Calcutta 815.⁸ Lat. 27° 36', long. 78° 9'.

HATTIA RIVER.—One of the principal mouths of the river Megna.—See **GANGES RIVER**.

HATTIA.—An island lying at the mouth of the Megna river, and comprised within the jurisdiction of the British district of Bulloah, presidency of Bengal. Its centre is in lat. 22° 35', long. 91° 8'.

HATTOD.—A town in the native state of Indore, or ter-

HAVALEE, in the Barea Doob division of the Punjab, a town situated 10 miles from the right bank of the Sutlej, 90 miles S.W. of the town of Lahore. Lat. $30^{\circ} 26'$, long. $73^{\circ} 34'$. E.I.C. Ms. Doc.

HAVEYLEE, in the Jetch Doob division of the Punjab, a town situated on the left bank of the Jhelum, 107 miles W. by N. of the town of Lahore. Lat. $31^{\circ} 48'$, long. $72^{\circ} 23'$. E.I.C. Ms. Doc.

HAWULBAGH,¹ in the British district of Kumaon, lieutenant-governorship of the North-West Provinces. It is situate five miles north of Almora, and on the left bank of the Kosilla, running at a considerable depth below, with a deep,² black, and violent current. The site is picturesque and fine, and as the climate is warmer than that of Almora, in consequence of an elevation less by 1,900 feet, it is generally the residence of the civil officers in charge of that town, and of the district of Kumaon. There is also here a cantonment for the provincial³ battalion. Elevation above the sea 3,889⁴ feet.

HAY—HAZ.

Distance N.W. from Calcutta 963 miles. Lat. $29^{\circ} 38'$, long. $79^{\circ} 40'$.

¹ E.I.C. Ms. Doc. HAYATNUGAR,¹ in the district of Sultanpoor, territory of Oude, 80 miles S.E. of Lucknow. Here is a small fort held by an officer of police and fifty soldiers. Butter estimates² the population at 100, half of whom are Mussulmans. Lat. $26^{\circ} 15'$; long. $82^{\circ} 13'$.

E.I.C. Ms. Doc. HAYCOCK ROCK, situate off the shore of Arracan, in lat. $17^{\circ} 10'$, long. $94^{\circ} 31'$.

HAYES ISLAND, off the coast of Tenasserim, 93 miles from Tenasserim: length four, and breadth two miles. Lat. $11^{\circ} 52'$, long. $97^{\circ} 45'$.

E.I.C. Ms. Doc. HAZAREEBAGH.—A British district subject to the political agent for the south-west frontier, called also Ramgurh, which see.

¹ E.I.C. Ms. Doc. HAZAREEBAGH,^{1*} the principal place of the district of Hazareebagh or Ramgurh, a town on the route from Calcutta to Benares, $239^{\frac{2}{3}}$ miles N.W. of the former, 189 S.E. of the latter. Jacquemont, who visited it in 1829, styles it a large village. Its principal³ bazar is regularly built, and some of the shops and houses, which are all of mud, are two stories high. It was formerly a place of more importance than at present, having been for some time the head-quarters⁴ for a regiment of the Queen's infantry, when a church⁵ was built, on the supposition of the permanent cantonment at that place, of an European regiment. In 1845,⁶ the station ceased to be a cantonment for European troops, and now is occupied by a detachment of the Ramgurh native battalion. It is also the station of a principal assistant to the Governor-General's agent for the south-west frontier, and contains a jail for civil and criminal prisoners. Hazareebagh is situate in an extensive and elevated plateau, overspread with forest and jungle, and having in many places the remains of mango-groves and other regular plantations, indicating the country to have been

* Hazaribag of Tassin; Hazarbg of Jacquemont; properly Hazaribagh, Commandant's-garden; from Hazari, "commander," and Bagh, "garden."

† Hazareebagh is situate about twenty miles south of the grand trunk road from Calcutta to Benares, *via* Burdwan; but upon the completion of this portion of the road, orders were issued for connecting Hazareebagh with the new line.¹

² Buchanan, Survey of Eastern India, ii. 633-636.

HEMTABAD,¹ in the British district of Dinajpore, presidency of Bengal, a town on the left bank of the river Coolick, 25 miles W. of the town of Dinajpore. That it was formerly a place of importance, appears as well from tradition as from numerous ruins² existing in its vicinity. Those of more remote date are considered to be of an era anterior to Mussulman sway. One of the most entire architectural relics of the latter period is a mosque, surmounted by seven small cupolas; the whole

* Hiriura of Tassin; Heriura of Buchanan.

HEN—HER.

building, though of ungraceful construction, manifesting elaborate and costly workmanship. Contiguous is another building, denominated Takhti Husayn Padshah, or "Throne of King Hoseyn," formerly monarch of Bengal. It consists of a truncated pyramid, twenty feet high, having on its summit a considerable area, in the centre of which is a square, on which Husayn sat to witness public spectacles. Several tombs and shrines of deceased persons, regarded by Mussulmans as saints, are dispersed over the area. Hemtabad is in lat. $25^{\circ}38'$, long. $88^{\circ}12'$.

HENERY ISLAND.—See ONDAREE.

HENNAVUTTY, in the territory of Mysore, a river rising near the western frontier, on the eastern declivity of the Western Ghats, and in lat. $13^{\circ}12'$, long. $75^{\circ}44'$. It flows for thirty-five miles south-eastward, to Santapoor, where it turns eastward, and thence holds a tortuous course, but generally in the direction last mentioned, for fifty miles, to Sagra. At that place it turns south-eastward, and continues to flow in that direction for thirty-five miles, to its fall into the Cauvery, on the left side of the latter river, near Kistnaraajpoor; its total length of course being 120 miles. It is officially described¹ as a valuable stream, never quite dry.

HENZADA.—A town of Eastern India, in the British province of Pegu, on the right bank of the Irawady, and 65 miles W. from Pegu. Lat. $17^{\circ}40'$, long. $95^{\circ}18'$.

HEOONLA, a river in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, rises in the most southerly range of mountains of the Himalaya system, and in lat. $29^{\circ}55'$, long. $78^{\circ}40'$. Its direction is generally north-westerly, and after a course of about twenty-five miles it falls into the Ganges, on the left side, in lat. $30^{\circ}6'$, long. $78^{\circ}26'$. Webb forded it in April, five miles above its mouth, and found it forty yards wide and sixteen inches deep, with a moderately rapid current.

E.I.C. Ms. Doc.

HERDOSE.—A town in the Southern Mahratta jaghiire of Bore, situate on the right bank of one of the branches of the Neera river, and 26 miles S. from Poonah. Lat. $18^{\circ}4'$, long. $73^{\circ}42'$.

HIDDAGOTE.—A village of Sind, on the route from Sehwan to Larkhana, and nine miles N. of the former place. The road north and south is rendered inconvenient by numerous watercourses, which aid the cultivation of this fertile and populous tract. The village is situate about a mile from the right bank of the Indus. Lat. $26^{\circ} 32'$, long. $67^{\circ} 53'$.

¹ E.I.C. Ms. Doc.

HIDGELLE.¹—A British district situate within the jurisdiction of the presidency of Bengal. It is bounded on the north-east by the Hoogly river, separating it from the British districts of Hoogly and the Twenty-four Pergunnahs; on the south-east by the river Hoogly and the Bay of Bengal; on the west by the Balasore division of Cuttack, and by the British district of Midnapore. It lies between lat. $21^{\circ} 36'$ — $22^{\circ} 22'$, long. $87^{\circ} 22'$ — $88^{\circ} 12'$, and has an area of 1,014 square miles.² It has a considerable length of coast, commencing at its southwestern extremity, in lat. $21^{\circ} 36'$, long. $87^{\circ} 26'$, and washed by the Bay of Bengal for twenty miles, as far as the mouth of the

² Parliamentary Return, April, 1851. Revenue Survey Maps.

HIDGELLEE.

small river Mahona, where the estuary of the Hoogly may be considered to commence, in lat. $21^{\circ} 42'$, long. $87^{\circ} 48'$. The shore of this estuary continues to form the boundary of the district for eleven miles in a direction north-east, to the mouth of the Russoolpoor river, in lat. $21^{\circ} 48'$, long. $87^{\circ} 55'$; and, in the same direction, for seventeen miles, to the mouth of the Huldee; thence, still north-east, for twelve miles, to Diamond Point, in lat. $22^{\circ} 7'$, long. $88^{\circ} 12'$, where it turns north-westward for eighteen miles, to Tumlook, in lat. $22^{\circ} 18'$, long. $88^{\circ} 2'$. The inside channel, giving access from the Bay of Bengal to the Hoogly, extends along the whole of this coast as far as the mouth of the Roopnarain. This was formerly the deepest and most-frequented channel; and Kedgerree, about eight miles above, or north-east of the Russoolpoor river, was much used as an anchorage for the largest ships; but of late years the channel³ has become silted up, so as to have not more than two or three fathoms water, and is now frequented only by country vessels. The Roopnarain does not appear to be navigable for large ships, and the flood-tide setting strongly up into it, many vessels making for the Hoogly, on their way to Calcutta, have been swept up the shallow estuary and lost.⁴ Besides the Hoogly, the Roopnarain, and the Russoolpoor river, the only stream of importance belonging to the district is the Huldee, which, rising in Midnapore, crosses the north-western frontier of this district in lat. $22^{\circ} 8'$, long. $88^{\circ} 45'$, and, holding a course easterly for about thirty-five miles, falls into the estuary of the Hoogly, in lat. 22° , long. $88^{\circ} 8'$. The streams above mentioned, though nearly dry during the greater part of the year, contribute largely to swell⁵ the Hoogly during the periodical rains.

Perhaps the topography of no part of India has received less attention than that of this district, of which scarcely anything is known, except that it resembles the adjacent British district of Cuttack in being level and low; having⁶ many swamps and shallow pieces of water, and numerous small winding streams, which are subject to great inundations⁷ during the periodical rains, and are infested with large and very dangerous alligators. Many parts are overgrown with jungle, or covered with a coarse reedy grass. The jungle affords brushwood, valuable as fuel to the salt manufacturers, but harbours tigers, leopards, wild buffaloes,

⁷ India Rev. Disp. 28 July, 1837.

HID—HIG.

and other dangerous beasts. A considerable quantity of fine salt is manufactured by a rude but effective process. The sea along the coast is remarkably productive, and the fisheries are pursued with eagerness and success. Turtle, oysters, crabs, and prawns, are among the delicacies which reward the industry thus employed.

The climate, especially in the more depressed and moist parts, is very unhealthy even to the natives, who are greatly affected by elephantiasis, dysentery, agues, and fevers. Rice is the principal crop, and is produced of a large size, and in great luxuriance and abundance, but is considered inferior to the average produce of Bengal and Behar. The other crops are sugarcane, tobacco, pulse, cucurbitaceous plants, millet, mustard, castor-oil plant, and other oil-yielding productions, hemp, safflower (*Carthamus tinctorius*), sweet potatoes, capsicum, and various potherbs. The cocoanut-palm and the toddy-palm (*Borassus flabelliformis*), from the fermented juice of which an ardent spirit is distilled, grow in the maritime tracts. There are no manufactures of any importance, unless that of salt be considered as such.

The population⁸ is estimated at about 133,265.

The only routes are—1. From north-east to south-west, from Calcutta to the town of Contai or Hidgellee; 2. from south-east to north-west, from the town of Hidgellee to that of Midnapore. This district was included in the grant of the dewanny of Bengal, Behar, and Orissa, made to the East-India Company by the emperor of Delhi, in August, 1765.⁹

HIDGELLEES.*—A town in the British district of the same name, under the presidency of Bengal. It is situated on the right or western shore of one of the entrances of the Hoogly, called the Inner Channel, and at the mouth of a small river falling into it. The civil establishment of the district appears to have been removed to the town of Contai. Distance from Calcutta, S.W., 48 miles; from Midnapore, S.E., 82. Lat. 21° 49', long. 87° 50'.

HIGH ISLAND.—A small island about five miles from the mainland of Arracan, in lat. 17°, long. 94° 30'. There is another of the same name in lat. 16° 38', long. 94° 20'.

HILSAH.—A town in the British district of Patna, presidency of Bengal, 21 miles S.S.E. of Patna. Lat. $25^{\circ} 17'$, long. $85^{\circ} 22'$. E.I.C. Ms. Doc.

HILL STATES.¹—Under this name are included a number of small sovereignties or chieftainships in the Cis-Sutlej territory, all of which appear to have possessed some degree at least of independence, till overrun and subjugated by the encroaching power of the Goorkhas. On² the breaking out of the war with Nepal in 1814, Sir David Ochterlony issued a proclamation inviting the various chiefs to co-operate with the British, and promising to such as should satisfactorily comply with the call, confirmation in their hereditary possessions, and protection from future attempts at aggression. A few only entitled themselves to the benefits held out: some had fled from the oppression of their invaders, some kept back from fear, and probably some distrusted the promises of the British government, and were apprehensive that by compliance with the required conditions, they should but exchange one tyranny for another. The success of the British army removed all ground for hesitation, and put an end to the opportunity of choosing between the Goorkhas and their conquerors. All the chieftains now became candidates for the exercise of either the justice or the clemency of the triumphant power, and the liberality of the British government was manifested in admitting claims which had been justly forfeited, and restoring possessions which the fortune of war had placed at its disposal. A part of Gurwhal was restored to its fugitive rajah; the remainder, consisting of the districts situate to the eastward, above the confluence of the Mandakini and the Aluknunda, together with the Dehra Dhoon, the pergunnah of Raeengurh, Subathoo, and Sewah, were retained by the victors, as was also the pergunnah of Sundock, in which is a cantonment for British troops. Burrowlee passed to the rajah of Nalagurh or Hindoor, in exchange for Malown, occupied as a British post. Bughat was dismembered, and a portion disposed of to the rajah of Pattecala; the remainder has since lapsed to the paramount power, from failure of heirs. A claim, however, to the succession has been recently preferred by a first cousin of the last two chiefs. The claim was not allowed, but a discretionary authority was given to the local government either to retain

¹ E.I.C. Ms. Doc.

² D'Cruz, 103, 323.

HIMALAYA.

the estate, or, if more expedient, to bestow it on the claimant by a new sunnud: this was in 1849. The former³ alternative was adopted, and Bughat is now a British possession. Keyonthul, like Bughat, was subjected to the process of dismemberment, and the excised part was transferred to the rajah of Patteeala. In consideration of this alienation, the remainder of the Keonthul state is excused the payment of tribute. At a later period, Raen Gurh, which had been reserved by the British government as a military post, was made over to the ruler of Keonthul, in exchange for Simla.⁴ Kothkai, in consequence of long and irreclaimable misgovernment, was in 1828 annexed to the British dominions.⁵ The ruler of Ootrah or Turoch, from the like cause, but more than ten years later, incurred the penalty of confiscation, and the territory was incorporated with Joobul.⁶ The states now recognised as having a distinct existence, are the following:—Bhagul, Beejah, Beejee, Bulsun, Bussahir, Dhamie, Dhoreatee, Ghurwal, Hindoor or Nalagurh, Joobul, Keyonthul,* Koomharsin, Koonnyhar, Kothar, Kuhloor or Belaspore, Mancee-Majra, Mangul, Muhlog, and Sirmoor Nahun. The area of the whole is 10,054 square miles; the entire population about 531,020. Each will be found noticed in its respective place under the alphabetical arrangement, as will also the portions of territory in these districts originally retained, or subsequently acquired by the British government.

HIMALAYA.¹—A vast assemblage of mountains, stretching in an irregularly curved line from the defile above Cashmere,² on the north-west, through which the Indus penetrates into the plains of the Punjab, and separates the range from the mountains of Hindoo Koosh,† to the southern bend of the Saupo or Dihong on the east previous to its junction with the Brahmapootra. This stupendous mass extends over 22° of longitude, its western extremity lying in long. 73° 23', and its eastern in long. 95° 23'.

In so brief a sketch as necessity compels, it is impracticable

* The following thakornees or petty chieftainships are tributary to Keyonthul; viz., Poonder, Rain, Kootee, Goond, Madhan, and Theog.

† Humboldt¹ regards the Hindoo Koosh as altogether distinct from the Himalaya, and considers the distinction as not merely verbal but substantial, having reference to the origin of the two ranges.

HIMALAYA.

to go beyond an outline of the more noticeable facts of this remarkable region; and it is necessary to premise, that the view must be restricted in a great degree to the southern slope of the mountains, as that which constitutes the limit of India on the north. To extend inquiry to the Tibetan side, would exceed the proper bounds of the work; while, to carry research into the wide variety of subjects which might be introduced, as into the various branches of natural history, or into the habits, languages, history, and present circumstances of the inhabitants, would swell the article to a length disproportioned to the place which it should occupy in a book embracing so wide a field. Some information on these points will, moreover, be found under other heads; among which, the reader may be referred to the articles Kumaon, Gurwhal, and Bussahir. It would, however, be unjust to refrain in this place from noticing a very admirable, though short tract, by Dr. Hooker, "On the Climate and Vegetation of the temperate and cold regions of East Nepal, and the Sikkim and Himalaya Mountains;" in regard to meteorology and plants of the parts proposed to be illustrated, it is most valuable, and the more so, as it is the result of the personal observations of the learned author.

About midway between the limits above defined, and in the vicinity of Lake Manasarowar, is the southern extremity of the mountain-range, which, extending from the north-west into Thibet, separates the drainage system of the Indus from that of the Saupoo (afterwards the Brahmapootra), and is by some regarded as the grand central axis of Asia.³ From this centre the chain of the Himalayas stretches to nearly an equal distance in a north-westerly direction on the one hand, and a south-easterly on the other, throwing off at right angles lateral ranges sloping southward to the plains of India. Deep narrow valleys, separated from each other by these meridional ranges, contain the sources of the numerous rivers which constitute the drainage system of the Indus, the Ganges, and the Brahmapootra. Among the tributaries of the Indus, may be enumerated the Jhelum, Chenab, Beas, Ravee, and Sutlej; the principal feeders of the Ganges are the Jumna, Gogra, Gunduck, and Cosy: the Teesta and some others fall into the Brahmapootra. The elevation⁶ of the culminating range of the Hima-

³ Thomson, Sketch of Climate and Vegetation of Himalaya, 1.

⁴ Id. 2.

HIMALAYA.

laya, observes Dr. Thomson, "is probably at a mean about 18,000 or 20,000 feet; it is nearly uniform at about these elevations throughout a great part of the chain, but gradually diminishes toward both ends. Like all mountain-chains, it presents alternations of high and low portions, the lower parts or passes, as they are called, from their affording the means of passage to travellers from one side to the other, being at the upper extremities of the river basins. These passes are, with a few exceptions, rarely under 17,000 or 18,000 feet. The lateral chains, starting from the more elevated portions of the central axis between the passes, gradually diminish in elevation as they approach the plains of India, not, however, with any exact uniformity of progression; for it is not unfrequent to find them rise into lofty peaks, considerably more elevated than any known part of the central axis. The greater part of the giant peaks, which rise to an elevation of 26,000 or 28,000 feet, are situated in this manner, not on the central axis, but to the south of it."

The distribution of the Himalayas, by the authority just quoted, into two grand sections (the eastern and western), is calculated to exhibit with greater perspicuity the leading characteristics of each, and is obviously preferable to the distribution of Herbert,⁵ under which the chain is divided into three separate portions; the section designated the "Indo-Gangetic range," and stretching from the source of the Sutlej, in Lake Manasarovar, to the vicinity of Ropur, on that river, in long. 76° 40', occupying the central position. A more recent traveller,⁶ whose researches extended to those regions, adopts the less complicated* of the two arrangements, and in so doing advances additional arguments in its favour. The two sections, he contends, furnish points of resemblance, in presenting almost insurmountable obstacles to communication between the countries which they divide, and both marking

⁵ *Journ. As. Soc. Benz 1842, part I. Append. xvi.—Survey of the Himalayas.*

⁶ *Major Cunningham, Phys. Stat. and Hist. Account of Ladak, 41.*

¹ *Cunningham, ut supra, 41.*

* "The great Himalaya, which bounds India to the north in one continuous chain of gigantic peaks from the southward bend of the Brahmaputra to the holy lake of Manasarovar, is extended to the westward from the sources of the Sutlej to the magnificent peaks of Dayanur, and thence to the sources of the Gilgit and Kunar rivers, where it joins the mountains of Pamir and Hindu Kosh. The highest peaks in the Western Himalaya are Nanda Devi, 25,749 feet; Gya peak, 25,761 feet; Monmangli, 23,000 feet; and Porngal, 22,760 feet."

HIMALAYA.

the boundaries of nations, by separating the Botis of Thibet from the Hindoo family of India. The distinction of climate he considers not less positively marked than that of nations; both ranges forming the "lines of demarcation between the cold and dry climate of Thibet, with its dearth of trees, and the warm and humid climate of India, with its luxuriance of vegetable productions."⁷ Some analogy, moreover, may be traced between the drainage systems of the two sections; the one separating the waters of the Sanpo from those of the Ganges and its affluents, and the other intervening between the Indus, flowing at its northern base, and the subsequent tributaries of that river rising on its southern slope.

⁷ Cunningham, *ut supra*, 42.

Major Cunningham, however, appears to be in error in supposing that the two divisions present points of contrast as well as of resemblance. "There is," he observes, "one marked difference between the eastern and western ranges, which can scarcely fail in striking the most casual observer. The inferior mountains of the eastern chain generally run at right angles to its axis; whereas those of the western chain are mostly disposed in subordinate parallel ranges." This marked difference, however, is not between the eastern and western divisions, but between two separate portions of the latter. The ramifications running "at right angles" to the axis, and the "parallel ranges," are both comprised within the limits assigned by Major Cunningham to his western division; viz. from the sources of the Sutlej to the banks of the Indus. In allusion to a portion of this division, Captain Strachey⁸ observes: "If we examine the structure of the mountains more closely, we shall find that from the sources of the Tonse to those of the Kali, a space which includes the provinces of Gurwhal and Kumaon, all the great rivers, the Bhagerati, Vishnugunga, Douli of Niti, Gori, Douli of Darma, and Kali, run in directions not far from perpendicular to the general direction of the Himalaya. Further, that they are separated one from another by great transverse ranges, on which all the highest of the measured peaks of this region are to be found." From these, moreover, proceeds an intricate ramification of subordinate ridges, giving to the whole area a most irregular and confused appearance.⁹ "Even the Snowy chain," says Herbert,¹ speaking of the Indo-Gangetic chain, "though defined to a certain

⁸ On the Snow Line in the Himalaya, 2.

⁹ Herbert, *ut supra*, xvii.
¹ *Ut supra*, xv.

HIMALAYA.

degree by a phenomenon so singular on a first view to the inhabitant of the plain country, loses on a nearer approach all character of continuity and regularity, and appears under the same confused and irregular aspect which the lower elevations are observed to bear."

The length of the western division of the culminating range of the Himalayas, from the source of the Sutlej to the peaks of Dayamur on the Indus (within which limits are comprised the Indo-Gangetic and the Bara Lacha ranges), is nearly 700 miles. The elevations of its summits are as under:—

The mean elevation, as already observed, is about 20,000 feet, the limits of the snow-line on the southern slope having a height of about 18,500 feet.* According to Herbert,² the geological structure of these mountains consists of gneiss and a schistose formation, comprising micaceous, chloritic, and talcose schists. Captain Strachey,³ describing the character of the Indo-Gangetic chain, observes: "Along the lines on which the points of greatest elevation are found in this part of the range, we invariably see, for a breadth of several miles, veins of granite in great abundance penetrating the schists, often cutting through them, but perhaps most frequently following the bedding of the strata, between which they seem to have been forced. The great peaks are, I think, in almost every case, composed of schistose rock, but the granite veins may be most clearly seen on the faces of the mountains to very great elevations. Kamet, one of the highest of the peaks in this

* The line of perpetual congelation is placed by Herbert at a considerably lower altitude.¹

² *Ut supra*, cxi-cxlii.

³ *Quarterly Journ. of Geol. Soc.* 1851, p. 301.

¹ *Ut supra*, xxviii.

HIMALAYA.

region, seems, however, to be among the exceptions to this rule; its summit, which is upwards of 25,500 feet above the sea, appearing to consist of granite alone. This line of granite seems to be subdivided into several branches, distributed generally along the strike, but otherwise not very regularly."

"In immediate succession to the crystalline schists penetrated by granite veins, we here come at once upon slaty beds overlying them, along the bottom of which, near the mica schists and gneiss, is a line of granite veins, differing somewhat in appearance from those of the larger eruption, and not producing any great alteration in the slaty beds themselves, as is shown by the occurrence of a coarse conglomerate, the component parts of which are perfectly distinct only a few feet above the granite."

"Above these are slaty beds, in all perhaps 9,000 feet in thickness, consisting of coarse slates, grits, and limestones, all more or less affected by slaty cleavage, and all devoid of fossil remains. It is after reaching the top of these strata, which is rarely done at a less elevation than 11,000 feet above the sea, that we at length enter again a region of fossiliferous rocks, which extends as far as my examinations have been carried. And it is not a little wonderful to find at this immense elevation a regular succession of most of the more important formations, from the silurian to the tertiary periods."

The length of the eastern section of the culminating range of the Himalayas, from the confluence of the Dihong with the Brahmapootra in the east, to the river Kalee, forming the boundary of Nepal on the west, is about 800 miles. This portion supports the lofty penks of Kinchinjunga and Dhwalagiri.

⁴ *Notany of Himalayas, xl.*

Seen from Patna, observes Dr. Royle,⁴ "at a distance of about 150 miles, these stupendous mountains present a long line of snow-white pinnacles, which, on a nearer approach, are seen towering above the dark line of lower but still lofty mountains."

⁵ *Cunningham, 57. Royle, ut supra Herbert, ut supra, xxii.*

Dhwalagiri,⁵ having an elevation of 28,000 feet, is in lat. 29° 10', long. 83°. Two hundred miles eastward of this, and in lat. 28° 20', long. 86°, is situate the mountain of Gossainthan, attaining the height of 24,740 feet.⁶ After another interval*

⁶ *Royle, ut supra, xvi.*

* It is generally believed that in this interval there are peaks more lofty than that of Gossainthan; one near Tingri Madan, about eighty miles

HIMALAYA.

of 140 miles in the same direction, the lofty peak of Kinchinjunga, probably the highest mountain in the world,* rises to the height of 28,176 feet.⁷ This last-named mountain is in the north-east angle of Nepaul. Contiguous to Nepaul on the east, is the petty territory of Sikkin, speaking of which Dr. Hooker⁸ says:—"Viewed from a distance on the plains of India, Sikkin presents the appearance—common to all mountainous countries—of consecutive parallel (wooded) ridges, running east and west, backed by a beautiful line of snowy peaks, with occasional breaks in the foremost ranges, through which the rivers debouch. Any view of the Himalaya, especially at a sufficient distance for the distant snowy peaks to be seen overtopping the outer ridges, is very rare, from the constant deposition of vapours over the forest-clad ranges during the greater part of the year, and the haziness of the dry atmosphere of the plains in the winter months. At the end of the rains, when the south-east monsoon has ceased to blow with constancy, views are obtained, sometimes from a distance of nearly 200 miles. The angle subtended by the giant peaks is so low (not a degree), that they appear like white specks very low on the horizon, tipping the black lower and outer wooded ranges, which always rest on a belt of haze, and from the density, probably, of the lower strata of atmosphere, are never seen to rest on the visible horizon. The remarkable lowness on the horizon of the whole stupendous mass is always a disappointing feature to the new comer, who expects to see dazzling peaks towering in the air. Approaching nearer, the snowy mountains sink behind the wooded ones long before the latter have assumed gigantic proportions, and when they increase in size, they appear a sombre, lurid grey-green mass of vegetation, with no brightness or variation of colour. There is no break in this forest caused by rock, precipice, or cultivation; some spurs project nearer, and some valleys appear to west of Kinchinjunga, is rumoured to rival the latter mountain in elevation.

⁷ Walker's Map.

⁸ Climate and Vegetation of Himalayas, 17.

* The highest summits of the Andes¹ are—

Sorata, 25,267 ft. Illimani, 23,952 ft. Chimborazo, 21,440 ft.

¹ Cunningham, ut supra, 41.

It will be thus seen that the principal peak of the Himalayas overtops the principal summit of the Andes by above half a mile of perpendicular altitude.

HIMALAYA.

retire further into the heart of the first great chain that shuts out all the country beyond. No pines whatever are seen on the outer range of Sikkim, both soil and climate being far too damp in the rainy season; nor are the colours of the foliage so varied and bright as the more perennially humid forests of tropical shores, from the want of any abundance of such palms as caryota, tall arecæ, and of artocarpî, or of orange-groves." Beyond this, extensive tracts of the Himalayas remain unexplored, though it is known that a considerable portion of the Bootan territory, extending to long. 95°, presents a succession of lofty and rugged mountains, frequently rising to an altitude of 20,000 feet above the level of the sea, and covered with snow throughout the year.⁹

⁹ Pemberton, Bhotan, 91.

Thus it will be seen that the great Himalaya range, from its north-western extremity, where its continuity with the Hindoo Koosh is broken by the Indus, takes a south-easterly direction, giving rise in its course to the Jhelum, Chenaub, Ravee, and Beas rivers, after which it is penetrated* by the Sutlej, previous to its debouch into the plains near Roopur. Further east, it continues its original direction, throwing off in its progress the feeders of the Ganges, and also of the Braham-pootra subsequently to its confluence with the Sanpoo or Dihong. The entire chain may be said to have an average breadth¹ of 150 miles; its length is computed at about 1,500.

¹ Thompson, ut supra, 2.
² History of India, I. 350.

"The noblest scenery in India," says Elphinstone,² "is under the Himalaya, where the ridges are broken into every form of the picturesque, with abrupt rocks, and slopes covered with gigantic pines and other trees, on the same vast scale, mixed with the most beautiful of our flowering shrubs, and the best of our fruits in a state of nature. Over the whole towers the majestic chain of the Himalayas, covered with eternal snow, a sight which the soberest traveller has never described without kindling into enthusiasm, and which, if once seen, leaves an impression that can never be equalled or effaced."

¹ Ut supra, 3.

* Dr. Thompson¹ says, "The most marked of these peculiarities may be observed in the course of the Sutlej, which runs, for a very considerable part of its course, nearly parallel to the Indus, before it turns towards the plains; thus separating the western division of the Himalaya chain, almost from its very origin, into two branches."

HIM—HIN.

HIMMUTGUNGEE,¹ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Allahabad to Jubbulpore, and four² miles S. of the former. It is situate on the left* bank of the Jumna, at the Gawghat ferry, and has a small space suited for encamping. Lat. 25° 26', long. 81° 55'.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 28, 31.

HIMUTGARH,¹ in the territory of Gwalior, or possessions of Scindia, a small town 10 miles S.W. of the fort of Gwalior. It is situate at the north extremity of a narrow² pass, extending from north to south, through a range of rocky sandstone hills, to the town of Puniar. Close to it was fought, on 29th December, 1843, an engagement, styled the battle of Puniar, between the British detachment led from Bundelcund by General Grey and the Mahrattas. The British lost thirty-six men killed, and 180 wounded; the Mahrattas lost all their artillery, amounting to twenty-four pieces, all their ammunition, some treasure, and a great number of men. Lat. 26° 6', long. 78° 3'.

¹ E.I.C. Ms. Doc.

² Further Papers respecting Gwalior, presented to Parliament, April, 1844, p. 135.

HINDIA, or **HANDIYA**,¹ in the territory of Gwalior, or possessions of Scindia's family, a town on the route from Baitool² to Mow, 90 miles N.W. of former, 96 S.E. of latter. It is situate on the left or south bank of the Nerbudda, here a great river, 1,000³ yards wide. It is of considerable size, and has a large bazar, and a fort commanding⁴ several ghats or passes over the river. This place was, in 1820, occupied by a British force, and by the treaty of 1844, was, with its pergunnah, and that of Hurda, yielding together an annual revenue of 140,000 rupees, placed under British management, the revenue being appropriated to the maintenance⁵ of the augmented Gwalior contingent. Distant S. from Gwalior fort 280 miles, S.E. from Oojein 90. Lat. 22° 26', long. 76° 59'.

Surv.

HINDOOR, or NALAGURH.¹—A hill state at the southwestern declivity of the Himalaya Mountains. It is bounded on the north by Kuhloor; on the east by Bhagul and Muhlog; on the south and west by Sirhind. It contains an area of 233 square miles, the centre being in lat. $31^{\circ} 7'$, long. $76^{\circ} 50'$. It is traversed throughout its whole extent by a steep range of hills, which, rising over the left bank of the Sutlej, continues in a south-easterly direction until joining the Sub-Himalaya near Subathoo. Parts of this ridge attain a considerable height; Chumbagarh being 4,400,² and Ramgarh 4,054 feet above the sea. The drainage is either by the rivers Gumbur and Gunrora, which flow in a north-westerly direction to the Sutlej, or by the Sarsa, which, rising in the Pinjor Doon, takes also a north-westerly direction, and falls into the Sutlej near Kanoli, after a course of about thirty miles. Moorcroft³ speaks of part of the country thus traversed in favourable terms:—"The valley of the Gamrora is populous and well cultivated. Along the courses of the different small streams by which it is intersected are rows of pear-trees, which, at the time we passed them, were in full blossom. Villages occurred repeatedly on either side of the road." The Sarsa receives several small streams from the north and north-east: of these the most worth notice are the Baladh⁴ and the Ruta. The Lohund and the Kalakund, two small rivers, flow down the mountain-tract sloping to the north-west, and fall into the Sutlej. The low grounds on the banks of the Sarsa and Sutlej are alluvial, fertile, and, being

⁴ Moorcroft, *ibid.*

HIN.

little more than 1,000 feet above the sea, have a climate and produce resembling those of intertropical regions. The crops are generally maize, rice, wheat, barley, various kinds of millet, cotton, opium, ginger, turmeric, hemp, tobacco, oil-seeds, and esculent vegetables. The fruits are pomegranates, paches, apricots, plums, apples, pears, walnuts, raspberries, strawberries, and melons. The pulp of the pomegranates is eaten; the husks are dried, and exported for the purposes of dyeing⁵ and tanning. The acacia, Indian fig, pine, elm, willow, gentian, geranium, rose, and other shrubs familiar in Europe, adorn the hills. The country is altogether picturesque, beautiful, fertile, well watered, and highly cultivated. The only places of importance are Nalagarh, Ramgarh, and Plassi or Palasi. Nalagarh is at present the residence of the rajah, in place of Plassi, at which he formerly dwelt. The population of the raj is estimated by Moorcroft⁶ at 20,000. It is represented to contain 136 villages, and to yield an annual revenue of 10,000*l.*;⁷ but according to official report⁸ of a recent date (1848), the revenue does not exceed 8,000*l.* The thakoreo of Burrowlee, with the exception of a small part, was conferred⁹ on the rajah of Hindoor, in November, 1815, in lieu of the fort of Malown, with six villages, retained as a post for British troops. The rajah holds under the East-India Company, from whom he received his raj on the expulsion of the Goorkhas in 1815; and in troublous times his conduct has been characterized by his devotion to British interests.

HINDOSTAN.—See INDIA.

HINDOUL,¹ in the British district of Muttra, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Meerut to that of Muttra, and 17 miles² N.E. of the latter. The road in this part of the route is indifferent, being narrow and sandy in some places; the country open, and but partially cultivated. Lat. 27° 42', long. 77° 49'.

HINDOWN,¹ in the Rajpoot state of Jeypore, a town on the route from Agra to Mow, 71 miles S.W. of former, 844² N.E. of latter. It was formerly a large city, with several³ extensive buildings, but suffered so much from the devastations of the Mahrattas, that it is much decayed, though still populous.⁴ The rampart which once surrounded it is now quite

HINGLAJGARH, or **HINGLAISGARH**,¹ in Malwa, a hill fort in the possession of Holkar's family, long deemed impregnable by the natives. It is surrounded by a deep ravine 200 feet deep, 250 wide, and with perpendicular sides, from the edge of which the walls rise, and is accessible only by three causeways, made to form communications across the chasm, with three gates respectively. It was, however, stormed July 3rd, 1804, by a British detachment sent by Colonel Monson, stationed at Sunara, ten miles farther east. The detachment, commanded by Major Sinclair, consisted of a battalion of a native regiment, with six six-pounders and a party of irregular horse. After battering for an hour, the British escaladed the walls, and took² the place with little loss, not a British officer being either killed or wounded. It was subsequently restored to Holkar,³ apparently in conformity to the declaratory article annexed to the treaty⁴ of Rajpurgat, 1805. Distant from Indor, N., 130 miles; from Oojein, N., 100. Lat. $24^{\circ} 40'$, long. $75^{\circ} 50'$.

¹ E.I.C. Ma. Doc.

HISSAR.¹ *—The principal place of the pergunnah of the same name, in the British district of Hurreeah, lieutenant-governorship of the North-West Provinces, a town on the route from the city of Delhi to Bhutneer. It is situate on the branch made by Feroz Shah from the Delhi Canal to supply water for irrigation, as well as for the use of the numerous host of followers brought by him into this arid tract, which was his favourite hunting-ground,² the neighbouring wastes harbouring lions and tigers,³ besides other wild beasts less formidable. This watercourse appears to have been partly made by excavation, partly by clearing the channel of the Chintang, or one of its branches. In 1825 it was, by order of the British government, cleared out as far as Darbuh, twenty-five miles north-west of Hissar, to which last place it is navigable⁴ for timber-rafts. Previously to this renovation, the town and its vicinity suffered much from want of water, being supplied merely from tanks or from wells, of which last it had 300 in the time of George Thomas.⁵ There is a well-supplied bazar, and formerly the East-India Company had here a stud,⁶ to furnish a supply of horses for the army; but in 1844 the establishment ceased.⁷ The place was likewise selected as the site of a farm for rearing cattle for the ordnance department; but this establishment also has been recently abolished.⁸ In the time of Akbar, Hissar⁹ had two forts, one of stone, the other of brick.† The sircar, of which it was the principal place, was

E.I.C. Ms. Doc.

HOBRA,¹ in the British district of Baraset, presidency of Bengal, a town² lying on the route from Calcutta to Dacca. It has a small bazar: the road in this part of the route is in general good, though in some places not free from swamps, the country being low and marshy. Distance from Calcutta, N.E., 28 miles; from Dacca, S.W., 158. Lat. 22° 52', long. 88° 41'.

¹ E.I.C. Ms. Doc.

² Garden, *Tables of Routes*, 91.

HOCIO,* or **HOPCHO**, in Bussahir, a stream of Koonawur, rises near the north-eastern frontier, in lat. 31° 38', long. 78° 43', on the western declivity of the Gautung Pass, from the melted snows of which it is supplied. Even near the source, it

Lloyd and Gerard, *Tours in Himalaya*, II. 154.

ancient inscriptions may still be preserved on the lower parts. The greatest circumference of the stone above ground is eight and a half feet. The rest of the pillar is of the red sandstone common at Agra, and there is part of the column, near the second cornice, made of coarse white marble. There is a massive iron rod on the top, which formerly served to support a cupola. Several attempts have been made to extract this rod by the natives, but they have always failed. From the base of the column to the top of this rod, the height is about forty-five feet. The column is solid, and there is no way of easily getting to the top." The pillar is situated in the middle of a square of old buildings, at present used as a magazine. In one of them is the entrance to a subterraneous passage, stated by the natives to extend to Hansee, a distance of fifteen miles, and which was explored by Brown, until the lights that he used went out. The inscriptions do not appear as yet to have been deciphered; the character is considered to resemble English capitals rather than any Indian letters. There is another building, which, according to tradition, was intended to represent the model of a ship, and made by order of Feroz Shah, who having never seen one, and being unable to understand the account given by an officer who attempted a description, caused him to raise this singular structure to aid the explanation. It is, however, as might be expected, very unlike any ship at present known.

¹ Voyage, IV. 304.

HOD—HOL.

in some places spreads to a width of 100 yards, and in one part to 200, in another to 300; but is so shallow as scarcely to cover the pebbles in its bed. In other places it is arched over with snow, or buried under the ruins of cliffs, from which it again bursts out and expands over the plain. The fall, which in the upper part of its course is very gentle, lower down is very rapid, as from its source to the confluence with the Sutlaj, a distance of less than twelve miles, in a westerly direction, it descends 10,000 feet, and is in general one broken sheet of foam. The mountains bounding its course on each side are precipitous, lofty, and covered with perpetual snow, avalanches of which frequently descend, and, damming the stream, form deep lakes, over the icy embankments of which the river is precipitated with a loud noise.

E.I.C. Ms. Doc.

HONAHWAR.¹ * in the British district of North Canara, presidency of Madras, a seaport and town, the principal place of a talook or subdivision of the same name. It is situate on the north side of an extensive estuary, or rather inlet, of the sea, forming an expanse of salt-water, which at its south-eastern extremity receives the Gairsoppa or Sheravutty, a considerable river flowing from the Western Ghats, farther eastward. This salt-water lake is about seven miles in length from south-east to north-west, and three in its greatest breadth; has an area of about fifteen square miles, and contains several islands. Though not a good haven, it can receive large ships; and Hyder Ali, sultan of Mysore, here established a dock for building ships of war, some of which were sunk by the British when they took the place, and their wrecks² were for a long time visible. The best station for shipping is, however, the road outside the mouth of the haven, and sheltered³ by two small islands, called Baswaraje Droog and Fortified Island. The depth of water is five or six fathoms, and the ground is soft; but as a station for shipping, it is disadvantageous for the greater part of the year, as fresh water is very scarce, the lake or haven being salt, except during the monsoon, when the quantity of water discharged into it by the Sheravutty and many other streams makes it quite fresh. It abounds in fish, great quantities of which are taken, and make an article of commerce. In particular

Of this place there is but little notice before 1569,⁵ when it was a rich and beautiful city, with a fort, belonging to the queen of Gairsoppa, a city now in ruins, about fifteen miles farther east, on the river Sheravatty, and was plundered and burned by the Portuguese, who shortly after fortified and garrisoned⁶ it. On the decay of the Portuguese power in India, it was acquired by the sovereigns of Bednore, on the conquest of which place by Hyder Ali, this town also submitted⁷ to him. In 1783⁸ it was taken by assault by a British force, despatched from Bombay under the command of General Matthews;⁹ and, in 1784, obstinately and successfully defended¹ by Captain Torriano, against Tippoo Sultan; to whom, however, in the same year, it was ceded by the treaty of Mangalore.² On the overthrow of that prince in 1798, it again came into the possession of the East-India Company. Distance direct from Bombay, S.E., 340 miles; from Mangalore, N.W., 110;³ from Seringapatam, N.W., 200; from Madras, N.W., 410. Lat. 14° 17', long. 74° 30'.

HONHULLY.—A town in the native state of Mysore, on the right bank of the Tongabudra river, and 144 miles N.W. by N. from Seringapatam. Lat. 14° 15', long. 75° 43'.

HONWAR.—A town in the British district of Belgaum, presidency of Bombay, 20 miles W. of Beejapore. Lat. 16° 49', long. 75° 30'.

HOOBLEE,¹ in the British collectorate of Dharwar, presidency of Bombay, a town situate about 12 miles S.E. of the town of Dharwar. Though ill-built, it is a thriving place, and has some considerable trade, being one of the principal cotton marts of the Southern Mahratta country. In this respect its importance will probably increase, from the improved means of communication with the coast. A cart-road from Dharwar to

HOO.

Hooblee was completed some years ago. In 1847 a further continuation of this road was authorized to Wuddeguttee, on the Canara frontier, there to meet the road constructed by the Madras government for facilitating the inland trade between Dharwar and the port of Coompta. The average² load of cotton for a bullock is 280 pounds. The average hire of a bullock from Hooblee to the port of Coompta, a distance of 120 miles, is three rupees; making the cost of conveyance six rupees per candy of 560 pounds. The average load for a cart drawn by two bullocks is 1,120 pounds. The same number of animals, therefore, employed in draught will draw twice the amount of goods by weight which they would carry in the way of burden.

² Bombay Statistics, 163.

Two of the government vernacular schools are established in this town; one Mahratta, one Canarese.

Hooblee was formerly the seat of an English factory, which, in 1673,³ was, with the rest of the town, plundered by Sevajee, the Mahratta leader, to the amount of 7,894 pagodas. Monazzim, son of Aurungzebe, sent⁴ by his father into this country at the head of an army, took Hooblee. During the decline of the kingdom of Delhi, the town fell into the hands of the Mahrattas, and on the overthrow of the Peishwa, in 1818, was, with the rest of that prince's dominions, taken possession of by the government of the East-India Company. Its population⁵ is estimated at 15,000. Distance from Bombay, S.E., 290 miles; from Poona, S.E., 230 miles. Lat. 15° 20', long. 75° 13'.

HOODESARA.—A town in the British district of Camroop, province of Assam, presidency of Bengal, 47 miles N.W. of Gowhatty. Lat. 26° 34', long. 91° 10'.

E.I.C. Ms. Doc.

HOOGHLY.¹—A British district subject to the presidency of Bengal, and named after its principal place. It is bounded on the north by the British district of Burdwan; on the east by the river Hooghly, separating it from the British districts of Nuddea, Baraset, and the Twenty-four Pergunnahs; on the south by the river Roopnarain, separating it from the British districts of Midnapore and Hidjeelee; and on the west by the British districts Midnapore and Burdwan. It lies between lat. 22° 13'—23° 13', long. 87° 34'—88° 30'; is seventy-two miles in length from north to south, and fifty-two in breadth. The area, according to official return,² is 2,089 square miles. In its general aspect, the district is low and level in the

¹ E.I.O. Ms. Doc.

² Statistics of British Possessions.

HOOGHLY.

eastern part, but more hilly in the western and north-western, where it runs towards the high lands of Burdwan. The river Hooghly touches on the district at its north-east corner, in lat. $23^{\circ} 12'$, long. $88^{\circ} 22'$, and, flowing southward, forms its eastern boundary towards the British districts Nuddea, Baraset, and the Twenty-four Pergunnahs, for forty miles, as far as Balee, in lat. $22^{\circ} 40'$, long. $88^{\circ} 25'$, where it passes into the Twenty-four Pergunnahs, on issuing from which, it again, at Fort Gloster, in lat. $22^{\circ} 28'$, long. $88^{\circ} 12'$, touches on the Hooghly district, and flows along its eastern frontier, dividing it from the Twenty-four Pergunnahs for twenty-five miles, to the confluence of the Roopnarain, at the southern extremity of the district, in lat. $22^{\circ} 12'$, long. $88^{\circ} 5'$. About ten miles above this confluence, it on the right or west side receives the Damoodah, which, proceeding from the high lands of Burdwan in a direction south-east, enters the district at the north-west corner, in lat. $22^{\circ} 56'$, long. $87^{\circ} 57'$, and flows throughout it in a direction nearly south for fifty-five miles, to its junction with the Hooghly. In the dry season, the Damoodah is fordable in many places, but when inundated by the periodical rains, at the close of summer and the commencement of autumn, becomes a vast torrent, ninety³ feet in depth and 1,000 feet in width, sometimes bursting the bunds or embankments with which it is inclosed, rushing with prodigious noise over the country, and sweeping away, in indiscriminate ruin, houses and their inmates, the crops and cattle. The Dalkissore touches on the northern boundary of the district, in lat. $23^{\circ} 2'$, long. $87^{\circ} 57'$, and, traversing it in a southerly direction for thirty miles, becomes at the end of that distance its boundary towards Midnapore for fourteen miles. Subsequently re-entering the district, it forms its boundary towards Hijellee, and falls into the Ganges in lat. $22^{\circ} 12'$, long. $88^{\circ} 7'$.

³ Bengal and
Agra Guide, 1841,
vol. II. part I. 321.

There are many other watercourses and torrents of less note, but of considerable size during the periodical rains, when the country is overflowed to a great extent. The dry, hot season lasts from the beginning of March to the end of June, during which interval the thermometer ranges from 75° to 110° . The periodical rains set in at the end of June, and last until the end of September or the early part of October. During this period the country is very unhealthy, fevers and

HOOGLY.

agues being especially ripe. The cool season lasts from the beginning of November to the end of January, and in the nights ice⁴ is sometimes formed to such an extent, that masses may, with due precautions, be preserved to be used during the hot season. February is cool and very pleasant, and is hailed with as high feelings of gratification by the natives, as the finest part of spring is welcomed in Europe.

⁴ Journ. A. S. Soc.
Beng. 1832, pp.
74, 204.

According to a recent publication,⁵ there are a few deer and wild hogs; but "elephants, tigers, wolves, and buffaloes, are not indigenous* to this district, though now and then met with."

⁵ Bengal and
Agra Guide, 1841,
vol. II. part I. 323.

The soil in the south, in some places, is much impregnated with common culinary salt, which was formerly extracted on account of government. Along the courses of the rivers, and generally in the low grounds, it is very fertile, and as irrigation is easily practised, it produces abundant crops of fine rice.

The trees most generally to be met with, are the mango, jak (*Artocarpus integrifolia*), cocoanut-palm and date-palm, tamarind, guava, lime-tree, orange-tree, and betel-palm. Lately, considerable efforts have been successfully made to introduce various new kinds of trees and plants from the botanic garden at Calcutta.

Besides rice, the principal objects of cultivation are the sugarcane, indigo, the mulberry-tree (for the sake of its leaves to feed silkworms), cotton, tobacco, mustard and other oil-seeds, ginger, hemp, potatoes, cucurbitaceous plants of various kinds, peas, onions, cabbages, and various other esculent vegetables. The principal exports are raw silk, indigo, and sugar. A large quantity of plantains is also sent to the Calcutta market, and distillation of rum is greatly increasing, in consequence of the brisk demand for it in the British market. Spirits are distilled in considerable quantities from the sap of the date-palm, and palmyra or toddy-palm. Large quantities of bamboos find a ready sale in the Calcutta market. Hemp is made into ropes, sacking, and coarse canvas. Formerly there was a considerable manufacture of cotton cloths, but the greater cheapness of the fabrics brought from Great Britain

* Hamilton, however, remarks,¹ "It is surprising how large a proportion of its surface [that of Hooghly] still remains in a state of nature, the asylum of tigers."

¹ Gazetteer, I. 603.

HOOGHLY.

has nearly put an end to that branch of industry in this district, as well as in other parts of India.

⁶ Statistics of British Possessions.

⁷ Bengal and Agra Guide, ut supra, 321.

⁸ Id. 1841. vol. II. part I. p. 323.

The population, according to official⁶ statement, is 1,520,840, an amount which, compared with the area, indicates an extraordinary relative density of 728 to the square mile; and it is, notwithstanding, considered⁷ that the numbers of the people are steadily on the increase. They consist of Brahminists, Mussulmans, and Christians; and amongst them, according to a rough estimate, the Brahminists form two-thirds. Of the residue, the Mussulmans are by far the most numerous, though the professors of Christianity constitute a portion relatively greater than is usual in India. In a recent publication, it is observed,⁸ that "they may be divided into three classes: 1. Europeans, including government functionaries; 2. East Indians, or descendants of Portuguese, Dutch, English, and French, by native mothers; 3. native Christians. The Europeans out of the service of government are very few. The English and French planters and their assistants would hardly amount to a score of persons."

The French settlement of Chandernagore is situate within the limits of this district, as are also Chinsura and Serampore, now British possessions, but originally belonging, the one to the Dutch, and the other to the Danes. Hooghly, the principal place, Ampata or Omptah, Boenchie, Jehanabad, Shah-bazar, Ghotal, Keerpoy, and the places just mentioned as now or lately held by foreign powers, are described under their respective names in the alphabetical arrangement.

The principal routes are,—1. From south-east to north-west, from Calcutta through the town of Hooghly to Burdwan; 2. from south-east to north-west, from Calcutta through Jehanabad to Bancoora; 3. from north to south, along the right side of the river Hooghly; 4. from north-east to south-west, from Burdwan to Midnapore; 5. from east to west, from Calcutta to Midnapore.

⁹ As. Res. ix. 112 — Wilson, Essay on the Kings of Nagalba.

The tract comprised within the present district of Hooghly, appears, according to the remotest historical records, to have formed part of a considerable realm,⁹ called Tamarnalipat, from its capital of that name, identical with the modern Tumlook. It is reputed to have maintained, or aspired to maintain, extensive foreign relations, and it is said, that in the year 1001, the

HOOGHLY.

king despatched an ambassador to the monarch of China. At the time of the invasion of Bengal¹ by the Mussulmans, at the commencement of the thirteenth century, the tract was comprised within the dominions of a rajah residing at Nuddea, on the Bhagirathi, north of the present district of Hooghly. This feeble chief, without an attempt at resistance, deserted his dominions, which were seized by Bukhtyar Khulijy, the Mussulman general, and subsequently incorporated with the state which he founded, and styled the kingdom of Bengal. It was probably united to the kingdom of Delhi by the renowned Sher Shah, when, in 1542,² he took the city of Gour, and overthrew the kingdom of Bengal. Wrested from Delhi during the troubles ensuing on the death of Sher Shah, it was reunited to it in 1576, by Khan Jehan, an officer of Akbar. At the commencement of the eighteenth century, it became³ part of the virtually independent state which, under the denomination of the soobah of Bengal, was founded by Murshid Kuli Khan, during the weakness and distractions of the kingdom of Delhi, ensuing on the death of Aurungzebe. The right of the East-India Company to this tract originated in the treaty concluded with Meer Cossim in 1760, and was confirmed in 1765, by the emperor Shah⁴ Allum.

HOOGHLY.^{1,2}—The principal place of the British district of the same name, a town on the line of railroad now under construction from Calcutta to Benares. It is situate on the right bank of the great offset of the Ganges, from it denominated the Hooghly. The river in this part is much contracted³ in breadth. The civil establishment of the district located here is accommodated in several buildings,³ of striking appearance, in the Grecian style of architecture, but of frail beauty, being merely overlaid with chunam or stucco. The church, built by the Jesuits, according to the inscribed date, 1599, is a large fine structure, of such durable materials as to appear to have been but recently erected. Here is a college, erected in 1836, upon a site granted for the purpose by the government,⁴ and supported by funds derived from the estate of Haji Muhammad Mohsin.⁵ Instruction is given both in English and Oriental literature. Connected with this institu-

HOOGHLY.

tion are several branch schools. The civil establishment, of which Hooghly is the chief station, comprises the following European officers:—A civil and sessions judge, a collector, a magistrate, a joint magistrate, and deputy collector; two assistants to the above, an assistant-surgeon, a superintendent of abkarree, an assistant to that officer. Besides these, there is a considerable number of native functionaries, of various grades and denominations. This town is conjectured⁶ to have been founded by the Portuguese in 1537. In 1632, it was, after an obstinate defence of three months, stormed by the troops of Shahjehan, 1,000 Portuguese being slaughtered, and 4,400 taken prisoners. Sixty-four large vessels, and 254 of smaller dimensions, were burned, three only escaping to Goa. The place, thus possessed by the Moguls, became the royal port of Bengal. In 1676,⁷ the English established a factory here, and about the same time Tavernier⁸ mentions a similar establishment belonging to the Dutch. In 1681, the English factory was fortified,⁹ and provided with a small guard, consisting of twenty Europeans, which was the first military establishment of the Company in Bengal. Subsequently wrested from the Company by Sooraj-oo-dowlah, it was, in 1757, retaken by Clive, and has from that time been retained. The population of the town is estimated at about 12,000.¹ Distance N. from Calcutta 27² miles; from Benares, S.E., 394.³ Lat. 22° 54', long. 88° 22'.

HOOGHLY.¹—A large river of Bengal, formed by the junction² of two great branches of the Ganges, the Bhagruttee and the Jellinghee, the confluence of which is in lat. 23° 25', long. 88° 22', and 125 miles from the sea, reckoned by the windings of the stream to Diamond Point, or, if the estuary be included, as far as Saugor Roads, 160 miles. Its³ mean breadth above Calcutta is three-quarters of a mile, and it was formerly navigable for ships of the line⁴ as high as Chandernagore, 115 miles from Saugor Roads, and seventeen above Calcutta. There is indeed a rumour, pretty generally credited, that the river is gradually silting up, and will at some future time cease to afford adequate accommodation to the trade of the capital of British India. This would be a fearful blow to the prosperity of the "City of palaces," unless a suitable remedy should be provided. Towards this end, it has been suggested⁵ that either

HOOGHLY.

a ship canal or a railway might be constructed from Calcutta to the Mutwal, a river some distance to the eastward, not unfitted to become the successor of the Hooghly, should it be necessary to abandon that channel; and thus the commerce of the maritime emporium of Bengal be retained. However, "the draught⁶ of water for ships departing from Calcutta to proceed down the river, is usually limited to seventeen feet, but the pilots will, for a gratuity presented to them, sometimes take charge of vessels drawing seventeen and a half or eighteen feet; and if a powerful steam-tug be employed, they may be taken from Calcutta drawing nineteen or even twenty feet, when the tides and weather are favourable." When the river is not affected by the annual periodical inundations, which take place at the close of summer, the water is slightly salt at Calcutta, but "in September⁷ the freshes are at their height; there is then no visible tide off Calcutta, the ships do not swing up, and the river-water is perfectly sweet, far beyond Saugor, in the open sea." The following general summary of the variations of the tides of the Hooghly is given by the writer just quoted:—"From⁸ the point of lowest low water in the dry season, to that of the highest high water in the freshes, is twenty feet ten inches. The greatest mean rise of tide from low to high water-mark takes place in March, April, and May, and is fifteen feet ten inches. The greatest mean rise of tide from low to high water-mark in the freshes is ten feet. The smallest mean rise of tide takes place in the freshes, and is at neap tides only three feet six inches. The smallest mean rise of the tide in the dry season, neap tides, is four feet. From the lowest fall of the river to high water-mark, neap tides, in February, is eight feet. From the lowest fall of the river to low water in the freshes, neap tides, is twelve feet.* The river is at its lowest in the beginning of March. The river is swollen by the freshes in July, August, and September, and part of October. The freshes take off about the middle of September, and are generally out of the river by the end of October. At the beginning of November, although the freshes

⁶ Horsburgh, East-India Directory, I. 637.

⁷ A. Res. xiii. 266—Kyd, on Tides in River Hooghly.

⁸ Id. 264.

* During the inundation in September, 1823, the low water stood at eighteen feet six inches, the tide having ebbed only fifteen inches on that day. The difference between this low water and the high water (neap tides in February, viz. eight feet) is ten feet six inches.

HOOGLHY.

are out of the river, it is upwards of three feet higher at low water than in March. The river is in the most quiescent state during the months of November, December, January, and February. During these months, the night tides are higher and more rapid than the day tides; and there are, on some occasions, bores at night. The strongest flood tides, and the greatest mean rise of the tides, are in March, April, May, and June. The day tides in these months are higher than the night tides. The strongest freshes are in September. In July, the strength of the flood tides is counteracted by the freshes, and this, therefore, is a moderate month as regards tides. The bores also are moderated, as a consequence. In August, the flood tides are overcome by the freshes, and the bores are moderate: should there be a high parallax of the moon, however, the great height of the sea in this month will cause a considerable bore." Though not a mile* wide at Calcutta, the river does not at all times afford perfect security to ships, as there have been instances of their being blown ashore⁹ there in violent storms. The river has little increase of breadth until after it has received the waters of the Damoodah and Rupnarain, and passed Diamond Point, fifty miles from Calcutta. Below that point, it rapidly expands, and at Saugor Roads, where the estuary terminates in the open sea, it is about fifteen miles wide. The tides, under circumstances calculated to favour their action, are violent and rapid, running sometimes at the rate of seven¹ miles an hour near Calcutta; and in the south-west monsoon, when a great current is driven into the river from the Bay of Bengal, the extraordinary phenomenon denominated the Bore, which sometimes rises on the sands contiguous to the banks in waves twelve or fifteen feet perpendicular, rushes on at the rate of twenty² miles an hour, carrying every floating body along with it. The Hooghly, though the only channel of the Ganges frequented by large ships, is at its mouth much encumbered by shoals, amidst which ships can be steered safely only by much skill and attention. Of the channels between those shoals, the principal³ are—1. The Inside Channel, farthest west, stretching from Balasor close along the shore inside, or to the north-westward of all the

⁹ Horsburgh, *East-India Directory*, 1. 615.

HOO.

shoals, with depths generally of from two to three fathoms at low water. This is used only by the small coasting vessels navigated by the natives. 2. Fairway, or the Western Channel, suitable only for ships drawing not more than fourteen or fifteen feet of water. 3. Middle Channel, which is narrow, has not more than three fathoms of water, and is little used. 4. Sagar Channel, or Eastern Channel: this is represented as at present the channel in general use by ships entering or departing from the Hooghly. 5. Thornhill Channel, which has two fathoms and three-quarters at low tide, but commonly three, three and a quarter, or three and a half. 6. The Old Channel, having from three to four fathoms at low water. 7. Lacam Channel, or Channels Creek, called by the natives Baratulla, separates Saugor island and Clive's Island from the lowland of the Sunderbunds. It has a good depth of water, but is rendered somewhat intricate by sands projecting from the land. If these, however, were marked by buoys or beacons, the navigation would not be difficult.⁴ Several ships at different times have entered it by mistake, and passed in safety.

⁴ Horsburgh, i. 620.

The Hooghly is considered by the Brahminists as the real and much-venerated Ganges, having its source at Gangoutri; and the Podda, which takes its course farther east, though having a much larger volume of water, is regarded as a mere branch. The banks of the Hooghly are studded with numerous towns and villages, many of which possess an interest, "from⁵ old associations, or have been rendered memorable by historical recollections."

HOOLIORDROOG,¹ in the native state of Mysore, a town, with the ruins of a fort, situate on a rock deemed impregnable² except by blockade, and hence formerly regarded as a place of importance. In 1659 it was acquired³ by Dnd Deo Raj, ruler of Mysore: it subsequently passed into the power of Hyder Ali, and in 1791 was surrendered to the British army under Lord Cornwallis, by whom it was dismantled and relinquished. It was subsequently repaired and reoccupied by Tippoo Sultan, but was retaken by the British before the termination of the war. Distant from Seringapatam, N.E., 48 miles. Lat. $12^{\circ} 50'$, long. $77^{\circ} 5'$.

E.I.C. Ms. Doc.

HOOLOOGOREE NUGUR.—A town in the British district of Seebpoor, province of Assam, presidency of Bengal, 30 miles N.E. of Seebpoor. Lat. $27^{\circ} 16'$, long. $95^{\circ} 3'$.

E.I.C. Ms. Doc.

HOOLSOOR.—A town in one of the recently sequestered districts of the native state of Hyderabad, or dominions of the Nizam, presidency of Bengal, 106 miles N.W. of Hyderabad. Lat. 18° , long. $77^{\circ} 6'$.

HOOLY ONORE.—See **HOLLA HONOR.**

E.I.C. Ms. Doc.

HOOMNABAD.—A town in the native state of Hyderabad, or dominions of the Nizam, 92 miles W.N.W. from Hyderabad, and 109 miles N. from Raichoor. Lat. $17^{\circ} 45'$, long. $77^{\circ} 18'$.

HOOSHUNGABAD.—See HOSHUNGABAD.

E.I.C. Ms. Doc.

HOOSSEIN BELA, in Sind, a village on the route from Subzulcote to Shikarpoor, and 15 miles E. of the latter place. It is situate on the left bank of the Indus, here crossed by a much-frequented ferry, generally called the ferry of Azeezpoor, which place, however, is above a mile north-east. The Indus is here divided into two branches: the eastern, called the *Dund*, is about 150 feet broad and twenty-four feet deep; the western branch is very wide, between thirty and forty feet deep, and is separated from the eastern by an island a mile and a half in breadth. At a short distance higher up, there is a good ferry over the undivided stream of the river; and that would be a preferable place for the passage of any considerable number of persons, but the boatmen prefer the lower ferry, as nearer their village. This latter ferry is sometimes called *Amil Got*, from the village of Amil, on the western side. (See *AMIL GOT*.) Hoossein Bela is in lat. $27^{\circ} 52'$, long. 69° .

- Moorer. I. 119.** **HOSHIARPUR,** in the Punjab, a small town near the southern base of the Himalaya Mountains, and on the route from Lahore to Nadaun. Lat. $31^{\circ} 33'$, long. $75^{\circ} 57'$.
- ¹ E.I.C. Ms. Doc.** **HOSHUNGABAD,**¹ a district or subdivision of that portion of the British possessions known as the Saugor and Nerbudda territory, and now placed under the jurisdiction of the lieutenant-governor of the North-West Provinces. No regular survey has been made, but its area is estimated at 1,916² square miles. The total amount of the population, according to a recent census, is 242,641; but no distinctions of creed, caste, or occupation, were noticed. An attempt was made to supply this deficiency by conjectural means, under which operation the people were thus distributed:—Hindoos,³ agricultural, 108,468; non-agricultural, 122,685; Mahomedans and others, not Hindoos, agricultural, 654; non-agricultural, 10,834. These proportions derive plausibility from the results of a former census, which probably furnished the chief ground for their assumption, but the total only can be entirely relied on.

- ⁴ Bengal and Agra Guide, 1842, vol. II. part I. 329. India Pol. Disp. 19 Aug. 1835. Bengal Marine Disp 10 May, 1839. Bombay Marine Disp. 12 Aug. 1840.**
- This district is so remarkable for fertility, as to be commonly styled⁴ the garden of Central India. It possesses also one of the elements of mineral wealth, in coal of excellent quality, and it is believed in abundant quantity. On a comparison with some

HOS.

of the coal imported from the northern part of Great Britain, that of Hoshungabad was found to merit a preference. The great distance of the beds from the coast is, however, at present a serious impediment to its being brought extensively into use.

HOSHUNGABAD.^{1*}—The principal place of British district of the same name. It is situate on the left or south bank of the river Nerbudda, stated² to be here 900 yards wide, and subject, during the periodical rains, to rise to such an extent as to cause very considerable inundations. Here is a fort, of quadrangular ground-plan, and having high walls. The town is irregularly built, and the houses being much dispersed, the population is not dense. The river is not fordable opposite the town, the water at the shallowest part, even in the season when lowest, being between five³ and six feet deep, and flowing over an irregular rocky bottom. It is infested with alligators, both of the long-snouted and bull-mouthed⁴ kinds. There are thirteen ghats or fords over the river, within twelve or fourteen miles of Hoshungabad, becoming passable in the beginning of winter, and continuing so until spring advances. That nearest the town was found, when the water was lowest, to be covered three feet deep.⁵ East of the town is a small cantonment of British troops belonging to the Saugor division, and the town itself is the seat of a political agency subsidiary to that of Saugor.

Hoshungabad was founded about the year 1433,⁶ by Hoshung Shah, sovereign of Malwa, whose remains were deposited⁷ there, but subsequently removed to Mandoo. In 1562 it was, with the rest of Malwa, conquered by Akbar. On the dismemberment of the empire of Delhi, Hoshungabad was appropriated⁸ by the nawaub of Bhopal, from whom it was taken by storm by the rajah of Nagpore or Berar, in 1796.⁹ It was, however, soon after retaken¹ by the ruler of Bhopal, and again, in 1807, taken by the rajah of Nagpore,² by whom it was ceded,³ in 1818, to the British government. Distant S.W. from Saugor, by Searmow,⁴ 114 miles; S. from Agra, by Saugor, 388; S.W. from Allahabad 428; N.W. from Calcutta, by Allahabad, 924; E. from Mhow 144. Lat. 22° 44', long. 77° 44'.

HOW—HUB.

was finally annexed to the British possessions, being included in North Arcot. Distance from Seringapatam, E., 80 miles; Bangalore, S.E., 23; Madras, W., 200. Lat. $12^{\circ} 45'$, long. $78^{\circ} 54'$.

HOWRA,¹ in the British district of the Twenty-four Pergunnahs, forming part of the lower provinces of Bengal, a town on the right bank of the river Hooghly, opposite Calcutta, of which place, indeed, it may be considered a suburb, though within the limits of the district above mentioned. It is described by Heber² as a considerable place, chiefly inhabited by ship-builders, but containing some pretty villas. The Hooghly, nearly a mile wide, is covered with large ships and craft of all kinds. The town has been selected as the site for the terminus of the railroad from Calcutta to the North-West Provinces. Lat. $22^{\circ} 36'$, long. $88^{\circ} 23'$.

HUBB.¹—A river forming for a considerable distance the western frontier of Sind, and dividing it from Beloochistan. It has been traced downwards from Hoja Jamote,² on the northern boundary of Lus, in lat. $26^{\circ} 12'$, long. $66^{\circ} 51'$, and is supposed to rise near that place. For about twenty-five miles in the upper part of its course, it flows south-easterly, and then turning due south, holds its way for about fifty miles in that direction. It then turns to the south-west, and, after a total length of 100 miles, falls into the Arabian Sea, on the north side of Cape Monze, in lat. $24^{\circ} 54'$, long. $66^{\circ} 43'$. De la Hoste³ states, that for a distance of fourteen miles from the mouth, water was in the end of summer found to the depth of eight inches, and that in some places deep pools exist, abounding in fish and alligators. He adds, that the river is said never to fail in the driest seasons. Masson,⁴ however, states, that it is only on extraordinary occasions that the water of the Hubb reaches the sea; and in this he is supported by Hart,⁵ who crossed it about fifteen miles above the mouth, where the channel was 100 yards wide. Though, in consequence of heavy rains, there was then a large body of running water, he found but a small stream on his return a short time after, and was informed it would soon cease to flow, and that water would then be found only in detached pools. The whole course is described as a succession of rocky or gravelly gorges in the rugged and barren Pubb Mountains.

² As. Res. xl. 470
—Surv. of the Ganges.

HUDEEALIE,¹ in Gurwah, a village on the left bank of the Bhageerettee, as the Ganges is called in the upper part of its course. Raper² describes it as "a very pretty village, with fine cultivation." It is situate opposite the mouth of the Nagur, a torrent which falls into the Bhageerettee on the right side. Hudeealee is in lat. $30^{\circ} 33'$, long. $78^{\circ} 24'$.

HUGRY.—A river rising in the Mysore dominions, in lat. $13^{\circ} 28'$, long. $75^{\circ} 55'$, and, flowing first in a north-easterly, and subsequently in a northerly direction for 125 miles, it passes into the British collectorate of Bellary, through which, maintaining its northerly course, it flows for 100 miles, to its junction with the Toongabudra, on the right side, in lat. $15^{\circ} 44'$, long. $76^{\circ} 58'$.

¹ Carless, Official Survey of the Indus, 4.
Burnes, III. 30, 37, 235.
Id. Pers. Narr. 7.

HUJAMREE,¹ in Sind, is an offset of the Sata, or great eastern channel of the Indus, and is called in the upper part of its course the Seeahn. The Hujamree mouth is wide, but rapidly narrows inland to about 500 yards: at Vikkur, twenty miles from the sea, it is only about 170 yards wide; and still higher up, near its junction with the Sata, its breadth is found not to exceed fifty yards. In 1831 it was navigable for boats from the sea to the entrance into the Sata, as the small flotilla which conveyed Captain Burnes and his party in that year passed this way. According to the statement of that officer,² there were then fifteen feet of water on the bar at high tide, and a depth of four fathoms all the way to Vikkur. He observes, however, adverting to the changing character of the river, "The next season perhaps Vikkur will be deserted."

² III. 236.

HUK—HUL.

The anticipated change occurred, though not so early as suggested. In 1839, the British troops marching from Bombay to Afghanistan, ascended the Hujamree and landed at Vikkur; and in the course of the same year this branch² was closed by a change in its channel, caused by the violence of the current. The Hujamree mouth is in lat. $24^{\circ} 16'$, long. $67^{\circ} 18'$. ² Kennedy, II. 221.

HUKUMUTWALA,¹ in Sirhind, a village on the route from Ferozpur to Simla, and 12 miles S.E. of the former town. Distant N.W. from Calcutta 1,159 miles.² Lat. $30^{\circ} 52'$, long. $74^{\circ} 35'$. ¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes, 173.

HULDI,¹ in the British district of Ghazceppore, lieutenant-governorship of the North-West Provinces, a village on the route from Ghazceppore cantonment to Chupra, 52 miles² E. of the former. It has water sufficient for a considerable body of troops, but supplies are scarce, and must be collected from some distance. The road in this part of the route is good. Lat. $25^{\circ} 45'$, long. $84^{\circ} 15'$. ¹ E.I.C. Ms. Doc.
² Garden, Tables of Routes, 170.

HULDOOG GHAT.—A ferry near the village of Surian, in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, and forming a communication between the East-India Company's territories and Nepal: S.E. of Pctoragath cantonment 11 miles. Lat. $29^{\circ} 28'$, long. $80^{\circ} 21'$. E.I.C. Ms. Doc.

HULDOUR, in the British district of Bijnour, lieutenant-governorship of the North-West Provinces, a town on the route from Bijnour to Moradabad, 10 miles S.E. of the former. Lat. $29^{\circ} 17'$, long. $78^{\circ} 21'$. E.I.C. Ms. Doc.

HULDYPOOKRE.—A town in the British district of Pooralia, presidency of Bengal, 148 miles W. of Calcutta. Lat. $22^{\circ} 37'$, long. $86^{\circ} 8'$. E.I.C. Ms. Doc.

HULHALLI.—A town in the native state of Mysore, on the right bank of one of the branches of the Cauvery river, and 25 miles S.S.W. from Seringapatam. Lat. $12^{\circ} 6'$, long. $76^{\circ} 37'$. E.I.C. Ms. Doc.

HULKANT, in the British district of Agra, lieutenant-governorship of the North-West Provinces, a town on the south-eastern frontier towards Gwalior, and 50 miles S.E. of the city of Agra. Lat. $26^{\circ} 47'$, long. $78^{\circ} 46'$. E.I.C. Ms. Doc.

71 miles N.W. from Khatmandoo, and 135 miles N.E. by N. from Goruckpoor. Lat. $28^{\circ} 24'$, long. $84^{\circ} 28'$.

HUMBER, in Sirhind, a village on the route from Lodiana to Ferozepoor, and $10\frac{1}{2}$ miles W. of the former town. It contains a few shops, and is supplied with water from two wells. The road in this part of the route is good, passing through an open and partially-cultivated country. Population about 600. Distant N.W. from Calcutta 1,099 miles. Lat. $30^{\circ} 57'$, long. $75^{\circ} 46'$.

E.I.C. Ms. Doc.
Garden, Tables of
Routes, 224.

HUMEERPOOR.¹—A British district under the lieutenant-governorship of the North-Western Provinces, deriving its name from its principal town, and forming, with Calpee, a collectorate. The united territory is bounded on the north-east by the river Jumna, dividing it from the British districts Etawa, Cawnpore, and Futtehpoore; on the east and south-east by the British district of Banda; on the south by the native states of Churkaree and Chutterpoore; and on the west by the territories of Jhansi and the British district of Jaloun. It lies between lat. $25^{\circ} 7'$ — $26^{\circ} 26'$, long. $79^{\circ} 20'$ — $80^{\circ} 25'$, and has an area of about 2,240 square miles. The district is generally a plain,² rising imperceptibly³ as it recedes southwards from the Jumna to the Bindachal and Punna ranges of mountains. Hence the streams hold generally a north-easterly or easterly direction, and discharge themselves into the Jumna, which touches on the district in lat. $26^{\circ} 23'$, long. $79^{\circ} 23'$, and, pursuing a course for the most part south-easterly, forms for fifteen miles the dividing line between this and the British district Etawa; for eighty-four miles farther, that between this and the British district Cawnpore; and for eight miles more, it divides this district from the British district of Futtehpoore. In lat. $25^{\circ} 54'$, long. $80^{\circ} 25'$, the river ceases to be connected with the district. For the 107 miles that it forms the boundary, it is navigable⁴ during the rainy season for boats of considerable size. The Betwa, touching on this district in lat. $25^{\circ} 48'$, long. $79^{\circ} 28'$, and flowing generally eastward, forms, with slight exceptions, for seventy miles, the boundary between it and the territory of Jaloun, of Bownee, and of Behree; then, entering Humeerpoore, in lat. $25^{\circ} 54'$, long. $80^{\circ} 3'$, it flows through it for twenty miles, to its junction with the Jumna. The Deesaun, coming from the Vindhya Mountains, lying to the southward, touches

on the district in lat. $25^{\circ} 20'$, long. $79^{\circ} 20'$, and continuing to flow northerly for forty-six miles, until its junction with the Betwa, forms generally the boundary between Humeerpore and the territory of Jhanssee. The large river Cane touches on the district in lat. $25^{\circ} 35'$, long. $80^{\circ} 20'$, and, running either north-east or north, forms the boundary between it and the British district of Banda for thirteen miles, to the junction with the Jumna. There are several smaller streams tributary to those already mentioned. The average elevation above the sea, of the waterway of the Jumna, at the northern extremity of the district, is probably about 550* feet, and perhaps no point within it is 300 feet above that height.

The soil⁵ is generally a black friable mould, composed probably of disintegrated volcanic formations, which are of frequent occurrence in the neighbouring mountains, mingled with the alluvial deposits of the numerous streams, and with the remains of decayed vegetation. In some parts, however, kankar⁶ or calcareous tufa is the prevailing ingredient, which, repelling the efforts of cultivation, yields little but a scanty growth of herbage and stunted shrubs. The population is very ill supplied with fuel, using generally dried cow-dung⁷ for that purpose. The black soil "is as productive⁸ as any in Hindostan." It is favourable to the growth of sugarcane, cotton, indigo, the aml-plaut (*Morinda multiflora*), wheat, barley, *Holcus sorghum*, *Holcus spicatus*, and every species of the pulse and lentil tribe. In the more sterile parts are grown several species of grain of the millet kind. The cotton,⁹ which is produced on the better soil in great abundance and of good quality, is largely transmitted from Calpee, and other places on the Jumna, to the lower provinces. Under the last revenue settlement of the North-Western Provinces, the government demand upon the land of this district was fixed for a term of years, and is not liable to increase till the year 1872.¹

Buffaloes and kine are the chief domesticated quadrupeds. The sheep are small, but the goats are of superior breed. In the time of Baber,² in the early part of the sixteenth century,

* The estimate made by Jacquemont¹ of the elevation of the country about Ajeenah, might seem to indicate that in the text to be too great; but there is much reason to conclude that Jacquemont's estimate falls short of the truth.

HUMEERPOOR.

wild elephants abounded in this tract, but are now unknown, though their fossilized³ bones have been discovered near Calpee.

The climate is not favourable to the European constitution, having a tendency to occasion intermitting⁴ fevers; but the natives appear to enjoy a full average share of health. During the latter part of spring and commencement of summer the heat is very great.⁵

The few and unimportant manufactures⁶ are coarse coltons, paper, and refined sugar.

The population consists generally of Boondelas, a spurious tribe of Rajpoots, infamous,^{7*} it is said, for treachery and other villany, and possessing no good quality but courage. There are several other tribes of less importance. The number⁸ of inhabitants, as ascertained by actual enumeration in 1848, is stated to be, Hindoo agricultural, 299,558; Hindoo non-agricultural, 120,125; Mahomedans and others, agricultural, 10,223; same classes, non-agricultural, 22,185; total, 452,091. The number of towns or villages containing less than 1,000 inhabitants, is returned at 713; those containing more than 1,000 and less than 5,000, at 105; those containing more than 5,000 and less than 10,000, at three; and those containing more than 10,000 also at three.†

The principal military routes are—1. From north to south, from Cawnpore to Banda, by Humeerpore; 2. from north to south, a little east of the last-named, from Cawnpore to Banda, by Chilah Tarah ferry; 3. from south-east to north-west, from Banda to Calpee; 4. from north to south, from Calpee to Kitha, and thence to Chutterpore and Saugor; 5. from south-east to north-west, from Banda to Gwalior.

The tract of which this district forms part, seems to have been always of some importance in India, and Ferishta relates⁹ that Vasdev, king of Kunouj, about the year 350, founded the fort of Calpee. It was amongst the earliest of the Mussulman conquests in India, having been taken in 1196¹ by Kutbudin, viceroy of Muhammed of Ghor. It submitted to the Timurian

* In accordance with the proverb—"One native of Bundelkhund¹ commits as much fraud as one hundred weighmen."

† These are—Calpee, 18,714 inhabitants; Khureela, 12,005 ditto; Koonch, 12,885 ditto.

invader Baber,² in 1527, and was frequently the scene of his military operations. A British force invaded it in 1778, crossing over the Jumna from the Doab,³ and taking the fort of Calpee. In the same year, General Goldard led his army from that place on the celebrated march⁴ which he performed across India to Surat. Towards the close of the last century, it was overrun by the Mahrattas, and subsequently transferred by Hummat Bahadur, one of their chiefs, to the East-India Company,⁵ to whom it was guaranteed by the Peishwa, in 1802, by Art. IV. of the treaty of Bassein; and in the following year the British troops took⁶ Calpee and occupied the country.

HUMEERPORE,¹ the principal place of the British district, and also of the pergunnah of the same name, a town situate on the tongue of land or doab at the confluence of the Betwa and Jumna, on the right bank of the latter. The Jumna, according to Jacquemont,² in February, has a stream of 1,000 feet wide, running in a channel half a mile in breadth, with a rapidity of three or four miles an hour. The town is considerable,³ consisting originally of several villages grouped together. It is a civil station; the European establishment consists of one magistrate and collector, one joint magistrate and deputy collector, and one assistant to the magistrate and collector. It is on the route from Banda to Cawnpore, 36⁴ miles N. of the former, 39 S. of the latter, 28 S.E. of Calpee, 155 S.E. of Agra, 110 N.W. of Allahabad, 575 N.W. of Calcutta. Lat. 25° 58', long. 80° 14'.

³ Von Orlich, Travels in India, II. 125.

HUNDIA, HINDIA, or HUNDERAI,¹ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a small town on the route from the city of Allahabad to that of Benares, and 23² miles S.E. of the former. The road in this part of the route is excellent³ in the dry season, but heavy and cut up during rains, when the country, which lies rather low, is swampy, though in many places partially cultivated. Lat. 25° 22', long. 82° 15'.

* Its foundation is probably of recent date, as it does not appear to be noticed by any ancient writer. Tieffenthaler,¹ who described it about 1765, is probably the first who makes mention of it.

¹ Beschreibung von Hindustan, I. 119.

HUN.

HUNDOUR,¹ in the district of Pertabgurh, territory of Oude, a town two miles from the right bank of the river Sai, 85 S.E. of Lucknow. Butter estimates² the population at 3,000, all Hindoos, except about twenty Mussulman agriculturists. Lat. $25^{\circ} 55'$, long. $81^{\circ} 52'$.

¹ E.I.C. Ms. Doc.

² Topography of Oudh, 127.

HUNDRY.—A river rising in lat. $15^{\circ} 16'$, long. $77^{\circ} 25'$, in the British collectorate of Bellary, and, flowing in a circuitous but generally north-easterly direction for fifty miles through that district, and for twenty-eight miles through Kurnool, it falls into the Toongabudra on the right side, near the town of Kurnool, in lat. $15^{\circ} 40'$, long. $78^{\circ} 6'$.

HUNDY ANNANTPOOR.—A town in the British district of Bellary, presidency of Madras, 59 miles N.W. of Bellary. Lat. $14^{\circ} 41'$, long. $77^{\circ} 41'$.

E.I.C. Ms. Doc.

HUNGGOO, in the Daman division of the Punjab, a town situated 30 miles from the right bank of the Indus, 36 miles S.S.W. of the town of Peshawur. Lat. $33^{\circ} 31'$, long. $71^{\circ} 25'$.

E.I.C. Ms. Doc.

HUNGRUNG, in Bussahir, a subdivision of the district of Koonawur, is a very elevated region, bounded on the south and west by the lofty limestone range of Hungrung, on the north by Ladakh, and on the east by Chinese Tartary. It lies between lat. $31^{\circ} 48'$ — $32^{\circ} 8'$, long. $78^{\circ} 25'$ — $78^{\circ} 45'$. It is nearly co-extensive with the valley of the river Spiti, in the lower part of its course, which enters this district on the western frontier, near Shealkur, at an elevation of 10,400¹ feet above the sea, and leaves it at the point of confluence with the Sutluj, at an elevation of 8,494² feet. It results from the cold attendant on this great elevation, and the aridity of the air at such a distance from the ocean, combined with the natural sterility of the mountains, that the country presents an almost inconceivable scene of desolation. At the same time, there is no stupendous scenery to interest the traveller, as the mountains are of very tame outline, being generally formed of gravel, from the disintegration of rocks of granite, clay-slate, or loose limestone; while undulating heights, or elevated plains, stretch as far as the eye can reach, presenting, though a varying, yet always a dreary expanse, through which a traveller may hold his way for days without meeting with a human habitation. The exceptions, which occur at long

¹ Gerard, Koonawur, Table of. No. 108, at end of vol.

² Gerard, Map of Koonawur; also Table, ut supra, No. 88.

HUNGRUNG.

intervals, are afforded by small villages or hamlets of a few huts, situate amidst scanty fields of wheat, buckwheat, or pulse, fenced with gooseberry-bushes, or surrounded with stunted poplars, planted for the sake of their leaves, which are used as fodder. Sometimes an encampment of Tartars, with their flocks and black tents, may be seen amidst a dismal waste, unbroken by a single³ tree, or any vegetation rising above a few inches in height. Here and there the surface is scantily clad with prickly shrubs resembling furze, giving the country the appearance of a wild of Northern Europe. In summer, the yellow blossoms of these plants give a transient gleam of cheerfulness to the scene; but towards the close of the year, furious blasts, utterly destitute of moisture, and dreadfully chilling, sweep over the face of the country, and suspend all vegetation; reducing the leaves and more succulent stalks of the plants and diminutive shrubs to powder, and turning their stems black, as if scorched by fire. Exposure to those winds destroys animal life, except in the yak, goat, sheep, dog,⁴ and other creatures protected by a dense under-coat of fine down; or in the human inhabitant of these deserts, who loads himself with such a quantity of woollen garments, that a stranger is led to deem him scarcely able to move.⁵ Notwithstanding the scanty and stunted character of the vegetation, there is a considerable number, as well as variety, of quadrupeds,⁶ yaks, mountain ponies, mules, goats, and asses, besides sheep of large size, which are much used for burthen, as they carry twenty pounds weight over rough roads, and generally reach their evening ground before loaded porters. Their services in this way are found very valuable for the carriage of grain in forced expeditions; and, after the consumption of their burdens, the animals themselves are killed, and used as food. Vegetation proceeds at heights inexplicable on preconceived notions: a species of buckwheat ripens at an elevation of 16,000⁷ feet; a shrub like furze produces blossoms and seeds, and attains a size sufficient for firewood, at 17,000 feet; and Gerard gathered vegetable specimens close upon the limit of 18,000. "Fifteen thousand feet," Gerard⁸ observes, "in lat. 32°, according to the generally received theory, should be veiled in impenetrable snow; but here it is very different; and numerous droves of cattle feed upon the thinly-scattered herbage at least 2,000

HUNGRUNG.

feet higher, where the sunrise temperature must always be several degrees below the freezing point."

Hungrung is inhabited by Tartars, or that variety of mankind styled by physiologists Mongolian. They are of good stature, athletic, and of ruddy complexions; have small oblong eyes and high cheekbones; their eyebrows are thin, and very few have either moustaches or beards, which, however, they hold in great honour. Gerard states them to be invariably hospitable, friendly, peaceable, and even amiable in their dispositions. "Cheating,⁹ lying, and thieving are unknown; and they may be trusted with anything. They have the nicest notions of honesty of any people on the face of the earth, and pay an inviolable regard to property." They dress in a warm woollen cloth, called sooklat, which resembles blanketing, and almost all, both men and women, go bareheaded, even in the coldest weather. The women load themselves with a number of uncouth trinkets. "I saw," says Gerard,¹ "upwards of 100 at Shipke, and nearly as many at Speetee, who came in crowds to see me; the whole of them were literally almost weighed and groaning under a load of ornaments; such as immense anklets and bracelets of silver or pewter, heavy earrings, metal chains of various kinds, beads of silver, precious stones, coloured glass, and cowrie-shells strung round the neck, ankles, and arms, and attached to different parts of their dress." The men too have their share of those incumbrances. Their food consists almost exclusively of flesh, as the little grain produced in the country is generally fermented, to yield a spirit called chong, to the use of which they are much addicted.² Yaks and other animals are killed for winter store, in September; and such is the dryness of the air, that their carcases are cured by hanging them up, though the temperature at midday generally exceeds that of England at the same season. Tea boiled with butter is very generally drunk, and tobacco universally used where within reach. Polyandry is common, and female chastity³ unknown. Lamaism, the religion of this race, is as singular as the physical circumstances under which they are placed. The lamas in Koonawur, according to Gerard,⁴ are of three sects,—Geloopa, Dookpa, and Necngma; a fourth, called Shammar, mentioned by another writer, Gerard could not trace. The grand lama of Lahassa, called Geabong Rimboche, who

⁴ Koonawur, 118.

HUNGRUNG.

resides in Potala, is the chief pontiff of all the lamas. The next in dignity is the Panchin Rimboche, who resides at Teeshoo Loomboo; and the third, the Lochawa Rimboche, resident in the same place. These three personages are never supposed to die; but on the dissolution of the body, the spirit is thought to take possession of another tenement. The succession to the last-named inheritor of divine authority, Lochawa Rimboche, seems on the latest occasion of his transmigration to have been embarrassed by the appearance of two children, both possessing the marks by which the true claimant was to be recognised. After a degree of consideration, and an extent of correspondence proportioned to the grave importance of the question at issue, it was decided that the pretensions of both were genuine, and that there were two lochawas; but, lest the two divine personages might not be actuated by unity of will, it was very judiciously provided, that one had precedence of the other. There are monks called Gelongs, and nuns, Anis, who live in secluded buildings, where they employ themselves in chanting hymns, and writing and printing sacred sentences from blocks of wood, having nothing to do with worldly concerns, or at least, having the reputation of renouncing them. Music enters largely into their ritual observances, in which they use cymbals, tambourines, immense brass trumpets, large drums fixed on wooden frames, and an instrument of singular construction, being a human thigh-bone, pierced with holes, "which sounds like the sea-conch, or sacred shell of the Hindoos." "You scarcely ever see a Gelong," observes Gerard,⁵ "but he is singing. If you ask a question, he answers it, but immediately resumes his song, which is generally the favourite invocation, 'Oom* mano paccence oom,' as Captain Turner spells it; but the last word is here pronounced 'hoong.' "

⁵ Cf. *supra*, 129.

¹ Koonawur, 129. * Gerard¹ observes, that he was as unsuccessful as Turner in his attempts to ascertain the meaning of this mysterious exclamation. Jacquemont, however, on the authority of Csoma de Koro, the well-known student of the Tibetan language, states it to be "the Pater, the Credo, the Confiteor of the lamas, who, many thousand times a day, repeat this short sentence, counting by means of their rosaries how often they have done so. They certainly do not understand it. At Kanum, where it is the exclusive text of the prayers of the lamas, M. Csoma explained it to me. It is Tibetan; Oum is an interjection; Mani means 'woman,' 'gem;' Paccence, the nenuphar or 'water-lily;' the concluding Oum is an

HUNGRUNG.

Hungrung, according to Herbert, pays only 900 rupees (90*l.*) a year to the rajah of Bussahir; and its chief value seems to consist in its serving as a channel of communication both with Ladak and Chinese Tartary; the route to the former lying up the valley of the Li, or river of Spiti; that of the latter, up the valley of the Sutluj. The population of Hungrung proper probably does not exceed 2,000.

HUNGRUNG, in Bussahir, a pass in the district of Koonawur, over a range of limestone¹ mountains, bounding the district of Hungrung on the south-west. The route from the south-west proceeds up a dell to the crest, which commands an extensive view in both directions; the southern, or Koonawur side, and the northern, or Tartarian. Hutton,¹ who crossed the pass in June, found furze and junipers growing on the south-western side as far as the summit; but on the northern side, the snow reached continuously several hundred yards from the crest. Several travellers* have mentioned the strongly-marked change which takes place in the aspect of the country in proceeding northward across this range. "The change in the nature of the country is most sudden: looking from the summit of the range in a northerly direction over Hungrung, the country is seen to wear a sad and sombre air of cheerless desolation; not a tree is to be seen, and the black and crumbling hills are either wholly barren, or clothed with nothing of larger growth than the dwarf willow and the dog-rose. The hills are chiefly of the secondary class, and being more rounded in their outline, want the grand and almost terrific beauty of the

interjection, as the first. However we may twist these words, it is evidently impossible to find any meaning in them. M. Csoma could not show me that the best-informed lamas attributed any to them. I suppose this mystic exclamation to have been translated from Sanscrit, because I do not think that the nenuphar is found in Lake Mansarower, nor in any Tibetan lake, though those plants are common in all the pieces of water in India, and celebrated there for their beautiful blossoms."² Vigne gives a similar account of the exclamation, in his Travels in Northern Punjab. The veneration of the lotus (Padma) is connected with the worship of Vishnu, from whose navel it issued, as he slept on the bottom of the ocean. See Wilford³ and Hugel.⁴

* Jacquemont,¹ always fond of expressing his dissent from the English who have preceded him in exploring, denies that there is any such decided difference in the physical character of the two regions; but Gerard,² Herbert,³ and Hutton, are unanimous on the point.

HUN—HUR.

towering granitic peaks which so strongly characterize the scenery of Koonawur." "On the southern side of this range lies the thickly-wooded district of Koonawur, where cultivation is often carried in steps nearly to the summits of the mountains, and presenting a rich and cheerful picture, which delights the eye, and imparts a feeling of joyousness and security to the traveller as he wanders on through forests² of majestic pines." The adventurous and hardy Gerard,³ who ascended the pass in August, found it then free from snow, but the cold so intense, that he became quite benumbed; the blood forsook the surface of his body, and he travelled three miles, half-torpid and congealed. The elevation of the crest above the sea is 14,800⁴ feet. Lat. 31° 48', long. 78° 35'.

HUNNOOMANA,¹ in Baghelcund, or the territory of Rewa, a village on the route by the Kutra Pass, from the cantonment of Allahabad to the town of Rewa, and 74² miles S.W. of the former. It is situate on an elevated table-land, where the prevailing formation of red sandstone is continually exposed³ to view. Cultivation is consequently scanty, and supplies are scarce at the village. Water is obtained from tanks. Elevation above the sea 1,219⁴ feet. Lat. 24° 47', long. 82° 9'.

HUNSASIR.—A town in the Rajpoot state of Jodhpoor, 80 miles N. by E. from Jodhpoor, and 42 miles S. from Beekaneer. Lat. 27° 25', long. 73° 20'.

¹ E.I.C. Ms. Doc.

² Garden, *Tables of Routes*, 49.

HUNSGUNJ,¹ in the British district of Muttra, lieutenant-governorship of the North-West Provinces, a village on the left bank of the Jumna, opposite the city of Muttra. Here, on the route from Allygurh to Muttra, is a ferry² over the river during the rainy season, and for the rest of the year a bridge of boats. Lat. 27° 31', long. 77° 45'.

E.I.C. Ms. Doc.

HUNTER'S ISLAND.—A small island, near the coast of Arracan, and situate just outside of Andrew's Bay. Lat. 18° 16', long. 94° 23'.

E.I.C. Ms. Doc.

HURAGAON.—A town in the native state of Gwalior, or dominions of Scindia, 52 miles W. from Hoosungabad, and 70 miles E. from Indore. Lat. 22° 43', long. 76° 58'.

¹ E.I.C. Ms. Doc.

HURAH,¹ in the territory of Oude, a small town on the route from the cantonment of Cawnpore to that of Pertaub-

* Goose-market; from Hans, "goose," and Ganj, "market."

HUR.

gurb, 10² miles S.E. of the former, and situate close to the left bank of the Ganges. It is styled Harlia by Butter,³ who estimates the population at 6,000, and states that, adjoining the place on the south-west, is a fort, the residence of the chakledar or governor of the pergunnah or subdivision of Hurah. He has under his command three companies of infantry, of from forty to 100 men each, and 100 sawars or horsemen, with twelve cannon. The inhabitants, according to the same authority, are money-changers, dealers in cloth, in grain, and fermented liquors, weavers, pandits or professors of learning, medical men, servants, bird-catchers, raiyats or cultivators, and labourers. Garden, however, merely styles it a small village, affording no supplies. The road is bad to the north-west, or towards Cawnpore; better to the south-east, or towards Pertaubgurb. Lat. 26° 22', long. 80° 32'.

HURAWUL,¹ in Sirhind, a town fifty miles from the left bank of the Sutluj. It is comprised within the possessions of a Sikh chief, under the protection and control of the British. Distant N.W. from Calcutta, by way of Delhi and Munuk, 1,043² miles. Lat. 30° 17', long. 75° 20'.

HURDA,¹ in the territory of Gwalior, or possessions of Scindia's family, a town on the route from Baitool to Mow, 76² miles N.W. of former, 109 E. of latter. It is the principal place³ of a pergunnah of the same name, has a bazar, and is well supplied with water from a stream. Its pergunnah, united with that of Hundya, adjacent, yields an annual revenue of 140,000 rupees, and, by the peace of 1814, was with it placed⁴ under British management for the maintenance of the augmented Gwalior contingent. Lat. 22° 18', long. 77° 7'.

HURDAGUR.—A town in the native state of Nagpore, or dominions of the rajah of Berar, 23 miles N.W. from Deogur, and 42 miles E.N.E. from Baitool. Lat. 22° 7', long. 78° 31'.

HURDANILALLI,¹ in the native territory of Mysore, a small fortified town, the principal place of a tallook or subdivision of the same name.² It is situate in the immediate vicinity of three considerable tanks. Distant from Seringapatam, S.E., 50 miles. Lat. 11° 52', long. 77° 1'.

HURDOBE.—A town in the native state of Oude, 38 miles S.S.E. from Lucknow, and 54 miles E. from Cawnpore. Lat. 26° 23', long. 81° 17'.

HUR.

HURDOOAGUNI.—A town in the British district of Allyghur, lieutenant-governorship of the North-West Provinces, situate six miles E. from Allyghur. The population is stated to be 5,012.¹ Lat. 27° 56', long. 78° 13'.

¹ Statistics N.W. Provinces, 84.

² E.I.C. Sta. Doc. I.I.C. Trigon. Surv.

³ Col. Brooke, in note on Raper, *ul. supra*, 420.

HURDWAR.^{1*}—A town in the British district of Saharnpore, under the lieutenant-governorship of the North-Western Provinces. It is called sometimes Gangadwar,^{2†} or the "Gate of the Ganges," being situate on its western or right bank, at the southern base of the Sewalik range, here intersected by a ravine or gorge, by which the river, finally leaving the mountainous region, commences its course over the plain of Hindostan. The stream here is divided by islands into three channels,³ the principal one being on the eastern side. They are all so shallow in places, that the passage of large unloaded boats through them is not practicable without difficulty. The breadth of the river in the rainy season, from the extreme eastern to the extreme western bank, is represented to be "a full mile."⁴ The town, which has an appearance of great antiquity, is situate close to the western bank, and the foundations of many of the houses are in the bed of the river. Raper,⁵ who visited it in 1808, describes it, at that time, as very inconsiderable, having only one street, about fifteen feet in breadth and a furlong and a half in length. Most of the houses have the upper part of brick, the lower of stone, which is of good quality. Chiefly, perhaps, from this town being situate close to the point at which the Ganges

² Shakerpear, Dict. 1876.

³ As. Res. xi. 440, 450—Survey of Ganges

⁴ Id. 420, Survey of the Ganges.

The learned Ritter¹ seems mistaken in the etymology of this name. According to him, Haridwar is the Dwara, that is, the gate, of Hari or Mahadeva: "Haridwara (d. i. dwara, Thor des Hari oder Mahadeva)."

But Hari is a name of Vishnu,² and not of Mahadeva, who, in Hindu mythology, is the same as Siva. He was probably led into this error by Raper,³ who states, "This place derives its names from Hara, which is synonymous with Mahadeva, and Dwara, a door or passage." But Col. Brooke⁴ (I. T.) corrects this in the following note on the above passage:—"It is written Haridwara in the Cedaracanda of the Saundhya Purana, and other Puranas. This marks a different etymology; from Hari, Vishnu, not from Hara, Mahadeva."

† Willford states that it is also called Gangawartta, or "the Awartha of the Ganges;" which he thus explains:—"The Awartha signifies an inclosed place of a circular form, and is more particularly applied to places of worship."

HURDWAR.

enters Hindostan, it is beyond all others visited in pilgrimage; the multitudes which throng to it being, however, beyond doubt, increased by the facility of access to it from various parts. Ablution in the river is the great rite practised here by the Hindoo pilgrims, their belief being, that purgation from sin is thus obtained. According to their notions, the orthodox place for bathing is at the ghat or stairs leading down to the river, and called Harika Pairi, or "the stairs* of Vishnu." Priority in ablution at the propitious moment is considered to be of great importance in a spiritual point of view, and many persons have formerly perished in the attempt to secure the advantage, being either crushed to death in the rushing crowd, or precipitated into the river, and there drowned. In 1819, "in consequence of a desperate rush made by the insatuated pilgrims to gain a precedence in bathing, 430 persons were squeezed to death; among whom were several British sepoy's, placed as guards to prevent this very catastrophe."⁶ The propitious moment is laid down by astrologers,⁷ according to their alleged calculations and observations, and sometimes happens at midnight. Since the occurrence of the accident above mentioned, the East-India Company's government has caused the old ghat to be replaced by one of sixty⁸ steps, and 100 feet wide. The rigidly pious, and those who dread to enter the water unassisted, are supported by a Brahmin on each side. As, however, the depth close to the ghat is not above four feet, the majority plunge in unassisted, men and women bathing together indiscriminately.

The assemblage of pilgrims, which is annual, is attended by people from all parts of India, and from many places far beyond its bounds. "The bathing⁹ commences in the month of Chaitra, when the sun is in Mina or Pisces, and concludes on the day he enters Mesha or Aries, agreeably to the solar computation of the Hindoos, and corresponding with the 10th April, on which day the sun has actually advanced 20½° in that sign. Every twelfth year is celebrated with greater rejoicing, and is called the Cumba Mela,† so denoted from the planet Jupiter

⁶ Hamilton, East-India Gazetteer, l. 667.

⁷ Skinner, Excursions in India, l. 183.

⁸ Stunby, Sketches in India, l. 156.

⁹ Raper, *ul supra*, 450.

* Raper calls this ghat Hara-ca-Pairi, which name he translates "foot of Hara," but no doubt erroneously, the proper denomination being Harika-Pairi, or "the Stairs of Hari;" the word signifying "stairs."¹

† From Kumbh, "the sign Aquarius," and Mela, "a fair."

¹ Shakspeare, Dict. 460.

HURDWAR.

being then in the sign of Aquarius. Whether this sign be symbolical of the purpose for which they meet, or whether the conjunction be arbitrary or accidental, is not ascertained; but a pilgrimage at those duodecennial periods is considered the most fortunate and efficacious." The 10th of April is the Purbi or last day of bathing. The Mela or fair, held on this occasion for commercial purposes, is the means of very extensive traffic. From the Punjab, and from the countries west of the Indus, are brought camels, horses, mules, salt, antimony, fine woollens and piece-goods, tobacco, assafœtida, dried fruits (such as apricots, figs, prunes, raisins), almonds, pistachio-nuts, and pomegranates; from Cashmere, shawls and other fine woollen fabrics; from Rajpootana, various fancy-goods, such as *chiras* or spotted turbans, toys, and other wares in metals and ivory, besides inferior woollens, and a great number of camels; from the British provinces, cotton and silk fabrics, and European¹ goods. There are besides less-important articles of commerce in great quantity and variety; and the food required for the vast assembled multitude constitutes an extensive and lucrative subject of traffic. The number of those who on these occasions resort to Hurdwar from various motives is enormous. Hardwicke, who visited the Cumbh-mela in 1796, and paid much attention to the subject, estimated the number at two millions and a half; and Raper,² at the following Cumbh-mela, in 1808, says, "If we estimate the number at two millions of souls, we shall probably fall short rather than exceed the reality." No such number³ is, however, at any one time assembled; as those who visit the place for the purpose of bathing, arrive in the morning and depart in the evening, or on the next day; so that there is a constant succession of strangers. Such a collection of people, under the influences which bring them together, and rule them, may readily be imagined ripe for any acts which their spiritual leaders may suggest; and the rivalry of conflicting parties has often led to sanguinary conflicts. In 1760, on the Purbi, two rival sects,—the Gosains and the Bairagis, met in battle, which terminated in the defeat of the latter, of whom,

¹ Raper, *ut supra*, 432.

³ First Impressions, ll. 170.

* Dacon,¹ writing at a much later date says, "The number of pilgrims is generally in excess of 300,000, though this year it did not amount to 200,000." The period of his visit, however, was not that of the duodecennial festival.

HUR.

according to report, 18,000³ were slain. At the time of Hardwicke's visit, in 1796, the Gosains, venturing to resist the better-organized Sikh pilgrims, were defeated with the loss of about 500⁴ men. The latest of the great duodecennial gatherings took place in 1844,⁵ and passed off without disturbance.

Hurdwar formerly bore the name of Koupela or Goupela. According to Wilford,⁶ it was so named from an ancient ascetic. "Capila, a most religious man, performed for a long time religious austerities near Hurdwar, where they show to this day the place where he lived, under the name of Capila-Sthan; hence the pass of Hurdwar is sometimes called the pass of Capila or Kupeloh." Tamerlane,⁷ marching to this place after taking Delhi, massacred a multitude of Hindoos here assembled, and carried off a rich booty. The elevation of Hurdwar above the sea is 1,024⁸ * feet; and a little below the town is the head of the great canal of irrigation for the North-Western Provinces, for an account of which see GANGES RIVER. Distant N.W. from Calcutta, by Lucknow and Moradabad, 92½ miles.⁹ Lat. 29° 57', long. 78° 14'.

HIUREAWALA,¹ in Sirhind, a village on the route from Ferozepore to Simla, and 2½ miles S.E. of the former town. Distant N.W. from Calcutta 1,100 miles.² Lat. 30° 42', long. 74° 40'.

HIUREERAMPOOR.—A town in the British district of Dacca Jelalpoor, presidency of Bengal, 121 miles N.E. of Calcutta. Lat. 23° 39', long. 89° 58'.

HIURNAL, in the Sindh Sagur Doonab division of the Punjab, a town situated 26 miles from the right bank of the Jhelum, 96 miles S.E. by E. of the town of Peshawar. Lat. 33° 19', long. 73° 8'.

HIUROOKEE THIAN, in the British district of Kumaon,

* Rennell, so justly celebrated for the light which he has thrown on the geography of India, has fallen into an error respecting the average descent of the Ganges from Hurdwar to the sea. He states that the declivity on which the water ran, was, in a distance of sixty miles, which he measured, "less than four inches per mile;" and adds, "I have no reason to suppose that its general descent exceeds it." The elevation of Hurdwar being 1,024 feet, if the distance from that place be assumed with Rennell at 1,350 miles, the descent will turn out to be above nine inches. This oversight has not escaped the notice of Prinsep.³

HURREAH, in the Punjab, a village on the route from Ramnuggur to Pind Dadun Khan, and 14 miles E. of the latter place. It is situate near the left bank of the river Jhelum, in a country described by Burnes as a sterile waste of underwood. Lat. $32^{\circ} 37'$, long. $73^{\circ} 20'$.

¹ E.I.C. Ms. Doc.

HURREEANAH,¹ * a British district under the lieute-

* Some have supposed the name to be derived from Hara, "verdant." Being irrigated by the rivers Gagur and Chitang, and by canals, it well deserves to be described as verdant and productive, in comparison with the neighbouring arid and desolate tracts of Bhuttecana and Bikaner.

HURRECANAH.

nant-governorship of the North-Western Provinces, is bounded on the north-west, north, and north-east by Sirhind; on the east by the British district of Rohtak and by Dadree; on the south by Dadree and Loharoo; and on the west by the state of Bikaneer and the British district of Bhuttana. It lies between lat. $28^{\circ} 33'$ — $29^{\circ} 49'$, long. $75^{\circ} 20'$ — $76^{\circ} 22'$, and comprehends an area of 3,300 square miles. Its soil appears to be for the most part formed of alluvial matter swept down by the Gagur, the Chitang, and other streams flowing from the Sub-Himalaya, and is, as might be expected, very fertile, producing, where duly watered, large crops of rice, wheat, barley, millet, pulse, and various other productions.² The grass, of superior quality and uncommonly luxuriant, affords pasturage not surpassed in any part of India. Its luxuriance, however, depends on the periodical rains falling at the close of summer and early part of autumn, when the inhabitants partially provide for their future wants by preserving the water in numerous tanks lined with masonry. These supplies fail, however, as the hot season advances, and then recourse must be had to wells, of which some are 100 feet in depth, some 120, and some even more.³ The necessity for this is imposed by the fact of the land-springs lying very far beneath the surface, and the mountain-torrents being lost by absorption or evaporation farther north, in Sirhind. The country is consequently for great part of the year excessively arid; the few springs to be met with are for the most part brackish; and the want of water is a source of distress. This tract was a favourite hunting-ground of Feroz Toghluks, the renowned king of Delhi, the ruins of whose buildings still occupy several square miles, and who,⁴ in the year 1356, to obtain a supply of water, as well for his numerous followers as for the purposes of irrigation, made a canal from the Jumna, which, passing by Hansi and Hissar, proceeded westward until it joined the river Gagur. This canal, which had been nearly obliterated, was cleared out in 1825;⁵ and by this process, the extension of the main line, and the construction of additional branches, was made largely available for the purposes of irrigation, as well as for rafting timber and navigating small barges.

The jungles and wastes of Hurrecanah still harbour many wild beasts. Tigers are common, and lions⁶ are sometimes met

HUR.

with, though generally thought to infest no part of Hindostan except Guzerat and its immediate vicinity.

The population is scanty in comparison with the extent of the district, amounting only to 225,086;⁷ of whom 154,674 are Hindoos engaged in agriculture, 21,346 Hindoos non-agricultural, 37,434 Mahomedans and others agricultural, and 11,632 of the like description non-agricultural. The excess in the number of Hindoos over the Mahomedans is, as thus appears, very much greater than in some other districts of this part of India. Hanshee is the only town in the district which contains more than 5,000 inhabitants.

Hurreeanah was, at the close of the eighteenth century, the scene of a bold but abortive attempt by George Thomas, an Irish adventurer, to found an independent state under his own rule. He fortified Hurreeanah, and collected there about 6,000 persons, cast cannon, made muskets and other arms, and coined⁸ rupees in his own name. He was, however, attacked by a vastly superior force of Mahrattas, commanded by the French adventurer Perron, and being overpowered after a gallant resistance, took refuge in Bengal, where, in 1802, he died on his journey towards Calcutta.

HURREEHURPOOR.—A town in the native state of Nepal, 29 miles S. by E. from Khatmandoo, and 62 miles S.W. from Bettiah. Lat. $27^{\circ} 18'$, long. $85^{\circ} 23'$.

HURREEPOOR,¹ in an outlying district of Puteala, a village with a fort, on the route from Subathoo to Simla, and five miles N. of the former post. It is situate on a principal feeder of the Gunbur, and is the property of the rajah of Puteala. Elevation above the sea 3,147 feet.² Lat. $31^{\circ} 1'$, long. $77^{\circ} 3'$.

HURRIANA.—See HURREEANAH.

HURRICKPOOGUR.—A town in the British district of Cuttack, presidency of Bengal, 49 miles S.E. of Cuttack. Lat. $20^{\circ} 4'$, long. $86^{\circ} 31'$.

HURRIORPOOR.—A town in the native state of Sirgojah, on the south-west frontier of Bengal, 136 miles S.W. from Sherghotty, and 103 miles W. from Lohadugga. Lat. $23^{\circ} 30'$, long. $83^{\circ} 5'$.

HURRISUNKRA,¹ in the British district of Nuddca, presidency of Bengal, a town on the route from Berhampore to Pubna, 35 miles E. of former, 25 W. of latter. The Pudda,

HUSSUNPOORA.—A town in the British district of Sarun, presidency of Bengal, 37 miles N.W. of Chupra. Lat. $26^{\circ} 2'$, long. $84^{\circ} 27'$. E.I.C. Ms. Doc.

HUSTINASSORE,¹ the principal place of a pergunnah of the same name, in the British district of Meerut, lieutenant-governorship of the North-West Provinces, is situate close to the right bank of the Boorea Ganges, or old channel of the Ganges, 24 miles W. of the present stream, and on the border of the Kadir or marsh-land. It is now an insignificant, obscure place, but much celebrated in the mythological lore of the Hindoos, as the capital of the Panchala,² an ancient race, ¹ E.I.C. Ms. Doc.
² As. Res. VIII. 290, 330, 338, 341—Wilford, Sacred Isles in the West.

* Husnain's town; from Husain, nom. prop., and Ganj, "mart, market, or market-town." Husain was son of the Khalif Ali and of Fatima, the daughter of Muhammad, founder of Islam.

HUS.

and the residence of King Bharata, the fifth in descent from Swynumbluva or Adam, and the ancestor of the renowned rival families³ the Kuroos and Pandooa. According to the legend, it received its name from Hasti,⁴ its founder; but it is perhaps more probable, as the name means "elephant's town," and those animals⁵ still abound in the forest about fifty miles north, at the south-western base of the Sewalik range, that this circumstance affords the true derivation. It is also called Hastinagara,⁶ a word of similar import to its more usual name. In the Ayceen Akbery,⁷ it is mentioned under the name of Hustnapoor, and stated to be "an ancient Hindoo place of worship, on the banks of the Ganges," and to yield a revenue of 1,11,672 rupees. It appears to have been the Bastinora⁸ of the Greek geographers, and is by Ritter⁹ styled (with no great perspicuity) "the Babylon of ancient India." Of its present condition scarcely anything appears to be known; and as it is but twenty miles north-east of the town of Meerut, in an open country, frequented by Europeans, the silence of travellers on the subject seems to indicate that it now contains nothing worth notice. The account given of it by Hamilton,¹ Ritter,² and some others, is little more than a repetition of Wilford,³ who states that there "remains only a small place of worship, and the extensive site of that ancient city is entirely covered with large ant-hills, which have induced the inhabitants of the adjacent country to suppose that it had been overturned or destroyed by the Termites." Lat. 29° 10', long. 78° 3'.

HUSTNAPPOOR.—A town in the British district of Cuddapah, presidency of Madras, 126 miles N.W. by W. of Madras. Lat. 14° 10', long. 78° 50'.

HUSUNPOOR, in the British district of Meerut, lieutenant-governorship of the North-West Provinces, a village on the route from the town of Meerut to Moradabad, and 13 miles S.E. of the former. Lat. 28° 51', long. 77° 56'.

HYDASPES.—See JHELUM.

HYDERABAD,¹ or the territory of the Nizam, an extensive realm of Southern India, the name by which it is thus distinguished being that of the city which is its capital. The form of the territory is that of a trapezium, the base of which is about 420 miles in a direction from north-east to south-west, from Humpasagra, in lat. $15^{\circ} 10'$, long. 76° , to Mulcaulgherry, in lat. $17^{\circ} 49'$, long. $81^{\circ} 30'$; its north-eastern side extends from south-east to north-west, a distance of 390 miles, from Mulcaulgherry, above mentioned, to Meil Ghaut, in lat. $21^{\circ} 40'$, long. $77^{\circ} 15'$; its north-western, in a direction from north-east to south-west, a distance of 220 miles, from Meil Ghaut, as above, to Phooltaumba, lat. $19^{\circ} 47'$, long. $74^{\circ} 40'$; and the south-western, a distance of 330 miles, from Phooltaumba to Humpasagra. Though such is the general outline of the country, the boundaries are marked by numerous sinuosities, causing them to deviate greatly from right lines. The territory lies between lat. $15^{\circ} 10'$ — $21^{\circ} 42'$, long. $74^{\circ} 40'$ — $81^{\circ} 32'$; is 475 miles in length from south-west to north-east, and about the same distance in breadth. The area is estimated at 95,337 square miles.² It is bounded on the north-east by the territory of the rajah of Nagpore; on the south-east by territory subject to the presidency of Madras, and the territory lately belonging to the nawab of Kurnool; on the west by territory subject to the presidency of Bombay; on the north-west by territory belonging to the presidency last named, by the territory of Gwalior, or of the family of Scindia, and by the British districts of Saugor and Nerbudda. Within the western part of the territory, are isolated some small British possessions. The Hyderabad territory is a tract of considerable elevation, on an average varying probably from 700 to 800 feet above the level of the sea, and some granitic summits attain an elevation of 2,500 feet.³ The elevation of the city of Hyderabad is laid down on barometrical measurement as 1,672 feet⁴ above the same level. With the exception of the valley of the Taptee, at the northern extremity of the territory, and which is bounded on the north by the Vindhya range, and on the south by the high land of the Godavery, the

¹ E.I.C. Ma. Doc.

³ Journ. As. Soc. Beng. 1833, p. 303 —Voysey, Report on Geology of Hyderabad.

⁴ Ibid.

HYDERABAD.

whole drainage of the country is either from west to east, or from north-west to south-east, discharging itself into the Bay of Bengal by the channels of the Godavery and the Kistna. The drainage of the valley of the Taptee, flowing westward, is discharged into the Gulf of Cambay. The geological formations are on a large scale; in the north-west being of the great volcanic formation,⁵ extending through the greater part of the Deccan, and principally trap, but in some parts basalt. In the middle, the southern, and the south-western parts, the formations are primary,⁶ being granite, gneiss, syenite, and quartz. In the north-east part of the territory, along the right bank of the Godavery, there is much sandstone, some of it carboniferous.⁷ Though this territory is for the most part an undulating plain,⁸ there are many isolated hills and ranges of moderate elevation. That⁹ in the vicinity of the city of Hyderabad may especially be noted. The Hyderabad territory is within the influence of the south-west monsoon, and the average annual fall of rain is stated to be about thirty-two inches.¹ From this circumstance, and the moderate declivity of the surface, it is a well-watered tract, rivers being numerous, and tanks or artificial pieces of water very abundant. Of rivers, the Godavery, rising on the eastern declivity of the Western Ghats, near Nassick, in the British district of Ahmednuggur, takes a course south-east for about ninety miles, to Phooltamba, where it touches on this territory, and, continuing to flow along the border south-eastward for seventy miles, to Mungi, in lat. 19° 27', long. 75° 30', there enters the Hyderabad territory, through which it holds a course nearly easterly for about 160 miles, to the vicinity of Lasona, in lat. 19° 7', long. 77° 5'. At that place, it, on the left side, receives the Doodna, a considerable stream flowing from the north-west; and eighty-five miles lower down, or farther eastward, it, in lat. 18° 48', long. 77° 55', receives on the right side the Manjera, a large river coming from the south. It thence continues to hold a course generally easterly for about 190 miles, to Kulaisur, in lat. 18° 52', long. 79° 53', where, on the left side, it receives the Prankceta, a large river from the north; and from the confluence turning south-east, flows for about 155 miles in that direction, along the south-western base of the mountains² of Bustar, to Kottoor, in lat. 17° 29', long.

HYDERABAD.

81° 29', where it passes into Orissa. Below Kulaisur, it flows parallel to the north-eastern boundary of the Hyderabad territory, towards that of Nagpore, and on an average about eight or ten miles distant from it. Thus, the total length of this great river, by the border and through the territory, is about 660 miles, for above 200 of which it is navigable³ from June to February. The Warda, rising in the Deogarh Mountains, in the territory of Nagpore, flows south-west for a few miles, and touching on this territory at Gudra, lat. 21° 35', long. 78° 25', thence flows towards the south-east 170 miles, till near Chanda, and in lat. 19° 55', long. 79° 15', it on the right side receives the Payno Gunga, a large river from the west; continuing to flow in a south-easterly direction for sixty miles, it, at Chumprai, in lat. 19° 37', long. 79° 52', on the left side, receives the Waingunga, flowing from the north. Below the confluence, the united stream, now called the Pranheeta, flows in a tortuous direction, but generally south, for about eighty miles, to Kulaisur, in lat. 18° 52', long. 79° 53'. The stream, through nearly its whole length of course, whether denominated the Warda or the Pranheeta, is the boundary between this territory and that of Nagpore. It is navigable⁴ for about 170 miles. The Kistna, rising near Mahabulishwur, in the Western Ghats, holds a course south-east for about 320 miles, to lat. 16° 10', long. 76° 18', where it touches, and ten miles further passes into, this territory, through which it flows in a direction generally north-east for about seventy-five miles, to Kadloor, in lat. 16° 24', long. 77° 20', where it on the left side receives the Beema from the north-west; after which accession, turning south-east, it flows eighty miles in that direction, to its confluence with the Toongabudra, in lat. 15° 58', long. 78° 19', where it turns north-east, and flows 180 miles, to lat. 16° 50', long. 80° 10', at which point it passes into the territory known as the Northern Circars. From the confluence to the point last named, it forms the south-eastern boundary of the Hyderabad territory towards Kurnoul and the British district of Guntoor. Thus, its total length of course connected with this territory is 315 miles, during which, however, in consequence of the ruggedness and declivity of its bed, it is of little use as a channel of navigation. The Toongabudra, formed by the junction of the rivers Toonga and Budra in Mysore, flows

—Walker, *ut supra*.

HYDERABAD.

north-eastward, and at Moodlapoor, in lat. $15^{\circ} 8'$, long. $76^{\circ} 1'$; first touches this territory, along the south-eastern boundary of which it flows, separating it from the British district of Belary and the territory of Kurnoul for a distance of 200 miles, to its confluence with the Kistna. Many other streams (considerable rivers during the annual periodical rains, but much reduced in volume at other times of the year) are discharged into these main channels of drainage. Tanks are, as before observed, numerous, and some of them are of very great size, as that at Pakhal, which is at least thirty miles⁵ in circuit. They are generally formed by throwing an embankment across the lower end of a valley, and thus causing the stoppage and accumulation of the water of such streams as may flow into it.

⁵ Journ. As. Soc. Beng. 1841, p. 472
—Walker, on Geology of the Nizam's Territory.

The climate may be considered in general good, and as there are no arid, bare deserts, similar to those of Rajpootana and some other tracts of Northern India, the hot winds are less felt. In the vicinity of the city of Hyderabad, the mean temperature⁶ in the house, according to observations made at sunrise, at two o'clock in the afternoon, and at sunset, for one year, "was in January, $74\frac{1}{2}^{\circ}$; February, $76\frac{1}{4}^{\circ}$; March, 84° ; April, $91\frac{1}{2}^{\circ}$; May, 93° ; June, 88° ; July, 81° ; August, $80\frac{1}{4}^{\circ}$; September, 79° ; October, 80° ; November, $76\frac{1}{2}^{\circ}$; December, $74\frac{1}{2}^{\circ}$; giving as an annual mean $81\frac{1}{2}^{\circ}$." The south-west monsoon commences about the beginning of June, and ends about the beginning of October, and, as is usually the case, brings heavy rains. After it has ceased, variable weather continues for a few weeks; and this is followed by the north-east monsoon, bringing rains, though less heavy than those accompanying the former. At midwinter the variation of temperature⁷ in the northern part of the territory is very great and sudden. The mornings are very cold, and ice is formed; but the days are hot, the thermometer sometimes reaching 80° in the shade. The closing monsoons are considered the most unhealthy periods of the year, producing fevers and agues, but in general not of formidable types, except in the vicinity of extensive marshy jungles. Diseases of the spleen are common in the vicinity of the Godavary.⁸ Cholera is not a prevalent disease, and when it does occur, is consequent on famine. Diseases of the eyes are prevalent in the sandstone districts. The wells

HYDERABAD.

in general yield impure, unpalatable water, productive of disease, especially the dracunculus or guinea-worm, from which those who use the water from tanks or streams are exempt.

Scarcely any attempt appears to have been made to investigate the zoology of this extensive country. From its numerous jungles, it must abound in game, and in the beasts that prey on it. Tigers are very numerous, and the large leopard, as well as the cheta or hunting-leopard, lurks in every covert. The nylgau, and other antelopes, are numerous, and wild buffaloes harbour in the extensive forests towards the north-east frontier. Horned cattle, for burthen and draught, are of fine qualities, being of good size, strong, and hardy. There is considerable care given to selecting good breeds, and the young animals are allowed to continue with their dams in a state approaching to wildness until they are nearly full-grown.

The soil is in general fertile, though in some parts it consists of chilka, a red and gritty mould, little fitted, from the coarseness of its particles, for purposes of agriculture. Resembling the last, but composed of particles more minute, is lalzumeen, a soil also of reddish hue, and considered by Walker⁹ to be formed of the remains of broken-down ant-hills, which are surprisingly numerous in this country. Thus, observes the writer just referred to, "we see that those insects, usually looked upon as troublesome and destructive pests, are not without their use in a grand natural operation. The peculiar acid (the formic), which is their chief agent, acts on the alkali and lime, and most probably on the silica of the rock debris, pulverizing it, and facilitating, in all probability, fresh combinations. The soil, when manured, is fitted for the reception of all kinds of crops, without reference to season." Though less extensive than those just enumerated, the regur or black cotton soil occurs in many places, and is esteemed the best of any, and, as indicated by the epithet above applied to it, peculiarly suited for the cultivation of cotton. It requires no manure, except that left by sheep generally fed on it fallowed, previously to its cultivation. This is, however, an important resource, as flocks of sheep are everywhere to be seen. There is also a soil denominated talao-ka-jumeen, a black earth, dug from the bottoms of tanks, but not much prized, being a stiff clay, and containing a profusion of small fresh-water shells. Its extreme tenacity is

⁹ Journ. As. Soc. Beng. 1841, p. 387
—Walker, on Productions and Manufactures in the Nizam's Territory.

HYDERABAD.

found unfavourable to vegetation, which is farther thwarted by a large impregnation of carbonate of soda. This, however, is collected from it in great quantities, for manufacturing and commercial purposes. All those soils effervesce with acids, thereby indicating that they contain carbonate of lime. Throughout this territory, the ground, wherever left uncultivated even but for a year or two, becomes covered with a low jungle, composed chiefly of the *Cassia auriculata* and *Zizyphus microphylla*. In process of time, the appearance of the jungle is enlivened by the growth of numerous trees, of which the principal¹ are—*Butea frondosa*, *Bombax heptaphyllum*, *Erythrina indica*, *Hyperanthera moringa*, *Cassia fistula*, *Annona reticulata*, *Melia azadirachta*, *Bauhinia parviflora*, *Capparis trifoliata*, *Ficus indica*, *Ficus religiosa*, *Bombax gossipinum*, *Feronia elephantum*, and several species of acacia. The toddy-palm, *Borassus flabelliformis*, and *Phoenix sylvestris*, are extensively cultivated on account of their sap, which is drawn off copiously, and fermented into an intoxicating beverage. The cocoanut-tree cannot be brought to high perfection, even with the greatest care, accompanied by the most favourable circumstances; and in consequence, its cultivation is very circumscribed. Mango and tamarind-trees occur in great numbers about the villages. The betel-vine is also cultivated, but in no great quantities. The principal grain crops are—rice, of which there are no less than eight varieties, wheat, maize of various kinds, jowar (*Holeus sorghum*), bajra (*Holeus spicatus*), raggy (*Cynosurus corocanus*); of oil-plants, mustard, *Sesamum orientale*, and *Ricinus communis* or castor-oil plant. Of leguminous growths there are—*Dolichos lablab*, *Dolichos gladiatus*, *Phaseolus mungo*, cheuna (*Cicer arietinum*). Melons, cucumbers, gourds, and some other cucurbitacea, are largely grown, and form important articles of diet. The gardens produce onions, garlic, carrots, radishes, potatoes, sweet potatoes, coriander, ginger, turmeric, various kinds of amaranth, used as potherbs. Tobacco is cultivated, but not to a great extent. Cotton, indigo, and sugarcane, are the more important objects of the agriculturist's care. *Al* (*Morinda citrifolia*) and chay-root (*Oldenlandia umbellata*), valuable dyes, occur wild, and are also cultivated.

There appear to be scarcely any manufactures for the supply

¹ Walker, ut supra, 383.

HYDERABAD.

of external commerce. For home supply, the wool of the native sheep is extensively manufactured into blankets and other coarse woollen fabrics. Cotton is also manufactured into coarse fabrics. The most important department of manufacturing industry is, however, silk; the material being tusser,² or that gathered in the woods, the produce of a wild species of worm. Hides, raw and tanned, and both of domesticated and wild quadrupeds, are articles of some importance in commerce. Wild bees swarm in all the jungles; consequently wax and honey are very abundant and cheap. Lac, suitable for use as a resin or a dye, may be obtained in quantities far beyond the present extent of demand. Mucilaginous gums are produced in the woods and jungles in inexhaustible quantities, varying in kind from the best African gums; and there are some not considered inferior³ in quality to them. Of gum resins, the most worth notice is that yielded by the *Boswellia thurifera*, considered to be the *olibanum* of the ancients. Deccanully, a resin yielded in great quantities by several species of *Gardenia*, is much used in native pharmacy, and probably might serve important purposes in the arts, but its properties have not been adequately tested. Some sorts of nuts abundantly yield oils, which might prove important articles of commerce. Cordage is supplied by the common sunn-plant (*Crotalaria juncea*), also by some species of *Bauhinia*, and of admirable quality by *Asclepias tennasissima*. Caoutchouc is yielded by several forest-growths. Of timber, the teak (*Tectona grandis*) produced in this territory is stunted and indifferent; but teak of fine quality is floated down⁴ the river from the forests of Nagpore. Other valuable woods are *Diospyros melanoxylon* and *Dalbergia or sisu*.

There are no returns of the amount of population, but its relative density is probably not very low, as the soil is on an average fertile, the climate good. If the relative density be assumed at 120 to the square mile, the aggregate will be 10,666,080 persons. In the south-eastern part of the territory, the Teeloogoo language prevails, and the population are generally Telingas; in the north-eastern part, the Gond language and population are general. The Mahrattas are most numerous in the west. The Mussulmans are chiefly to be met with about the capital, and everywhere in the civil and in the

HYDERABAD.

military service of government. The Telingas, though not in general in a highly advanced state of civilization, are by no means sunk in barbarism. They generally inhabit straggling villages, in houses built of mud, with pyramidal roofs of palmyra-leaves, though a few dwellings are more substantially constructed of brick, and tiled. In some of the less-civilized parts, the habitations are mere sheds of palmyra-leaves, or hovels made of bamboos and wattle. There is usually to each village a detached fort, constructed either of masonry or mud, of about fifty yards square, and containing the dwellings of the zemindar and his immediate dependants. There is a considerable number of Brahmins among the Telingas, and the diet of these, and the higher classes in general, consists of rice, wheat, vegetable curries, cakes flavoured with garlic or assafœtida, and fried in butter. The Brahmins profess to abstain from animal food, but the zemindars of the Coombe caste consume mutton, poultry, and game. The lower orders are obliged to subsist on ragi and other inferior sorts of grain; all are addicted to intoxication with the fermented sap of various kinds of palms, and spirit distilled from the flowers of the madhu (*Bassia latifolia*). Tobacco is in general use both for smoking and chewing, as well as in the form of snuff. Bang, or the intoxicating narcotic obtained from hemp, and opium, are also in use, but to no great extent. The Gonds lurk in the hills and fastnesses: they are a wild and savage race; yet it is stated that they may be rendered tractable and obedient by kind treatment. At present, the majority are nearly in a state of nature, sheltering in caves or hollow trees, and feeding on game when obtainable; at other times on vermin, reptiles, and wild roots or fruits.

⁶ Parliamentary
Return, 1831.

The revenue of the Nizam is stated at 1,550,000l.⁶ The cities and places of chief note, viz., Hyderabad the capital, Secunderabad, Jaulna, Jaafarabad, Beder, Janur or Chinur, Elliehpoor, Doulatabad, Goleonda, Nirmal, Nander, Palensha, and Warangol, are described under their respective names in the alphabetical arrangement.

The military roads are in general good, especially in the granitic tracts, where the prevailing material is easily beaten into a smooth, sound, durable surface. The principal routes are,—1. From north to south, from Nagpore, through the city of Hyderabad, to Bangalore; 2. from south-east to north-west,

HYDERABAD.

from Madras and Masulipatam, through the city of Hyderabad, to Poona, and thence to Bombay; 3. from south-east to north-west, from the city of Hyderabad to Aurungabad.

The subsidiary force maintained by the British government under the terms of the treaty with the Nizam, concluded in the year 1800, consists of 10,628 men.* The Nizam's military force consists of four separate descriptions of troops:—1. The auxiliary force, organized under British officers, as a substitute for the contingent of 6,000 infantry and 9,000 cavalry. This force, consisting of 8,000 men, is composed of regular troops, officered from the Company's army, and paid by the Nizam's government. 2. The irregular troops, consisting of cavalry, infantry, and artillery, amounting to 16,000 men. 3. A miscellaneous irregular force, composed of Arabs, Scindees, Moguls, and Seiks, amounting to nearly 10,000; and, 4. the troops maintained by amciers and others from revenues assigned by government for their support, consisting of 4,749 men.

To deduce from the earliest available sources the history of the countries which constitute the dominions of the Nizam, would require more space than could be spared for the purpose in such a compilation as the present. The Nizam himself⁷ derives his authority from a chief named Azof Jah, who held high command under Aurengzebe, and who, while nominally bearing allegiance to that sovereign, and administering the government of the Deccan as his viceroy, actually established himself there as an independent prince. This chief, known as Nizam-ool-Moolk (Regulator of the State), died in 1748, at the age of upwards of 100 years, and the right of succession to his power and authority was fiercely contested among his descendants. The claimants most favoured were two. One of these, Nazir Jung, the second son of the deceased ruler, being on the spot

when his father died, had seized the treasure, and obtained the support of the army; and, moreover, fortified his claim by an alleged renunciation of the right of succession on the part of his elder brother. The other, named Mozuffer Jung, was a grandson of Nizam-ool-Moolk, by a favourite daughter; and to him it was said the succession was conveyed by testamentary bequest. Each of these two candidates had the good fortune to secure the countenance and support of one of the great European powers then commencing their career of contention for supremacy in the East; the English espousing the cause of Nazir Jung, the French, that of his rival Mozuffer Jung; but after a very brief period, dissensions between the commander and his officers caused the retirement of the French force from the field; and Mozuffer Jung, deprived of its support, became the prisoner of Nazir Jung. Differences now arose between the latter and his English allies, and their assistance was withdrawn. Nazir Jung subsequently gave himself up to idleness and sensual pleasure; a majority of the officers of his army, seduced by the French, fell from their allegiance, and by the hand of one of them, he perished in a conflict with a body of French troops, which had mustered to attack his camp. Mozuffer Jung was now undisputed viceroy of the Deccan, exercising his authority, however, under the control of the French commander Dupleix, whose will was supreme. But Mozuffer Jung was not destined long to enjoy even the appearance of power. He fell in an affray with some Patan chiefs, who, having been instrumental in placing him on the throne, were disappointed in the amount of reward to which they thought their services entitled. A new occupant of the seat of power was now to be sought; and the French, passing over an infant son of Mozuffer Jung, selected Salabut Jung, a brother of Nazir Jung, to be ruler of the Deccan. A new claimant for the dignity, however, shortly afterwards appeared, in the person of Ghazee-ood-deen, the eldest son of Nizam-ool-Moolk, who advanced to Aurungabad at the head of a large army, to assert the right which Nazir Jung alleged to have been renounced. Salabut Jung, aided by the French, prepared for resistance; but the impending contest between the brothers was averted by the sudden death of the elder, Ghazee-ood-deen, brought about, it has been said, by poison; and though the

HYDERABAD.

Mahrattas by whom he was supported, continued for their own purposes to maintain hostilities, their unvarying ill-success disposed them to listen to proposals for procuring their absence on the usual terms. The English and French, however, continued to struggle for power and influence in the Deccan; but the latter were compelled, after a while, by the danger of their own possessions, to withdraw from the support of Salabut Jung, who, thus weakened, and apprehensive, moreover, of the designs of a younger brother, Nizam Ali, entered into an engagement by which he promised to dismiss the French from his country and service, and renounce all connection with them. In 1761, this weak prince was dethroned by his youngest brother, Nizam Ali, whom, contrary to the advice of the most judicious of his French counsellors, he had intrusted with power, which was used to supplant the donor. Two years afterwards, the usurper made further acknowledgment of his brother's favour, by putting him to death. In 1765, he ravaged the Carnatic, exercising in his course a measure of cruelty far beyond what was necessary to his purpose; but he retired on the approach of a British force. Still, the British government was anxious to be on better terms with him, partly from apprehension of his future hostility in alliance with other powers as unscrupulous as himself, and partly from a desire to obtain his concurrence to their retention of a maritime district known by the name of the Northern Circars, formerly possessed by the French, but now occupied by the English, who had fortified their right by the firman of the emperor.

Nizam Ali was straitened for money (an infirmity which has clung to the Hyderabad state to the present time), and, in 1766, a new treaty was concluded, not unacceptable to either party, under which the East-India Company engaged to "have a body of their troops ready to settle the affairs of his highness's government, in everything that is right and proper," subject, however, to withdrawal when their own possessions, or the peace and tranquillity of the Carnatic, might be in danger, and to pay, as a consideration for the free gift of the Circars, a sum of five lacs every year in which the assistance of their troops should not be required. There were other stipulations; and among them one reserving the life-right of Bazarut Jung,

HYDERABAD.

a brother of Nizam Ali, in one of the Circars, subject to his good behaviour. The aid of British troops was afforded, as provided by the treaty, to enable Nizam Ali to proceed against Hyder Ali Khan, then rapidly rising into power; but, after a good deal of vacillation, Nizam Ali preferred to unite with that adventurer. The allies, however, were unprosperous, and the Nizam was compelled to sue for peace, which was concluded by a new treaty in 1768. By the sixth article, the East-India Company and the nabob of the Carnatic (who was a party to the treaty) were to be always ready to send two battalions of sepoy, and six pieces of artillery manned by Europeans, whenever the Nizam should require them, and the situation of affairs would allow of such assistance being rendered, the Nizam paying the expense during the time such force should be employed in this service. In 1782, Bazalut Jung died; but the Company did not obtain possession of the circar held by him till 1788. The peishcush, or payment to be made to the Nizam on account of the Circars, had fallen into arrear, and was not adjusted till even a later period. These matters, however, having been at length arranged, the British governor-general, Lord Cornwallis, in 1789, addressed a letter to the Nizam, explaining and interpreting the treaty of 1768, but declining to enter into any new treaty, as had been suggested. This letter of the Governor-General's was subsequently declared, by a resolution of the House of Commons, to have been meant, and to have had the full force of a treaty executed in due form. In this letter, the Governor-General agreed that the force stipulated for in the sixth article of the treaty of 1768 should be granted whenever applied for, provided it was not to be employed against any power in alliance with the Company. In the following year, on the breaking out of the war with Tippoo, son of Hyder Ali, a treaty of offensive and defensive alliance was concluded between the Nizam, the Peishwa, and the British government. Tippoo purchased peace at the sacrifice of half his dominions, and the Nizam had no reason to be dissatisfied with his share of the spoil. At a later period, the Nizam, being engaged in war with the Mahrattas, claimed the assistance of the British government under the subsisting relations between them; but the Governor-General, Sir John Shore, refused to afford it, and the Nizam was consequently

HYDERABAD.

obliged to conclude an ignominious peace with his enemy. This refusal, and its results, so incensed the Nizam, that he requested that two battalions, stationed at his capital as a subsidiary force, should be withdrawn. The Nizam now sought safety in the entertainment of a party of Frenchmen, who, however, were dismissed, in accordance with the provisions of a treaty concluded in 1798, under the administration of the earl of Mornington, afterwards Marquis Wellesley, who was most anxious to rid India of all French influence. By this treaty, a subsidiary force, augmented to 6,000 sepoys, with a due proportion of field-pieces, was assigned to the service of the Nizam. On the fall of Tippoo Sultan, and the annihilation of the state of Seringapatam, the Nizam participated largely in the division of its territory, under the partition treaty of 1799, and his share was increased on the Peishwa's withdrawal from the treaty. In 1800, the subsidiary force with the Nizam was further augmented, and the pecuniary payment for its maintenance was commuted for a cession of territory. The territory ceded for this purpose consisted of the acquisitions made from Tippoo allotted to the Nizam, under the treaty of Seringapatam in 1792, and the treaty of Mysore, concluded in 1799, after the destruction of Tippoo's power and government. Thus the Nizam secured the future defence of his person and state, without any sacrifice either of money, or of any portion of his original dominions, the territory assigned for payment of the subsidiary force having been acquired under the protection and influence of the power which now undertook to maintain his authority by means which itself had placed at his disposal. In 1804, on the conclusion of the first Mahratta war, the Nizam obtained further territorial advantages, and at the termination of the second, in 1817, certain exchanges between the Company and himself took place, some of them made for mutual convenience, others to gratify the Nizam's wishes. The precise position of the Nizam, in regard to the British government, is determined by the treaties above referred to, and it does not materially differ from that of other states with which that government maintains subsidiary alliances. Nizam Ali, of whom mention by no means to his honour has been made in the course of this narrative, closed a long and guilty life in 1803. He was succeeded by his son Secunder Jah, with whom

HYDERABAD.

the Company confirmed all existing treaties. His feeble and unprosperous rule was terminated by his death in 1829, when he was succeeded by his eldest but illegitimate son, to whom the existing engagements were again confirmed. Under this prince the misgovernment of the country has continued and increased. A host of mercenary troops, entertained by him, so far from contributing to the purpose of defence, have been a terror both to government and people; the administration of justice, or even the semblance of it, was almost unknown, while debt, public and private, was allowed to accumulate to an enormous extent. The British government was at one time creditor for arrears of payments due to it, to the amount of between five and six hundred thousand pounds. This claim, to the continued increase of which there seemed no probable limit, was strongly pressed on the notice of the Nizam's government, and its arrangement was at length effected by a territorial cession, the revenues of the districts thus sequestered being applicable both to the reduction of the debt,⁸ and the maintenance of the Nizam's military contingent.

HYDERABAD,¹ * the principal place in the territory of the Nizam, is situate on the river Musi, here between 400 and 500 feet² wide. The environs have a wild but highly picturesque appearance, being overspread with granite³ hills and isolated rocks, some of hemispherical form, others of cubical or columnar. Approached from the west, the appearance of Hyderabad is very striking: "The palace⁴ and numerous mosques rising above the surrounding buildings, give it an air of grandeur, which is much strengthened by the very superb pile of building erected as the British Residency." The town is feebly fortified by a wall of stone, too weak to stand a moment against battering-guns, though adequate for protection against predatory attacks. The ground plan inclosed by the wall is a trapezoid, the longest or north-western side of which, extending along the right bank of the river Musi, is about two miles and three-quarters in length;⁵ the south-eastern, two miles; the southern, one mile; the south-western, one and three-quarters. There is a considerable suburb on the left side of the river, and in this quarter is situate the British

HYDERABAD.

Residency, the communication between it and the city and palace being maintained by a handsome stone bridge. This fine structure, planned and executed by a British officer* in 1831, is built⁶ of squared granite stone, and has eight arches, semielliptical, each of fifty-six feet span and eighteen feet rise, with piers ten feet wide; the breadth of the bridge being twenty-four feet. There is, besides, on the left or northern side, a land-arch of seventy-seven feet span and sixteen feet rise. The total cost was 10,200%. "The city⁷ is crowded with buildings of all descriptions, from the stately and stupendous palaces of the nobility and other men of rank and wealth, to the low and dirty hovels of the poor. The construction of the houses of the great is entirely native, displaying little or no taste. They are erected too close to each other, rendering their situations unpleasantly confined, if not unhealthy." The streets, some of which are paved with stone, are in general narrow. In addition to the water of the Mussi, the place is abundantly supplied from numerous wells, in various parts of the town. Besides the palace of the Nizam (a large building in the usual style of native grandeur), the most remarkable structures are the principal mosque and the British Residency. The mosque is a large stone edifice, built after the model of the Kaaba of Mecca, but devoid of ornament or any architectural beauty. The British Residency "consists⁸ of a basement story of arches, and two others above it with wings, connected by a continuation of the basement story of arches, finished with a balustrade. The principal front is distinguished by an enormous portico of the Corinthian order, decidedly too large for the building. On the three points of the pediment are three statues, and in the centre the Company's arms in alto-relievo. The Corinthian columns are formed of white chunam, beautifully polished, and extend from the base, which is on the summit of a noble flight of twenty-two steps, to the top of the upper story. On each side of this flight of steps stands a colossal sphinx. The interior of the portico, the cornices, &c., are ornamented in the richest style of Grecian architecture, executed in white chunam, and forming most appropriate and elegant decorations, the pavement beneath being of black and

white marble. There is a large court in front, with a circular basin of water in the centre, stocked with aquatic birds, and planted round with various fruit-bearing and other trees: the whole is inclosed by a wall, with two gate-ways." The state apartments are on the upper story, and form a suite superb beyond description. There is perhaps more of splendour than of good taste displayed in the style of decoration; but they are admirably adapted to delight the natives. Of the antiquities of the city, the most remarkable is the Chaur Manar, or Four Minarets,² a curious relic of the past, raised upon the spot where the four principal streets of the city meet. It is built upon four grand arches, through which the thoroughfares run, and above are several stories of apartments, formerly employed for academic purposes, each being a seminary for the study of different arts and sciences. No longer, however, a seat of learning, these chambers are now turned into warehouses. Above, and towering on high, rise the four lofty minarets, whence the building derives its name.* The effect of the whole, from either of the four streets, is very grand and striking. In the environs of the city are many fine gardens, containing gorgeous pavilions. Among them, that of the minister of the Nizam is represented as marvellously beautiful. "It is inclosed, after the Asiatic manner, by high walls, the centre containing a large marble basin filled with water, and fed by numerous fountains, their silvery columns being mingled with stately cypress-trees. The pavilions, galleries, and terraces around are built and ornamented in the richest style of Oriental architecture, that beautiful carved trellis-work, which always produces so exquisite an effect, frequently intervening, while the painting and gilding are equally profuse and striking." The country about Hyderabad abounds with fine tanks or artificial pieces of water of great dimensions. One, called Hussain Sagur, four miles north of the city, and close to the British cantonment² of Secunderabad, is about three miles in length and two in breadth; another, a few miles to the south, is stated to be twenty miles in circuit.

HYDRABAD,¹ in Sindh, was formerly considered the principal town of that country, in consequence of its having been selected as the residence of the chief amceers, or those ruling the southern and principal part of the country. It is situated four miles E. of the eastern bank of the Indus, on an eminence of the low rocky range called the Guajah Hills, and in an island inclosed between the Indus and the Fulailee, a branch which, leaving the main stream about twelve miles above the town, communicates with it about fifteen miles below. The Fulailee flows about 1,000 yards east of the town, the base of the rampart being washed by a creek from it in the season of inundation, though the whole branch is dry when the river is low. This fortress, which was esteemed very strong by the Sindians, and would no doubt prove so in their mode of warfare, was built nearly on the site of the ancient Nerunkot, by Futtah Ali, the first ameer. The outline is irregular, corresponding with the winding shape of the hill's brow, on the very edge of which the walls, for the greater part of their extent, rise to the height of from fifteen to thirty feet. They are built of burnt bricks, and are thick and solid at the base, but taper so much, and are so greatly weakened by embrasures and loopholes with which they are pierced, that a few well-directed shot would demolish any part, and expose the defenders to the fire of the assailants. The ramparts are flanked by round towers or lofty bastions, at intervals of 300 or 400 paces, which, combined with the height of the hill, give the place an imposing appearance. Where the walls do not rise immediately from the

edge of the declivity, the defence is strengthened by a ditch of ten feet wide and eight deep. The rock is too soft to admit of being scarped, and slopes so gently, that if the wall were breached, the rubbish would rest on the face of the hill, and

² Wood, Oxus, 30.

afford footing for a storming-party. The plateau² of the hill on which Hyderabad is built, is a mile and a half long and 700 yards broad; the height is about eighty feet, and on the southern part are the fortress and the suburbs or pettah. There are about 5,000 houses, meanly constructed of mud, one-half of that number being within the fortress, the rest in the pettah. The fortress contained the residence of the ameers, and a massive tower built as the repository of their treasures. The bazar is extensive, forming one street the entire length of the town; and it displays considerable bustle and appearance of business. The most important manufacture of Hyderabad is that of arms of various kinds, matchlocks, swords, spears, and shields; and the skill of the workmen is said to be scarcely inferior to that attained in Europe. There is also a considerable manufacture

³ Id. 31.

of ornamental silks and cottons. A cemetery,³ which over-spreads the northern part of the eminence, contains the tombs of the deceased members of the Talpoor dynasty, and of the preceding one of the Kaloras. That of Gholam Shah Kalora is a beautiful quadrangular building, with a handsome central dome. It is lined with fine marble, is highly ornamented with mosaic, and inscribed with sentences from the Koran. The tomb of the late Ameer Kurum Ali is also a handsome quadrangular building, surmounted by a dome, and having a turret on each corner. When the Belooches, under the conduct of Futteh Ali, of the Talpoor tribe, overthrew the Kalora dynasty, that successful chieftain gave to one branch of his relatives Khyerpore, with a considerable district attached; to another, Meerpore, and allowed his three brothers to share with himself the government of Hyderabad and its dependent territory, comprehending the greater part of the country. Sir C. Napier entered this place on the 20th February, 1843, having previously received the submission of six of the ameers of Sind. On the 24th he marched out to give battle to Sheer Mahomed of Meerpore, who yet remained in arms, and was posted in great force behind a neighbouring nullah, which had been partially fortified. The ameer was, however, attacked and defeated; the

is a bazar in the town, and during the dry season the road is good. It is called Hemratpur by Tieffenthaler.⁴ Lat. $27^{\circ} 32'$, long. $79^{\circ} 40'$.

⁴ Beschreibung von Hindustan, I. 140.

INCHULKURUNJEE, or **EENCHULKURUNJEE**,¹—A jaghire or feudal dependency of Colapore, in the territory of Bombay. These possessions, however, are held² in enam, and not on surinjam tenure; and the Colapore state has consequently no right to claim military service from their chief. The centro of the jaghire is in lat. $16^{\circ} 41'$, long. $74^{\circ} 2'$. A part of the country, stretching to the Ghauts bordering on the Concan, is rugged and jungly, but the greater portion lies on the plains, and is very productive. The revenue³ is 75,000 rupees. The lato chief was greatly burthened with debt, and his jaghire had become a prey to usurers. He died in 1852, without leaving male issue, when his widow was permitted to adopt a successor, subject to certain conditions; among which was the abolition of transit-duties and other objectionable taxes.⁴

INDGURH, in Sirhind, a town on the route from Lodiana to Ferozpoore, and 33 miles W. of the former place. It contains several shops, and is abundantly supplied with water from twelve brick-lined wells, each about twenty feet deep. The surrounding country, though partaking of the nature of a deep sand, is well cultivated. The road in this part of the route, from the nature of the soil, is heavy. Lat. $30^{\circ} 55'$, long. $75^{\circ} 20'$.

INDIA, an extensive region of Asia, the main divisions of which, together with the several subdivisions, their towns and villages, lakes and rivers, will be found more particularly described under their respective names in the alphabetical arrangement of this work. India is bounded on the north by the Himalaya Mountains, dividing it from Thibet. The Suliman range, a continuation of the Sufeid Koh Mountains, separates it from Afghanistan and Beloochistan on the west; and parallel offshoots from the opposite extremity of the Himalaya Mountains form its frontier on the east. On all other sides, from the port of Kurrachee on the west, to the southern extremity of the Tenasserim provinces on the east, it has a maritime coast, bordered by the Bay of Bengal on the one hand, and by the Arabian Sea, or North Indian Ocean, on the other. Its greatest length, measured from Cape Comorin in the south, to the extremity of the Punjaub in the north, may be estimated at 1,830 miles, a distance which closely corresponds with its breadth, measured from Kurrachee in the west, to the extremity of Assam in the east. It lies between lat. $8^{\circ} 4'$ — 36° , long. $66^{\circ} 44'$ — $99^{\circ} 30'$. Within these limits is comprised an area of 1,484,367 square miles, with a population of 161,758,226.

¹ *As. Res.* xviii.
5-13—Calder, on
Geology of India.

Another chain of mountains, termed the Vindhya¹ range, crosses the continent of India at a lower latitude, from east to west. This range unites at one of its extremities with the Eastern, and at the other with the Western Ghauts, and thus forms the base of the triangle upon which rests the table-land of the Deccan. Such is a general outline of the mountain system of India.

Extensive means of inland navigation are presented in the

INDIA.

noble rivers by which the country is traversed. These may be conveniently distributed into two classes; the one deriving their chief supplies from the melted snows of the Himalayas, and the other being mainly fed by the rains of the south-west and north-east monsoons. In the one class may be ranked,—

1. The Indus and its tributaries, consisting of the Sutlej, Beas, Ravee, Chenab, and Jhelum; 2. the Ganges and its tributaries, the chief of which are the Jumna, Gogra, Gunduck, and Cosy; 3. the Brahmapootra, with its principal feeders, the Sanpoo and the Teesta; and, 4. the Irawaddy, traversing Burmah and the recently-acquired province of Pegu. In the second class are ranged the great rivers of the Deccan; among which may be enumerated the Godavery, Kistnah, and Cauvery, together with the Nerbudda, Taptee, Mahannddee, and various others intersecting Southern and Central India.

For political objects, as well as for administrative purposes, the British possessions in India have been distributed into several principal divisions, which, with their respective areas and population, are stated below:—

	Area. Sq. Miles.	Population.
Bengal, including Assam and the Tenasserim Provinces.....	225,103	41,094,325
North-Western Provinces	85,593	*23,803,349
Sangor and Nerbudda territory.....	17,538	2,143,599
Punjaub	78,447	4,100,983
Cis-Sutlej territory	4,559	619,413
Pegu	28,920	2,000,000
Madras	135,680	22,301,697
Bombay	120,065	11,109,067
<hr/>		
Total, exclusive of the Eastern Straits settlements, the area of which is 1,575 square miles, population 202,540	695,905	107,172,433

* This is the result of the census of 1848; but it appears from a later return, not yet officially received, but adverted to in the Indian newspapers,¹ that the total population of the North-West Provinces in 1852 amounted to 30,271,885. That such an increase could take place under ordinary circumstances in four years, is utterly impossible; but it may be observed, that under the last revenue settlement the waste lands of these

¹ Friend of India, Nov. 1853, p. 694.

INDIA.

It will thus be seen that less than one-half of the superficial extent of India is strictly British, the remainder, comprising an area of 788,462 square miles, and a population of 54,585,793, is occupied by native states; among the principal of which may be enumerated Oude, Hyderabad or the dominions of the Nizam, Nagpore* or the possessions of the rajah of Berar, Guzerat or the territory of the Guicowar, Gwalior or Scindia's territory, Indore or Holcar's possessions, Mysore, Travancore, Cochin and Cutch, Nepaul, Burmah, Bhopal, Cashmere or Gholab Singh's dominions, the Rajpoot states, and a variety of others, forming in the aggregate a number falling little short of 200, and which, moreover, might be doubled by the addition of the petty chieftainships of the peninsula of Kattywar.

With the exception of Burmah, Nepaul, and one or two petty governments, the whole of these states have entered into treaties and engagements with the British government, involving the obligation of protection on the part of the paramount power, and allegiance on that of the subordinate. In some instances, the dependent state is subject to the payment of tribute; in others, it is exempt from any pecuniary claim. All have relinquished the right of self-defence, as well as that of maintaining diplomatic relations with each other; and the British government, which guarantees external protection and internal tranquillity, has been constituted the arbiter of all disputes arising between native rulers. But though debarr'd from the exercise of military power in regard to external aggression, the native governments are not prohibited from maintaining a separate military force; in some cases, they are required to provide such a force, which, in the event of war, is to be available to the British government against the common enemy. In some instances, the number of troops to be maintained is restricted. Under these arrangements, the existing military resources of the native princes comprise a force of

provinces were exempted from assessment on the part of the government, for the entire period of the settlement (thirty years); and this would be calculated to occasion an extraordinary influx of husbandmen from the hills and parts adjacent.

* Ragojee, the late rajah of Nagpore, died at the latter end of the year 1853, leaving no heir, natural or adopted. The right to adopt a successor will, however, be probably claimed on behalf of the family; and until the question be finally decided, Nagpore must be regarded as a native state.

INDIA.

little less than 400,000 men,² an amount exceeding by nearly 100,000* the numerical strength of the British army in India, inclusive of the contingent troops commanded by British officers. It may be observed, however, that considerable portions of the regular troops of native states are described in the official returns as fitted rather for police purposes than for regular military duties.

² Statistics of
Native States,
32.

It is to be lamented, that the benefits that might have been anticipated from this indirect exercise of British authority have not been realized. Most of the protected states are wretchedly misgoverned, and there cannot be the slightest doubt that the people would be far happier as British subjects than they are now. The British provinces have been steadily advancing in prosperity; the progress of the protected states has been from bad to worse. In some cases, the reliance on British support encourages the sovereign to abandon himself to a course of personal gratification, regardless of the interests of his subjects. In all, the supremacy of a foreign power deprives him of that importance, which is necessary to command either the respect of his subjects or his own. Feeling that he is regarded as a cipher, he will not be unlikely to take the same view of his situation, and, divesting himself of all responsibility, to consider his elevated rank only as bestowing a title to unlimited indulgence—an exemption from every species of care, and a license to sink into irreclaimable apathy and sensuality.

The policy of the British government in India has always been opposed to conquest. But though it is impossible not to respect their motives, it is equally impossible not to perceive, that, had they been actuated by a less-scrupulous spirit, the condition of a large portion of the people of India would have been far better than it is. Could the whole of the protected states be annexed at once to the British dominions, humanity

would have cause to rejoice. Unfortunately this cannot take place without a violation of that good faith which, in all parts of the world, it has been the pride of England to maintain. Occasionally, the accumulation of abuses in these protected states becomes so enormous, that the supreme power is compelled to carry its interference beyond mere remonstrance. It is not improbable that some change will be made in the relation at present existing between Oude and the protecting power. A long course of misgovernment having reduced that kingdom to a state of anarchy, the British may perhaps find it necessary to take the administration into their own hands.

It will be evident from this view, that the British authority in India is paramount. That of the French is almost annihilated. They still occupy Pondicherry, and one or two other places of small importance; but they no longer dispute with the English the dominion of the East. The Portuguese linger in a few spots, the scenes of their former commercial grandeur; but from neither of these powers has Britain at this time anything to fear. Her rivals have fallen before her, and left her in possession of the most gigantic dominion that ever was appended to a foreign state.

So vast a region, varying, in respect to latitude and elevation, from the sea-level of the lower provinces of Bengal to the lofty summits of the Himalayas, must necessarily embrace various degrees of temperature; and in a general description of the climate of India, it is only the leading characteristics that can be noticed. The year admits of a division into three seasons,—the hot, the rainy, and the temperate. The hot season commences in March, and continues till the beginning of June, when the rains, brought from the Indian Ocean by the south-west monsoon, set in, and last with occasional intermission till October, at which period the temperate weather commences, and continues till the end of February. "In a great part of the country," says Elphinstone,² "the sun is scorching for three months in the year; even the wind is hot, the land is brown and parched, dust flies in whirlwinds, all brooks become dry, small rivers scarcely keep up a stream, and the largest are reduced to comparatively narrow channels, in the midst of vast sandy beds. In winter, slight frost sometimes takes place for about an hour or two about sunrise." "At a low level, if

² *Mem. of India*,
i. 7.

INDIA.

towards the south, the greatest cold in winter is only moderate heat."

Considerable interest is attached to the zoology of India. The forests contain a variety of wild animals, the most remarkable of which is the elephant. These animals associate in herds, which, emerging from the jungles, frequently occasion serious injury to the crops. They are often destroyed by parties of hunters, or caught in pits and tamed. The elephant of the Deccan is considered inferior to that of Bengal. The rhinoceros, wild buffalo, and bear, are also inhabitants of the forest. Tigers, leopards, panthers, wild boars, hyenas, wolves, and jackals, pervade both forest and jungle, and sometimes infest patches of underwood in the immediate vicinity of cultivated lands. Lions are met with only in particular tracts, and more especially in the western part of Rajpootana, the province of Guzerat, and its vicinities. Among the remainder of wild animals may be enumerated deer, antelopes, and monkeys. Crocodiles, serpents, and other reptiles are most numerous. The domestic animals are buffaloes, camels, horses, sheep, swine, oxen, and goats. Game and fish are found in abundance, as are also birds of splendid plumage.

Among the principal trees are the teak, considered superior to the oak for purposes of shipbuilding, the sal, the sissoo, and the babul. There is also the coconut-tree, every portion of which is rendered available to the wants of man; the fruit being serviceable as food, the husk which envelops the nut affording a fibre from which cordage is manufactured, while the wood is peculiarly adapted to the construction of water-pipes, and also of beams and rafters. Another valuable tree, yielding a fleshy flower, which is important as an article of food, and from which spirit is moreover distilled, is the mahua. Besides the above, may be enumerated the bamboo, largely employed in scaffolding, and also in the manufacture of baskets and mats; the bauyan, the tamarind, and the mango; the palmyra and other palms. Sandal and ebony are found in many parts. In the Himalayas, pines abound, including the magnificent deodar; together with oaks and other forest-trees indigenous in Europe, or capable of being naturalized there.

On the banks of the Lower Ganges,⁴ and all round the sea-coast of the peninsula, rice constitutes the staple food of the

⁴ Calcutta Rev.
IX. 4.

INDIA.

inhabitants. Wheat is largely consumed in the north-west provinces of Bengal. The peasantry of the Deccan depend for subsistence upon jowar and bajra, or upon a small and poor grain called raggi. The last-named grains are sown at the commencement of the rains, and reaped in autumn. Wheat ripens during winter, and forms a spring crop. But, though there are thus two distinct cultivations, the tropical and temperate crops are seldom sown on the same ground in the same year,² except in the rich soil of the lower provinces of Bengal, and in some other irrigated tracts, where the rice crop requires only three months to arrive at maturity. Extensive tracts of land are appropriated to the production of the staple articles of export, consisting chiefly of cotton, sugar-cane, indigo, rice, opium, tobacco, and oil-seeds; pepper and cardamoms are largely cultivated on the western coast, and ginger, capsicum, cummin, coriander, and turmeric, are a common field-produce. Among the vegetables, indigenous or exotic, are yams, potatoes, carrots, onions, spinach, radishes, gourds, and cucumbers. The fruits consist of plantains or bananas, mangoes, tamarinds, guavas, jacks, melons, grapes, pine-apples, peaches, strawberries, oranges, &c.; figs are not very general; apples are devoid of flavour; pears and plums do not sweeten.

Numerous as are the towns and cities of India, none are remarkable for the amount of their population. That of Calcutta, independently of its suburbs, has been recently returned at 413,152.* No census has been yet taken of the population of the city of Madras;† but Bombay, with its suburbs, and including also the floating population in its harbour, contains only 566,199 inhabitants‡. Throughout the whole extent of the North-West Provinces no one city can boast a population of 200,000; Delhi§ has only 137,977, Cawnpore 168,796, Benares 183,491, Bareilly 92,208, Agra 64,008.

The towns are usually composed of high brick houses, and, with some exceptions, the streets are narrow, and badly paved. Many of these are walled, and capable of some defence. Villages vary according to locality; some being defended by walls,

¹ Cornhill, MoL. Ind., 29.

INDIA.

others open, or surrounded only by a fence. Each village has its temple and bazar, its annual fair and festivals. In the North-Western Provinces, the houses of the peasantry are usually built of unburnt brick, and are tiled; in Bengal the cottage has its thatched roof and cane walls; and in the Deccan the huts are either of mud or stone, with terraced roofs. Throughout India the dwelling of the peasant is scantily furnished; the principal articles consisting of a few earthen pots and brass vessels, a hand-mill, pestle and mortar, and an iron plate, on which cakes are baked. A mat is the substitute for a chair, and tables are dispensed with.

The enormous population of India is composed chiefly of two leading races, Hindoos and Mahomedans. The Hindoos, though resembling each other in their religion and in the observances and habits which it involves, are at the same time distinguished by many points of difference. Diversity in appearance, in dress, in the staple articles of food, in the mode of building, and in many other respects, is occasioned partly by local peculiarities, and partly by the nature of their institutions. The natives of Northern India are tall and fair; those of Bengal⁶ and the Deccan, small and dark: the former are manly and warlike, the latter timid and superstitious. There are also the aborigines of India, the Bheels and Coles. Some account of the former will be found under the article CANDEISH, and of the latter under ORISSA. Bhats and Charuns, and some other tribes, are noticed under the head of GUZERAT.

⁶ Elphinstone, Hist. of India, i. 332.

According to the latest returns which are available, the gross revenues of the British government in India amount to about 27,000,000*l.*, more than one-half of which is derived from the land. The other principal sources of revenue are customs, stamps, excise, salt, and opium. The revenue from salt is secured by a duty charged upon the prime cost of the home manufacture, and by a customs duty upon the foreign supply; the rate being the same in both cases, and amounting to about three farthings per pound. The annual revenue contributed by this article may be estimated at two millions sterling. Opium, from the poppy cultivated in the British provinces, is manufactured solely on account of government: that produced in native states is subject to a transit-duty on its passage through British territory to the coast. In both cases the tax may be

INDIA.

regarded as being paid wholly by foreigners. The annual revenue from opium exceeds three millions sterling: from land, the chief source of revenue, the amount derived is more than fifteen millions sterling. The government land tenures vary in the different presidencies. In the lower provinces of Bengal, the land is held chiefly upon the zemindarry tenure. In this case, the government recognise no separation of interests; the whole estate is cultivated as a joint-stock property for the mutual benefit of the proprietors, and, after payment of the government demand, the net profits are divided among the shareholders, according to their respective shares. One individual (the representative of the proprietary body) is held responsible for the rent; and in the event of default, the whole estate is sold for its realization. In this part of India, the rent has been fixed in perpetuity, and the government are consequently debarred from further participation in the agricultural improvement of the country. In the North-Western Provinces, the land is held under putteedaree settlement. Under this mode, an estate is parcelled out into allotments, and thenceforward the shares in the net profits are commuted for equivalent portions of land. Each proprietor or shareholder undertakes the agricultural management of his separate allotment, paying through the representative of the proprietary body (the landlord, or perhaps the headman of the village), such instalment of the government revenue as may have been agreed to among themselves in distributing the aggregate assessment. In the event of individual default, a joint responsibility attaches to the whole proprietary body; but any proceedings instituted by the government for the realization of the deficiency, would be directed in the first instance against the defaulting allotment. The characteristic of the putte-daree tenure, is cultivation in severalty, with joint responsibility. In this part of India, the government demand has been calculated upon the basis of two-thirds of the net rent, and has been granted for periods of thirty years. By this limitation of the public demand, a valuable and marketable private property has been created in the land, and every landholder, however petty landholder, is to a certain extent a capitalist. In Bombay, the revenue settlement is chiefly ryotwar. Under the ryotwar tenure, the various proprietary subdivisions of the estate are recognised by the government,

INDIA.

and joint responsibility ceases. The aggregate of the government demand is distributed by its authority in distinct instalments, corresponding with the value of each separate allotment. The proprietor of each petty holding is thus made responsible to the government for the payment exclusively of his own fixed assessment. The principle of the ryotwar tenure is that of a field assessment, with a total separation of interests. In this part of India, under the new survey now in progress, the lands are subdivided into fields of moderate size, so that each subdivision is rendered easy of cultivation by a farmer of limited means. The government assessment is laid separately upon each field, and leases granted for thirty years' duration at a fixed and invariable sum, binding on the government for the full term, but with the option on the part of the cultivator of surrendering any one or more of his fields, or altogether putting an end to his lease at the close of any given year. In Madras, a considerable portion of the land is also held under the ryotwar tenure. A maximum assessment is fixed by the government for the best lands, which cannot be exceeded. Inferior lands, so long as they remain inferior, are of course assessed at lower rates. The contracts with the cultivators are renewed from year to year, when remissions of rent are made, if the unfavourable character of the season, or the circumstances of the cultivator, render such a measure expedient. In the south of India, the seasons are usually precarious, and the cultivators poor and improvident. Under such circumstances, it has been thought there were no means of securing to the government a fair share of the surplus produce or net rent, except by taking more than the average in favourable seasons, and making corresponding reductions in those which prove unfavourable. Annual settlements are therefore in this view indispensable. But such a system must necessarily operate as a bar to agricultural improvement. It is obvious that, but for the remissions, the land is over-assessed. It has consequently a very low marketable value. Farming capital is borrowed at enormous rates of interest, not upon the security of the land, but solely upon the crop of the current year—a very uncertain one. Farming thus becomes a matter of wild speculation; and the net rent is divided, not between the government and the cultivator, but between the government and the usurer.

INDIA.

It is almost unnecessary to state, that the external commerce of India is carried on almost entirely with ports within the British territories. Within the last twenty years, several restrictions which impeded the growth of commerce have been removed, and India may now be said to enjoy free trade. This state of things has been brought about by—1st. The abolition of transit or inland duties. 2nd. The removal of export duties on the staple articles of sugar and cotton. 3rd. The equalization of duties on the cargoes of British and foreign ships. By the abolition of inland duties, the transit of produce for home consumption was rendered free, and a fresh impetus given to the internal trade of the country. By the withdrawal of export duties on sugar and cotton, the staple produce of India is enabled to compete in foreign markets with the like productions of other countries. By abolishing the distinction between British and foreign ships, the latter, previously discouraged from resorting to India by the imposition of double duties, now enter the ports of India on the same terms as their British competitors, and thus afford a vast addition to the means of transport, and an incalculable increase of facilities for its commerce. The same Act (VI. of 1815) removed the impediments which obstructed the coasting trade, by abolishing the levy of duty on goods conveyed from port to port. Further; Asiatic sailors or la-caras, being natives of India, and under the government of the East-India Company, are now deemed British seamen.

The degree of expansion resulting to the commerce of India from these measures, may be seen from the following comparative statement:—

IMPORTS INTO INDIA.

	Merchandise.	Treasure.	Total.
1831-35 ...	£1,261,103	£1,593,023	£2,854,126
1849-50 ...	10,299,588	3,896,807	14,196,395

EXPORTS.

1831-35 ...	7,093,420	191,740	£7,285,160
1849-50 ...	17,312,209	871,211	18,183,420

It thus appears that the amount of both imports and exports in the last year is more than double that of the first; and hence

INDIA.

it is clear, that while the government revenue has benefited, the people have prospered.

In so vast an extent of country, it might be presumed that wide diversity of language prevails; and such is the fact. In Upper India, the chief dialects are Hindee, Bengalee, Punjabee, Mahratta, Guzerattee, Cutchee, Boondela, Brig Bhakhur, Ooriya, and Assamese. These are all derivatives from the Sanscrit. The languages of Southern India, Teloo-goo, Tainul, Canarese, Malayala, and Cingalese, are also closely dependent upon Sanscrit, the storehouse of the religious ceremonies of the Brahmin, and the language of the laws of Menu, which may be regarded as the basis of the actual civil law of the Hindoo, and the mainspring of his daily avocations. Oordoo or Hindostanee is the common language of Mahomedans throughout India, and is in fact Hindee, the primitive tongue of the Hindoos, modified by the chief languages of their Mahomedan conquerors, Arabic and Persian. Pushtoo and Sindhee are also derived from Arabic, the language which is the depositary of the Mahomedan faith, and of the laws and civil regulations of those who profess it. Persian was formerly the language of the law courts of the East-India Company; but, in 1837, its use was abolished, and the vernacular of each district substituted.

Little or nothing deserving the name of education existed in India till a comparatively recent period. Near the end of the last century, the British government established a Mahomedan college at Calcutta, and a Sanscrit college at Benares; but these foundations, however well intended, did little either to inform or to enlarge the minds of those admitted to them, and taught at least as much of error as of truth. Bishop Heber says: "The Mussulman literature very nearly resembles what the literature of Europe was before the time of Copernicus, Galileo, and Bacon. The Mussulmans take their logic from Aristotle, filtered through many successive translations and commentaries; and their metaphysical system is professedly derived from Plato. Both Mahomedans and Hindoos have the same natural philosophy, which is also that of Aristotle in zoology and botany, and Ptolemy in astronomy, for which the Hindoos have forsaken their more ancient notions of the seven seas and the six earths." From this state of mental thralldom,

INDIA.

the native mind could never be expected to emancipate itself without assistance. Early in the present century, more serious and more useful exertions in the cause of education began to be made. The literature and science of the western world were introduced to a great extent; and there can be no doubt that gradually, though perhaps slowly, these will supersede the trifling and deadening studies which for ages have added to the darkness of India, in place of tending to dispel it. The seminaries wherein the higher studies are pursued, may be pronounced to have been generally successful. In the attempt to improve and extend vernacular instruction, the British government, though equally zealous, has not been equally successful. The best results attained have been in the North-Western Provinces, where the new revenue settlement, under which the rights of every individual interested in the land became matter of record, has afforded precisely the stimulus required. The desire to ascertain and to preserve their recognised rights, induces in the people a desire for the acquisition of the art of reading, writing, arithmetic, and mensuration. A few other of the simpler elements of knowledge are found to be easily added; and perhaps no great number of years will elapse before the mass of the people in the provinces above named will be well instructed in those branches of knowledge which are more immediately necessary; while those who have advanced somewhat farther, will not be few.

Among the great public works which have more recently been undertaken in India, may be mentioned the Ganges Canal, full particulars of which are given under the article GANGES RIVER. Measures are likewise in progress for establishing a comprehensive scheme of railway lines, to constitute the main arteries of communication throughout the country. Commencing at Calcutta, a railroad is now under construction, *via* Rajmahal and the valley of the Ganges, to Delhi; to be thence extended to the north-west frontier. A line, from Bombay in a north-easterly direction, will form a junction with the Calcutta line, probably either at Allahabad or Agra; while the cotton districts of Berar will be connected with the western coast by a branch from the Bombay line. It is further proposed to connect by railway the presidency towns of Bombay and Madras, in the direction of Poona and

INDIA.

Bellary, while the eastern and western coasts of the more southern part of the peninsula will be linked together by a line from Madras to Ponany. Electric telegraph lines are also in course of construction, whereby the means of instantaneous communication will be secured, not only between the presidency towns, but between all the principal military and civil stations of the country, from the Panjaub to Pegu.

The early history of India is involved in extreme obscurity, and fable has in consequence usurped the place of fact. The ridiculous fictions which the Hindoos dignify with the name of history, are unworthy not only of belief, but even of grave consideration. Little of either pleasure or information would be afforded by a detailed account of the solar and lunar dynasties, or an investigation of the accuracy of chronicles which carry us back through countless ages. Our best information is derived from the Greeks; and until the conquests of Alexander, they were acquainted with India only through vague and meagre reports obtained from the Persians. Alexander passed the different rivers of the Panjaub, and advanced towards the Ganges, which, however, he was not destined to reach. The narratives of his followers are admitted to be, in some respects, discordant; and though, previous to the time of Ptolemy, the spirit of commercial adventure had added something to the stock of information, the knowledge of India possessed by the Greeks must be regarded as both scanty and inaccurate; but though unsatisfactory, it is sufficient to show that the people to whom it relates are almost unchanged by the lapse of centuries. Even the minute features of the national character are at this time the same that they were two thousand years ago.

Though capable of being trained into efficient soldiers, the natives of India have not been fortunate in maintaining their independence, and they have generally afforded an easy triumph to a bold and determined invader. A large portion of their country was subject to the Persian monarchy; to Alexander they offered some resistance, but his conquests were effected in no long space of time; and at a later period they became, first tributaries, and ultimately subjects, of the victorious disciples of Mahomet.

Previously to the invasion of the Moguls, the Mahometan

INDIA.

history of India possesses slender interest, and is, perhaps, little to be relied on. For a considerable time after that event, it offers but a picture of those commotions and crimes which characterize a state of society in which conflicting parties are struggling for the sovereignty. The most remarkable person of this period was Timur or Tamerlane; a man who, though exhibited by an English poet* as a model of clemency, as well as of heroism, had little pretension to the former quality. His conquests extended from the Irtysh and Volga to the Persian Gulf, and from the Ganges to the Archipelago. He even meditated the invasion of China, and had made vast preparations for an expedition against that country, when death intercepted his career. His courage, perseverance, and military skill are indisputable; but, unfortunately, his cruelty is not less so.

The death of Timur took place about ninety years before the arrival of the Portuguese in India by the south-east passage, the discovery of which was to effect a revolution in the destinies of the country, compared with which all previous changes were unimportant. The great mass of commerce between India and Europe was carried on by the route of the Red Sea, until the seventh century, when the conquest of Egypt by the Saracens transferred it by the Black Sea to Constantinople. When, however, the Mamelukes became masters of Egypt, they permitted the Venetians to resume the ancient route; and Alexandria was thenceforward the sole entrepôt of Indian trade.

The spirit of Portuguese discovery received its impulse from the genius of Prince Henry, youngest son of John I. of Portugal. Under his countenance, naval adventure became popular; but the progress of discovery was greatly impeded by the imperfect state of navigation. The first acquisition was but of small importance, consisting only of the little island of Puerto Santo. It was sufficient, however, to encourage confidence, and stimulate to further exertions, and a subsequent expedition was rewarded by the discovery of the rich and beautiful island of Madaira.

After a tedious succession of voyages continued for nearly half a century, Vasco di Gama, an active and enterprising

* Il. &c.

Portuguese admiral, doubled the Cape of Good Hope, and, coasting along the eastern shore of the continent of Africa, sailed from thence across the Indian Ocean, and landed at Calicut, on the coast of Malabar. At the period of his arrival, the west coast of Hindostan was divided between two great sovereigns, the king of Cambay and the Zamorin, each of whom had under him numerous petty princes. The dominions of the Zamorin included the whole coast from Bombay to Cape Comorin; but the attempts of De Gama to conclude a commercial treaty with this power were frustrated by the jealousy of the Mahometan merchants, and he returned to Lisbon. His successor, Cabral, was not more fortunate; and in consequence he proceeded to Cochin and Cananore. The kings of these places were dependants upon the Zamorin: a dependency from which they were anxious to be emancipated. By them Cabral was very favourably received; and in an incredibly short time, the Portuguese acquired a paramount influence over the whole coast. Previously, however, to the arrival of Albuquerque in 1503, they were not possessed of a good port. After a violent struggle, they secured and fortified Goa, which from thenceforth became the capital of the Portuguese settlements, and the point from whence they spread their conquests and their commerce over the Eastern seas.

The Venetians and the sultan of Egypt, who were the principal sufferers by the diversion of the commerce of the East into a new channel, made some ineffectual attempts, in conjunction with the king of Cambay, to dispossess the Portuguese of their conquests; but the latter not only maintained their superiority, but succeeded in acquiring the command of the Red Sea and the Persian Gulf. The trade by those routes consequently ceased, and feeling secure from competition, the Portuguese proceeded to push their success. In the course of a few years they established a commercial empire of unprecedented extent, splendour, and opulence; they commanded the east coast of Africa, the coasts of Arabia and Persia, the two peninsulas of India, the Moluccas, Ceylon, and the trade to China and Japan. They levied tribute upon a hundred and fifty native princes, and claimed a right to sweep from the Indian seas every vessel that sailed without their permission. Of all this mighty dominion, a miserable remnant is all that

Portuguese admiral, doubled the Cape of Good Hope, and, coasting along the eastern shore of the continent of Africa, sailed from thence across the Indian Ocean, and landed at Calicut, on the coast of Malabar. At the period of his arrival, the west coast of Hindostan was divided between two great sovereigns, the king of Cambay and the Zamorin, each of whom had under him numerous petty princes. The dominions of the Zamorin included the whole coast from Bombay to Cape Comorin; but the attempts of De Gama to conclude a commercial treaty with this power were frustrated by the jealousy of the Mahometan merchants, and he returned to Lisbon. His successor, Cabral, was not more fortunate; and in consequence he proceeded to Cochin and Cananore. The kings of these places were dependants upon the Zamorin: a dependency from which they were anxious to be emancipated. By them Cabral was very favourably received; and in an incredibly short time, the Portuguese acquired a paramount influence over the whole coast. Previously, however, to the arrival of Albuquerque in 1508, they were not possessed of a good port. After a violent struggle, they secured and fortified Goa, which from thenceforth became the capital of the Portuguese settlements, and the point from whence they spread their conquests and their commerce over the Eastern seas.

The Venetians and the sultan of Egypt, who were the principal sufferers by the diversion of the commerce of the East into a new channel, made some ineffectual attempts, in conjunction with the king of Cambay, to dispossess the Portuguese of their conquests; but the latter not only maintained their superiority, but succeeded in acquiring the command of the Red Sea and the Persian Gulf. The trade by those routes consequently ceased, and feeling secure from competition, the Portuguese proceeded to push their success. In the course of a few years they established a commercial empire of unprecedented extent, splendour, and opulence; they commanded the east coast of Africa, the coasts of Arabia and Persia, the two peninsulas of India, the Moluccas, Ceylon, and the trade to China and Japan. They levied tribute upon a hundred and fifty native princes, and claimed a right to sweep from the Indian seas every vessel that sailed without their permission. Of all this mighty dominion, a miserable remnant is all that

INDIA.

now exists, and that remnant depressed, impoverished, and almost in a state of estrangement from the mother country.

The annexation of Portugal to the crown of Spain was fatal to the colonial dominion of the former country, and the Dutch occupy the next conspicuous place in the commercial history of India. They had originally been contented with the carrying-trade between Lisbon and the north of Europe; but Philip II. having put an end to this trade, they endeavoured to repair their loss by the discovery of a passage to India by the northward. Failing in this attempt, they embraced the proposal of Hautman, a prisoner for debt at Lisbon, to reveal to them the knowledge he possessed of Indian navigation and commerce, on condition of his liberation. Four ships were despatched to India under the command of Hautman, in the year 1594, and a sanguinary war with the Portuguese soon followed. Success was long doubtful; but the Dutch ultimately triumphed. The Portuguese at first lost Malacca and Ceylon; they were subsequently driven from various settlements on the coast of Malabar; and not long afterwards the native princes permitted the Dutch to establish factories at Negapatam, Sadras, Pulicat, and Bimlipatam, on the east coast. From this period the power of Portugal in the East was rapidly approaching to extinction.

The spirit of rivalry to the Portuguese was not confined to the Dutch. The splendid results which had followed the discovery of the south-east passage could scarcely fail to excite the emulation of a maritime and enterprising nation like the English. Two attempts were made in the reign of Henry VIII. to explore a north-west passage, and one in the reign of Edward VI. to discover a passage by the north-east. Many similar attempts followed within a short space of time, but all with the same want of success. There seemed, therefore, no alternative but to renounce the glittering visions of oriental wealth, or to follow them in the same track which the Portuguese had so successfully pursued. The first attempt to proceed by the south-east was, however, unprosperous. After encountering some Spanish men-of-war on the coast of Brazil, the expedition was obliged to return, for want of provisions. The second expedition was still more unfortunate; the ships,

INDIA.

three in number, were driven on the coast of Spanish America, and the crews, with the exception of four men, perished.

The more fortunate expeditions of Drake and Cavendish, and their flattering reports of the wealth of the countries which they had visited, kept alive the national ardour for a participation in the Indian trade; and the fact of the Dutch having resolved on contending with the Portuguese for a share of this coveted traffic, determined the English to follow their example. An association was formed and a fund subscribed for the purpose, and a memorial presented to the government, setting forth the places with which the Spanish and Portuguese had established intercourse, and pointing out others to which the English might resort without affording ground of complaint to their predecessors. Some difficulties were interposed by the government on account of a treaty then pending with Spain, but permission was given to make preparations for a voyage, while the patent of incorporation was under consideration. The government of the day appears to have been not indisposed to share in the patronage created by the adventure, and recommended Sir Edward Mitchelbourn to be employed in the expedition. The answer of the directors affords a memorable proof of their independence, and must be regarded as peculiarly honourable to them, when it is considered that they were at the time petitioners to the throne for a charter. On consultation, they resolved "not to employ any *gentleman* in any place of charge, and requested that they might be allowed to sorte their business with men of their own qualite, lest the suspiceon of the employmt of gentlemen being taken hold upon by the generalitie, do dryve a greate number of the adventurers to withdraw their contributions."

Greatly to the honour of the government, the honest resistance offered to its interference was not permitted to prejudice the cause of the adventurers, and on the last day of the year 1600, they were by letters-patent from the queen constituted a body politic and corporate, by the title of "The Governor and Company of Merchants of London trading to the East-Indies." The government of the Company was vested in a committee of twenty-four and a chairman. It was empowered to trade to all places beyond the Cape of Good Hope and the

INDIA.

Straits of Magellan for fifteen years, with the exception of places in possession of princes in amity with the queen, whose objection should be publicly declared; and all other the queen's subjects were prohibited from interfering with the Company's exclusive trade, except by license granted under their common seal. From James I. a renewal of the charter was obtained, by which all preceding privileges of the Company were confirmed, and they were constituted a body corporato for ever.

The early voyages of the Company were confined to the islands of the Indian Ocean; but after the confirmation and extension of their charter by James, they proceeded to establish a commercial intercourse with the Asiatic continent. Their endeavours were of course opposed by the Portuguese; but the English Company finally succeeded in establishing factories on various parts of the coast. One of their earliest settlements was at Surat, and this factory, with that at Bantam, remained for a long period their principal stations.

In the Dutch, the English Company found enemies more formidable than the Portuguese. The Dutch were bent on securing a monopoly of the spice-trade, and they enforced it in the most unscrupulous and vindictive spirit. After a long course of hostility, relieved by some weak and inefficient attempts at pacification, the spirit of the whole British people, with the exception of their sovereign, was roused to the highest pitch of indignation by the atrocious proceedings at Amboyna. The Dutch having determined on obtaining the exclusive possession of the island, fabricated a plot, to afford them a pretext for effecting their purpose. The plot, it was pretended, was confessed by two soldiers in the Dutch service, one a Japanese, the other a Portuguese, who had been put to the torture. Upon this evidence the English were apprehended, imprisoned, loaded with irons, and their books and property seized. A mock trial followed, in the course of which the prisoners were subjected to the most varied and horrible tortures, for the purpose of extorting confession. It is unnecessary to say that this mode of examination was successful. Confession was of course followed by conviction—conviction by execution; and the commercial interests of the Dutch were cemented by the blood of the accused persons. The pretence of a conspiracy was too absurd to deceive even the most credulous. When the

INDIA.

bureaux of the factors were opened and their papers rifled, no traces of such conspiracy were discovered. The number of English on the island did not exceed twenty, while the Dutch had a garrison of three hundred men in the fort, and several other garrisons in the island. The English were not only few in number, but they were unprovided with arms and ammunition. They had not a single ship, whereas the Dutch had eight lying off the town of Amboyna. A conspiracy against the Dutch authorities, under such circumstances, could have been formed only by men labouring under insanity; and those who professed to believe in its existence, had they been sincere, would have justly fallen under the same imputation. It would be idle to say a word in refutation of a mode of trial from which common sense and humanity alike recoil. The torture procured for the Dutch authorities that which they wanted—a legal excuse for the condemnation of their victims; but the courage of the sufferers revived as they approached a more righteous tribunal, and on the awful verge of eternity they solemnly protested their innocence. Those who will deliberately commit the graver crime of murder, will of course not hesitate at the comparatively light one of robbery. Massacre was not unnaturally followed by confiscation, and the Dutch retained English property to an immense amount. Its value has been stated at 100,000*l*. The truckling policy of James deterred him from seeking reparation of this great national wrong, and the disturbed reign of Charles allowed the Dutch a prolonged period of impunity; but the honour of the country was in some degree vindicated by Oliver Cromwell, who required and obtained payment of a large sum in satisfaction of the pecuniary injury inflicted.

At this time all the factories in the tract extending from Capo Comorin to the Persian and Arabian Gulfs, were controlled by the presidency of Surat. On the coast of Coromandel the Company had established themselves in the first instance at Masulipatam. Subsequently they left that place for Armegum. Finally they settled at Madraspatam, where, by permission of the native government, they erected Fort St. George, now the seat of one of the British presidencies.

The connections of the Company with Bengal were formed gradually. The first privilege which they obtained from the court

INDIA.

of Delhi was that of free resort to the port of Pipley, a privilege afterwards much extended, through the intervention of a surgeon named Boughton, who acquired influence at the imperial court by the exercise of his professional skill. Factories were accordingly established at Hooghley, Cossimbazar, Balasore, Patna, and Malda. Of these Hooghley was chief; but the whole of them were subordinate to Fort St. George.

The accession of Charles II. to the throne was followed by a renewal of the charter of the Company, by which their former privileges were confirmed, and authority conveyed to them to make peace and war with any people, not being Christians, and to seize unlicensed persons within their limits, and send them to England. From the same prince they obtained a grant of the island of Bombay, which he had received as part of the marriage portion of Catherine of Portugal. This island, now the seat of a presidency, was on its first acquisition subordinate to Surat.

Though the British interest in India was on the whole progressive, its advance was not uninterrupted. A civil war in Bantam was the means of excluding the English from Java, while the factories of Surat and Bombay were disturbed by unremitting war between the Mogul and the Mahrattas. The Mogul empire was established by Baber, a descendant of Timur, already mentioned, and sultan of the Mogul Tartars. Having lost the northern part of his own dominions by the hostilities of the Usbeck Tartars, he attempted the conquest of Hindostan with such success, that, putting an end to the dynasty of Lodi at Delhi, he established an empire, which was raised to the greatest splendour and authority under Aurngzebe towards the end of the seventeenth century. The Mahrattas were a native Hindoo race, little known till the middle of that century, when, under a chief named Seetagee, they became successful rivals to the Moguls. The conflict between these two great powers was necessarily injurious to the English. Both the belligerents had fleets of galliots on the coast; these repeatedly skirmished in the very harbour of Bombay, and the factory was, in self-defence, occasionally driven into hostilities with each party. Surat suffered even more severely, the Mahrattas ravaging up to its very gates. In Bengal, the English, thinking they had reason to be dissatisfied with the

INDIA.

conduct of the native powers, resolved to seek redress by arms; but the attempt was unfortunate, and they were obliged to retire from Hooghley and take refuge at Chutanuttee, contiguous to Calcutta. After a succession of hostilities, in which the factories at Patna and Cossimbazar were taken and plundered, an accommodation was effected, and the English were allowed to return to Hooghley. Negotiations for regaining their ancient privileges were commenced, but were interrupted by fresh hostilities. The contest between the Moguls and the Mahrattas had taken a decided turn in favour of the former; and Aurungzebe threatened to drive the English from his dominions. But the revenue derived from the trade was too valuable to be relinquished, and a fresh negotiation for peace terminated favourably. Tegnapatam, on the coast of Coromandel, had been ceded to the English by the rajah of Gingee, while besieged in his capital by Aurungzebe; and on the defeat of the rajah the grant was confirmed by the Mogul chief: the English fortified the station, and it has since been known as Fort St. David.

The peace was followed by an event which deserves notice, as having laid the foundation of the future capital of British India. This was the transfer of the agency to Chutanuttee, to which place the British had retired when expelled from Hooghley. It was subsequently fortified, and in 1698, a grant was obtained from Prince Azim, one of the grandsons of Aurungzebe, of the three connected villages of Chutanuttee, Govindpore, and Calcutta, with the justiciary power over the inhabitants. These new possessions were forthwith fortified, and received the name of Fort William; and about the same time Bengal was elevated to the rank of a presidency. For some years the position and relative constitution of the British presidencies had fluctuated considerably; but Bombay at last completely superseded Surat: and from the building of Fort William the established presidencies were those of Madras, Bombay, and Bengal.

From its commencement the Company had been occasionally exposed to the competition of rivals. In the reign of James I. Sir Edward Mitchelbourne, for whose employment the government had vainly interceded, obtained a license to engage in the eastern trade, which was an evident violation of the charter of

INDIA.

the Company; he however made but one voyage, and it appears rather for plunder than for traffic or discovery. By Charles I. Sir William Courten was invested with similar privileges, and formed an association which assumed the name of the Assayda Merchants: with this body, after some years of competition, the Company coalesced. In the reign of William III. another company was formed under a charter from the king, which was termed the English Company, the old one being designated the London Company. The rivalry of the two bodies was soon found to be productive of mischievous consequences to both, and the expediency of a union became apparent. This was ultimately effected, and in 1708 the companies were consolidated by Act of Parliament, under the name of the United Company of Merchants of England trading to the East Indies. From this period the British interests in India may be considered as steadily advancing. The amount of trade and shipping increased, and the intercourse and influence of the Company were extended.

A period of quiet prosperity affords slender materials for history; and till the breaking out of the war between England and France, in 1745, nothing occurs worthy of notice. The first appearance of the French in India was nearly 150 years before this period, when a company which had been formed in Brittany sent out two ships; but the voyage was attended with so little success, that on their return the company was dissolved. At later periods the French made some further attempts to trade and establish factories: their chief rendezvous was at Surat; but the Dutch and English uniting against them, they were compelled to abandon it. They next attempted to seize on Trincomalee, but in this also they were unsuccessful. They were more fortunate in an attempt upon St. Thomé, a seaport contiguous to Madras, which they carried by assault. They retained it, however, only two years; but from the wreck of this establishment was formed their celebrated settlement of Pondicherry, where a small district was ceded to them by the native prince. In 1746 Madras was besieged by a French armament, and compelled to capitulate. Admiral Boscawen made an attempt to retaliate upon Pondicherry, which was unsuccessful; but the peace of Aix-la-Chapelle restored Madras to the English.

INDIA.

From this time the history of India rises in interest and importance. We have no longer to detail the advantages of commercial speculation, but to record the transfer of a magnificent empire into the hands of strangers, who, a short time previously, were supplicants for the privilege of defending themselves.

The territory of the Carnatic was one of the subordinate principalities immediately governed by nabobs, but subject to the soubahdar of the Deccan, who was himself a feudatory under the Mogul emperor. Nizam ul Mulk, soubahdar of the Deccan, dying in 1748, the succession to the vacant province was disputed between his son Nazir and his grandson Murzafa; at the same time the nabob of the Carnatic was opposed by a rival claimant. The pretender to the province and the pretender to the nabobship made common cause, and succeeded in attaching to their interests M. Dupleix, governor of Pondicherry, a man of great talent, and of still greater ambition and capacity for intrigue. The combined forces of these allies were successful in a battle, in which the lawful nabob of the Carnatic was killed, and his eldest son taken prisoner. His second son, Mahomet Ali Khan, having escaped, implored and obtained the aid of the English. Such was the origin of the Carnatic war between the English and the French; and it is remarkable that these two nations should have been engaged in hostile operations against each other in India at a time when no war existed between them in Europe. As soon as intelligence of these extraordinary events reached the courts of the two countries, orders were sent out to put an end to the contest, and a treaty was entered into, by which the two nations were to possess equal dominion, military force, and advantages of commerce on the east coast of the peninsula. The breaking out of the seven years' war in 1756 prevented the execution of this treaty, and the French and English became principals instead of auxiliaries. The French at first met with some partial success; but the tide of fortune turned in favour of their rivals, who acquired, partly by conquest and partly by negotiation, a considerable increase of dominion as well as of influence.

The English were at the same time obliged to have recourse to arms to defend their interests in another part of India. The

INDIA.

nabob of Bengal, Surajah Dowlah, attacked, and after a brief resistance, took Calcutta. The event has attained an infamous celebrity by the cruelty which accompanied it. The European inhabitants, 146 in number, were, in the most sultry season of the year, confined for twelve hours within the too-memorable Black Hole, a cube of eighteen feet, having no outlets except two small windows, strongly barred. In this miserable den, all, except twenty-three, perished. The city was in a short time retaken by Colonel Clive, afterwards Lord Clive, who had already exhibited proofs of that talent which raised him to eminence. Peace with the nabob followed; but it was subsequently proved that he was in correspondence with the French. The English resolved to punish his faithlessness, by supporting the pretensions of a rival. This led to the famous battle of Plassy, by which Meer Jassier obtained the nabobship, and his English allies considerable treasure and accession of territory.

Meer Jassier, however, became unwilling to fulfil the conditions of his elevation, and he was in consequence deposed. His successor, who was raised by the same influence, was his son-in-law Meer Cossim, and it was stipulated that he should grant to the English, for the pay of their army, the districts of Burdwan, Midnapore, and Chittagong. But he, too, became hostile to the power which had raised him, and it was deemed expedient to restore Meer Jassier. A war ensued with Cossim, in which the English were completely victorious, and Cossim escaped into the dominions of the vizier of Oude.

The same year which witnessed the expulsion of Cossim was signalized by the conclusion of a peace between France and England. The former country was reinstated in the factories which she possessed in 1749; but the latter, in addition to her old settlements, retained the circle of Masulipatam and its dependent districts, acquired from the French, as well as the castle of Surat, the jaghiro round Madras, the Calcutta zemindary, and the districts of Burdwan, Midnapore, and Chittagong.

The vizier of Oude, Suja Dowlah, with whom Cossim had taken refuge, encouraged by some discontents which existed in the British army, decided on hostilities, and war commenced. The discipline of the British army having been restored, Suja Dowlah was twice defeated; first by Major Carnac, secondly

INDIA.

by Major Munro, and was compelled to throw himself upon the generosity of the victors. Such was also the fortune of a more elevated individual, the emperor of Delhi, who had been recently engaged in hostilities with the British, but was now a fugitive and a temporary sojourner with his nominal vassal, the ruler of Oude. Terms were granted to both, and in regard to the vizier, they were certainly not hard ones. The entire territories which the vizier had previously governed were restored to him, with the exception of certain districts reserved to the Mogul emperor, who, in return for the consideration shown for him, conferred upon the British the dewanny of the three provinces of Bengal, Bahar, and Orissa. The word dewanny is derived from dewan, which was the appellation of the officers appointed by the Mogul government for the collection and disbursement of the provincial revenues, and for the administration of civil justice. These officers held their stations during pleasure, and were only stewards for the emperor; but the grant to the Company was in perpetuity, and assigned to them the whole provincial revenue, subject only to the payment of certain specific sums. In addition to this, the emperor granted to the English the maritime districts known by the name of the Northern Circars, though over them his authority was but nominal. They fell within the government of the soubahdar of the Deccan; but having been the seat of hostilities between the English and French, the soubahdar's authority was not well established. By negotiation with him, the Company obtained possession of this disputed territory, with the exception of a small part which became theirs in reversion. This cession, however, involved the British in new wars. It was a condition of their treaty with the soubahdar, that they should assist him with troops when he might stand in need of them; and in 1760 he applied for this assistance against Hyder Ali Khan, the sovereign of Mysore. The required aid was granted; but Hyder Ali, not less skilful as a diplomatist than as a warrior, succeeded in detaching the soubahdar from his English connection, and prevailed upon him not only to conclude a separate peace, but even to enter into an alliance offensive and defensive, for the purpose of extinguishing the British power in the Deccan. Their combined operations were frustrated, and the soubahdar deserting Hyder as he had done

INDIA.

his former ally, made peace with the British, and retired to his own dominions. Hyder Ali then prosecuted the war alone, and, entering the Carnatic, committed dreadful ravages. Having diverted the British forces to a distance from Madras, he suddenly appeared before that place with 6,000 cavalry, having accomplished a march of 120 miles in three days. His further progress was arrested by negotiation, and a treaty was concluded on the principle of a mutual restitution of conquests.

Our arms were next directed against the Mahrattas, who had invaded the Rohilla country. The British, acting as the allies of Suja Dowlah, drove them beyond the Ganges. For this service the Rohilla chiefs had agreed to pay Suja Dowlah forty lacs of rupees; but failing in the performance of their contract, the Rohilla country was added to the British conquests. A considerable tract of land was also conquered from the Jauts and other adventurers, by which the boundaries of the province of Oude were considerably advanced. On the death of Suja Dowlah, which took place soon afterwards, the province of Benares was ceded to the Company.

A subsequent war with the Mahrattas was distinguished by some movements of uncommon brilliancy. A body of native troops, commanded by British officers, but whose number did not exceed 7,000, traversed with success almost the entire Mahratta territory. Several fine provinces were subdued, and important fortresses taken; but war breaking out with Hyder Ali, peace was made with the Mahrattas, and all the acquisitions given up, except Salsette, and the small islands situate within the gulf formed by Bombay, Salsette, and the continent. The war with Hyder Ali raged until his death, and was continued by his son Tippoo Sultan; but the conclusion of a peace between the English and French depriving Tippoo of the hope of assistance from the latter power, hostilities were terminated by a treaty, which left the affairs of both the belligerents nearly in the same condition as before the commencement of the war. But Tippoo Sultan's restless character would not suffer him to remain at peace, and his invasion of the possessions of the rajah of Travancore, who was under the protection of the English, involved that power in a fresh quarrel with this turbulent prince. The result to him was humiliating. After two years war, he was compelled by Lord Cornwallis to pur-

INDIA.

chase peace by the payment of a large sum of money, the sacrifice of half his dominions, and the delivery of two of his sons as hostages for the due performance of the conditions of the treaty.

The memorable campaign which terminated in the discomfiture of Tippoo Sultan, was succeeded by seven years of tranquillity. The enemies of British interests were not, however, inactive, but were employed in sowing the seeds of future wars. Among the most insidious and dangerous of these enemies may be reckoned the French, ever on the watch for an opportunity of diminishing the power of the English, and now intoxicated with the doctrines of liberty and equality which they had undertaken to disseminate throughout the earth. Even regions which for ages had patiently submitted to despotic power, were not exempt from the intrusion of these opinions. The French ventured to establish a society in Mysore for the diffusion of the knowledge of the rights of man, and met with very different success to that which awaited the unfortunate Jean Bon St. André in the kindred region of Africa. They received from the sovereign patronage and protection. He even condescended to become an honorary member of the society, and was enrolled among its associates by the incongruous name of *Citizen Tippoo*. The result of these machinations was another war, which terminated with the storming of Seringapatam, the death of Tippoo, and the partition of his dominions. In the division, the English retained the districts of Canara, including all the seacoast of the Mysore, the provinces immediately adjoining the possessions of the British on the coast of Malabar, and the Carnatic; the forts and posts of the passes into the Mysore, and the island and fortress of Seringapatam. Certain districts were given to the Nizam, which, however, were afterwards surrendered by that power to the English, together with other territories which had been acquired by a former treaty. A third portion was reserved to be given, upon certain conditions, to the Peishwa, the actual, though not the nominal, head of the Mahrattas; but he having refused to accede, the reserved territory was divided between the British and the Nizam. The Peishwa, however, was forced ultimately to elaim the assistance of the British to deliver him from the state of anarchy by which he was surrounded. A treaty was in con-

INDIA.

sequence concluded, by which the British consented to furnish the Peishwa with a certain number of troops, and he to assign a portion of territory for their payment.

The war which ensued for the protection of the Peishwa was distinguished by the brilliant services of Lord Lake, and of another commander, who in the East commenced that illustrious career which he terminated by the liberation of Europe. The splendour of his Indian campaigns is indeed obscured by the surpassing glory that encircles the head of the conqueror of Napoleon; but no one who adverts to this period of the history of India, however briefly, can be excused if he pass by the name of Wellington without bestowing the tribute of admiration. Space will not permit a detailed recital of the achievements of the British army in these wars: it must suffice to record the results. In a comparatively short space of time, a formidable confederation of French and Mahratta power was broken, and an immense accession of territory gained.

From this period the history of India presents little of importance until 1814, when the British became involved in a war with the Nepaulese, a people of aggressive habits, occupying a mountain country. The nature of the country, the imperfect knowledge which the British possessed of it, the courage of the enemy, and the fortifications by which they were defended, were obstacles to the success of the British, and continued for some time to impede it. Military skill ultimately overcame these difficulties, and the Nepaulese being subdued, agreed to a treaty, by which the British became possessed of certain districts deemed necessary to the security of their frontier; but endeavouring, in the true spirit of Indian policy, to evade ratification of the treaty, a renewal of hostilities became unavoidable. A war of very brief duration was sufficient to accomplish its object.

The constant wars and commotions prevailing among the native powers of India produced in great numbers men trained in habits of rapine and disorder. Gathering strength by degrees, these lawless ruffians became at length associated in bands under recognised leaders, and on the arrival of the marquis of Hastings in India, they mustered a force of not less than 40,000 cavalry. They were termed Pindarries, and in their predatory excursions committed the most shocking

INDIA.

excesses. The irruptions of these bandits into the Company's territories compelled the government to take up arms, and they were preparing to take vigorous measures for their expulsion, when the Peishwa, an ally and dependant of the British, revolted against their authority. The rajah of Nagpore, who stood in the same relation to the British, pursued a similar course. Both these powers were subdued, while the war with the Pindarries was prosecuted with vigour. In the mean time the British government became involved in disputes with Scindia and Holkar, two independent chiefs. With the former they made terms; but the treaty forced upon him was executed with extreme reluctance. Holkar resolved to have recourse to war. It ended in his entire defeat; his power was completely broken, and he was compelled to sue for peace. The army being now at liberty to act against the Pindarries, the dispersion of that lawless body was at length effected.

Not many years elapsed between this and the war with the Burmese. That war, like most of those in which the English have been engaged, was occasioned by the aggression of the power with whom it was waged. During the Pindarrie war, the Burmese were in communication with several of the belligerent native chiefs, and were even prepared for an invasion of the frontier of Bengal. This was averted by a stratagem. The marquis of Hastings had received a rescript from the Burmese monarch, requiring the surrender of all provinces east of the Baugrutty. The projected hostility was evidently a measure concerted with the Mahrattas. Lord Hastings sent back the envoy with an intimation that the answer should be conveyed through another channel. It declared that the Governor-General was too well acquainted with his majesty's wisdom to be the dupe of the gross forgery attempted to be palmed upon him, and he therefore transmitted to the king the document fabricated in his august name, and trusted that he would submit to condign punishment the persons who had endeavoured to sow dissension between two powers, whose reciprocal interest it was to cultivate relations of amity. By this proceeding the necessity of noticing the insolent step of the Burmese monarch was evaded, and that sovereign, on hearing of the defeat of his Mahratta allies, was content to remain at peace. But though the expression of hostile feeling

INDIA.

was for a while suppressed, the feeling itself was not removed, and the Burmese monarch now gained courage to attack, where before he had been satisfied to threaten. War commenced, and the successes of the British led to the conclusion of an armistice, which was employed in negotiations. These negotiations being unsuccessful, hostilities were resumed. The march of the English, as in Nepaul, was in some degree retarded by the nature of the country; but this obstacle being overcome, the Burmese were completely defeated, and the British advanced towards the capital, when negotiations were recommenced, and a treaty concluded, by which the Burmese secured their existence as a nation, and the English obtained an extension of territory, valuable as affording a secure frontier.

During the progress of the Burmese war, the British obtained from the king of the Netherlands, Malacca, Singapore, and the Dutch possessions which remained to that nation on the continent of India, in exchange for the settlement of Bencoolen and other possessions in Sumatra; an event deserving notice, and rendered important from the position subsequently attained by Singapore as a vast *entrepôt* of commerce.

Some years later, the misconduct of the rajah of Coorg, a small principality in Southern India, rendered necessary his deposal from sovereignty, and his removal from the country which he had misgoverned; and there being no one entitled to succeed him, Coorg was unavoidably annexed to the British dominions, of which it has since formed part.

The Affghan war commenced in 1839,* with a view to raising a barrier against the aggressive power of Russia, brought to the British no accession of territory, of power, or, taken on the whole, of glory. It was ostensibly undertaken to restore to the throne a former Affghan ruler, Shah Shoojah, supposed at least to be actuated by friendly feelings towards the British, though doubts on that point may well be entertained. The advance of the forces destined for the conquest of Affghanistan was attended by much difficulty and dreadful suffering; but at length a part of the invading army reached the chief city, Cabool. Here it was thought the object of the expedition was gained; but the commencement of a new and frightful series

* Shah Shoojah was enthroned at Candahar on the 8th May, 1839.

INDIA.

of calamities was at hand. Insurrection broke out, the British envoy was treacherously murdered, a large part of the British force was destroyed, and the remainder compelled to retire under the most disastrous circumstances, incessant annoyance and fearful slaughter marking its progress. Many deeds of heroism, never surpassed, tended indeed to add fresh lustre to the British name; and, among others, the noble defence of Jelalabad by Sir Robert Sale, can never be forgotten so long as Affghanistan is remembered. But the war and its consequences contribute to furnish an awful page in the history of British enterprise in India. Ultimately the country was avenged, and its reputation vindicated, through the vigorous counsels and vigorous acts of Generals Pollock and Nott. The former arrived first at Cabool, and replanted the British colours there: the latter arrived shortly afterwards. The British could now withdraw without discredit, from a country where, for the first time, the *prestige* of their national character seemed endangered. That at least was vindicated and upheld; though, looking at the expenditure of blood and treasure, at the mass of suffering, and the imminent danger of irreparable disgrace which must have followed a premature retirement, every Englishman must wish that the war had never been undertaken.

The chapter in the history of British India which records the annexation of Sinde, is little more consolatory to a sound-hearted Englishman than that on the war in Affghanistan. The ameers or rulers of Sinde were ever opposed to any close connection with foreigners. Various attempts had at different times been made to establish such connection, but they had been met reluctantly and unfavourably. Two or three treaties had been entered into; but they were brief, dry, and to neither party satisfactory. The ameers of Sinde hated the alliance, which the British were anxious to establish, at first, for commercial, latterly, for political purposes. When the British commenced the march to Affghanistan, a treaty was forced upon the rulers of Sinde, which was more distasteful than any former one. Under this treaty, a British military force was to be permanently stationed in Sinde; and, after some considerable time, Sir Charles Napier, whose career in Sinde has given rise to such a mass of controversy, was appointed to the chief

INDIA.

command there. He commenced his course certainly with vigour, but as certainly with little consideration of the existing rulers. Treaties were proposed, which, though rejection must have been looked for, were accepted, whether with sincerity or not;—probably there was little of that quality on either side. But, notwithstanding the acceptance of the treaties, Sir Charles Napier continued to advance. During his progress, the British Residency was attacked. It was gallantly defended, but weakness of numbers and deficiency of ammunition soon rendered retreat necessary. This was effected in good order, but at the sacrifice of the greater part of the property within the Residence. The battle of Meeanee followed, in which the British gained a brilliant victory. Another battle, fought near Hyderabad, the capital, may be said to have terminated the contest; and Sind, in 1813, became a British possession.

The conclusion of the contest in Sind found the British government involved in difficulties in Gwalior, or the dominions of Scindia. The death of the representative of that house without heirs rendered an arrangement for the appointment of a successor necessary. A child, said to be the nearest relative of the deceased prince, was selected, and the British government approved. But every Indian court is a focus of intrigue, and that of Gwalior formed no exception. A rabble army of 30,000 men was a source of weakness, not of strength; and through the influence of a profligate and reckless court, combined by that of a disorganized army, the state appeared rapidly tending to dissolution. Internal war had in fact commenced, when the British government, somewhat tardily, though at the last rather hastily, put in motion a military force towards the disturbed country. It soon came into hostile collision with the enemy; and two victories in one day, gained by two separate portions of the British force, decided the questions at issue. A new treaty followed, dated January, 1811, in which a variety of arrangements for the safety of Scindia's territories and the security of those adjacent were embodied.

By this time, a new cause for apprehension had arisen in the north-western part of India. The death of Runjeet Singh, the "Lion of the Punjab," had been followed by a series of excesses, terminating in a state of things in which the army was tri-

INDIA.

umphant over the government, and was an object of its dread rather than of its dependence. At length a portion of it crossed the Sutlej, and invaded the British territories. This of course was repelled; and, first at Moodkee, subsequently at Ferozeshah, in December, 1845, the Sikhs were defeated. At Aliwal, and at Sohraon, fresh triumphs attended the British forces, who finally crossed the river, and dictated the terms of submission at Lahore, the Sikh capital. Here a treaty was concluded, under which the British obtained a cession of all the territory between the Beas and the Sutlej; the native government of Lahore being retained, with some requisite modifications. But this arrangement proved of short duration. The atrocious conduct of a chief, holding the fortress of Mooltan, where two British officers were murdered, the generally distracted state of the country, the open violation by the government and people of the treaty so recently concluded, and the actual levying of war against their peaceful neighbour, demanded further intervention of a hostile character. One step only remained to be taken, and the success which again attended the British enabled the Governor-General to take it. The Punjab was annexed, and was thenceforward a part of the vast empire of India. In this instance, as in so many others which occur in the history of that empire, the cause of Great Britain was the cause of general humanity.

Another Burmese war followed; rendered necessary by the wrongs, public and private, inflicted by the Burmese government. It was neither long in duration nor brilliant in events; and concluded with the annexation, in December, 1852, of the extensive province of Pegu, in satisfaction to some degree of the injuries sustained, and in aid of the means of defending British territory and property from further aggression.

After all the declamation that has been expended upon the means by which the British dominions have been acquired, probably no conquests were ever made more righteously. This is certainly true with regard to the greater portion of them. Strangers were forced to become conquerors in self-defence. During a considerable part of the last century, the question was, whether India should be subjugated by France or by England. To this question but one answer could be given. The perfidy of the native princes was another source of war,

IND.

and of British aggrandizement. But the crimes of these rulers have in this respect been beneficial to their subjects, by transferring them to the care of a better and a milder government. *No friend to mankind can wish that the natives had remained under their old masters, and none but the most prejudiced can believe that their lot would have been improved by transferring them to the French.*

INDORE TERRITORY.¹—From the capital, the name of *Indore* is extended to the aggregate of the possessions of the Holcar family. These consist of several isolated tracts, some of them lying very remote from others. They may be thus enumerated:—1. Territory annexed to the town of Indore. This portion, within which is situated the British cantonment of Mhow, is bounded on the north by Gwalior; on the east by Dewas and a portion of Scindia's dominions; on the south and south-west by the British districts of Saugor and Nerbudda; and on the west by Burwanee and Dhar. It lies between lat. 21° 18'—23° 5', long. 75° 2'—76° 16'. Its length from north to south is 120 miles, its breadth 82 miles. 2. The tract of territory annexed to the town of Rampoor, situate north of Indore, and lying between lat. 24° 3'—24° 46', long. 75° 6'—76° 12'. This section is seventy-one miles in length from east to west, and forty in breadth: its principal towns are Rampoor, Bhaupoor, and Chendwassa. A third division, also situate north of Indore, includes the town of Mehedpore, in lat. 23° 29', long. 75° 42'. A fourth section, situate to the westward of Indore, contains the town of Dhie, in lat. 22° 10', long. 74° 39'. Pitlaud, in lat. 23° 1', long. 74° 51', is the principal place of the fifth portion, lying north-west of Indore. The last outlying tract of Holcar's dominions, of which Airwas, in lat. 22° 31', long. 76° 26', is the chief town, lies to

INDORE.

the eastward of Indore. The area of the whole of Holcar's dominions is estimated at 8,318 square miles.* Of these districts, those situate to the north are drained by the river Chumbul and its feeders; those to the south, by the Nerbudda, flowing east and west. Like the rest of Malwa, these districts are fertile, producing in abundance and excellence, wheat and other grain, pulse, sugar-cane, cotton, and especially opium, the poppy producing it being so generally cultivated, that, when in bloom, it gives the country the appearance of a vast garden. Tobacco is also much cultivated, and is of excellent quality.

The great Vindhya² range traverses the southern or Indore division of Holcar's dominions, in a direction nearly from east to west, a small portion of the territory lying to the north of the mountains, but by much the larger part to the south of them. The part lying south is a portion of the valley of the Nerbudda, bounded on the south by the Satpura Mountains. The summits of the Vindhya vary in height, probably from 1,500 to 2,000 feet; and at one place the crest of the Jam Ghat, lat. 22° 23', long. 75° 49', rises to the elevation of 2,325³ feet above the sea. The elevation of the Satpura range is somewhat greater, one summit being 2,500⁴ feet above the level of the sea. Basalt and other volcanic formations predominate in both ranges, though there is also much sandstone.⁵ The Nerbudda river traverses this territory from east to west, dividing it into two nearly equal portions. The length of its course through the district would be about seventy miles, were it uninterrupted; but this is not the case, the territory under notice being indented for some distance by the projection into it of the state of Jhar and the district of Mundlaisir, which the river crosses, and then re-enters the dominions of Holcar. Of the extent to which this part of the river admits of navigation, reports are not perfectly agreed. On a comparison of the different statements, it would appear to be practicable by small boats for limited distances during a considerable part of the year.⁶ The channel of the Nerbudda is very deeply worn in basaltic rock; the banks are very high, and in the periodical rains the stream rushes down with great rapidity, and with a

* Sutherland¹ states the area to be 4,215 square miles; but this estimate is obviously limited to the Indore division of Holcar's territory.

¹ *Map accompanying sketches.*

INDORE.

vast volume of water. The elevation above the sea, of the surface of the country in the bottom of the valley at Mundlairsir, in the central part of the district, is between 600⁷ and 700 feet. "The general⁸ appearance of the country is that of an undulated valley, intersected in various directions by low rocky ranges, mostly covered with jungle, in some parts thickly, of a stunted growth, consisting of the dhak, babool, and other shrubs, which also cover considerable tracts in the plains."

From its intertropical position, the climate is sultry, the thermometer ranging from 60° to 90° in the house. For some months, from the close of the periodical rains, the malaria is so deadly in the jungly tracts, that no European ventures into them. The most remarkable wild animals are tigers, leopards, bears, hyenas, lynxes, jackals, foxes, monkeys, nylogaus (*Antilope picta*), and wild kind of great size and strength. There are also alligators, the boa constrictor, and some other formidable snakes. The Nerbudda abounds in fine fish.

Besides the ruling tribe of Mahrattas, the population comprises many other classes of Hindoos, a few Mahomedans, and a considerable number of Gonds and Bheels.⁹ It is peculiarly the country of the Bheels, who are considered to have been the earliest occupiers of the soil. This race is one¹ of the most wild and savage found in India, its people living for the most part on wild vegetables and game, the latter the produce of their bows and arrows, or on the plunder of their more civilized neighbours. They are, however, not entirely irreclaimable, but have in some instances been converted into useful and trustworthy soldiers. The population of the whole of Holcar's dominions is estimated at 815,164,² which yields an average of 98 to the square mile. The revenue in 1848 was estimated at 22,17,210 rupees, or 221,721⁷. The armed force, including the contingent of cavalry, amounted to about 7,000 men. The principal towns,—Indore, Mundlairsir, Ram-poor, Bhanpoo, and others, are described under their respective names in the alphabetical arrangement.

The most important routes are—1. The Bombay and Agra road. 2. From north to south, from Oojein, through Indore and Mhow, by the Jam Ghat, to Mundlairsir, where it turns south-west, proceeding to Bombay. 3. From east to west,

INDORE.

from Goona to Neemuch, Bhanpoora, and Rampoor. 4. From south-east to north-west, from Mahidpore to Neemuch. The southern and larger portion of the territory has scarcely any route continuously practicable for wheel-carriages, that by the Jam Ghat being represented as the only one throughout the Vindhya range.

The founder of the family of Holcar was Mulhar Rao, a ryot or cultivator of Hul, a village of the Deccan. His birth is said to have taken place in the year 1693. First a shepherd, and subsequently a soldier, he obtained distinction and promotion in hostilities against Nizam ool Mulk, and being received into the service of the Peishwa, was appointed to the command of 500 horse. In 1728, he received a jaghire of twelve districts north of the Nerbudda; in 1731, he obtained seventy more, being at the same time appointed to the general management of the Mahratta interests in Malwa; and in 1733, Indore was granted to him, with the district appertaining to it. From that time until his death in 1767,³ he was the most distinguished of the military commanders of the Mahratta race. In addition to the possessions above referred to, he was appointed deshmook or foudatory of Chaundore, in Khandeish; while his revenues were further increased by the levy of fixed tributes on several states. He was among the Mahratta leaders at the battle of Paniput in 1761, but fled⁴ when it became apparent that the defeat of the Mahrattas was inevitable. Mulhar Rao Holcar had only one son, Koondi Rao, who was killed during his father's lifetime. On the death of Mulhar Rao, the succession devolved on Malli Rao, the son of Koondi Rao. Malli Rao died insane after a few months, and the sovereignty of Indore fell into the hands of his mother Alia Bacc, who committed the charge of the military force of her dominions to Tookajee Holcar, a member of the same tribe, but not otherwise related to the family with which the Bacc was allied. He appears to have acted strictly in conformity with her wishes during his long command, which was terminated by his death in 1797. This harmony⁵ of action and the abilities of both parties brought Indore to a state of high prosperity. Succession to the power of Tookajee was disputed by his two legitimate sons Kasi Rao and Mulhar Rao, the latter of whom was cut off by assassination,⁶ through the treachery of his brother, a person

INDORE.

weak in intellect, deformed in body, and, as his actions showed, not less deformed in his moral constitution. Tookajee left also two illegitimate sons, Etojee and Jeswunt Rao. Etojee attempted to maintain himself by a course of freebooting, but being seized, was put to a very cruel death by the Peishwa, who looked on unmoved; whilst the wretched man, tied to the leg of an elephant, implored mercy, or shrieked in agony as he was dragged along until torn in pieces. Jeswunt Rao, who, on the murder of his brother Mülhar Rao, had fled to Nagpore, and besought the rajah's protection, received it in the shape of imprisonment; from which, however, he contrived to escape. He thereupon, like his brother Etojee, commenced a predatory career,⁷ and soon assembled an army of about 30,000 men, with above 100 pieces of artillery. But this large force received a signal defeat from the army of Scindia, when Jeswunt Rao Holcar lost nearly all his artillery, and the disaster was followed by the plunder of the capital. He rapidly recovered from the effects of this mischance, and employed European officers to introduce their discipline into his army. In October, 1802, at the battle of Poona, which he gained over the combined forces of Dowlut Rao Scindia and the Peishwa, he had fourteen⁸ regular battalions, 5,000 irregular infantry, and 25,000 horse. The distinguished state of Indore at the commencement of the present century, when the British government was engaged in arduous conflict with various enemies, gave opportunity for Jeswunt Rao Holcar to indulge in devastation and plunder to an enormous extent. General Lake despatched against him five battalions of sepoy and 3,000 irregular horse, under Colonel Monson, an officer of extraordinary bravery, but unfortunately destitute of a corresponding degree of judgment. The expedition accordingly terminated disastrously, and the unhappy retreat of this force is characterized as one of the most lamentable events in the history of the British career in India.⁹ The apparent success of Holcar caused great numbers of freebooters to join him, and at the end of August, 1804, he advanced at the head of 60,000 horse to the Junna, and took the city of Muttra. Marching thence, he commenced the siege of Delhi on the 8th of October, but retreated baffled on the 14th; the British under General Lake marching to its relief. Holcar then, at the

INDORE.

head of his cavalry, suddenly crossed the Jumna near Paniput, and laid waste the Doab with fire and sword, closely pursued by General Lake, who, on the morning of November 17th, surprised him in his bivouac at Furruckabad, where he was totally routed, leaving about 3,000 dead; and so rapidly did his predatory followers fall off, that it is stated, that of the 60,000¹ cavalry which he led across the Jumna, less than half that number recrossed it. His infantry, which had been intrenched under the walls of Deeg, had previously been attacked and defeated by a British force under General Frazer, on whose fall, before the fate of the day was determined, the command devolved upon Colonel Monson, who had then the satisfaction of frustrating in some degree the disastrous consequences of his retreat. According to an authority² whose means of information were great, Holar entered Hindostan (or Northern India) with "92,000 men, of whom 60,000 were cavalry, 7,000 artillery, and 19,000 infantry, and 190 pieces of ordnance; and he left it with his whole force diminished to 35,000 horse, 7,000 infantry and artillery, and thirty-five guns." In October, 1805, Holar, encouraged no doubt by the wavering and imbecile policy of Lord Cornwallis, and subsequently of Sir George Barlow, successively Governors-General, marched from Ajmeer, where he had remained during the rains, and with 12,000³ cavalry, 2,500 infantry, and thirty guns,⁴ advanced to the Punjab, pursued by the British under Lord Lake, who came up with him at the city of Amritsir, where, in December, 1805, a treaty⁵ was concluded, by which Holar relinquished any claim on Tonk, Rampoon, Bhoondee, and all places north of the Bhoondee Hills, and in possession of the British government; but was confirmed in nearly all his other possessions. In the following year he murdered Kasi Rao, the legitimate son of Tookajee Holar, and Kuudi Rao, the infant son⁶ of Mulhar Rao, another legitimate son of Tookajee, assassinated at an earlier period, while contending with his brother Kasi Rao. These atrocities were closely followed by the insanity of the perpetrator, who ultimately sank into a state of utter fatuity, in which he died⁶ in the year 1811. A stormy regency succeeded, ostensibly administered by Toolsee Bye, mistress of the deceased Jeswunt Rao, but

INDORE.

actually, at many periods of its continuance, by her various paramours. Before the death of Jeswant Rao Holcar, she had adopted an infant, Mulhar Rao Holcar, an illegitimate son of her protector, and by general consent he was recognised⁷ as his father's successor. In 1817, the intrigues and disturbances fomented by the different factions which disturbed the state, came to a crisis. The army seized Toolsee Bye and the young Mulhar Rao, and having murdered the former, commenced hostilities under the ostensible command of the latter; a result long before indicated. These were, however, brought to a speedy termination by the decisive victory which, on December 21st, 1817, was gained⁸ at Mahidpore, by the British army over that of Holcar. On January 18th, 1818, a treaty⁹ was concluded at Mundesore, with the British government, that power engaging to extend the same protection to the territory of Holcar as to its own, and to maintain a field-force for the preservation of internal tranquillity, and for defence against foreign aggression; disclaiming all concern with Holcar's relatives or subjects, and entering into a stipulation not to permit the Peishwa or any of his heirs or descendants to claim or exercise any sovereign rights over the dominions of Holcar, and to restore to the latter chief the possessions lately conquered from him. On the other part, Holcar engaged to renounce all claims to the possessions guaranteed to Ameer Khan by the British government; to cede certain pergunnahs to Zalim Singh, of Kota; to confirm to Ghuffoor Khan his jainad or grant of various districts in Malwa; to renounce all claim to any places north of the Bhoondee Hills; to cede to the British government all claims of revenues and tributes from the Rajpoot states, and all the Mahratta chieftain's territories within and south of the Satpura range, including the fort of Sindwa, as well as all his possessions in the province of Khandeish, and others intermixed with the territories of the Nizam and the Peishwa; to abstain from diplomatic intercourse with other states, except with the knowledge and consent of the British resident; to entertain in his service no Europeans or Americans without similar permission; to permit an accredited minister from the British government to reside with the maharajah; to discharge his superfluous troops, and not to keep a larger force than 3,000 horse, for whose regular payment a

INDORE.

suitable arrangement was to be made. Of the effect of this arrangement, Malcolm observes,¹ "This was in fact a new condition to the Holcar state; for twenty years had elapsed since it had enjoyed any regular resources or government, and its name during the greater part of that period had only served as a pretext to plunderers for committing every species of excess and crime."

Mulhar Rao Holcar² died in 1833. His mother, known by the title of the Mahjee, thereupon assumed the reins of government; and an adoption took place by Mulhar Rao's widow, of an infant son of Bapoo Holcar, a distant relative of the family. The pregnancy of one of the females in the deceased maharajah's zenana (who subsequently gave birth to a son) having been concealed, the succession of the adopted son, under the title of Marbund Rao Holcar, was recognised by the British government, and the birth of the posthumous child was not allowed to disturb the arrangement. Subsequently, public feeling appeared to be decidedly in favour of the superior claims of Hurree Rao Holcar, a former competitor for the guddee, and the nearest male relative of the late maharajah, by whom he had been kept for many years a prisoner in the fort of Mahayseer. An insurrection broke out in favour of the prisoner; the troops sent against him espoused his cause, and the existing government found it necessary to submit. Neutrality was observed by the British government during the contest, and amicable relations were maintained with the new ruler. Hurree Rao Holcar³ appears to have manifested the full amount of incapacity for government which is ordinarily exhibited by Indian princes. Under his sway the state of the country was so wretched⁴ that it was rapidly deserted by the inhabitants, especially the more respectable and wealthy portion of them. On the death of this imbecile specimen of oriental chieftainship, he was succeeded⁵ by a youth named Kumdee Rao Holcar, whom he had adopted with the sanction of the British government. The career of this adopted successor was, however, terminated by an early death,⁶ when it appears no person possessed any hereditary claim to the guddee, neither had any one valid title to adopt, and the continuance of the Holcar possessions under a separate form of government became a question for consideration. It being

determined that it should be so continued, the choice of a ruler was to be made; and, after weighing the competing claims of various candidates, the guddee was bestowed upon a youth named Mulkerjee, whose elevation it was avowed was not in virtue of either adoption or hereditary claim, but of the express nomination of the British government. The opportunity was taken to limit the succession to lineal heirs, to the exclusion of adoption. The new chief being a minor, the government was carried on, during his legal infancy, under the superintendence of the resident, by a council of regency, composed of the Mace Sahiba (widow of Jeswunt Rao Holcar) and three principal officers of state. Under this arrangement the administration⁷ and state of the country greatly improved. The young chief, educated under the auspices⁸ of the British government, displayed at an early age great capacity for public business,⁹ and drew forth, by his exemplary conduct, the approbation of the Governor-General. In February, 1852,¹ upon the attainment of his majority, the young rajah assumed the reins of government.

INDORE,¹ the capital of the possessions of Holcar's family, a town situate in a plain of no great extent on the left bank of the small river Kutki.² It is an ill-built place, the houses, which are disposed in irregular winding streets, being constructed with sundried bricks, and covered with clumsy tiles laid on bamboos. It contains a few mosques, of no architectural pretensions, and numerous Brahminical temples, built of basalt, and whitewashed with lime. Jacquemont, who visited the place in 1832, describes³ the palace of Holcar as having no claims to notice, but mentions that he was building another, which would be much superior. The house of the British resident is situate east⁴ of the town; and as this, as well as the dwellings of his assistants, are well built, surrounded with groves and gardens, and judiciously disposed in a fine park-like expansé, the whole forms a pleasing scene. A strong escort of cavalry and infantry attend the resident, but the principal British force for this part of India is cantoned at Mhow, thirteen⁵ miles more to the south-east.

The resident at Indore, in addition to his duties connected with that state, is the immediate representative of the British government in regard to various petty states under its pro-

IND.

tection, but in other respects differing greatly in their circumstances. The Bhopal subordinate agency is also subject to his control.

Jemnab, or old Indore, is situate on the right side of the stream. The present Indore, on the left bank, was built⁶ by order of Alia Bacc, widow of Mulhar Rao Holcar, immediately after his death, in 1767. The outline of the city is nearly square, each side being about 1,000⁷ yards in length; the area is about 216 acres, or a third of a square mile, and its population may be conjectured not to exceed 15,000. Its elevation, according to Malcolm⁸ and Dangerfield, is 1,998 feet above the sea; but Jacquemont, who, however, did not make any barometrical observations on the subject, is of opinion that this estimate errs in excess.

Indore was plundered in 1801 by the army of Doulut Rao Scindia, which had previously defeated⁹ Holcar, at the head of above 30,000 men. In 1804, it was occupied,¹ without resistance, by a British force under Colonel Murray; but was restored on the subsequent pacification, in 1805. Distance south-west from Agra 402 miles; S.W. from Delhi 494; S. from Neemuch 142; S. from Nusseerabad, by Neemuch, 285; S.W. from Saugor 224; S.W. from Allahabad, by Saugor, 537; W. from Calcutta, by Allahabad, 1,030; N.E. from Bombay, *via* Maligaum and Nassiek, 377. and town held by a petty² tributary rajah, 45 miles N.E. of the town of Kotah. Lat. $25^{\circ} 41'$, long. $76^{\circ} 19'$.

INDURPUR, in the *fief* or *jaghire* of Rampore, under the jurisdiction of the lieutenant-governor of the North-West Provinces, a village on the route from Bareilly to Almora, and 51 miles N. of the former. Supplies and water are plentiful. The road in this part of the route is bad; the country level and partially cultivated, but in many places overrun with jungle. Lat. $28^{\circ} 57'$, long. $79^{\circ} 26'$.

INDUS.—A great river of Asia. Among the various tribes and people through whose territories it flows, it bears different names; but that by which it is most generally known and most highly celebrated, is *Indus*, derived from the Sanscrit *Sindhu*,^{1*} which word, changed by the Greeks into *Sinthus*, and by the Latins into *Sindus*,† ultimately passed into the name now in ordinary use. Though the vigilant jealousy of the Chinese, who rule Tibet, has excluded Europeans from that country, the inquiries of Moorcroft,² Trebeck, and Gerard, have established, beyond any reasonable ground of doubt, that the source of the longest and principal stream of the Indus is at the north of the Kailas Mountain,‡ regarded in Hindoo mythology as the mansion of the gods,³ and Siva's paradise; and though over-estimated by Gerard⁴ in respect to its altitude, still having an elevation of 22,000 feet above the level of the sea. The locality of the source of the Indus may be stated with some probability to be in lat. 32° , long. $81^{\circ} 30'$. Near its source, it bears the name of *Sinh-kha-bab*, or "lion's mouth,"⁵ from a superstitious belief that it flows from one. It first takes a north-westerly direction to Tagle, about 160 miles from the place of its reputed source. It is there joined on its left,⁶ or south-western side, by the Eekung Choo, or "river of Gartope," which rises on the western base of the Kailas

* *Sind* or *Sindhu*, "the sea."—Shakespeare in v.

† Pliny observes, "*Indus incolis Sindus appellatus*."

‡ Ritter (*Erdkunde von Asien*, i. 13) derives the name Kailas, or Kailasa, from *kil*, "to be cold." Ideler, in the index to that work, translates it *hoch Gipfel*, "high summit." Hodgson states "that *Cylas* is a general appellation for high ranges always covered with snow." (*As. Res.* xiv. 92.) Humboldt states that *kylas* signifies "cold mountain" (*montagne froide*), and Kailassa any "very elevated summit." (*Asie Centrale*, i. 112.)

INDUS.

Mountain. Moorcroft⁷ found the "river of Gartope," at about forty miles from its supposed source, "a clear, broad, and rapid, but not deep, river." The country through which these streams flow, varies in elevation from 15,000 to 18,000 feet.

It is one of the most dreary regions in existence, the surface being for the most part formed by the disintegration of the granite of the adjacent mountains. It is swept over by the most furious winds, generally blowing from the north. These are at once piercingly cold and parchingly dry, and no vegetation is visible but a few stunted shrubs and some scanty and frost-withered herbage. It is, however, the proper soil for the production of shawl-wool, which is obtained from the yak,⁸ the goat, the sheep, certain animals of the deer kind, and even, it is said, from the horse and the dog.

The united stream bears the name of the northern confluent, Sinh-kha-bab; and, near the La Ganskiel Pass, about fifty miles below the junction, the river leaves the table-land through which it had previously flowed, and enters the deep gorges of the great depression dividing the Kouenlun or Mooz Taugh from the Himalaya. To this point, five miles from the Chinese frontier,⁹ and having an elevation of 14,000 or 15,000 feet, its course has been explored by Trebeck, the companion of Moorcroft. It is situate in lat. 32° 56', long. 79° 22', on the border of a sandy plain, or rather wide valley, studded with small lakes, having their edges incrustated with soda.† The river was here found to be about sixty yards wide, apparently deep, and in the middle of November frozen over in most parts. It is, however, fordable occasionally in this neighbourhood, becoming in summer shallower during the progress of night,¹ and deeper as the day advances, in consequence of the melting of the snows on the adjacent summits, through the sun's heat. Thirty miles below this, the river turns nearly south-west for a short

⁷ As. Res. xii. 140-450. Id. 454.

⁹ Trebeck, in Moorcroft, I. 410.

¹ Moorcroft, I. 265.

* Gerard, just quoted, observes (245), "The silky softness of the goat's fleece, and even its existence, depends on the arid air and vegetation," as the coldest tracts of the Himalaya, where not characterized by dryness, fail to support this state of animal life in perfection. This view of the subject is supported by the observations of Conolly on the Angora goat. (Journal of Roy. As. Soc. 1810, vol. vi. p. 169.)

† This appears to be the farthest point to which the Sinh-kha-bab has been ascended by any European, though, as has been seen, its feeder, the "river of Gartope," was crossed and surveyed by Moorcroft much higher.

INDUS.

distance, and then takes the direction of north-west. At Ugshi, which is about 330 miles from the source, it was surveyed by Moorcroft,² and found to be about fifty yards wide. Close to Le, the capital of Ladakh, and thirty miles below Ugshi, the elevation of its bed is not less than 10,000 feet; and if that of its source be assumed at 18,000, and its length, so far, at 360 miles, its fall* will be found to be twenty-two feet per mile. Yet the descent of the bed of the Sinh-kha-bab is far less rapid than that of the Sutluj,³ which in thirty miles descends 2,300 feet, or about seventy-six feet in the mile. Holding its course in a direction approaching to north-west, the Sinh-kha-bab, about eighteen miles below Le, is joined, opposite to Niemo, by the river of Zaskar, flowing from the district of the same name, and in a direction from south-west to north-east. The Zaskar⁴ is a very rapid, turbid river; the Sinh-kha-bab, a clear and placid stream. About thirty miles below this, and 408 from its source, Vigne⁵ found the river, at Kulutzi, crossed by a wooden bridge, and only twenty-five yards wide. The small size of the river, after a course of more than 400 miles, can only be accounted for by the excessive aridity⁶ of the elevated tract through which it has held its way. Moorcroft⁷ estimates the breadth of the river at this place at only twenty yards; but he found that it rose nearly forty feet during the season of inundation. Having flowed about fifty-five miles below this place, in a north-west direction, it receives from the south the river of Dras, which, rising in the mountains forming the north-eastern frontier of Kashmir, holds a north-easterly course of about ninety miles, and, receiving several streams both from the east and west, discharges a considerable volume⁸ of water at its confluence. From this confluence the Sinh-kha-bab takes a more northerly direction, for about forty-seven miles, to the fort of Karis, in lat. $35^{\circ} 11'$, long. $75^{\circ} 57'$, where⁹ it receives, from the north, the water of the Shy-yok, by far its most important tributary above the

* Vigne (Kashmir, ii. 341) states the elevation of Le at about 10,000 feet; according to which, the bed of the Indus there must be below that height. Moorcroft¹ states the elevation of Le to be above 11,000 feet, and that of the confluence of the Zaskar river and Sinh-kha-bab, about twenty miles farther down the stream, and consequently less elevated, at nearly 12,000 feet.

INDUS.

river of Kabool. The Shy-yok, though not explored to its source by any European, is considered, from the concurring testimony of the natives, to have its origin at the southern end of an extensive glacier, or frozen lake, embosomed in a gorge on the southern side of the Karakorum or Mooz Taugh Mountains, and in lat. $35^{\circ} 33'$, long. $77^{\circ} 40'$. It holds a generally south-easterly course for about forty miles, and then turns, first to the north-west, and afterwards to the west, for about 185 miles farther, to its junction with the Sinh-kha-bab. The accumulation of ice in the great glacier from which this river proceeds, its subsequent dislodgement, and the obstruction thereby caused in the channel of the Shy-yok, have from time to time caused the water to make violent irruptions through its ordinary barriers, leading to dreadful inundations. The great and sudden flood of the Indus, which, in the summer of 1811, was felt as far as Attock, and even beyond it, has been generally attributed to such a cause.¹ At the confluence of the two rivers, the Shy-yok is about 150 yards broad, the Sinh-kha-bab not more than eighty; but the latter is the deeper, and has a greater body of water. Below the confluence, the river is known by the name *Aba Sind*² (*Indus Proper*). About twenty-five miles below the point of junction, and westward of it, the Indus, opposite Iskardoh, receives from the north the river of Shyghur. The downward course of the Indus between Iskardoh and Makpon-i-Shagaron, in which interval it runs a distance of about ninety miles, is in a direction west-north-west.³ At Makpon-i-Shagaron, in lat. $35^{\circ} 48'$, long. $74^{\circ} 30'$, according to Vigne, who viewed the place at the distance of eighteen miles, the river emerges from the mountainous region, and, turning south, a course which it thenceforth continues to keep generally to the sea, takes its way through the unexplored country north of Attock. Vigne caused the part intervening between Iskardoh and Makpon-i-Shagaron to be explored by his native servants, who found it to flow through a succession of rocky gorges and deep and narrow valleys, rugged and difficult, but presenting nothing else remarkable: more recently this section has been examined by Europeans. About three miles south of Makpon-i-Shagaron, it receives, from the north-west, a considerable stream, called the river of Gilghit.⁴ Vigne, who viewed the Indus at Aho, about twenty-five miles below

⁴ Id. 303.

INDUS.

this confluence, describes it there as a vast torrent rushing through a valley six or seven miles wide, and holding a southerly westerly course, which might be traced downwards for at least forty-five miles. From thence to Derbend, a distance of about 111 miles, its course lies through countries inhabited by barbarous and fanatical tribes of Mussulmans, and which does not appear to have ever been explored by Europeans.³ At Derbend, on the northern boundary of the British territory of the Punjab, it was in 1837 surveyed by Lieutenant Leech, of the Bengal Engineers, and there, in the middle of August, about which time it is fullest, he found it 100 yards wide. From this place, about 812 miles from its source, and in lat. 34° 15', long. 72° 51', he descended the river on a raft to Attock, a distance of about sixty miles.⁴ In this interval, the river, flowing through a plain, has a broad channel of no great depth, containing many islands, and is fordable in five places.

The fords are only available in winter, when the river is lowest, and even then the attempt is perilous, from the rapidity of the current and the benumbing coldness of the water. If the account given by Masson⁵ be correct, 1,200 horsemen were swept away and drowned on one occasion when the Indus was crossed by Runjeet Singh at one of these fords. Hough⁶ states the number lost at 7,000. Shah Shooja forded the Indus in 1809⁷ above Attock, but his success was considered to be almost a miracle. Where crossed by Forster,¹ about twenty miles above Attock, in the middle of July, and consequently when fullest, it was three-quarters of a mile or a mile in breadth, with a rough and rapid current, endangering the ferry-boat, though large enough to contain seventy persons, together with much merchandise and some horses. Close above Attock, the Indus receives, on the western side, the great river of Kabool, which drains the extensive basin of Kabool, the northern declivity of Sufeid Koh, the southern declivity of Hindoo Koosh and Chitral, and the other extensive valleys which furrow this last great range on the south. Both rivers have large volumes of water, and are very rapid,² and as they meet amidst numerous rocks, the confluence is turbulent, and attended with great noise. The Kabool river appears to have nearly as much water as the Indus, and in one respect has an advantage over it, being

INDUS.

navigable for forty miles above the confluence,³ while the upward navigation of the Indus is rendered impracticable by a very violent rapid, immediately above the junction. Both rivers have gold in their sands, in the vicinity of Attock.⁴ It is obtained in various places along the upper course of the Indus, or its tributaries; as at Gartope,⁵ in Hundes, and also near the confluence of the Shy-yok, and near Iskardo. Attock, just below the confluence of the Kabool river, about 872 miles from the supposed source of the Indus, and in lat. $33^{\circ} 54'$, long. $72^{\circ} 16'$, is remarkable, as being the limit of the upward navigation of the latter river, and the place most frequented for passage over it from Hindostan to Afghanistan. The passage is,⁶ for the greater part of the year, made by bridges of boats, of which there are two: one is above the fort of Attock, where the river is 800 feet wide; the other below, where it is above 540 feet wide. Wood found the depth at Attock, in August, to be sixty feet; the rate of the current six miles an hour; the breadth, where he measured it above the place of the bridge, 858 feet. The inundation affects the depth and speed of the current, rather than the breadth, at Attock. This remarkable point is about 1,000 feet above the sea, and consequently about 17,000 feet below the source of the Indus,* which falls, therefore, to that extent in 872 miles. This is at the average rate of about twenty feet per mile. The length of its channel from Attock to the sea is 942 miles,⁷ and consequently, in that lower part of its course, it falls little more than a foot per mile. At Attock, the river, flowing generally south-south-west, as it does below Derbend, enters a deep rocky channel in the Salt range, or secondary mountains, which connect the eastern extremity of Sufeid Koh with the base of the Himalaya, in the Punjab. In this part of its course, the river, as well as the fort on its left or eastern bank, is known by the name of Attock, in consequence, as is generally supposed, of the prohibition under which the Hindoos originally lay of passing it

⁷ Wood, in Burnes, *Pers.* Narr. 305.

* Burnes (*Personal Narrative*, 112-120) reached Peshawur by water, a distance of about fifty miles from Attock, and, consequently, the Kabool river and its tributary, by ascending which this was effected, cannot have a fall much exceeding a foot per mile. Griffith (*Append. to Hough*, 74) ascertained the height of Peshawur to be 1,068 feet. It may, therefore, be safely concluded that the height of Attock above the sea is about 1,000 feet.

westward.⁸ * For about ten miles below Attock, the river, though in general rolling between high cliffs of slate rock, has a calm, deep, and rapid current; but for above 100 miles farther down, to Kala-Bagh, it becomes an enormous torrent, whirling and rolling among huge boulders and ledges of rock, and between precipices⁹ rising nearly perpendicularly several hundred feet from the water's edge. The water here is a dark lead-colour, and hence the name *Nilab*,¹ or "blue river," given as well to the Indus as to a town on its banks, about twelve miles below Attock. At Ghora Trup, about twenty miles below Attock, the immense body of water passes through a channel only 250 feet wide, but having a depth of 180 feet, the velocity being about ten miles an hour.

Wood, describing the course of the river from Attock to Kala-Bagh, says,² "It here rushes down a valley varying from 100 to 400 yards wide, between precipitous banks from 70 to 700 feet high." During inundation, the river rises in this part about fifty feet. It is obvious, that at the season when this occurs, extending from the end of May to September, the upward voyage is impracticable. The downward voyage may at all times be performed, though attended with considerable danger during inundation. It has been suggested, that there are several places along this rock-bound channel where it would be practicable to construct an iron bridge across the river, the breadth at various points not exceeding 300 feet (sometimes falling short of this), and the banks being solid limestone.³ The natives frequently venture down this vast torrent, floating on a mussuk or inflated hide.⁴ The boats employed here are called duggahs,⁵ and are heavier and more strongly built than the dundis, or boats used in the lower part of the river. The upward voyage, when practicable, is effected by means of tracking,—sails resorted to previously, being either useless, from the prevalence of dead calm, or dangerous, in consequence of the varying and violent squalls produced in the current of air by the effect of the lofty and irregular banks. As the river

* According to Wilford (As. Res. vi. 529), *Attaca*, or "the forbidden." The prohibition of crossing seems, however, pretty generally set at naught, as was seen in the case of the Hindoos in the British armies invading Afghanistan. Hough (334) derives the name from *Atak* or *Utuk*, "prevention" or "obstacle."

INDUS.

approaches the plain country below Kala-Bagh, the channel expands nearly to the breadth of 500 yards; just above that town the width is 481 yards.⁶ Below Kala-Bagh, in lat. 32° 57', long. 71° 36', and about 830 miles from the mouth, the river enters the plain, the east or left bank here becoming low, while on the right the Khussoree Hills rise abruptly from the water, having, as Burnes⁷ observes, "the appearance of a vast fortress, formed by nature, with the Indus as its ditch." Along the base of these hills, which stretch south-south-west for about seventy miles, the channel is deep, generally having soundings about sixty feet.⁸ On entering the plain, the water loses its clearness, and becomes loaded with mud. In inundation, the depth of the stream is not so much affected in this part of its course as are the breadth and velocity; and here, as well as in the Delta, the river, when swollen, overflows the adjacent country to a great extent.⁹ From Kala-Bagh, southwards, to Mittunkote, distant about 350 miles, the banks, either right or left, or both, are in several places so low, that the first rise of the river covers the country around with water, extending, as the inundation advances, as far as the eye can reach. On this portion of the river's course Wood¹ says:—"So diffused was the stream, that from a boat in its centre no land could be discovered, save the islands upon its surface, and the mountains on its western shore. From Dera Ismael Khan to Kala-Bagh, a distance of above 100 miles, the eastern bank cannot once be seen from the opposite side of the river, being either obscured by distance or hidden by interjacent islands." These islands, when the river is low, are gentle elevations of the mainland, much frequented on account of the luxuriant pasture; but during the season of inundation, they, as well as the immediate banks, are deserted, in consequence of the danger resulting from the sudden, irregular, and irresistible irruptions of the current. "In this month" (July), observes Wood,² "the islands are abandoned, and as the boat swiftly glides amidst the mazy channels that intersect them, no village cheers the sight, no human voice is heard; and, out of sight of land, the voyager may for hours be floating amidst a wilderness of green island fields." The habitations are generally placed at a considerable distance from the banks. If this precaution be disregarded, they are exposed to the fate of Dera Ismael Khan,³

INDUS.

a large town, which, with its flourishing palm-groves, was totally swept away in 1829. Sometimes the Indus suffers very sudden and extraordinary changes. For instance, on one occasion, at the setting in of night, Wood found it to have an unbroken expanse of 2,274 yards in breadth,⁴ and next morning its bed was a confused mass of sand-banks, in which the main channel was only 259 yards wide; this extraordinary change having occurred in consequence of a great body of the water of the river having made its escape into a low tract in the vicinity of its course. As the inundation originates in the melting of the snows in the Hindoo Koosh and the Himalaya, it commences with spring, and retrogrades as autumn advances; and so regular is this process, that, according to Wood,⁵ it begins to rise on the 23rd of March, and to subside on the 23rd of September, its maximum being about the 6th or 7th of August. The average rise of the inundation between Kala-Bagh and Mittunkote is eight feet and a half;⁶ the declivity of the water's edge is eight inches per mile. In this part of its course, with the exception of the Koorum, the Indus receives scarcely any accession to its water. Higher up it has a few tributaries, though of no great importance. Thus, on the right, or west bank, in lat. 33° 25', long. 71° 52', the Toe, described by Elphinstone⁷ as a deep and clear stream, falls into it. On the left, or east side, in lat. 33° 47', long. 72° 16', the Indus receives the Ilurroo,⁸ a small stream; and on the same side, lower down, in lat. 33° 1', long. 71° 46', the Swan,⁹ also an inconsiderable stream. The Indus, between Kala-Bagh and Mittun Kote, in consequence of the great breadth of its channel, is scarcely affected by rain; but in the narrow part, above Kala-Bagh, it sometimes rises eight or nine feet in a short time from this cause. In many places where the river flows through the plain, there is an inner and an outer bank. The outer banks¹ run at a great distance from each other, and between them, during inundation, the vast body of water rolls often in several channels, separated by shifting islands: when the river is low, this great course becomes a shallow valley of very irregular breadth, and the shrunken river meanders along its bottom. If the outer banks were continuous, the river would roll along in a stream varying in breadth according to the greater or less degree of inundation; but at all times, even when fullest, in a defined

INDUS.

channel of moderate breadth, though varying greatly in different parts. In many places, however, the outer bank is wanting, and, during inundation, the river expands over the country, converting it into an extensive lake. Between Mittunkote and Bulkur, the inundation extends sometimes twenty miles from the western side of the river, in its low state, and ten or twelve from the eastern side.² Wood³ gives the width of the shrunken river as varying from 480 to 1,600 yards, and the average width at about 680 yards; its usual maxima of depth at nine, twelve, or fifteen feet: but its bed is so irregular, and so liable to be obstructed by shifting shoals, that though it cannot be regularly and safely forded in any part, except that intervening between Torbela and Attock,⁴ its navigation, even below the confluence of the Kabool, cannot be effected at all times, and continuously throughout its whole course, by boats drawing more than thirty inches water. The general velocity of the stream in its shrunken state is estimated by Wood at three miles an hour; but he observes,⁵ "it is scarcely necessary to remark, that the three last items (breadth, depth, velocity) are very inconstant. At no two places are the measurements exactly alike, nor do they continue the same at one place for a single week." In fact, the breadth, during inundation, is only 250 feet at Ghora Trup;⁶ and below Mittunkote,⁷ it in one place amounts to thirty miles; the depth at the same time and place is 186 feet, and in other places only twelve feet: the velocity at Ghora Trup, during the inundation, is ten miles an hour; at other places, not half that, and when the river is low, often not more than two miles an hour.

The general course of the river is a little west of south from Attock to the confluence of the Punjnad, the channel which conveys the collected streams of the Punjab. This confluence is on the left or eastern side of the Indus, two or three miles below Mittunkote, in lat. 28° 55', long. 70° 28', and about 490 miles from the sea. Above the confluence, the breadth of the Indus is less than that of the other river, but, in consequence of the greater depth and velocity, the former has the greater volume of water. Wood⁸ found the Indus having a breadth of 608 yards, a velocity of about five miles an hour, a depth of twelve or fifteen feet, and discharging 91,719 cubic feet per second. The Punjnad had a breadth of 1,766 yards,

INDUS.

a velocity of about two miles an hour, a depth of twelve or fifteen feet, and discharged 68,955 cubic feet per second. Below the confluence, the Indus is in its lowest state 2,000 yards wide. Its aspect in this part is well described by Boileau.⁹ "At the place where we crossed the Indus, almost immediately below its junction with the Punjnad, its stream 2,047 yards, or nearly a mile and a quarter, in breadth, at a place where its width was unbroken either by islands or sand banks. The banks are very low, and the water very muddy having just begun to rise, from the melting of the snows at its sources; nor is the stream of very great depth, except in the main channel; but with all these drawbacks, it is a magnificent sheet of water—a very prince of rivers." For a considerable distance above and below Mittunkote, the country is low,* and the inundation extensive, reaching to Shikarpoor, and even to some places distant from the river twenty miles to the west and extending eight or ten miles to the east. Lower down, at Roree, the stream makes its way through a low ridge of limestone and flint, which stretches from the mountains of Cutch Gundava,¹ eastward, to Jessulmair. There are strong indications that the stream, in remote ages, swept far eastward along their northern base, and irrigated the level tract at present desert, but exhibiting numerous proofs that it once was traversed by large streams,² and was both fertile and populous. At present, this ridge is cut, not only by the Indus, but, a few miles farther east, by the Eastern Narra, which diverges from the main stream, on the eastern side, a short distance above Roree, and takes a south-easterly course through the desert, which it is usually lost, though in violent inundations, it runs onward to the sea in a great volume of water, discharging it through the Koree, or most eastern mouth, which is in general quite deserted by the fresh water. At Roree there are a few rocky islets, the largest of which, that of Bukkur, contains extensive fort, and divides the river into two channels. A few miles below this place, the Western Narra, a great and permanent branch, divaricates from the Indus on the western side.

* Such is the statement of Wood (in Burnes, Personal Narr. 24 Lord, on the contrary (Medical Mem. 61), states that the banks below Mittunkote are not much inundated; but Wood's industrious researches and general accuracy are well known.

INDUS.

and, after a tortuous course of nearly 120 miles, rejoins the main stream about four miles south-east of Schwan. A little above that town, the Narra has a large but shallow expansion, called Lake Manchur, varying in circuit from thirty to fifty miles, according to the greater or less degree of inundation. This great watercourse, in the part intervening between Lake Manchur and the Indus, has a name distinct from that of the Narra, being called the Arul. From Schwan, downwards, to the efflux of the Fulailee, a distance of about eighty miles, the bed of the river is much depressed below the level of the adjacent country, and the banks are elevated from sixteen to twenty feet³ above the surface in the low season; in this part of the course, inundations rarely overspread the country, and irrigation is effected by raising the water with the Persian wheel. The Fulailee, a large branch, though yearly diminishing, leaves the Indus, on the eastern side, about twelve miles north of Hyderabad, and, flowing south-east, insulates the Gunjah Hills, on which that town is built, as, about fifteen miles below it,⁴ an offset running westward rejoins the main stream. At Triceal, where is the point of reunion, in lat. 25° 9', long. 68° 21', the Delta commences; all below it, and contained between the Fulailee on the east, and the extreme western branch of the Indus, being, with little exception, alluvial, and obviously deposited by the river. The Fulailee holds a south-easterly course, in the lower part of which it bears the name of the Gennec, which, communicating, during high inundations, with the Phurraun, is thereby discharged into the sea through the Korce mouth. The Korce mouth may more properly be termed an arm of the sea, as the water is salt, and it receives a current from the Indus only during inundations of unusual height. Burnes⁵ found it seven miles wide and twenty feet deep at Cotasir, about twenty miles from the open sea. Some suppose it to have once been the principal mouth of the Indus, constantly discharging the water of the Narra, which they consider to have been the chief branch. It is at present the most eastern of the estuaries connected with the Indus. The Pinyarce, a wide branch, which diverges from the Indus at Bunnua, about forty miles below Hyderabad, is navigable, downwards, to within fifty miles of the sea: at that distance the navigation is closed by a bund⁶ or dam, thrown across it at

³ Wood, in Burnes, Pers. Narr. 341, 342. Lord, Med. Mem. on the Plain of the Indus, 63.

INDUS.

Maghribee; but as the water makes its way through small creeks in time of inundation, the navigation recommences below the bund, and continues to the sea. The Pinyaree discharges itself through the Sir estuary,⁷ two miles wide at its mouth, with a depth on the bar of one fathom, and of from four to six inside: it is next, westward, to the Koree mouth. At about six miles above Tatta, the Kulairee, a small branch, leaves the Indus on the right or western side, and may be considered to mark the commencement of the Delta on that side. Were not its water lost by absorption and evaporation, it would generally insulate Tatta,⁸ as it now does occasionally. At about five miles below Tatta,⁹ and sixty miles from the sea, the Indus is divided into two great branches,—the Buggaur, which flows westward, and the Sata, which maintains the previous course of the Indus southward, and is in strictness the continuation of that river. The Mull and the Moutnee, formerly great branches, leaving the left or eastern side of the Sata, are now so diminished as to be almost dry. The estuaries, however, remain: that of the Mull is navigable for boats; it is the mouth next westward of the Sir; and beyond this, in the same direction, is the Kaha, or estuary of the Moutnee, at present unnavigable.² A few miles further west is the Kookywarree mouth, now blocked up by a sand-bank, but forming, in 1837, when Carless published his account, “the grand embouchure of the Indus,”³ having a breadth of 1,100 yards. Even then, however, the navigation was rendered difficult by an enormous bank stretching across it, and extending five miles out to sea. The Sata now discharges the great bulk of its waters through the Kedewarree, the next mouth proceeding westward, the embouchure of which was considerably diverted during the inundation⁴ of 1848. Its channel is well defined, having no less than from seven to eight feet water at low spring tides. Following the line of coast in a north-westerly direction, the next estuary is that of the Hujamree, where the English force, advancing in 1838 on Affghanistan, were landed.⁵ Next in succession, in the same direction, is the Jooa mouth, leading by the river of the same name to the Buggaur, and practicable to the junction for river steamers during the floods. During the low-season, the estuaries of both the Jooa and Hujamree are safe roads⁶ for ingress or

egress, independent of fresh-water discharge. The Dubbar and Gorabee, now united, form the next mouth, which has five feet on the bar at low water; beyond which is the Pityanee, also communicating with the Buggaur, by which it was for a time deserted.⁷ Further on is the Cooddee mouth, having five feet at low water; and this is succeeded by the Pitty, one of the largest, deepest, and best-defined of the mouths of the Indus, and much frequented by steamers to and from Kurrachee. Next, and last, is the Gizree, the estuary of a branch of the Indus formerly obliterated, but again rendered navigable for boats, though having but two feet water at its mouth at low tide.

⁷ Burnes, III. 235.

The distance from the Koree estuary, in the south-east, to the mouth of Gizree creek, in the north-west, is about 130 miles, and such is, consequently, the length of the seacoast of the Delta. There are several mouths of less importance, and the enumeration of which is unnecessary. There are also numerous intricate cross-channels, allowing an inland navigation for small vessels between the various creeks and branches. To sum up briefly this involved subject—during the season of low water, the Indus falls into the sea by only one channel of any importance: this, called the Sata, Munnejah, or Wanyanee, has its efflux by the Kedewarree mouth, the entrance of which is very unsafe, and consequently avoided by coasting craft. "Impetuous currents and shifting sands are dangers they are not disposed to encounter. Sharp vessels grounding on such a locality seldom escape serious disaster, a few hours being sufficient to engulf them in a bed of sand, from which no human aid or skill can extricate them."⁸ The other mouths, with the exception of the Pitty, are, in the season of low water, little more than creeks silted up and closed at various distances from the sea. The number of these creeks or estuaries at present at all worth noticing, is thirteen, occurring in the following order in proceeding from south-east to north-west: the Koree, Seer, Mull, Kaha, Kookewarree, Kedywarree, Hujamree, Jooa, Durbar, Pittecanee, Coondce, Pitty, and Gizree. The tide influences the Indus nearly up to Tatla,⁹ a distance of about seventy miles. The spring tide rises nine feet.

⁸ Mem. on the Indus, ut supra.

⁹ Wood, in Burnes, Pers. Narr. 308.

The description above given of the mouths and lower

INDUS.

- branches of the Indus is mainly applicable to their state when the river is lowest. When the river is at its height, as Burnes¹ observes, "the great branches of this river are of themselves so numerous, and throw off such an incredible number of arms, that the inundation is general; and in those places which are denied this advantage by fortuitous circumstances, artificial drains, about four feet wide and three deep, conduct the water through the fields." For about twenty miles from the sea, the whole country is nearly submerged. At this season, the water of the sea is fresh for some distance from the land, and discoloured for a still greater.*² The quantity of water discharged by the Indus is by no means proportionate to the enormous supplies derived from its numerous tributaries; the larger portion seems lost by evaporation, absorption, and employment for irrigation in a sultry climate where rain seldom falls. Wood and Lord³ state the *maximum* discharge in August, at 446,080 cubic feet per second, and in December, at 40,857 cubic feet per second. The water in the early part of the season of inundation is very unwholesome, in consequence of the great quantity of decayed vegetable and animal matter held in suspension by it. Lord,⁴ who made experiments by desiccating the water and weighing the residuum, computes that the quantity of silt annually discharged by the river, during the seven months of inundation, would suffice to form an island or bank forty-two miles long, twenty-seven miles broad, and forty feet deep; but it is clear, that this computation must be received with great allowances, as, according to it, the land of Sinde must have been much farther advanced into the Indian Ocean than it is found to be. After the early part of the season of inundation, if the water be preserved until the earthy admixture has subsided, it is both palatable and wholesome.
- ⁵ Wood, *Oxus*, 25. The Indus is infested by alligators,⁵ they are of the *guryial* or long-snouted kind, the common kind being unknown in the river, though numerous in lagoons near Kurrachee. 'The *bolun*,⁶ a cetaceous animal, the size of a porpoise, is common. Nowhere

* The junction of the fresh and salt water, according to Burnes, is "without violence, and might be now and then discovered by a small streak of foam and a gentle ripple." Pottinger states, that it causes "a very confused rippling" (p. 9).

INDUS.

are fish finer or more abundant, and they form a large portion of the sustenance of the population of the adjacent country. Westnacott⁷ enumerates sixteen kinds, some as long as six or seven feet. The *pulla*, a species of carp, is a rich and delicious fish, though bony to a degree dangerous to an incautious eater. It is largely consumed on the spot, and also dried for exportation,⁸ forming an important article in the scanty trade of Sindé. The fisherman of the *pulla* floats, with his breast downwards, on an oblong earthen vessel, closed in all parts except an orifice, which he covers by applying his stomach to it. In this position, he passes along, taking the fish with a net at the end of a long bamboo, and depositing it in the vessel.

⁷ Acc. of Khyrpoor, in Jour. As. Soc. 1103.

⁸ Leech, on the Commerce of Cutch, 51.

Wood⁹ observes, that "the population of the banks of the Indus are almost amphibious. The boatmen of Lower Sindé, for example, live, like the Chinese, in their boats. If a native of the Lower Indus has occasion to cross the stream, a pulla-jar wafts him to the opposite shore. At Bukkur, the *mussuk* (inflated hide) supersedes the pulla-jar; and from Mittunkote upwards, every man living near the river has one. Kossids (couriers) so mounted make surprising journeys, and the soldier, with sword and matchlock secured across his shoulders, thus avoids the fatigue of a long march." The leisure time of every description of persons is spent in the water, or floating on it. Such familiarity with the water naturally inclines the population to regard it as the great medium of commercial intercourse, and Hamilton,¹ who visited Sindé at the close of the seventeenth century, found the traffic considerable. Until within the last few years, the trade of the Indus was obstructed, and in many places destroyed, by the oppression and voracious rapacity of the various petty powers and tribes claiming sovereignty over divers parts of its course. The success of the British arms has led to the restoration of a better state of things. The *doondah*, or boat generally used in Lower Sindé, is a clumsy vehicle, flat-bottomed, of capacity varying from thirty to fifty tons, with bow and stern, each forming a broad inclined plane, having, the former, an angle with the surface of the water of about twenty, the latter of about forty degrees. The *jumptees*, or state barges of the ameers, were of considerable dimensions. Wood measured one 120 feet long, eighteen

⁹ Oxus, 104.

¹ New Acc. of the East Indies, i. 114-116.

INDUS.

and a half broad, and drawing two feet six inches water. In the upper part of the Indus, the boat chiefly used is the *zohruk*, in most respects resembling the doondah, except that it is smaller, lighter, and more manageable. The *duggah*, used only in the boisterous part of the current above Kala-Bagh, is very strongly built, with stern and bow greatly projecting, to keep away the hull from the bank, in case of collision with it. It is so heavy and unmanageable, that if brought far down the river, it is usually disposed of there, to save the labour and expense of tracking it back.² In proceeding up the stream when the wind is unfavourable, as is generally the case during the half-year between the autumnal and vernal equinoxes, way must be made exclusively by tracking. During the other half-year³ southerly winds prevail, and the boats run up under sail before it, except where the use of sails becomes dangerous from peculiar circumstances. Steam will doubtless be found highly efficient in navigating the Indus. Communication by its means has indeed been already established between Kurra-chee and Mooltan, by government vessels, for goods and passengers; an advantage which it is confidently believed will shortly be extended to Kala-Bagh, on the Indus, and to the town of Jhelum, on the tributary of that name. The principal obstacle to its general employment is the dearth and inferior quality of the firewood of Sinde; but coal⁴ has been discovered near the Indus, both in the Punjab and on the western bank of the river, though further investigation is required as to its quality and quantity.

In estimating the advantages to be drawn from the navigation of the Indus, reference should be had, not only to the home consumption of Sinde and the Punjab, but also to the demand of the various marts of those countries through which Afghanistan, Khorasan, and Central Asia are largely supplied; and the best means of advancing this most important branch of trade, have been deemed to be the establishment of grand periodical fairs at suitable points on the banks of the Indus, and in affording facilities of communication and protection to the commercial classes. Kurra-chee and Sukkur have been selected as sites for this purpose.

Although some of the particulars following have been already noticed, it may be convenient, in conclusion, to bring them into

one view. The length of the navigable part of the river from the sea to Attock has been ascertained,⁵ by measurement, to be 942 miles; that of the upper part is about 860 miles; making a total length, in round numbers, of 1,800 miles. The average declivity of the watercourse from the supposed locality of the source to Attock is, per mile, twenty-four feet; from Attock downwards to Kala-Bagh, a distance of about 110 miles, it is twenty inches; from this last place to Mittunkote, a distance of about 350 miles, it is eight inches; and thence to the sea, six inches. The Indus is probably destined to be an important channel of political and commercial communication.

IRAK RIVER, in Sinde, rises at the base of the Bhool Hills, in the mountainous tract between Kurrachee and Sehwan, and in about lat. $25^{\circ} 20'$, long. $67^{\circ} 45'$. It holds a course of about forty miles in a south-easterly direction, and empties itself, in lat. $21^{\circ} 53'$, long. $68^{\circ} 6'$, into the dund or lake of Kunjur, a considerable body of brackish water, abounding in fish. Though the stream fails in time of drought, water may always be obtained by digging in the bed.

IREJ.—See **ERICI**.

E.I.C. Ms. Doc.

IRLAPPAUL.—A town in the British district of Nellore, presidency of Madras, 37 miles S.W. of Ongole. Lat. $15^{\circ} 12'$, long. $79^{\circ} 40'$.

IRON ISLAND, off the coast of the Tenasserim provinces, measuring twenty miles in length from north to south, and two in breadth. The north part of the island terminates in a point with rocks, having close to them from twenty-five to thirty fathoms water.¹ Lat. $12^{\circ} 45'$, long. $98^{\circ} 28'$.

¹ Hornburgh,
Directory, li. 37.

IRRAWADDY.—A river rising at the eastern extremity of the Snowy range of the Himalayas, the source of its principal tributary being in lat. $28^{\circ} 5'$, long. $97^{\circ} 58'$. It flows in a direction from north to south, traversing the heart of the Burmese territories, which it separates into two nearly equal divisions. After a course of 790 miles, it reaches the southern frontier of Burmah, and crossing over into the British province of Pegu, pursues its way for a further distance of 270 miles, reaching the Bay of Bengal by several mouths, which form the delta of the Irrawaddy. At the distance of 540 miles from its source, it passes the Burmese town of Ummerapoora; and a few miles farther, it flows past the capital of the empire, sixty-five miles beyond which it receives, on the right side, its great confluent the Khyendwen, flowing also from the north. The course of the united stream through the Burmese territory continues for the further distance of 180 miles. Fifty miles below the southern frontier of Burmah, as at present defined, it passes the British town of Prome; ninety miles below which it diverges into two principal branches, each measuring about 130 miles in length. The more easterly of these branches is

IRRAWADDY.

designated the Rangoon or Siriam river, from the cities of those names built upon its banks; and it falls into the Gulf of Martaban, in lat. $16^{\circ} 28'$, long. $96^{\circ} 24'$. The other main branch, intersecting the province in a south-westerly direction, is known as the river of Bassein, and discharges itself into the Bay of Bengal, in lat. $15^{\circ} 50'$, long. $94^{\circ} 26'$. Innumerable water-courses, forming the delta, are thrown off from these two rivers.

From experiments instituted in 1852 across the river at Prome, to ascertain the velocity of the current, it appeared that the fall of the stream from October to February amounted to about twenty feet; the mean depth on the 25th April was found to range from twelve to thirteen feet; and its mean speed was computed at about two miles per hour.¹ The Bassein branch affords a passage for the largest ships for sixty miles from its mouth, and for forty miles further for vessels of 300 tons. No river of similar magnitude, it is stated, presents so few obstructions.² According to the theory of M. Klaproth³ and the Chinese geographers, the Irrawaddy is a continuation of the Sanpo of Thibet; but though absolute proof be yet wanting of the identity of the latter with the Brahmapootra, little doubt appears to be now entertained on this point. A high authority,⁴ exploring the Irrawaddy at a spot obviously at no great distance from its source, observes: "The Irrawaddy we were surprised to find but a small river, smaller even than we anticipated, though aware of the proximity of its sources. It was not more than eighty yards broad, and still fordable, though considerably swollen by the melting snows; the bed was of rounded stones, and both above and below where we stood, we could see numerous shallow rapids. As to the origin of the river, I felt perfectly satisfied from the moment I made inquiries at Sadiya; but since further evidence, founded on the report of the natives, might not have satisfied those who had adopted M. Klaproth's opinion, that the waters of the Sanpo find an outlet through the channel of the Irrawaddy, I had resolved, if possible, to have ocular and incontrovertible demonstration; and I could not help exulting, when standing on the edge of the clear stream, at the successful result of our toils and fatigues. Before us, to the north, rose a towering wall, stretching from west to east, offering an

ISA—ISK.

awkward impediment to the passage of a river in a cross direction; and we agreed on the spot, that if M. Klaproth proved determined to make his Sampoo pass by Ava, he must find a river for his purpose considerably removed towards or into China." A chart of the Irrawaddy from Rangoon to Yandaboo has been published,⁵ and further attempts to explore this river have, it is believed, been successful in adding somewhat to the stock of knowledge on the subject. But at present their results are not available for general use, as no public communication, either official or otherwise, has yet been made of them. A short time will probably throw open the discoveries to all who may take an interest in the matter.

⁵ *Bengal Marine Disp.* 4 Aug. 1852.

ISAKHANKAKOT,¹ in Sirhind, a village with a small fort, on the route from Ludianah to Ferozpoor, and 46 miles² W. of the former town. It is situate in an open, level country, partially cultivated, and capable of yielding supplies for a moderate number of troops. Water is abundant, and the road in this part of the route generally good, though in some places sandy, yet not so much so as to present serious difficulties for guns or carriages. Distance N.W. from Calcutta 1,134 miles. Lat. 30° 57', long. 75° 16'.

ISHAMUTTEE.—The name of one of the numerous water-courses of the Ganges which intersect the lower provinces of Bengal: it divaricates from the Martabhangha in lat. 23° 24', long. 88° 42', and flowing in a southerly direction for seventy miles through the British districts of Nuddea and Barasut, falls into the Bay of Bengal through the Soonderbunds.

ISHAPORE.—A village on the left bank of the Hooghly river, in the British district of Barasut, presidency of Bengal. At this place are the powder-works of the government. The manufacture of gunpowder at Ishapore was, however, directed to be suspended¹ in 1852; and though renewed² at a later period under a temporary emergency, a desire was expressed by the home government that the future manufacture of this article should be transferred to a station in the upper provinces. Distant N. from Calcutta 13 miles. Lat. 22° 36', long. 88° 23'.

ISKARDOH,¹ the capital of Bultistun, is situate in an elevated plain, forming the bottom of a valley embosomed in stupendous ranges of mountains. The plain or valley of Iskardoh is nineteen miles long and seven broad.² Its soil is

ISKARDOIL

formed of the detritus brought down and deposited by the Indus, and by its great tributary the Shighur river; the confluence being at the northern base of the rock on which the fort is built. The killah or rock, the site of the fort, is on the left bank of the Indus,³ here a deep and rapid torrent, above 150 yards wide.* It is two miles long, and at the eastern end, where it is highest, rises nearly perpendicularly 800 feet above the river, from a buttress of sand, loose stones, and broken rocks. The killah has this mural face on every side, except the west, where it slopes steeply to the plain. Vigne considers that it could be rendered as strong as Gibraltar, to which, in appearance, it bears much resemblance. The castle of the former sovereigns of Bultistan stands on a small natural platform about 300 feet above the bed of the river, and is built of stone, with a framework of timber, and numerous strong defences against musketry. It is approached by a steep zigzag path, traversed by gateways and wooden defences, several of which are also disposed in such parts of the sides of the rock as require to be strengthened. There is a look-out house on a peak, a little above the castle, and another on the summit above that. Everything in the interior of this stronghold is constructed for defence rather than comfort, the place "being a confusion of break-neck stairs, low doors, and dark passages." There is a splendid view of the valley and the river from the windows. The highest summit of the rock is a small level space of a triangular shape, and here are piled stones, ready to be rolled down for the destruction of assailants. It is scarcely accessible, except on the western side; and there, at a height of about 200 feet, the acclivity is strongly fortified by walls and square towers. The formation of the rock is gneiss. There is no water in the upper part of the killah, but below the castle is a fine spring. The residence of the population attached to the seat of government of this fallen state is on the plain at the base of the rock, and can, according to Vigne,⁴ "hardly be called a town, being a straggling collection of houses." The number of these houses is estimated by Moorcroft⁵ at 150. Vigne displays the enthusiasm of an ardent admirer of the picturesque in describing the appearance of this singular and secluded place,

³ Moorcroft, *Punj.*
Bokh. ii. 261.

⁴ ii. 240.

⁵ ii. 262.

* According to Vigne (ii. 245). Moorcroft states it to be 300 yards wide (ii. 262).

ISKARDOH.

as viewed by him on his first visit to it from the direction of Cashmere. "I, the first European who had ever beheld them (so I believe), gazed downwards from a height of 6,000 or 7,000 feet upon the sandy plains and green orchards of the valley of the Indus at Iskardo." "The rock, of the same name itself with the rajah's stronghold on the east end of it, was a very conspicuous object. The stream from the valley of Shighur, which joins the Indus, as it washes its foot, was visible from the spot where I stood, but the latter river was hidden by the height of its left bank, whilst on the north, and wherever the eye could rove, arose with surpassing grandeur a vast assemblage of the enormous summits that compose the Tibetan Himalaya."⁶ Respecting the origin of Iskardoh, Wade⁷ mentions an absurd tradition, which at least has the interest of novelty for those whose knowledge of the exploits of "the great Emathian conqueror" is derived from classical sources. It is, "that Alexander the Great came here on an expedition towards Khata, or Scythia (modern China), and that the Koteli Mustak, or the Mustak Mountains, which lie between Yargand and Khata, being at that time impassable on account of the depth and severity of the snow, the Macedonian halted on the present site of the capital until a road could be cleared for his passage; when, leaving every part of his superfluous baggage, together with the sick, old, and infirm of his troops, behind in a fort which he erected while there, he advanced against Khata. These relics of the army founded a city, which they named Iskandaria, or Alexandria, now pronounced Iskardoh." The tradition received no countenance from Ahmed Shah, the intelligent gylfo or sovereign of the country, to whom Moorcroft⁸ applied for information on this curious subject. Neither the gylfo, nor any other inquirer, had been able to find any trace of Greek colonists. Vigne,⁹ who at one time maintained the fabulous Greek origin of Iskardoh, in retraction states, that "Iskardo, Skardo, or Kardo, as it is sometimes called, is obviously only an abbreviation of Sagara Do, the two floods or rivers." He then mentions, that the people of Ladakh called it Sagar Khood, and adds, "Sagara is an old Sanscrit word for the ocean; and in this case Sagar Khood may signify the valley of the great flood or river: *do*, signifying two in Persian and its cognates, is added to the

ISL.

name Sagar, because the open space is formed by the junction of two streams, the Indus and the Shighur river." The plain or bottom of the valley of Iskardoh is 6,800¹ feet above the sea, and the summit of the rock is 7,200 above the same level. Ahmed Shah, the late native sovereign, had ruled the country with a moderation and paternal regard for his people little known among Asiatic despots. He made some unsuccessful efforts to become a protected vassal of our Indian government, as he justly dreaded the power, rapacity, and cruelty of the Sikhs. His fears proved true, as, a short time since, Iskardoh, notwithstanding its great natural strength, was seized by Golab Singh,² the present ruler of Cashmere. Iskardoh is in lat. 35° 12', long. 75° 35'.

ISLAMABAD, in Cashmere, a town situate on the north side of the Behut or Jhelum, here navigable, and running with a gentle current. The river is about eighty yards wide, and is crossed by a wooden bridge. Islamabad is built at the extremity of a long, low eminence, extending from the mountains eastward. At the foot of this eminence is a spacious reservoir, of a triangular shape, supplied by a copious spring of clear water, slightly sulphureous, and from which gas is continually evolved. This spring, called Anat Nag, is supposed to have been produced by Vishnu. The gas does not prevent the water from swarming with fish, which are considered sacred. There are about 300 shops of shawl-weavers at Islamabad, and a considerable quantity of ehintzes, coarse cottons, and woollens are also manufactured here. Its name was originally Anat Nag, which, in the fifteenth century, was changed to that which it now bears. Lat. 33° 43', long. 75° 17'.

territory of the same name, lies on the route from Mhow to Deesa, 92² miles W. of the former, 234 S. of the latter. It is inclosed by a wall of mud, with circular bastions of masonry, and is beautifully situate in a valley lying at the eastern base of a ridge of hills. On the north bank of a fine lake, south of the town, is the fortified palace of the petty rajah or chief. The boundaries of his small territory are as follow:—On the north, Banswarra; north-east, a portion of Holcar's territory; south-east, Amjherra; south, Alee Rajpore; and west, a portion of Seindia's territory, and Dohud. The area contains 1,348³ square miles. The population consists principally of Bheels, of the more civilized classes, and is returned at 132,104. The annual revenue of the territory, in 1840, was stated at 144,536 rupees, or 14,453⁴. This is inclusive of the income derived from certain territories farmed from Holcar, which is said to amount to about 35,000 rupees (3,500⁷). It is believed that the Jabooah state derives no pecuniary benefit from this farm, but, on the contrary, sustains some loss; but the districts of which it consists lying intermingled with the territory of Jabooah, the administration of them is a desirable object, with a view to security and the maintenance of order. A small military⁵ force appears to be maintained by this state, but, in order that its contribution in aid of the Malwa Bheel⁶ corps might be less onerous, it was proposed to incorporate in that corps such of the troops as were disposed to enlist into it.⁷

The rajahs of Jabooah claim descent⁸ from the Rhattore princes of Joudpore. Bhujee, one of their ancestors, commanded 400 horse at Delhi, and his son, Kishen Doss, was placed in attendance on the prince Allah-oo-Deen, to whom, subsequently to his accession to the throne, he rendered considerable service by regaining possession of Dacca, which had been withheld by a rebellious governor. For this service, he was requited by liberal grants of territory. Jabooah was at that time subject to Suka Naiga, a Bheel ruler and notorious freebooter, who, in conjunction with a Rajpoot chief named Chunderbahn, ruler of Dholitah, had plundered and murdered the family and followers of the governor of Guzerat. Kishen Doss was ordered to revenge this wrong, and set about the task in the only way probably in which he was likely to succeed. Disguising himself as a horsedealer, he proceeded to

JAD—JAE.

Jabooah with some remarkably fine specimens of the animal in which he professed to deal, and having won the favour and confidence of the Bheel chief, by allowing him to obtain the horses at very low prices, he lured him to a carousal, and taking advantage of the moment when excess had wrought its work, put him and his principal adherents to the sword. The zeal and success with which he had executed his instructions, procured him a grant of the dominions of the slaughtered chief, and henceforth Kishen Doss took a high place among the Hindoo dependants of the throne of Delhi. From this period, the history of the chiefs of Jabooah is not more interesting than that of the petty states around. Their territorial acquisitions were diminished by successive alienations in favour of younger branches of the family; and they shared in the common ruin which the Mahrattas spread over the face of that part of India, until the supremacy of British power and influence restored peace, and led to the introduction of a higher measure of civilization. The means taken by this state, as well as by others, to defend itself from Mahratta domination by the employment of foreign mercenary troops, increased its calamities, and extended their duration; for long after the Mahratta power had ceased to be formidable, the mercenaries, originally called in to assist it, remained a source of danger and alarm. For upwards of three years, down to 1836, the country was kept by them in a state of anarchy, which was finally suppressed only by the armed⁹ interference of the British government. Tranquillity was thereby restored, and by the deportation of the foreign troops, the country was freed from the main cause of disturbance. The rajah, being a minor, the management of the country was, at the request of the rane, temporarily assumed by the British, under whose administration it greatly improved. Distance of the town from Neemuch, S., 120 miles; from Oojein, S.W., 80; from Bombay, N.E., 285. Lat. 22° 45', long. 74° 36'.

JAG—JAH.

province of Assam, presidency of Bengal, 33 miles E. of Gowhaty. Lat. $26^{\circ} 10'$, long. $92^{\circ} 17'$.

JAGESUR,¹ in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a village situated on a nullah or rivulet of the same name, in the Sub-Himalaya, or mountain system south of the great range, 20 miles² N.E. of Almorah cantonment. It has a Hindoo temple, and is supplied with water from a baoli or largo well. Close to the temple is a confined encamping-ground. Lat. $29^{\circ} 30'$, long. $79^{\circ} 53'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 51.

JAGNOR, in the British district of Agra, lieutenant-governorship of the North-West Provinces, a small town near the southern frontier, towards Dholpoor, is situated in the pergunnah or subdivision of Sarhendi, among the sandstone hills extending southwards from Futtchpoor Sikri. It is 35 miles S.W. from the city of Agra. Lat. $26^{\circ} 52'$, long. $77^{\circ} 40'$.

E.I.C. Ms. Doc.

JAGUN.—A place in Sinde, 10 miles N.W. of Shikarpoor. It consists of a fort and village, with some lofty square fortified buildings outside. It has a small, but rather well-furnished bazar. Supplies may be procured in moderate quantities, and forage, both for camels and horses, is plentiful. Jagun is eleven miles and a half from Jachdurra, from which place the road lies over a level country with much wood. There is an encamping-ground on the south-east of the village. Lat. $28^{\circ} 8'$, long. $68^{\circ} 33'$.

E.I.C. Ms. Doc.

JAHAANPOOR,¹ in the British district of Agra, a village on the route from the city of Agra to Jeypoor, and 24² miles W. of the former. The road in this part of the route is in general good, though in some parts heavy. The country is fertile and highly cultivated. Lat. $27^{\circ} 5'$, long. $77^{\circ} 42'$.

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 1.

JAHAUTOO.—A town in the British district of Chota Nagpoor, presidency of Bengal, 182 miles W. by N. of Calcutta. Lat. $23^{\circ} 7'$, long. $85^{\circ} 40'$.

E.I.C. Ms. Doc.

JAHHUR,¹ in the British district of Agra, lieutenant-governorship of the North-West Provinces, a village on the southern frontier, towards Dholpoor, and 17² miles S. of the city of Agra. It is situated on the north or left bank of the Bangunga, in this part of its course called the Oobunghun, and which in the dry season is here only a small rill of clear water. In the rainy season, however, the stream becomes considerable; running in a sandy bed 130 yards wide, with steep

¹ E.I.C. Ms. Doc.

² Garden, Tables of Routes, 22.

JAH—JAI.

banks cut into deep ravines. The road to the north of Jahjur, or towards Agra, is rather good, and the country fertile and highly cultivated; to the south, or towards Dholpoor, the country is sandy and waste, and the road heavy. Lat. $26^{\circ} 55'$, long. $77^{\circ} 59'$.

JAHRNUVI.—A feeder of the Ganges, in the upper part of the course of the latter, where it bears the name of the Bhageerettee. The Jahnuvi has been supposed to derive its origin from the north of the culminating range of the Himalayas, within the limits of Chinese authority;¹ but this conjecture is without foundation, it being now ascertained² that the remotest source of this river is situate in British territory, on the southern base of the before-mentioned range. The Jahnuvi rises in Gurwhal, in lat. $30^{\circ} 55'$, long. $79^{\circ} 14'$, and, holding first a northerly, then a westerly course, joins the Bhageerettee near the Sanga of Bhairogathi. At this point the Jahnuvi is from eighty to 100 feet wide,³ and superior in volume to the Bhageerettee, though the latter was long considered the origin of the holy and celebrated Ganges. The Jahnuvi flowing for the distance of thirty miles from its source, to the point of confluence, is evidently the most distantly derived of all the branches of the Ganges; for if the course of the latter be measured upwards from Deoprag to the source of the Jahnuvi, its length will be found to exceed the distance from the same point to the source of the Doulee. It must, therefore, be admitted that the Jahnuvi is the real origin of that great river, notwithstanding the rival claims of the Doulee.

miles N.W. of the town of Lahore. Lat. $32^{\circ} 40'$, long. $72^{\circ} 59'$.

JAITPOOR.—A town in the province of Guzerat, or the dominions of the Guicowar, 40 miles S. by W. from Rajkoto, and 63 miles E. by N. from Poorbundur. Lat. $21^{\circ} 45'$, long. $70^{\circ} 44'$. E.I.C. Ms. Doc.

JAJARCOTE.—A town in the native state of Nepal, 148 miles N. by E. from Lucknow, and 105 miles E. by N. from Pilleebhet. Lat. $28^{\circ} 56'$, long. $81^{\circ} 33'$. E.I.C. Ms. Doc.

JAJMOW,¹ in the British district of Cawnpore, lieutenant-governorship of the North-West Provinces, a town in the pergunnah of the same name, is situate on the right bank of the Gauges, six miles S.E. of the cantonment of Cawnpore by land, and five² by water. It has a bazar, but does not seem of any great importance, not being mentioned by Lord Valentia,³ Skinner,⁴ or Lumsden,⁵ in their voyages down the river. In the time of Baber, it was perhaps more considerable; that sovereign, in his Memoirs, mentions that in one of his campaigns against the Afghans, they attempted to make a stand here, but were routed⁶ by his son Humaion. It is the Jaujesmow of Rennell's Index. Distant⁷ N.W. from Calcutta 620 miles by land, and by water 949, or, going by the Sunderbund passage, 1,125. Lat. $26^{\circ} 26'$, long. $80^{\circ} 28'$. E.I.C. Ms. Doc.

JAJOO.—A village in the jaghire of Jajhur, lieutenant-governorship of the North-West Provinces. Lat. $28^{\circ} 29'$, long. $76^{\circ} 14'$. E.I.C. Ms. Doc.

JAKO,¹ in Bussahir, a village on the southern declivity of the outer or most Southern Himalaya, and the last inhabited place on that side of the range in the route northwards by the Gunas Pass. It is of no great size, and the inhabitants, who bear the marks of poverty, are supported principally by the carrying-business across the mountains. Elevation above the sea 9,188 feet.² Lat. $31^{\circ} 15'$, long. $78^{\circ} 9'$. E.I.C. Trigon. Surv.

JAKO,¹ in Keonthul, a high peak of the Simla range, and overtopping on the east the Simla station. The summit is of clay-slate. It is remarkably bare of trees to the south, though its declivity on the north side is well clothed with oaks, pines, and rhododendrons. It was one of the stations in the great trigonometrical survey of the Himalaya. Elevation above the sea 8,120 feet.² Lat. $31^{\circ} 5'$, long. $77^{\circ} 15'$. E.I.C. Ms. Doc.

JALHU, or **JALHUPUR**, the principal place of the pergunnah of Jalhu, a town a mile N.W. of the left bank of the Ganges, and 12 miles N.E. of Benares. Lat. $25^{\circ} 22'$, long. $83^{\circ} 10'$. E.I.C. Ms. Doc.

JALIHIAL.—A town in one of the recently sequestered districts of the native state of Hyderabad, or dominions of the Nizam, 133 miles S.W. by W. of Hyderabad. Lat. $16^{\circ} 22'$, long. $76^{\circ} 50'$. E.I.C. Ms. Doc.

JALLIAPULLUNG.—A village in Arracan, situate on the south bank of the river Racezoo, and forming the termination of the first division of the great route from Chittagong to Akyab, from the former of which places it is distant about 105 miles.¹ The country in the vicinity is well cultivated and populous. Lat. $21^{\circ} 17'$, long. $92^{\circ} 10'$. E.I.C. Ms. Doc.
Pemberton, 10.

JALLOR.—A town in the Rajpoot state of Jodhpoor, on the left bank of the Sookree river, and 71 miles S.W. by S. from Jodhpoor. Lat. $25^{\circ} 23'$, long. $72^{\circ} 40'$. E.I.C. Ms. Doc.

JALNA, or **GALNA**,¹ in the British district of Candeish, presidency of Bombay, a small town with a fort, on an isolated hill, not high, but steep and rocky. The summit is fortified² all round, and on the side towards the town, where it is least steep, has in some parts two, in others three walls of good masonry. In October, 1801, it belonged to Holkar, and was invested by a British force under Wallace, who, having breached the defences in two places, prepared for an assault, the necessity for which, however, was superseded by the garrison, amounting to 700 men, evacuating the place. On the subsequent pacification, it was restored to Holkar. It was ceded in 1818, by Mulhar Rao Holkar, to the British government, by the sixth article of the treaty³ of Mundeesor, and surrendered⁴ to a detachment sent by Sir Thomas Hislop to take possession. Distance direct from Mow, S.W., 150 miles; from Bombay, N.E., 165. Lat. $20^{\circ} 46'$, long. $74^{\circ} 30'$. E.I.C. Ms. Doc.

JALOUN.

² D'Cruz, *Political Relations*, 24.

³ Mem. on the Statistics of the N.W. Prov. Calcutta, 1848, pp. 178, 180, 181.

25° 32' and 26° 26', long. 78° 45' and 79° 53'; its greatest length from north to south is about seventy miles, and its breadth from east to west sixty miles. It was estimated² in 1832 to have an area of 1,480 square miles, and to comprise 518 villages. Since that period, the limits of the district have been extended, by the addition of some pergunnahs from the adjacent state of Jhansee, ceded to the British government, and also of a confiscated jaghire called Chirgong. According to more recent returns, the area of the district thus increased is 1,873 square miles; but it is necessary to remark, that while, in respect of that portion which constituted the original district, the details are founded on the results of a professional survey, conducted by British authorities,³ those relating to the ceded pergunnahs and to Chirgong are taken from the canoongoes and putwarrec records; those parts of the present district having been acquired by the British government subsequently to the completion of the survey.

The annexed table of population, which is restricted to the pergunnahs constituting Jaloun proper, is founded on a regularly-conducted investigation.

Hindoo—

Agricultural	92,439
Non-agricultural	72,477

Mahomedan and others not Hindoo—

Agricultural	3,063
Non-agricultural	8,318

Total	176,297.
-------------	----------

⁴ Shakespeare, Stat. N.W. Prov. 179.

A rough census⁴ of the population of the Jhansee ceded pergunnahs and Chirgong affords an amount of 70,000. This being incorporated with the total of the last table, gives the following result:—

Population of original district	176,297
Ditto of recent addition.....	70,000

Total of present district.....	246,297 .
--------------------------------	-----------

It is represented, however, that the population is increasing, and that cultivation is steadily advancing at a rate which in a

JALOUN.

few years will leave no more cultivable land untilled within the district, than must of necessity be left fallow.

The district of Jaloun came into the possession⁵ of the Peishwa early in the eighteenth century, and the management of it was committed to one of his servants. Under the series of arrangements effected with the Peishwa in 1802 and 1803, the sovereign rights of that prince over Jaloun were transferred⁶ to the East-India Company. The administrator, Nana Govind Rao, of Calpee, subsequently took up arms against his new lords; but the dispute was brought to an immediate conclusion. In 1817, the British government, by a new engagement, constituted the Nana "hereditary ruler of the lands then in his actual possession." In 1832⁷ the principality passed to a child only six years of age, who was placed under the guardianship of the widow of the former chief. The regent, however, who was herself but a child, being at the time not more than thirteen or fourteen years of age, proved quite unequal to the duty of controlling the refractory spirits in the district. A strong party was formed adverse to her authority; the country became disorganized, the government was involved in debt, and portion after portion of the territory mortgaged to talookars, until at length the regent and her minister, finding the credit of the government at an end, applied to the British agent for his guarantee of a further loan, declaring their inability to carry on the government without it, and exhibiting a statement of revenues and expenses, which showed an annual deficit of two and a half lacs of rupees. In these circumstances, it was deemed necessary that the British government should assume the temporary management of the country, for the purpose of reducing the expenditure, paying off the debt, resuming the mortgaged territory, and restoring order. This step was accordingly taken in 1838.⁸ The organization of a local military force* being indispensable, to supersede the undisciplined and disorderly troops previously retained, the formation of a legion was authorized, composed of cavalry, infantry, and a

* This force was subsequently increased in strength, and named the Bundelcund legion, when its sphere of duties was extended. The purposes for which it was organized having been effected, it was in 1846 disbanded, and the native officers and privates transferred to the regular army.

JAL--JAM.

gun establishment, with two European officers, as commanding officer and adjutant. Under the British administration, many beneficial changes were effected; cultivation was extended, and the country manifested unequivocal proofs of being in a state of gradual improvement. The infant chief did not live to the period when the propriety of committing the administration of the country to his charge could become a subject of discussion. He died during his minority, and no one surviving of the family of Nana Govind Rao entitled to claim the succession under the engagement by which that chief was constituted hereditary ruler of the district, it lapsed,⁹ as a matter of course, to the East-India Company as paramount lord. Since the lapse, the indications of progressive improvement have continued to be satisfactory. A revenue settlement for a term of years was made in 1819.

331*—Hodgson
and Herbert,
Trigon. Surv. of
Himalaya.

¹ Von Hugel,
1. 143.

JAMOO,¹ a considerable town in the north of the Punjab, and among the mountains forming the southern range of the Himalaya, is situate on a small river, which, rising about forty miles to the north, takes its course below the town for about twenty miles, in a south-westerly direction, and falls into the Chennab. The town and palace are built on the right or western bank of the river; on the east is the fort, elevated about 150 feet above the stream, which is here fordable when lowest. The place, with the lofty and whitened palace and fort, has a striking and pleasing appearance when viewed from without. The bazar is large, well built, and well supplied; the streets are extensive, and the population considerable, amounting, according to Vigne,² to about 8,000. The palace is a spacious and handsome building. The fort, though built with great cost and labour, is untenable against a regular attack, being commanded by an adjacent height of easy access. There

² 1. 183.

JAN—JAO.

is an extensive and beautiful pleasure-ground, belonging to the rajah. About the town are numerous ruins of great size, the evidence of its prosperity under its hereditary rajahs, before the expulsion of their family by the Sikhs. It is still held by Gholab Singh as part of his dominions, although the position of this prince has been greatly altered by the transfer to him of Cashmere and the adjacent hill country, a consequence of the success of the British arms in the Punjab in 1845. Jamoo is in lat. $32^{\circ} 44'$, long. $74^{\circ} 54'$.

JANEEDERA, in Sinde, a village on the route from Shikarpoor to Bagh, and 18 miles N.W. of the former town. It is situate near the border of the Pat, or desert of Shikarpoor, yet the immediate vicinity is fertile, and was well cultivated before it suffered from the devastations of the marauding Belooches, who some years ago laid the village in ruins. There is a fort of considerable size, containing a good well. There are three other wells outside the fort. Lat. $28^{\circ} 16'$, long. $68^{\circ} 28'$.

JANGI,¹ in Bussahir, a village in the district of Koonawur, is situate on the right bank of the Sutlej, and at the eastern base of a high mountain, the cliffs of which being soft and fissile, are shattered by the expansive force of frost; from which cause vast masses continually tumble down, forming a sloping surface, composed of sand, fragments of mica-slate, and spar, with an admixture of earth, and capable of cultivation wherever a stream from the snows above can be directed over it. By such management those accumulations of apparent rubbish become soon covered with crops of grain² and fine vineyards. Jangi is at the elevation of 8,905³ feet above the sea. Lat. $31^{\circ} 36'$, long. $78^{\circ} 29'$.

JANJPAT.—A town in the British district of Tirhoot, presidency of Bengal, 105 miles N.E. of Dinapoor. Lat. $26^{\circ} 27'$, long. $86^{\circ} 31'$.

JANSUTHI,¹ in the British district of Muzaffurnuggur, lieutenant-governorship of the North-West Provinces, a town on the route from Hurdwar to Meerut, 23 miles N. by E. of the latter. Its population is returned at 5,312.² Lat. $29^{\circ} 18'$, long. $77^{\circ} 55'$.

JAOLI, in the British district of Muzaffurnuggur, lieutenant-governorship of the North-West Provinces, a town, the

JAT—JAU.

part of the route is but indifferent, being gravelly, occasionally encumbered with stones, and cut up by ravines. Lat. $26^{\circ} 25'$, long. $73^{\circ} 44'$.

JATWALA, in the Rajpoot state of Joudpore, a village on the route from the town of Joudpore to that of Ajmere, and 40 miles N.E. of the former. It is situate in a rough country, with a gravelly soil, much cut up by ravines, and in consequence, the road in this part of the route is execrable. Lat. $26^{\circ} 25'$, long. $73^{\circ} 40'$.

Bollean. Rajwara,
147, 210.

JAULDOE, in the British district of Pachete, presidency of Bengal, a small town on the route from Burdwan to Dorunda, in Chota Nagpore, 125 miles W. of former, 45 E. of latter. Lat. $23^{\circ} 22'$, long. 86° .

E.I.C. Ms. Doc.

JAULNA,¹ in the territory of the Nizam, a British cantonment on the route from the city of Hyderabad to Aurungabad. It is located in a very dreary,² barren country, having a surface rendered uneven and rugged by numerous ravines and hills of trap or other volcanic formation, overlaid in many places with laterite. The immediate site of the cantonment is a gently-sloping declivity, in front of which, a small range of hills, from one to two miles distant, form a sort of amphitheatre. The lines extend from south-east to north-west, the cavalry lines being at the south-eastern extremity, those of the infantry in the middle, and those of the horse and foot artillery at the north-west. Behind those lines are the officers' quarters, well built, and situate within spacious compounds or inclosures, having good gardens, outhouses, and stabling attached to them. The cantonment is capable of affording accommodation for one troop of horse-artillery, one regiment of native cavalry, and three regiments of native infantry; having barracks, hospitals, and storerooms. They were built in 1827. A place of worship has also been erected for the Roman³ Catholic soldiers at this station. The climate is admirably adapted for the purposes of horticulture; in the cool season, abundance of excellent European vegetables are raised: peas, beans, cabbages, carrots, parsnips, turnips, celery, cauliflowers, and potatoes; besides many common in India. Figs, grapes, peaches, and strawberries, are also produced; the latter of extraordinary size, but somewhat deficient in flavour. South-west of the cantonment, two miles, and on the left bank of the small river Kundulka, is

JAU.

the town of Khaderabad. It is surrounded by a high stone wall, and has about 7,000 inhabitants. On the opposite bank is the old town of Jaulna, formerly large and flourishing, having enjoyed an extensive trade in grain and silks. It yet possesses to some extent a manufacture of silks for native use. The place, however, is much decayed, though having a population estimated at 10,000, of whom about a fifth are Mussulmans. Many of the houses are substantially built of stone, and a fort, well planned and strongly constructed, indicates the former importance of the place. Distance from Secunderabad and Hyderabad, N.W., 210 miles; Nagpore, S.W., 235; Aurungabad, E., 38; Bombay, N.E., 210. Lat. $19^{\circ} 50'$, long. $75^{\circ} 55'$.

JAUM,¹ in territory of Indore, or possessions of Holkar's family, a village with a fort on the route from Mhow to Asceergurh, $1\frac{1}{2}$ miles S. of the former, 100 N.W. of the latter. It is situate on the crest of a pass through a ravine of the Vin-dhya range, descending² from Malwa to the valley of the Ner-budda. The ghat or pass is a mile and a half in length, and is so steep, narrow, and zigzag, that, according to Malcolm, it is impassable for wheeled carriages of any sort; but Garden states that six-pounders have been lowered down it. Notwithstanding its great difficulty, it is much frequented by foot-travellers, being the most direct route from Malwa southwards. Elevation above the sea 2,325⁴ feet. Lat. $22^{\circ} 23'$, long. $75^{\circ} 49'$.

JAUMGONG.—A town in the petty native territory of Peint, presidency of Bombay, 100 miles N. by E. from Bombay, and 97 miles S. by E. from Broach. Lat. $20^{\circ} 20'$, long. $73^{\circ} 15'$.

E.I.C. Ms. Dec.

JAUNJMEER.—A town in the peninsula of Kattywar, province of Guzerat, situate on the west coast of the Gulf of Cambay. Lat. $21^{\circ} 10'$, long. $72^{\circ} 4'$.

JAUNPORE.—See JOYPORE.

¹ E.I.C. Trigon. Surv.

JAUNSAR.¹—A British hill district, officially connected with the Dehra Doon, and which, stretching northward from it, is as it were indented between Gurwhal and Sirmor. It is bounded on the west by Sirmor, from which it is separated by the river Tons; on the north and east by Gurwhal, from which it is for a considerable distance separated by the river Jumna, which river also, on the south, divides it from the Dehra Doon.

JAUT.

Jaunsar is about thirty-three miles long, in a direction from north to south; its breadth from east to west is twenty-three; and it has an area of 579 square miles. It lies between lat. $30^{\circ} 30'$ and $30^{\circ} 57'$, long. $77^{\circ} 46'$ and $78^{\circ} 9'$. The surface throughout is rugged and mountainous, rising to the middle from the Tons on the west, and the Jumna on the east, and discharging from the elevated and central part numerous small streams into those rivers. Some of the summits are lofty; as Bairat, having an elevation of 7,559 feet; Bhadraraj, of 6,043; and Baila, 6,318. The elevation diminishes generally, though irregularly, to the southern frontier, where, at Haripur, at the confluence of the Tons and Jumna, it is reduced to 1,686² feet above the sea.

² As. Res. xiv.
328*—Hodgson
and Herbert,
Trigon. Survey of
Himalayas.

The number of townships within this district is 414. In regard to the population, the returns are less to be depended upon than those from more settled districts. They are the result³ of a rough census taken in 1847, by means of native agency; but they are believed by the superintendent of the district to be not far from the truth. The following are the particulars:—

³ Mem. on Stat.
N.W. Prov. 170.

Hindoo	{	Agricultural	24,515	'
		Non-agricultural	145	'
Mahomedans and	{	Agricultural	—	'
others not Hindoo		Non-agricultural	24	'
				24,684

Showing an average of rather more than forty-two persons to the square mile. Jaunsar was formerly part of the raj of Sirmor, but on the expulsion of the Ghoorkas in 1815, it became subject to the British government.

JAUT,¹ in the British district of Goorgaon, lieutenant-governorship of the North-West Provinces, a village on the route from Delhi to Rowaree, and 48² miles S.W. of the former. It is situate near the left bank of the Sabi, the bed of which is dry from November to July, but for the rest of the year is the course of a torrent discharging water into the jhil or lake of Najafgarh, or of Furrucknuggur, whence it passes ultimately into the Jumna³ at Delhi. There is encamping-ground west of the village, and supplies are procurable in

abundance. The road in this part of the route is rather heavy. Lat. $28^{\circ} 15'$, long. $76^{\circ} 41'$.

JAVANAGOONDENHULLY.—A town in the native state of Mysore, on the left bank of the Hurry river, and 99 miles N. from Seringapatam. Lat. $13^{\circ} 51'$, long. $76^{\circ} 48'$.

JAWUD,¹ in the territory of Gwalior, or possessions of Scindia's family, a town, the principal place of a pergunnah containing 133² villages. It is surrounded by a stone wall, and has good gateways, but the defences are of no strength. In 1818, it was held by a refractory retainer of Doulat Rao Scindia, and being stormed by a British detachment, was made over to that prince. Population 80,000. Elevation above the sea 1,400 feet. Lat. $24^{\circ} 35'$, long. $74^{\circ} 55'$.

JAYBHOM.—A town of North-eastern India, in the British district of Goalpara, presidency of Bengal, 26 miles W. by S. of Goalpara. Lat. $26^{\circ} 4'$, long. $90^{\circ} 14'$.

JAYES,¹ in the district of Salon, territory of Oude, a decaying town, 35 miles W. of Sultanpoor, 55 S.E. of Lucknow. It is situate on the left bank of the Naia Nuddy or stream, a tributary to the river Sai, and contains many large brick-built houses, constructed by Mussulmans of former times. According to Butter,² the population is 9,000, of whom three-fourths are Mussulmans. Lat. $26^{\circ} 14'$, long. $81^{\circ} 37'$.

JEEAGAON,¹ in the territory of Gwalior, or possessions of Scindia's family, a town on the route from Hoshlungabad to Mow, 54² miles W. of former, 90 E. of latter. It is situate on the small river Jampnair, a tributary of the Nerbudda.³ Supplies are plentiful. Population about 1,800. Lat. $22^{\circ} 37'$, long. $76^{\circ} 59'$.

JEEKA MOUNTAIN, in the island of Ramree, off the coast of Arracan. Its elevation is about 3,000 feet above the sea, and it rises in a very abrupt manner from the range with which it is connected. With the exception of the summit, it is covered with a dense forest.¹ A brown ferruginous sandstone, regularly stratified, with an inclination to the south-west, is the only rock visible on the surface.

JEELAIKE.—A town in the native state of Bhawalpoor, on the left bank of the Sutlej river, and 103 miles N.E. by E. from Bhawalpoor. Lat. $30^{\circ} 6'$, long. $73^{\circ} 15'$.

JEELOO.—A town in Tourwuttee, a dependency of the

JEJOOREE.—A town in the British district of Poonah, presidency of Bombay, 28 miles S.E. of Poonah. Lat. 18° 16', long. 74° 12'.

JELALABAD, or JULLALABAD.—A town in the British district of Shahjehanpore, lieutenant-governorship of the North-West Provinces. It contains a population of 5,031.¹ Distant 11 miles S.W. from Shahjehanpore. Lat. 27° 46', long. 79° 50'.

¹ Statistics N.W. Provinces, 63.

JELALPOOR.—A town in the Punjab, on the right or western bank of the Jhelum, situate in a narrow valley of great fertility, extending between the river and the eastern extremity of the Kala, or Salt range. According to Elphinstone,¹ this was the scene of Alexander's battle with Porus; but Burnes² thinks it must have been at Jhelum, higher up, where the river, according to him, is fordable at all times except in the monsoon; but where Hügel³ found it, at the beginning of January, when lowest, a great stream, larger than the Indus at Attock, and bridged with twenty large boats. It is therefore doubtful whether the river could at that point be forded at the season of inundation (when, as Arrian* informs us, it was crossed by Alexander); and where, indeed, the British army lost eleven men in fording it in December, which is the low season.⁴ It is, however, said that all the fords in the Punjab are more or less zigzag, and are also subject to variations, not only from season to season, but even from day to day. Jaldalpoor is one of the great passages over the Jhelum, on the route from Hindostan to Afghanistan. Lat. 32° 40', long. 73° 26'.

JELLINGHEE,¹ in the British district of Moorshedabad, presidency of Bengal, a town situate at the point where the river Jellinghee parts from the Pudda, or great eastern branch of the Ganges. Elevation² above the sea seventy-five feet. Distance E. from Berhampore 25 miles, N. from Calcutta 105. Lat. $24^{\circ} 8'$, long. $88^{\circ} 40'$.

JELLINGHEE.—A river parting from the Pooda, or great eastern branch of the Ganges, at the town of Jellinghee, in lat. $24^{\circ} 8'$, long. $88^{\circ} 40'$. It holds a course very sinuous, but generally S.W., for about ninety-five miles, and, at the town of Nuddea, in lat. $23^{\circ} 25'$, long. $88^{\circ} 22'$, joins the Bhagruttee, another great off-set of the Ganges, the united stream being designated the Hooghly. Of the three rivers, the Bhagruttee, the Martablunga, and the Jellinghee, forming the direct channels of navigation between Calcutta and the North-West Province, the last is by much the deepest and most important, retaining two feet¹ of water during the dry season in spring, when the others have an average depth of about one foot.

the boundary between this district and that of Nuddea, to lat. $22^{\circ} 52'$, long. $89^{\circ} 10'$; and beyond that point meandering, generally in a southerly direction, between this district and that of Baraset, for about seventy miles, and finally, in lat. $22^{\circ} 20'$, long. $89^{\circ} 17'$, passing into the Soonderbunds. The other, or left branch of the Boorub, retains that name, and takes a course south-east for about ninety miles, passing by the town of Jessore, to Hahatti, in lat. $22^{\circ} 36'$, long. $89^{\circ} 50'$, where it crosses the eastern frontier into the British district of Backergunge. The Matabhanga, before throwing off the Boorub, gives outlet on its left side, at Chudanga, in lat. $23^{\circ} 40'$, long. $88^{\circ} 51'$, to the Nabaganga, which, flowing sinuously, but generally in a south-easterly direction, for ninety miles, to Khulna, in lat. $23^{\circ} 15'$, long. $89^{\circ} 50'$, there joins the Barashee, a large offset from the Ganges. About ten miles below the divergence of the Nabaganga, and on the same side, the Chitrah is thrown off, which holds a course south-east for about 120 miles, and at Alipore, in lat. $22^{\circ} 47'$, long. $89^{\circ} 42'$, joins the Boorub. The Koomar, from its divergence from the Matabhanga, at the north-east corner of the district, forms its north-eastern boundary for about fifty-five miles, towards the British district of Pubna, as far as its confluence with the Gorae, at Mossundpur, in lat. $23^{\circ} 33'$, long. $89^{\circ} 33'$, below which point it is called the Barashee, and, flowing south-east for about ninety miles, forms the boundary between this district and those of Daeca-Jelalpore and Backergunge, and of ultimately lost in the Soonderbunds. Of these rivers, the Koomar and Barashee are navigable throughout the year, others only during the inundations caused by the rains of closing summer and autumn, when innumerable channels, streams cause communications between the low-lying country, intersecting the country in every direction, and laying it extensively under water. The climate in hunting we being tainted with pestilential exhalations, we got into weedy tanks and watercourses: hence the quicksands, among and often fatal, are rife at all times of the year, even in some places of sand-sometimes above 100° . It decreases in the neighbourhood of the desert." The times at night as low as 55° . There are of frequent occurrence, are and produce grain, cotton, tobacco,

JESSORE.

season during which they prevail, that whole villages are often depopulated.

The zoology of the district, though very inadequately explored or described, is rich and interesting. It comprises, of wild beasts, the tiger, leopard, panther, bear, jackal, fox, ichneumon, wild deer, swine, and porcupine. Of domestic beasts, kine, sheep, goats, ponies, buffaloes, and hogs. Alligators in great numbers infest the waters. Birds are very numerous: the most noticeable are, the eagle, vulture, hawk, crane, goose, duck, partridge, quail, and pigeon. The botany is very comprehensive and varied, but has received little attention. From the exclusively alluvial character of the country, it contains no minerals; but salt is obtained from the southern frontier. The soil is generally very fertile; in the northern part, however, having considerable admixture of sand and clay. In the south, it comprises a larger proportion of rich alluvial earth or vegetable mould, abundantly productive of rice, indigo, oil-seeds of various kinds, sugar, tobacco, cocoanuts, areca-nuts, gram (*Cicer arietinum*), rye, pulse, hemp, turmeric, and fruits of various kinds. Mulberry-trees have latterly been planted in great numbers, for feeding silkworms. Indigo is largely exported, as also is rice.

The production and export of sugar and rum have latterly been greatly on the increase, large quantities being prepared by inspissating the sap of the palm-tree. The other principal exports are silk, oils, cocoanuts, areca-nuts, betel-leaf, saltpetre, and hides. The imports are cloths, metals, and manufactured hardwares, paper, spices, wheat, and shawls. The population, according to official statement, is 381,744.⁴ According to a recent⁵ authority, the Brahminists form one-half of the population, the Mussulmans the other; but this unusually large proportion of Mussulmans appears remarkable in a tract so remote* from the seat of their former empire in India. Jessore, the principal place, and the other towns, Khulna and Mülhommudpur, are noticed under their respective names in the alphabetical arrangement.

* There are four roads or routes in the district:—1. From

* Hamilton† gives a still larger relative amount of Mussulmans to Brahminists; being as nine to seven.

JESSORE.¹—The principal place of the British district of the same name, presidency of Bengal, on the route by Baraset from Calcutta to Dacca, 77 miles² N.E. of Calcutta, 103 S.W. of Dacca. The civil establishment of the district is located here, and consists³ of a civil and session judge, a collector, a magistrate, two assistants to the magistrate and collector, an uncovenanted deputy-collector, a deputy-magistrate, an assistant-surgeon, a superintendent of the salt department; besides a number of native judicial and revenue functionaries. The jail at this place is a spacious building, capable of holding in safe custody 1,000 persons. Here is a school, the house for accommodating which is a fine building, the cost of erecting it having been defrayed by subscription of the zemindars of the district. The establishment consists⁴ of four members, a secretary, a head-master, an assistant, and two pundits or native teachers. The number of pupils is about 120, who are instructed in English, Persian, and Bengalee. The school was first opened in 1838. This place was formerly reputed an unhealthy station; but within the last few years considerable pains have been taken, and expense incurred, with a view to sanitary improvement; and happily with success.⁵ Jessore is in lat. 23° 10', long. 89° 10'.

JESSULMERE.¹ * the most western of the fourteen²† states of Rajwara or Rajpootana, is bounded on the north by

* According to Tod,¹ "it is termed Mer in the traditional nomenclature of this region, from being a rocky (Mer) oasis in the heart of the sandy desert."

† Now increased to fifteen, by the distribution of the territory of Kotah into two separate principalities (Kotah and Jhallawur).

JESSULMERE.

the territory of Bahawalpore; on the north-east by the territory of Bikaner; on the south-east and south by that of Joudpore; and on the west by Sind. This state was formerly much larger, extending to the Indus and Ghara, till the territory of Bahawalpore was wrested from it by the Daudpootras.³ It now contains an area of 12,252 square miles.⁴ It lies between lat. $26^{\circ} 8' - 28^{\circ} 28'$, long. $70^{\circ} 3' - 72^{\circ} 51'$.

³ Tod, *Annals of Rajasthan*, II. 321.
⁴ Parliamentary Return, 1851.

According to Tod,⁵ a line drawn in a north-west direction from Lowarki, in lat. $27^{\circ} 5'$, long. $71^{\circ} 50'$, to Kharreh, lat. $27^{\circ} 27'$, long. $70^{\circ} 14'$, would divide the territory of Jessulmere into two nearly equal parts, the southern of which is in many places rocky, being traversed by a ridge of hills, which may be considered continuous with the high lands of Cutch.⁶ "Sometimes it assumes, as at Cholhun, the character of a mountain, then dwindles into an insignificant ridge, scarcely discernible, and often serves as a bulwark for the drifting sands, which cover and render it difficult to trace it at all. As it reaches the Jessulmere country, it is more developed; and at the capital, erected on a peak about 250 feet high, its presence is more distinct, and its character defined. The capital of the Bhattis (town of Jessulmere) appears as the nucleus of a series of ridges which diverge from it in all directions for the space of fifteen miles. One branch terminates at Ramghur, thirty-five miles north-west of Jessulmere; another branch extends easterly to Pokuru (in Joudpore), and thence, in a north-easterly direction, to Tilodi, from whence at intervals it is traceable to Gurriala, nearly fifty miles due north." "These barren ridges, and the lofty undulating teebas (hills) of sand, are the only objects which diversify the almost uniform sterility of these regions. No trees interpose their verdant foliage to relieve the eye or shelter the exhausted frame of the traveller. It is nearly a boundless waste, varied only by a few stunted shrubs of acacia or mimosa family, some succulent plants or prickly grapes, as the bhoorut or burr."⁷ * Macmurdo, however, draws a less repulsive picture of this tract, representing it as abounding with patches of good pasture among the rocks and sandhills, and feeding great herds of cattle. The forma-

² Boileau, *ut supra*, 62.

tion of the rocky ridges, consisting of sandstone,⁸ secondary limestone,⁹ and flint, is obviously similar to that of the range which crosses Upper Sind from the eastern frontier to Roree, where a low summit insulated by the Indus is the site of the celebrated fortress of Bukkur.¹ North of the line of demarcation already mentioned, the country is more barren, and so uniform that travellers hold their way by the guidance of the heavenly bodies. Boileau, who traversed the Great Desert, as this tract is called, thus describes it:—"Long and lofty ridges of sandhills follow each other in ceaseless succession, as if an ocean of sand had been suddenly arrested in its progress, with intervals of a quarter of a mile, or even more, between its gigantic billows; for, after ascending many hundred yards along a gradual slope, we would come suddenly to a steep descent, when our path lay across the line of waves; and on other occasions we would, perhaps, move parallel to them, with a steep wall of sand on one hand and a gentle rise on the other. In other parts of the desert, however, the main features of the scene are much less distinctly marked."² "Where the sand has become fairly settled, it is overrun with a considerable growth of grass and shrubs, which tend still more to bind the soil; and it seems probable, that in course of time a considerable portion of this vast wilderness will become habitable."

"There are no running streams in the territory of Jessulmere, the periodical rains producing merely temporary sars or lakes of salt-water, formed by damming up the streams running down from the sandhills and intervening gulleys. The sars in general last but a few months, though, after very heavy monsoons, some have been known to continue through the year. The largest is the Kanod Sar, in lat. $27^{\circ} 5'$, long. $71^{\circ} 15'$, so called from the town of Kanod, on its southern border. It is about eighteen miles in length when fullest, and retains some water throughout the whole year. When filled to the greatest extent, a small stream proceeds from its eastern side, and, after a course of about thirty miles in an easterly direction, is lost in the sands of Joudpore. Salt is obtained from the ground left dry in the shrunken state of the lake; and this is a source of revenue to the rawul or sovereign."³ Water in Jessulmere is at so great a depth below the surface, that wells in some

³ Tod, *ut supra*, 281.

JESSULMERE.

places must be dug above 300 feet* before a steady supply can be obtained. Thus, at Dihatra, on the north-west frontier, the wells are 309 feet⁴ deep; at the town of Jessulmere, 304 feet.⁵ To provide a sufficiency of that which is everywhere one of the first necessities of life, but in warm countries pre-eminently so, the natives dig extensive tanks, which, being filled by the periodical rains, supply water during the greater part of the year; but when those supplies fail, which sometimes occurs, many human beings and cattle perish from thirst.

Jessulmere is devoid of valuable minerals, but limestone† is abundant, and of good quality.

The cold is considerable in winter, especially in the north and on the Bikaner frontier, as experienced by Boileau,⁶ who mentions "the thermometer frequently falling below 40° in the tents at daybreak, during the month of January, 1835;" and also, that "on the 7th February it was down to 32°, with a good deal of frost, so that ice was formed in considerable quantities on the ponds, and different vessels of water in the camp were completely frozen." Such severe cold seems inexplicable in a latitude not far removed from the tropic, and having an elevation not exceeding 500 or 600 feet above the sea. As the season advances, however, the heat rapidly increases, as appears from the following facts recorded by the author above quoted.‡ "On the 4th of March, 1835, the thermometer at 2 30 p.m. stood at 106½° in my tent, and 119° in the sun; on the 5th March, at 3 p.m., it stood at 107° in the tent, and 117° in the sun in the same place."⁷ The same author describes the heat later in the season as still higher. "In the month of

⁴ Boileau, ut supra, 156.
⁵ Id. 37.

⁶ Ut supra, 107.

⁷ Boileau, 106.

* Tod¹ mentions some above 500 feet deep; but he is not indisposed to make the most of his material.

† Boileau¹ states that "the limestone of Jessulmere has been applied to the purposes of lithography, and highly approved of, being considered fully equal, or even superior, to the Bavarian stone, for all transfer-work, as it will give off a very considerable number of impressions without running rotten, but its yellow colour is too deep to allow of its being used for chalk-work, as the artist cannot well distinguish the different shades of his pencil upon the stone. It has been employed largely in the royal buildings of the emperors at Agra, by the name of Sung-Kuthoo."

‡ The statement appears to apply more especially to Bikaner; but the neighbouring countries, Jessulmere, Joudpore, and Shekawatee, partake in a great degree of the same character of climate.

¹ Ut supra, li. 308.

¹ Ut supra, 38.

JESSULMERE.

May, before the setting in of the rains, the heat is certainly awful in and near the desert; the thermometer on the table in my tent being, on the 8th May, 118° at noon, 119° at half-past 12, and 117° at 3 P.M.; on the 9th, it was 120° at noon, 123° at 1 P.M., 119° at 2 P.M., and 116° at 3 P.M., in the same situation. Yet, notwithstanding this fearfully high temperature, the summer seems to be by no means an unhealthy season, and we had scarcely a single sick man in the camp, which was attributable chiefly to the dryness of the air."⁸ Jessulmere is under the influence of the south-west monsoon, so that there is an abundant fall of rain during the months of June, July, and August.⁹ But, notwithstanding this, the air is generally dry; in consequence of which, and of the sandy nature of the soil, the country is, as Boileau found it, very healthy; and, according to a native proverb, neither mud, mosquitoes, nor malaria, are found in it.

⁸ Boileau, 107.

⁹ Id. ib.

The zoology of Jessulmere appears to be neither varied nor important. A few lions are said to haunt the wilds about the southern frontier, and wild hogs are numerous in the same region. Tigers and leopards occur but rarely; wolves¹ and jackals are more common. There are a few antelopes, deer, and nilgaus* (*Antelope picta*). Snakes are so numerous that the people wear leggings of leather as a defence against them.⁴ But, in general, little amount or variety of animal life could be expected in a country so barren and of such limited extent. Domestic cattle are numerous and valuable. They consist principally of dromedaries, horses, kine, and sheep; of which last large flocks are kept, and the price is so low, that three may be bought for about four shillings.

¹ Id. 34.

The wild vegetation comprises phog, a tough green bush, the branches of which terminate in broomy leafless cusps; lana, a shrub about a yard high, and yielding useful provender for camels; dholirukri, or "the white shrub," a small bush about a foot and a half high, overspreading the ground in some tracts; buna, an aromatic, slender, tough-stemmed shrub, about a yard high, which in some sandy tracts overruns many hundred acres together; chug, a green shrub resembling broom, about two feet high, and making good thatch, and for which it is extensively used. The trees are generally stunted: they are the

* Nilgaw, or "blue cow."

JESSULMERE.

babul (*Mimosa*), janth, the kurit (*Capparis aphylla*), the pilu. But one crop is raised in the year, the cultivation consisting in little else than scratching the ground with a small light plough, and scattering the seed in the way of broadcast. As, from the want of streams or large bodies of water, and the depth of the wells, artificial irrigation is impracticable, the weight of the crop depends entirely on adequate falls of rain. The principal crop is bajra or millet; in the more fertile parts, various sorts of pulse are cultivated.

The only manufacture of any importance in Jessulmere is that of woollens, of both coarse and fine fabrics, made from the produce of the numerous native flocks. The coarsest part of the wool is made into cordage of various kinds; the next quality into blankets, and the finest into excellent woollen cloths and fabrics.

The commerce of Jessulmere consists, for the most part, of the transit-trade between Marwar and Western Hindostan on the one hand, and Sind and Afghanistan on the other. In consequence of the activity of this commerce, Western Rajpootana is well supplied with goods, even from remote parts. Boileau² found there Delhi scarfs, ivory toys from Herat, China ware, English cutlery and firearms, glass of American manufacture, opium from Malwa, copper, gold thread, silk, piece-goods, sugar from Hindostan, and salt from the Punjaub. Opium is by far the most important article of the transit-trade, and the carriage of it, and of the more bulky articles of corn and salt, gives employment to a considerable number of men, and to thousands of camels, which animals, in consequence of the arid, sultry, and generally sandy character of the country, are almost exclusively the beasts of burthen. In this traffic Sind sends indigo,³ tamarisk dye, madder, rice,⁴ wheat, ghee or clarified butter, pulse, silk⁵ and cotton cloths, dried fruits, assafoetida, saffron, turquoises, and quince seeds for dyeing; receiving, in return, sugar, sal ammoniac, corrosive sublimate, vegetable oils, tabashir (siliceous secretion from the bamboo), lac, groceries, and dates.⁶ The weights in use in Jessulmere are the seer, equal to two pounds avoirdupois, and the maund, containing forty seers.⁷ The currency consists of rupees and deorees,⁷ fourteen of which go to one paisa, and thirty-one of the latter make one rupee.

⁷ Boileau, ut supra, 179, 181.

JESSULMERE.

The houses in the towns are substantially built of yellow limestone, and those of persons in good circumstances are ornamented with balconies and lattices of elaborately-carved stone.* The poor villagers are wretchedly lodged in circular huts, wattle-roofed with grass or straw, and bound round with grass ropes, to make them more secure; yet brick clay is obtainable, and fuel from the numerous jungles to bake it, as well as to burn lime from the calcareous deposits, frequent in many places. There are in various parts of the territory some buildings, probably of great antiquity, constructed of large stones, without cement, partaking of that style of architecture called by antiquaries Cyclopean: some temples in this style are supposed to have existed for eighteen⁶ centuries. In buildings thus constructed, the rooms, being overlaid with stone, are either so small that slabs, easily obtained and managed, can span them, or, if they be of larger dimensions, they are supported at intervals by pillars.

⁶ Bollaue, 183.

The ruler, and the influential portion of the population, are of the Bhatti tribe of Rajpoots,† according to Tod⁹ originally from Zabulistan. They are a dissipated race, debasing and destroying their moral, intellectual, and physical powers by the excessive use of opium, which they imbibe sometimes in an infusion, sometimes by smoking, and not unfrequently till they become quite insensible.¹ The dress and accoutrements of a Bhatti in easy circumstances consist of a tunic of white cloth or chintz, reaching to the knee, trousers loose, and of many folds in the upper part, but tight round the ankles; round the

⁹ Tod, *Annals of Rajasthan*, I. 24, 85.

¹ Tod, *ut supra*, II. 230.

* See account of the town of Jessulmere.

¹ Bibliothèque Orientale, III. 570, III. v.

† D'Herbelot¹ considers "Zablistan" to be the tract drained by the upper course of the river Helmund and its tributaries, and comprehending the western part of the Huzara or Hazareh country, and the district of Ghuznee. According to Tod, the Rajpoots are offshoots of the great Scythian stock; but neither he nor any one else can give any farther account of the Scythians, than that they were nomadic ferocious savages, roaming over a part of Europe and an adjacent tract of vast extent in Asia. According to the account given by Malcolm,² "the word Rajpoot is indisputably corrupted from Rajaputra, which in Sanscrit literally means a raja's son, but more generally one of the royal race." The Rajpoots would appear to be a branch of the military caste; and Malcolm³ says, "We know, from concurring evidence, that all the Rajpoot tribes have their origin from Ayodhya or Oude."

² *Central India*, II. 638.

³ *Id.* II. 120.

JESSULMERE.

waist a scarf, in which a dagger is stuck; a shield, suspended from the left shoulder by a strap of deer-skin, and a sword, girt on with a belt of the same material. The head is covered by a turban, generally of a red colour, and terminated above by a high peak. The dress of females is of red woollen cloth, very full below; and a scarf is generally worn, which is more or less costly, according to the circumstances of the wearer. All wear rings of ivory or bone on the arms, in such numbers as nearly to cover them from the shoulders to the wrists. The legs above the ankles are also adorned with silver rings; and women will deny themselves the necessities of life to obtain the means of purchasing these ornaments.

The religious² strictness of the Bhatti Rajpoots is rather relaxed, in consequence of their continual intercourse with the Mussulmans to the westward. The next class in number and importance to the Rajpoots are the Palliwals,³ a Brahminical tribe, who nearly engross the commercial business of the community, and the Pokurna tribe, also Brahminical, and exclusively devoted to rural pursuits, which are also followed by the Jat tribe, who constitute a considerable portion of the population. There are also a few Jains.⁴ The population is estimated at 74,400.⁴

Unlike many other dialects of India, that of the Bhattis of Jessulmere has no admixture of Persian, that language being nearly unknown there.⁵ Their language closely resembles the Marwari, a dialect spoken in Joudpore, Bikaner, and the neighbouring parts of Rajpootana. The Rawul, and principal people, write in a kind of Nagari character, which, though in some degree differing from the Devanagari, could, with little practice, be fluently read by a Hindee scholar. The citizens of Jessulmere appear to favour learning, and about 1,000 young persons are in course of education there, some by Brahmins, some by other instructors. A short time since, an English schoolmaster formed part of the domestic establishment of the Rawul.

The sovereign has an annual⁶ revenue of about 8,500*l.*, of which about one-half is from transit-duties, the remainder from khalsa or crown lands, and miscellaneous sources. The military force maintained by the state does not exceed 1,000⁷ men; but Tod states that, if on good terms with his thakoors or vassals,

² Tod, *ut supra*, II. 285, 286.

JESSULMERE.

the chief could muster 5,000 infantry, 1,000 horse, and a camel corps.

The history* of Jessulmere is little else than an apocryphal subject for antiquarian research, previously to 1808, when the Rawul, probably alarmed at the encroachments of the Khan of Bahawalpur, made advances to an amicable understanding with the British government. This relation matured in 1818 into an alliance, by which Jessulmere became entitled to British protection,† and engaged to "act in subordinate co-operation with the British government, and with submission to its supremacy."[‡]

* *Trenty*, in App. to Vol. II. 771.

The principal places are noticed separately in the alphabetical arrangement. Boundary disputes had sprung up from time to time between this state and those of Bahawalpur and Khayrpore; the differences with the latter originating in the cession to Jessulmere, after the conquest of Sind, of a portion of the desert originally belonging to Jessulmere. Under the auspices of the British government, these differences have been now adjusted, and the boundaries of Jessulmere defined both towards Khayrpore and Bahawalpur.[§]

§ *India Pol. Dep.*, 17 March, 1852.

JESSULMERE.—The capital of the Rajpoot state of the same name. It is situate in a rocky tract, described by Boileau¹ as "a succession of valleys, or inclined planes, several miles long, and three or four miles broad, formed by low ridges of yellow limestone, the strata of which are not quite horizontal, but dip gently to the westward, and crop out on the eastern side, with a tolerably bold profile of ninety or 100 feet in height." The city is built at the base of the south end of one of these ranges, and has ramparts of uncemented stone, with bastions constructed in the same way, and generally much higher than the intermediate curtains. Many of these bastions are, however, in ruins. The circuit of the ramparts is about

¹ *Tour in Raj-warra*, 30.

* In Tod's *Annals of Rajasthan*, the "annals of Jessulmere" extend through seventy-three quarto pages.

¹ II. 216-233.

² II. 275.

† Tod mentions that the British government was disgraced by affording this protection to the Rawul's minister, represented as a monster of the most atrocious character. However this may be, caution is necessary in receiving the statements of a writer who seems not to think it incredible, inasmuch as he refers to the report without comment, that the minister had been able, in twenty years, to wring from a beggarly population of 71,000 persons, not less than two crores (2,000,000l.).

JESSULMERE.

two miles and a quarter; the height fourteen feet, including a parapet of six feet. The thickness of the rampart is four feet, that of the parapet two; and there is neither ditch nor fausse-braie. These defences are in many places so ruined and obliterated by sand-drifts, that they may be crossed on horseback. The only piece of ordnance throughout the whole circuit is one small gun on the highest bastion, at the north-east angle. There are four regular gateways, and three sally-ports. Inclosed within the rampart, and in the south part of the town, is the citadel, situate on an insulated eminence, three-quarters of a mile in circumference, and with steep sides, scarp'd all round, and faced with masonry to the height of about twenty feet, above which distance the surface of the hill recedes, at an elevation of about 40° , to the foot of the renee, which, with a width of six feet, runs quite round the fort. The ramparts of the fort vary in height from fifteen to thirty feet, the top of the parapet being about 130 feet above the town. The whole of the defences, as well as the town wall, are built of the yellow limestone quarried from the rocky ridge at the base of which the town lies. The summit of the ridge commands every part of the fortifications, which could be easily breached, though the considerable angle of elevation of the side of the hill forming the site of the citadel would make it difficult to storm. The outline of the citadel is an irregular triangle; the interior is occupied by the palace and several temples and dwellings, to the number of 3,000. There is only one entrance, which is on the north side, and is defended by four successive gateways, with sloping roads between them. At the time of Boileau's visit, there were four guns mounted on the walls of the citadel, and two heavy guns, a large howitzer, and three field-pieces, drawn up near the gate. The crests of the parapets are covered with rollers and balls of stone, methodically arranged, and ready to be sent down upon an assailing force.

The palace of the Maha Rawul or sovereign, within the citadel, is a great pile of building, surmounted by a huge umbrella, made of metal, and supported by a stone shaft. This is considered an emblem of high dignity, to which no other Rajpoot prince is entitled, except the chief of Oodeypoor. There are in the citadel, besides the palace, six temples, three

JESSULMERE.

for those of the Jain persuasion, and three for the Brahminists. The Jain temples are of great antiquity, built of stone, elaborately carved, and surmounted by gilt spires, towering over the adjacent buildings. Within the citadel, there are eight wells, above 300 feet deep. The water which they furnish is brackish, but not to such an extent as to be undrinkable. Progress has been made in sinking a well close to the gate. The work, at the time of Boileau's visit, had proceeded to the depth of 120 feet; but a much greater depth had still to be attained before reaching the main spring.

The city contains about 8,000 houses, including those within the citadel. The domestic architecture is in many instances elaborate and solid. The house of a citizen in moderate circumstances has usually a frontage of about twenty-five feet. The basement story is painted red on the outside, and is quite plain, having one door giving access to the interior, and two or three slits instead of windows, to give light to the lumber-room, which occupies that part of the house. The upper or principal story is very neat, the front having a small projecting balcony, constructed of stone well carved, though rather in a heavy style. On each side is a latticed window about four feet square, and ornamented with framework of limestone, curiously carved. The balcony is surmounted by a massive canopy, the top of which is level with the flat roof, and being, like it, provided with a balustrade or battlement of cut stone, serves as a place for the inmates of the dwelling to enjoy the fresh air and prospect. Each house is raised above the street by a terrace about four feet high and six or seven wide, and has in front of every story a stone spout, to carry off the water into the street below. In the fronts of the terrace, long blocks of stone are bedded, so as to project some distance, and these have knobs at the ends, to which cattle may be tied. The interior of the house has a court a few feet square, into which various water-spouts are discharged, and the drainage passed off into the street by the subterraneous channel. On one side of the court is the cistern, on the other, the *rusora* or kitchen. One or two narrow and steep staircases of stone lead from the corners of the area to the upper story and roof, where the females of the family take the air. The principal sleeping-room occupies the front side of the square. The back part of

JET—JEW.

the house is laid out in store-rooms, and the two sides of the square are formed into numerous small chambers, "with a profusion of odd but convenient little nooks, and cupboards built into the thickness of the wall. Pretty cradles and beds are provided for the children; long wooden pegs neatly painted, project from the wall for the purpose of hanging up clothes, and, in short, everything wears an appearance of comfort, the more pleasing, as it is quite unexpected."² The most remarkable building in the town is the house of the ex-minister, a very costly structure of five stories of cut stone, with a sixth of timber, surmounted by five cupolas. There is scarcely anything like a bazar, and the only appearance of traffic is at the custom-house, near the gate of the citadel. The inhabitants of the town are supplied with water from a large tank, 300 yards south-east of the city; and near its banks are several small pits, which collect water from the drainage of the surface, but are not sufficiently deep to reach the springs. Close outside the western gate of the city are two wells, 241 feet deep, with water slightly brackish. They are protected from falling into the hands of an enemy by parapets with loopholes.

² Boileau, 186.

According to Tod,³ Jessulmere was founded in 1156, by Jesul, a Bhatti prince, to replace the more ancient capital, Lodorva, situate 10 miles N.W. of the present. The site of Lodorva had no natural difficulties which might aid its defence, and in consequence of its exposed situation, was sacked by a hostile force; whereupon, the surviving inhabitants settled at Jessulmere. The population of Jessulmere is probably about 35,000.⁴ It is distant N.W. from Calcutta, by Allahabad, Calpee, Gwalior, and Nusseerabad, 1,290⁵ miles. Lat. 26° 56', long. 70° 58'.

JEWALA MUKI.

tenant-governorship of the North-West Provinces, a village on the route from the city of Agra to Allygurh, and 20 miles N. of the former. The road in this part of the route is very good, the country well cultivated. Lat. $27^{\circ} 25'$, long. $78^{\circ} 7'$.

JEWALA MUKI, in the north-east of the Punjab, a celebrated Hindoo place of pilgrimage, 10 miles N.W. of Nidaon, situate in an elevated nook, immediately under the mountains of Changa, is frequented by votaries from all parts of Hindostan, anxious to worship the mythological personage called Devi, wife of Mahadeo, her presence being indicated, as they believe, by some inflammable gases which issue from fissures in the rock. The name Jewala Muki is composed of two Sanscrit words,—*Jewala*, flame, and *Muki*, mouth. The flame, according to the legend, proceeds from the fire which Sati, the bride of Siva, created, and in which she burned herself. Siva,¹ finding that this flame was about to consume the world, buried it in the hollow of the mountain. The temple is about twenty feet square, and the principal place of flame is a shallow trough,² excavated in the floor, where it blazes without intermission. There are several jets of less importance. The gas also lies on the surface of some small reservoirs of water, and, when ignited, continues to burn for a short time. The roof of the temple is richly gilt, but the interior is blackened by the smoke of burned butter, sugar, and other gross offerings. In 1839, Runjeet Singh, when ill, made an offering of butter to the amount of 1,500*l.*, hoping the renovation of his health from the favour of the deity. The weight of the offering was probably about sixty or seventy tons; and Vigne,³ who was at the place while the burning was going forward, found “the stench similar to that of a candlemaker’s shop.” Near the principal temple is one smaller, called Gogranath, and hence concluded by Von Hügel⁴ to be of Buddhist origin. The ground adjoining to the group of sacred-buildings is crowded with cows, Brahmins, pilgrims, and mendicants, and loaded with filth. The pilgrims, most of whom are paupers, are supported for one day from the funds of the temple. The town is dirty and neglected, but has an extensive bazar,⁵ containing great quantities of idols, votive garlands, rosaries, and other trumpery of the like description. The population is about 3,000. Near the town is a mineral spring, the water of which is found to be singularly

¹ Wilson, in Moorcr. i. 70.

² Von Hügel, i. 85.

⁴ i. 87.

⁵ *Id.* i. 83.

efficacious in discussing bronchocele. Moorcroft was unable to analyze the water; but it probably contains some form of iodine, now known to possess much efficacy in resolving glandular tumours. Lat. $31^{\circ} 53'$, long. $76^{\circ} 22'$.

JEWLIPPOOR,¹ in the British district of Azimgurh, lieutenant-governorship of the North-West Provinces, a village on the eastern route from the town of Azimgurh to that of Goruckpoor, and 12² miles N.E. of the former, 60 miles N.E. of Benares. Lat. $26^{\circ} 9'$, long. $83^{\circ} 24'$.

JEWUR, or **JEWAR**, in the British district of Boolundshuhur, lieutenant-governorship of the North-West Provinces, a town on the route from Coel to Delhi, 86 miles N.W. of the former. The population is returned at 5,835.² Lat. $28^{\circ} 7'$, long. $77^{\circ} 39'$.

JEYPOOR.¹ *—A considerable raj or territory of Rajpootana, named from its principal place. This state, called anciently Amber, lies between lat. $25^{\circ} 40'$ — $27^{\circ} 37'$, long. $75^{\circ} 8'$ — $77^{\circ} 20'$; is about 150 miles in length from east to west, and 140 in breadth; having an area of 15,251² square miles. It in general is an extensive plain,³ though in the northern and north-western parts are "insulated peaks," and clusters of dentated hills, here and there rising above the general level." They may be regarded as connected with a similar formation⁴ in the vicinity of Delhi. Jacquemont⁵ estimates their average elevation above the plain at about 300 feet. Their geological formation⁶ is quartz and granitoid rock, intermixed with white calcareous rock or marble, and occasionally mica. The country extending south of those hills is generally a level expanse of fine white sand, nearly devoid of vegetation, except where intersected by a spring or perennial rill, either of which is of very rare occurrence. This plain is bounded to the south-east by a rocky range of small⁷ height, running from north-east to south-west, immediately to the west of the city of Jeypoor. The range is continued in a north-eastern direction⁸ until it joins the mountains of Alwar. The southern part of the territory is, with little exception, a sandy⁹ plain, studded in some places with low rocky hills, cultivable only by means of the incessant irrigation applied to it

JESPOOR.

by the indefatigable industry of the natives, drawing their supplies of water from innumerable wells. Many parts are irreclaimably barren. Heber says, "The country resembled extremely a large estuary, but studded with rocky islands, whose sands were left bare by the receding tide. Except the

few thorny shrubs I mentioned, which do not grow higher than the common heather, not a blade of verdure was to be seen."

A large portion of the soil is employed in grazing, and cattle are very numerous.¹ Those parts of the territory which admit

of cultivation, produce great crops of grain, pulse, cotton, and tobacco. Everywhere occur traces of extensive cultivation and

prosperity, swept away² by the devastating wars in the latter part of the last century and the early part of the present; a natural consequence of such events, as thorough tranquillity and safety for life and property are indispensable for the due cultivation of a tract depending on irrigation from wells for the growth of vegetation. The periodical rains are light, and confined to the close of

summer, and there are few perennial streams. The Banganga, the most considerable of the transient torrents which traverse the country, is in winter and spring devoid³ of water. There are a few springs, but the water which they afford is soon absorbed by the sands. Water, however, may be obtained at all times

by digging in the beds⁴ of torrents, and in most places is met with near the surface; so that wells need not be sunk to any great depth.⁵ From the naked, arid character of the soil, the temperature, during the prevalence of the hot winds, in the

latter part of spring and beginning of summer, is dreadful,⁶ the thermometer frequently rising 100° in the shade, and the heat proving fatal to men and beasts. In winter, however, the

temperature is sometimes so low as to produce hoar frost. The population is a collection of various races, of which the

most numerous are the Minas, supposed to be the aboriginal⁸ possessors of the country. Next, and nearly equal in number, are the Jats, who are extensive holders of land, and the most industrious and skilful agriculturists. Brahmins are numerous, being in greater proportion to the rest of the population than in any other state of Rajwara. Rajpoots, the ruling class, though inferior in number to the Minas and Jats, are conjectured to be still capable of mustering⁹ 30,000 men in arms.

JEYPOOR.

Awaha* or Kashwaha tribe, according to tradition, descended from Kash or Kasha, the son of Rama, who have originally come from Mount Aboo,¹ but are not considered equal in prowess to the Rahtors, the Haras, or some other² Rajpoot† tribes. Of less important tribes, the chief are the Banias, Dhakurs, and Gujurs. Tod estimates the relative density of the population of Shikawutti at 80, and the remainder of Jeypore at 150³ to the square mile, giving an average of 124 to the united area; and assuming this, the area being 15,251 miles, 1,891,124 would be the aggregate number of the inhabitants. Of the accuracy of the assumption on which this calculation is based, there are no sufficient means of judging; but it differs considerably from the view of Malcolm, who estimates the relative density of the population⁴ of Central India at ninety-eight to the square mile; which would yield an aggregate of only 1,494,598.)

The revenue of Jeypoor has greatly fluctuated. It was estimated⁵ in round numbers at a crore of rupees, or a million sterling, during the most flourishing condition of the state. This was probably an exaggeration; but, however that may be, various causes combined to reduce the amount in 1802 to 81,83,000 rupees; a sum differing widely from that now realized, which, independent of feudal jaghires and charitable endowments, is returned at 45,83,950 rupees. Under a treaty⁶ concluded in April, 1818, Jeypoor became tributary to the East-India Company. For the first year no demand was to be made; for the second year the amount was fixed at four lacs of Delhi rupees; the third year at five lacs; the fourth year at six lacs; the fifth year at seven lacs. Thenceforward the annual tribute was to be eight lacs, until the revenues of the state should exceed forty lacs, when five-sixteenths of the excess was to be paid in addition to the eight lacs. In 1842, however, an arrear had accumulated amounting to no less than forty-six lacs. The whole of this was remitted, and the annual tribute fixed at four lacs.

* Cashwaha of Elliot.¹

† The Kashwaha does not occur among the thirty-six Rajpoot tribes enumerated by Chandra in his history of Prithwi Rai, the Rajpoot prince, and last Hindoo king of Delhi.

Foreign Letter
from India,
6 Sept. 1848.

The military strength of Jeypoor and its dependencies comprises 2,096 cavalry, 18,377 infantry, 692 police; and with the addition of forces maintained in the territories, 5,690, and of troops in garrison, 5,267, the amount amounts to 32,248. The government is vested in an hereditary rajah; and when that dignity is held by an adult of firm character and talent, he engrosses nearly all power; but, as in most Eastern states, during a minority, or the reign of an imbecile prince, the country may be regarded as partitioned among the thakoors; each then becoming nearly, if not quite, independent in his estate and fort.

The principal towns are noticed under their respective names in the alphabetical arrangement.

The principal military routes are—1. From north-east to south-west, from Delhi to the city of Jeypoor, and thence to Mhow; 2. from east to west, from Agra to the city of Jeypoor, and thence to Ajmere; 3. from north-east to south-west, from Agra to Neemuch; 4. from east to west, from Calpee to Neemuch.

The Kachwaha Rajpoots, who founded the state of Jeypoor, claim descent from Kush,⁸ second son of Rama, king of Ayoda or Oude, whose reign is fixed at a very early period. After many centuries of wars and migrations, they overran the tract at present forming the state of Jeypoor, and, expelling or subjugating the Minas and Bingoogurs, founded the kingdom of Dhoondar* or Amber, in 967,⁹ under the conduct of Dhola Rae, the first rajah. In the year 1200, Alauddin,¹ the Patan king of Delhi, stormed the celebrated fortress of Rantambor, and put its defenders to the sword. At a later period, the rajah attached himself to the fortunes of Baber, and afterwards, as rajah of Amber, received² from Humayon, about the year 1532, a munsab or commission of command over 5,000 men. A subsequent rajah³ gave his daughter in marriage to Selim, the son of Akbar, and afterwards padshah; under the name of Jehangir. The alliance, however, proved unfortunate. Prince Khusroo, the offspring of the marriage, was hated by his father; and some circumstances in their disputes so affected

he destroyed⁴ herself by poison. Akbar, in supersession of his unsuccessful, and he passed the latterly he was intrusted to the charge of his brother, the Mahratta, another son of Jehangir, and afterwards padshah, the court, in whose custody he died, not without suspicion of having been cut off by order of his brother. Under the reign of Aurangzebe, Jey Singh, the rajah of Amber, was one of the most powerful and assiduous courtiers⁵ of that monarch, from whom he received a munsab or command of 7,000 men; and, amongst other services, he betrayed to his patron his rival brother, the rightful heir, Prince Dara. He also contrived⁶ to place in captivity Sevajee, the celebrated founder of the Mahratta sway, whom, however, he in some degree compensated by subsequently aiding⁷ in his escape. Aurangzebe becoming jealous of Jey Singh,⁸ caused him, it is said, to be poisoned. The munsab was reduced to Jey Singh's successor to 4,000 men, and to the third in succession to 3,000 men. The next prince, Jey Singh the Second, entered into the contest for the succession, which, on the death of Aurangzebe, arose among his sons. He supported the cause of Azim against his brother Moazzim; and, after the defeat and death⁹ of the former, was by the victor subjected to terms much more rigorous than were enforced on other Rajpoot princes.¹ The course of events, however, favoured Jey Singh, and he was subsequently, it is believed, admitted to conditions not inferior to those granted to his most favoured brethren. At a later date, when Ferokshere was raised to the throne of Delhi, Jey Singh held a high command under him. When a powerful conspiracy threatened the ruin of that feeble-minded monarch, the Rajpoot steadily supported him; and having in vain urged him to resistance, on his murder retired² to Amber. Jey Singh was high in favour with Mohammed Shah, successor of Ferokshere, and, on account of his great scientific attainments, was

* Gladwin¹ gives the following version of the transaction:—"She inherited a melancholy disposition from her family; and the undutiful behaviour of her son in making use of every opportunity to prejudice Akbar against his father, so worked on her imagination, that, taking the opportunity of her husband's absence on an hunting-party, she destroyed

in the condition of the by that monarch intrusted with the refo^d generally throughout dar; for which purpose he drew up astron^{se} of security and in honour of the Padshah, he named³ Zij f. say, have been un- "Tables of Mohammad Shah." For furthering astr^{bish} the pursuits, he erected observatories, and provided them with scientific apparatus of enormous magnitude; at Jeypoor, Benares, Muttra, Oojein, and Delhi. He also founded the city of Jeypoor, which remains a monument of his architectural skill. The career of Mahratta conquest towards the north and north-east appears to have been at first favourable to the aggrandizement of Jeypoor, which for a time made common cause with the new race of marauders, in seizing the fragments of the falling realm of Delhi, but itself soon became a sufferer from them. Seindia⁴ demanded heavy contributions, which being resisted, that chieftain marched with a large army to enforce them. He was, however, signally defeated. The defection and subsequent independence of the chief of Ma^{cherry}⁵ or Alwar, about the year 1790, rent away a large portion of the territory of Jeypoor; and Tukajee Holkar; the Mahratta chief, invading the remainder, extorted an engagement for the payment of a large annual tribute,⁶ which⁷ was afterwards transferred to Ameer Khan. From this period the country was overrun and desolated by different parties of freebooters, who often fought among themselves⁸ for the spoil, till, in 1803, a treaty was concluded between⁹ Juggut Sing, rajah of Jeypoor, and the British government, but annulled by Sir George Barlow, governor-general, in 1805, contrary to the earnest remonstrances of Lord Lake. On this occasion, the Jeypoor agent observed to the British general, that this was the first time the English government had been known to make its faith subservient to its convenience. Jeypoor was now left to the mercy of the Mahrattas, whose desolating ravages reduced the finest tracts to the state of deserts. In 1818 another treaty was concluded,¹ by which the British government agreed to protect Jeypoor, that state engaging to acknowledge its supremacy, to yield subordinate co-operation, and to pay tribute. Some hesitation was manifested by the durbar of the Jeypoor state in receiving the overtures of the British; the existence of which was ascribed, and probably with justice, to a fear that the stronger power might, as before, break th

eipitous, and totally inane, leaving the weaker to the ven-
 er, on the north, where it, leaving the weaker to the ven-
 antique town of Amber. But though saved from outrages of
 miles in length from e, prospered not. Juggut Singh, the
 It "is entirely⁴ su the treaty was concluded, died in the same
 towers and well- was executed. After² a short interval, a
 l'lin t-uous son of the deceased rajah was acknowledged as his
 s, he ssor; and during his minority his mother assumed the
 regency. This authority she continued to exercise till her
 death, which occurred in 1831. Throughout this period, the
 most scandalous corruption, intrigue, and misgovernment pre-
 vail, and shortly after the rance's death, the British govern-
 ment found it necessary to move a force into Jeypoor, for the
 purpose of redressing the wrongs and correcting the abuses
 which had brought the country to a state which led to its
 being described by a traveller in 1835, as exhibiting "an
 empty" treasury, desolate palaces, stagnating commerce, a fero-
 cious populace, and a rabble army." The greater part of the
 country was in the hands of the thakoors or subordinate chiefs,
 each of whom possessed a military force⁴ and as many retain-
 ers as he could keep together, exercising all the powers of
 government within his own district. These thakoors were in
 general engaged in quarrels and wars with each other, and
 frequently in combinations and contests against the ruling
 powers of the state, while marauders from neighbouring dis-
 tricts ravaged the country, sometimes even with the connivance
 of the rajah's minister, who closed his eyes to these outrages,
 and participated in the plunder. This man consummated his
 villanies by poisoning his master. He followed up the atrocity
 by attempts on the life of Major Alves, the Governor-Gener-
 al's agent, and his assistant, Mr. M. Blake, and against the
 latter was unhappily successful. It remains to be added, that
 the convicted contriver of these vile deeds was permitted to
 end his days in the fortress of Chunar, an example of lenity
 ill merited. The measures of the British government speedily
 introduced a better state of things; a regency during the
 minority of the infant successor of the murdered prince was ap-
 pointed; financial reforms were commenced, and an approxima-
 tion to at least something like the administration of justice
 made. The effect of the pervading influence of the British
 government is thus stated by Colonel Sutherland:—"A

visible⁵ improvement has taken place in the condition of the fine and modern city of Jeypore itself, and generally throughout the country, while everywhere there is a strong sense of security and the prevalence of order, which, the people here ascribing to the known during either of the last two reigns, have been unable to compare with what existed in the days of Jey Sing, the poor, Be- of the city of Jeypore." Subsequently, opportunity was found for the exercise of the charities of life; hospitals and dispensaries were established, of the benefits of which nearly 2,000 patients availed themselves within eight months. Of this number nearly seven-eighths were discharged cured, and only five persons died under treatment. The financial results under the influence of English authority were not less happy. The government, it is needless to add, was in debt; for all Indian governments, however hopeless their credit, contrive to accumulate debt. In 1843-44, 9,39,587 rupees of the public debt was paid off;⁶ and only 3,59,545 rupees remained due. Towards this reduction, 7,32,414 rupees, derived from the discovery of treasure formerly concealed by the infamous minister of Jeypoor, was made available. In 1844-45 the revenues exceeded the disbursements by 3,38,138 rupees,⁷ and the amount of debt was reduced by 49,777 rupees, leaving a balance of 3,09,768 rupees. In 1845-46 the receipts exceeded the disbursements by 5,14,012 rupees, and the state was free from debt.⁸ In 1851 the young chief completed his eighteenth year. He had in some degree been initiated into public business, and the British authorities entertaining a favourable opinion of his general fitness for the duties of his station, he was allowed to assume the reins of government,⁹ and exhorted to continue the beneficent system of administration under which his dominions during his minority had attained so high a degree of prosperity.

JEYPOOR.¹—A large city, the principal place of the territory of Jeypoor or Amber. It is situate in a small plain, or rather basin, conjectured² to be the bed of a dried-up lake, having on all sides, except the south, barren stony hills, crowned in many places with forts. On the north, the land rises above the town several hundred feet, and on this side of the citadel, which "has³ a very bold appearance with a fear that from the town, the south face of the rocks be

JEYPOOR.

cipitous, and totally inaccessible." It is approachable, however, on the north, where the rock slopes gradually towards the antique town of Amber. The town of Jeypoor is about two miles in length from east to west, the breadth about one mile. It "is entirely⁴ surrounded by a wall of masonry, with lofty towers and well-protected gateways, but the ramparts are too thin to offer an effectual resistance even to field artillery, and they are so low, that the shifting sands have in some places drifted against the outside of the wall nearly as high as the parapet, totally obliterating the ditch, if ever there was one." There are seven gateways,⁵ in no manner differing from each other. Outside the rampart, another wall runs parallel to it, embattled at the top, and having numerous loopholes for musketry. It is considered to be the most handsome and regularly built of the cities laid down by native Indians. A main street, two miles in length, and forty yards in breadth, extends from east to west. This is intersected by several streets of about forty yards in width, and at each point of intersection is a *chauk* or market-square. "The cross-streets⁶ are in their turn intersected at right angles by narrower streets, and the latter are again subdivided in a similar manner by lanes, which are aligned with equal accuracy; so that nearly the whole city is portioned out into rectangular blocks." "The palace, gardens, and royal premises, occupy the whole of the central block, being half a mile long." The front of the royal residence is extremely high, having seven or eight stories, and is flanked at each extremity by a lofty tower, surmounted by a *eupola*. Within are two spacious courts, and several of smaller dimensions, surrounded by cloisters, with stone pillars. The garden, which is surrounded by a high embattled wall, terraced at top, and cloistered below, is "extremely⁷ beautiful, full of fountains, cypresses, palm, and flowering shrubs, with a succession of terraces and alcoves, none of them, singly taken, in good taste, but, all together, extremely rich and striking." Jaquemont states⁸ that there are in this vast residence fully a dozen palaces, communicating either by galleries or gardens. The most remarkable apartment is the *Diwani Khas*, or hall of audience, a splendid oblong room, entirely built of white stone to which material is also profusely employed throughout the construction of the palaces. The houses in the principal government;

⁸ vi. 309.

JEYPOOR.

cipal streets are in general finely built of stone; and numerous mosques and temples add to the architectural splendour of the town. The arsenal⁹ contains a furnace for casting, and machinery for boring guns; but none have lately been made here. There are some antique cannon, of enormous dimensions, constructed of wrought-iron bars, laid longitudinally, and kept together by a coat of gun-metal founded around them; but they are totally unserviceable. The huge observatory, erected¹ here by Jai Singh, is in good preservation, but no pundit of the place has skill² to make use of it. "Besides" the huge dials, azimuth-circles, altitude-pillars, and such other bulky instruments, of masonry, there are some brazen altitude-circles of enormous size and great weight."

Disp. 7 Mar. 1849.

¹ E.I.C. Ms. Doc.

JEYPOOR,¹ in Orissa, a town in the native zemindarry of the same name, on the south-west frontier of Bengal, situate 111 miles N.W. from Vizagapatam, and 69 miles W. by S. from Ryaguddah. The territory of which this town is the principal place is bounded on the north by the petty state of Calahandy and the Koond tribes; on the east by the British collectorate of Vizagapatam; on the south by the river Godavery; and on the west by the territory of Nagpore. It lies between lat. 17° 15'—19° 45', long. 81° 28'—83° 53'. Its length from north-east to south-west is 212 miles, and its breadth 100. The area is computed at 13,041 square miles, and the population at 391,230.² The tract is held by a number of chiefs, styled hill zemindars, who collectively pay an annual tribute of 16,000 rupees, or 1,600*l.*, to the British government.

² Statistics of
Native States.

JEY—JHA.

The tribute has occasionally fallen into arrear, owing to internal dissensions, in which the British government have declined to interfere.³ Indeed, from the wild state of the country, access to the interior is scarcely practicable, and a further barrier is imposed, in the pestilential nature of the climate. An alleged instance of human sacrifice in this territory was some time since brought to the notice of the British government, and measures were instantly adopted for the suppression⁴ of the barbarous practice. The town of Jeypoor is in lat. 19° 1', long. 82° 27'.

It has a bazar,⁴ a mosque, a small temple, a large and fine tank, and some well-built houses of brick, two stories high, and covered with tiles. Lat. $29^{\circ} 7'$, long. $74^{\circ} 9'$.

⁴ Heber, Journ. ii. 103.

JHALLOWA.¹—A small raj, formed in the year 1838 by a division of the Rajpoot state of Kota. The circumstances which led to this division (which are of singular character) will be found detailed in the article KOTA. It is divided into three separate portions, the largest of which extends from lat. $24^{\circ} 6'$ to $24^{\circ} 40'$, and from long. $76^{\circ} 30'$ to $76^{\circ} 58'$. The area a little exceeds 2,200 square miles, and the population, according to the rate of estimate usually adopted for this part of India, would be upwards of 220,000. Upon the death of the late chief of Jhallowa, in 1848,² a suttee took place; and in consequence of this violation of existing engagements, the British government withheld for a time their formal recognition of the present ruler. Precautions³ were subsequently taken to prevent a recurrence of the atrocious practice, and friendly intercourse between the two governments was re-established.

JHIA.

a large body of water. It has been either made or enlarged by artificial means, as Zalim Singh repaired⁶ the dam at the same time that he enlarged and improved the town. He also granted a charter exempting⁷ the inhabitants from all forced contributions, forced labour, and the hardship of buying grain from government at an exorbitant and arbitrary price. The inhabitants moreover pay only one-half of the transit-duties ordinarily levied in Harouti. From these causes the town has become the grand central mart of Northern Malwa and South-eastern Rajpootana. Though brought to its present flourishing state only towards the close of the last century, it is a town of great antiquity, the oldest inscription amongst its numerous ruins bearing date 748,⁸ Samvat, corresponding to A.D. 692. Shattered temples and fallen idols strew the ground about the town, and vast numbers have been used as materials in building the present fortifications; and nothing can be more elaborate than the workmanship in the ruined faues. The number of temples, according to tradition, was once 108; and from the pealing of their bells, this sacred city, it is alleged, was denominated.* It is also called Chandravati. Distant from Ooguin, N., 100 miles; from Kotah, S.E., 50; from Agra, S.W., 215. Lat. 24° 32', long. 76° 13'.

JHANDINOOR, or JENDIPOOR,¹ in the British district of Agra, lieutenant-governorship of the North-West Provinces, a village on the route from the city of Agra to that of Muttra, and 25² miles N.W. of the former. The road in this part of the route is in many places sandy and heavy; the country cut up by ravines, and ill cultivated. Lat. 27° 22', long. 77° 49'.

JHANSI.—A small native state in Bundelcund. It consists of two parts, lying nearly contiguous to each other, being separated only by a narrow strip of territory belonging to the native raj of Tehree. The western division is bounded on the north by Gwalior and Duttceah; on the east by Tehree; on

¹ II. 720.

² II. 551.

³ Id. II. 732.

* According to Tod,¹ "Jhalra-patun, or 'the city of bells.'" He, however, elsewhere states² that the etymology is "Jhalrapatun, the city of the Jhala;" Zalim Singh, who rebuilt it, being of the Jhala tribe of Rajpoots. A more plausible etymology, however, appears to be from Jhalra, "a spring of water," and Patun, "town;" the rivulet³ Chandrabhaga, as well as the Orongar, or small lake, abundantly supplying it with water.

JHANSI.

the south and west by Gwalior. The eastern portion is bounded on the north-west by the British district of Jaloun; on the east by that of Hummeerpoor; on the south and south-west by Tehree. The combined territory lies between lat. $24^{\circ} 55'$ and $25^{\circ} 48'$, long. $77^{\circ} 53'$ and $79^{\circ} 31'$, and extends from east to west about 100 miles, and from north to south about 60. In 1832 it was estimated to have an area of 2,922¹ square miles, 956 villages, and a population of 286,000. Since that period, however, the limits of the district have been contracted by alienation, and consequently the above-quoted estimates do not, in respect either of extent or population, represent its present condition. Probably 390 miles should be subtracted from the area as above stated, and 86,000 persons from the population.

¹ De Cruz, Pol. Relations, 30.

The tract was formerly part of the possessions of the Boondela rajah of Ooreba.² Subsequently, it fell into the hands of the Peishwa, and was assigned to the administration of one of his officers in the character of soubahdar. In 1804 a treaty of defensive alliance was concluded by the British with the then soubahdar, as a tributary³ of the Peishwa. In 1817, consequent on the cession to the East-India Company of the Peishwa's rights in Bundeleund, a second treaty was concluded by the British government with the soubahdar of Jhansi, by which he was acknowledged "hereditary ruler" of the territory, subject to the payment of an annual tribute⁴ of 74,000 rupees (Jhansi currency). In 1832 he was permitted to assume the title of rajah. Ram Ramchand Rao, the ruler on whom this dignity was conferred, died in 1835, without issue. Various claimants to the succession thereupon appeared, but the British government decreed in favour of Rao Rugonath Rao, the uncle and next of kin of the deceased rajah. He died about three years after his accession; his brief period of rule having been rendered unquiet by opposition to his claim, professedly grounded on the fact of his being a leper, which was asserted to be a disqualification for the occupation of the seat of power. Rugonath Rao left no legitimate issue, and the succession became again the subject of contending claims. Some of these were obviously inadmissible, and the propriety of at once sanctioning any of them appeared very questionable, regard being had to the distracted state of the country, which

*JHANSI.

had greatly deteriorated in condition, from continued misgovernment; the revenue (which is said at one period to have been eighteen lacs of rupees) having fallen from twelve lacs, its amount in 1832, to three lacs. Under these circumstances, it was deemed advisable that the Governor-General's agent in Bundelcund should assume the administration; the various claims to the raj being reserved for future adjudication. This step was accordingly taken, though not without opposition; the mother of Ramechund Rao, who espoused the cause of one of the claimants to the succession, having compelled the British government to make military demonstration before she would quit the fort of Jhansi. A commission appointed to investigate the different claims, unanimously rejected all except that of Baba Gunghadar Rao, brother of the late chief, and the only surviving male descendant of Sheo Rao Bhow, with whom, as soubahdar, the first engagement of the East-India Company with Jhansi was concluded. The selection was approved by the home authorities; but the new rajah was not of strong intellect, and was therefore thought unequal to the task of retrieving the principality from the state of disorder into which it had fallen. It was thereupon determined to carry on the administration by British agency, giving the rajah a fixed allowance, with the understanding that the administration should be made over to him partially, or entirely, when it should be deemed safe to trust it to his hands. This plan, thus dictated by temporary necessity, was attended with such success, that the revenue⁵ which, as already mentioned, had fallen so disastrously, was in one year considerably more than doubled. To provide for defence, and to maintain tranquillity, the Jaloun force (afterwards called the Bundelcund legion) was increased, and made available for the service of this state, as well as of that for the protection of which it had originally been raised.*

⁵ Pol. Disp. to India, dated 29 July, 1840.

Pergunnah Mote, which belonged to the British government, but had been granted in *istehmwarra* tenure to the rajah of Jhansi, subject to an annual rent, which had not been paid, was in consequence resumed,⁶ and placed under the management of the superintendent of Jaloun. After a few years of British management, the country having attained that state in

⁶ Id. dated 2 June, 1841.

* The circumstances under which this legion was disbanded are referred to in a note to the article on the district of Jaloun.

JHANSI.

which it appeared safe to make the transfer always contemplated, it was given up to the management of its native chief, subject to a cession of territory, in commutation of the annual payment previously made towards the support of the Bundelcund legion, and to other necessary conditions.⁷ This took place in 1843.*

It would appear that in 1848 the revenue⁸ of the rajah reached the sum of 61,198*l*. An annual payment of 7,500 rupees is made to this chief by the British government, on account of the lapsed territory of Chirgong.⁹ The native force is said to amount to 3,000 infantry, 200 cavalry, and 40 artillery; total, 3,240 men.

JHANSI,¹ in Bundelcund, a town, the principal place of the small territory of the same name, lies on the route from Agra to Saugor. Hunter, who visited the place in 1792,² says, "It is frequented by the caravans from the Deccan, which go to Furruckabad and the other cities of the Dooab. Hence, an afflux of wealth, which is augmented by a considerable trade in the cloths of Chanderi, and by the manufacture of bows, arrows, and spears, the principal weapons of the Boondela tribe."

The town is situate amidst tanks,³ and groves⁴ of fine timber-trees, and is surrounded by a good wall. On a rock overlooking the town, is a fortress, or castellated residence of the rajah, a lofty mass of building, of stone, more striking from being surmounted by a huge round tower. This fort is said to have between thirty and forty pieces of cannon. It was built by the Mahrattas,⁵ from whom it was wrested in 1761, and for some time detained by the nawaub of Oude, who reduced it almost to ruins. The streets and bazars are clean and orderly, the rajah paying great attention to their due regulation. There is another hill 600 yards south-east of that on which the fort is situate, and of nearly equal elevation to it. Jhansi† is

* De Cruz states (as mentioned in the text) that Jhansi was subjected to the payment of tribute. No mention is made of this in the treaty of 1817; but if, nevertheless, the fact were as stated, it is to be presumed that the tributary engagement was merged in the general arrangement of 1843, under which annual payments for the support of troops were commuted by cessions of territory.

† The population of the town is 60,000, according to Captain Sleeman.¹

² Garden, *Tables of Routes*.

¹ E.I.C. Ms. Doc. JHEEND.¹—A small native territory within the limits of the tract of country over which the British government maintains a controlling power, through the commissioner and superintendent of the Cis-Sutlej states. Some years since, the territory lapsed, from failure of direct heirs, and possession was taken of it; but, in 1837, the larger portion was granted to a collateral heir. In 1842,² the revenue of the state thus constituted was estimated at three lacs of rupees, or 30,000*l.*; but this estimate is inapplicable to the present condition of the state, as, on the conclusion of the war with Lahore, an accession of territory was bestowed on the rajah, in consideration of his fidelity during that contest. The possessions of this state being made up of scattered portions of territory, there is much difficulty in dealing with them as a whole; but they are returned as having an area of 376 square miles, and a population of about 56,000 persons. The British government, in granting to the rajah an extension of dominion, took who, however, brings forward no grounds for adopting an estimate incredibly great for a place so obscure.

² De Cruz, *Pol. Relations*, 132.

JHE.

advantage of the opportunity furnished by the act of favour, to promote the cause of public improvement, and advance the interests of humanity, by binding³ the rajah to abolish transit-duties, to make and keep in repair a military road, and to suppress suttee, infanticide, and slave-dealing.

JHEEND,¹ in Sirhind, a town situate on Feroz Shah's canal, in a naturally fertile country, but which, in consequence of deficient cultivation, is extensively overrun with jungle, especially of dakh² (*Butea frondosa*). It is a considerable town, and is the chief place of the native state bearing the same name: there is a good bazar, and a palace,³ the residence of the rajah. The road in this part of the route, which is in general good, crosses the canal by a bridge. Supplies are abundant. Jheend is distant N.W. from Calcutta 979 miles. Lat. 29° 19', long. 76° 23'.

JHELUM, or **BEHUT**.—A river of the Panjab, and the most western of the five great rivers which intersect that region east of the Indus. It rises in Cashmere, the whole valley of which it drains, making its way to the Panjab, through the Pass of Baramula,¹ in the lofty range of Pir Panjal. Its most remote source is the head of what is regarded by some as its principal feeder, the Lidur,² which rises in the mountain-range bounding the valley on the north-east, and in lat. 34° 8', long. 75° 48'; and, having drained the small mountain-lake called Shesha Nag, takes a south-westerly course of about fifty miles, to its confluence with the Breng, flowing from the south-east. About ten miles to the north-west, this united stream forms a junction with a large feeder flowing from the south, and itself formed by the junction of the Sandren, the Veshau, the Huripur, and some other streams of less importance, none having a length of course exceeding forty miles. Of these, the Veshau is the principal, and, according to Vigne, so far exceeds in size the other upper feeders of the Jhelum, that its fountain-head should be regarded as properly the source of that great river. The Veshau flows by a subterraneous passage from Kosah Nag, a small but deep lake, situate near the top of the Pir Panjal Mountain, and at an elevation of about 12,000 feet above the level of the sea. Herc, Vigne³ states, "its full strong torrent is suddenly seen gushing out from the foot of the last and lofty eminence that forms the

JHELUM.

dam on the western end of the lake, whose waters thus find an outlet, not over, but through, the rocky barrier with which it is surrounded." This remarkable spot is in lat. $33^{\circ} 35'$, long. $74^{\circ} 43'$. The stream thus produced and reinforced, subsequently receives numerous small feeders; passes through the City Lake, the Manasa Lake, and the Wulur or Great Lake, and sweeps through the country, confined by embankments, which prevent it from overflowing the lower part of the valley. Previously to entering the Wulur, it receives a considerable tributary named the Sinde, which rises in the lofty range bounding the valley on the north. The whole course of the Jhelum through the valley, before it finds an outlet through the Pass of Baramula into the lower ground of the Punjab, is about 130 miles,⁴ for seventy of which it is navigable. It is the opinion of Vigne,⁵ that the river made its way gradually through this pass, and thus drained the lake, which, according to tradition,⁶ formerly occupied the site of the valley. At Baramula,⁷ where the stream is 420 feet broad, is a bridge of seven arches. At Mozafarabad, about 205 miles from its source, it is joined by the Kishengunga, a stream of nearly equal volume, which rises in Little Tibet, receives a considerable tributary from the valley of Gurys, and subsequently makes its way through the mountains stretching from Cashmere to the vicinity of Attock. The united stream takes a course nearly due south, from Mozafarabad, and, about 255 miles from its source, leaves the mountains, and enters on the plain of the Punjab, near the town of Ohind, whence it is navigable to the Indus.⁸ It is here a very great stream, though considered by Burnes⁹ less than the Chenaub. Von Hügel,¹ at the commencement of January, when the rivers of the Punjab are lowest, crossed it at the town of Jhelum, sixty-five miles lower down, on a bridge of twenty large boats, and estimated it to have a greater volume of water than the Indus at Attock. Moorcroft,² at the same place, found it in the middle of October 150 yards wide, and from twelve to sixteen feet deep, but 600 yards wide at a short distance both above and below that point, and flowing at the rate of about a mile an hour. At this place the direction of the Jhelum changes from southerly to south-westerly. At Jelalpoor, from which point Burnes³ descended by a boat to Pind Dadun Khau, the

JHELUM.

stream was muddy but rapid, with a current of three or four miles an hour. Elphinstone⁴ crossed the river at Jelalpoor, in July, when he found it one mile, one furlong, and thirty-five perches wide, with a depth of from nine to fourteen feet, and a current running four miles an hour. It abounds in fish, and is infested by great numbers of crocodiles. Below Jelalpoor, it takes a direction nearly southerly, and joins the Che-naub a little above the ferry of Trimo, in lat. 31° 10', long. 72° 9', after a course of about 490 miles. The Jhelum was, at the confluence, when observed by Burnes at the end of June, about 500 yards wide. After the union, the channel of the united waters was a mile broad and twelve feet deep.⁵

The Jhelum was unquestionably the Hydaspes of the Greeks. It is still known to the Hindoos of the vicinity by the name of *Betusta*,⁶ corrupted by the Greeks, according to their usage with respect to foreign names. The scene of the battle between Porus and Alexander is generally placed at Jelalpoor.

JHELUM.¹—A town of the Punjab, on the right bank of the river of the same name. Jhelum is a town of considerable extent, with a population mostly Mahomedan.² It is, however, rendered unhealthy by the inundation, which extends widely over the eastern bank of the river. The principal crops in the vicinity are wheat, barley, and cotton. During the season when the river is lowest, there is a ford nearly a mile above the town. The passable part of the bed describes two sides of a triangle, the vertex of which is down the river.³ By this ford the British army crossed in the middle of December, 1839, in its return from Afghanistan; and though this is the low season, several were swept down the stream, and eleven persons, including an officer, drowned. Hough, who was present on the occasion, states, "the ford extended over a line of about 500 yards, and had more than three feet water, and a strong current near the south bank." It is obvious that, for the greater part of the year, the ford must be totally impassable. The elevation of Jhelum above the sea is estimated at 1,620 feet. It is expected that steam communication between Kurrachee and

¹ E.I.C. Ms. Doc.

JHOOSEE, or **JHOUSEE**.¹—The principal place of the pergunnah of the same name, a town on the left bank of the Ganges, close to the confluence of the Jumna. It is opposite the city of Allahabad, with which it communicates by a ferry across the Ganges. A more frequented communication between the

JHO—JHU.

left bank of the river and the British cantonments, which adjoin the city on the north, is at Daraganj, two miles higher up. The bed of the river is there a mile² in width, but in the dry season the stream occupies only a third of it, the remainder being used as a road. It is always heavy, either from sand or mud. This ferry has thirty boats, and troops and stores are passed free of charge. In some seasons the Ganges is impassable here by ferry, in consequence of shifting sands, and the passage must then be made at Papamow, five miles higher up. These sands form a great obstruction to the navigation of the Ganges below Cawnpore. It flows "in a race"³ over a shifting channel in the dry season, and has a very strong current³ (in some places seven miles an hour) during the rains. Distant N.W. from Calcutta, by water, 810 miles;⁴ by land, 503.⁵ Lat. 25° 26', long. 81° 58'.

JINJEERA,¹ on the coast of Bombay, a district and harbour, sometimes called the Harbour of Rajapoor,² from the town of that name situate on the northern point of land forming the entrance of the harbour. "This³ is an excellent harbour, without any bar, having from four to five fathoms in the entrance, and the same depths inside, at low water, where there is shelter from all winds." Off the mainland is the fortified island of Jingeera, formerly regarded as a place of high importance. During the existence of the Mussulman monarchy of Beejapoor, it was the principal⁴ depôt of the maritime force of the Seedee or African admiral of that state, who held his dignity on condition of maintaining a fleet for the protection of commerce, and conveying pilgrims to the Red Sea. After the rise of the power of the Mahrattas, it was attacked repeatedly, but in vain, by Sevajee.⁵ On one occasion, the garrison revolted, and placed the fort in the hands⁶ of Aurungzebo. Rajapoor, on the mainland, had previously been taken by the Mahrattas. In 1682, Sambajee, son of Sevajee, besieged the island, which he attempted to connect by means of a mole with the mainland; but the project failed, and in other attempted modes of attack, the assailants were repulsed with great loss.⁷ On the decline of the realm of Delhi, the Seedeo or chief of Jinjeera assumed independence, which he and his successors maintained more or less effectually, and the potty power still⁸ exists, under the protection of the East-India Company. The Jinjeera principality lies between lat. 18° and $18^{\circ} 32'$, and its revenues are computed at 17,500*l*. The title Seedeo or Hubsheo is one given in India to Abyssinians, and hence the territory is designated that of the "Hubsies."⁹

JINJINEALLA.—A town in the Rajpoot native state of Jessulmeer, 48 miles S. by W. from Jessulmeer, and 148 miles W. from Jodhpoor. Lat. $26^{\circ} 16'$, long. $70^{\circ} 48'$.

JINKIPUDDA.—A town in the Cuttack mohal of Mohurbunge, 84 miles N.E. by N. from Cuttack, and 30 miles W. from Bulasoro. Lat. $21^{\circ} 32'$, long. $86^{\circ} 33'$.

JOOBUL.¹—A protected hill state, in the southern or lower Himalayas. Inclusive of Ootrah or Turoch,* with which it has been incorporated, this state is bounded on the north by Poondur, a detached district of Keonthul, and Bussahir; on the east by Bussahir and Gurwhal, the Pabur separating it from the former, and the Tonso from the latter; on the south

* See OOTRAH for particulars.

JOOBUL.

by Sirmour; and on the west by Sirmour and Bulsun. It lies between lat. $30^{\circ} 48'$ — $31^{\circ} 6'$, long. $77^{\circ} 32'$ — $77^{\circ} 54'$: it is stated to have an area of 330² square miles. Its northern part lies in the extensive valley of the Pabur, along the right bank of that river; its southern is comprised within the valley of the Shalwee, a tributary of the Tonse. The valley of the Pabur is described by Jacquemont³ as one of the most delightful tracts he had ever seen, especially that subdivision in which Deohra, the residence of the rana, is situate. The mountains, rising with a gentle slope, are formed into numerous terraces, yielding crops of rice, amaranth, and other grain, amidst which groves and hamlets are dispersed, while thick and lofty forests overspread the higher parts. The elevation of Joobul in general is very considerable. That of the great peak of Chur, at the south-western frontier, is 12,149⁴ feet; that of Urrukta, in the north, above 10,000.⁵ The elevation of the bed of the Pabur at Raingarh, on the north-eastern frontier, is 4,932⁶ feet.

The geological character of Joobul appears to have been but very partially investigated. The summit of the Chur peak, on the southern frontier, is of granite.⁷ Obscure hints of the writers on the subject appear to indicate that mica-slate, and various schistose forms, extend north-westward of that, and intervene between it and the great gneiss zone, forming generally the Indo-Gangetic range, or outer Himalaya. Jacquemont⁸ found the prevalent formations on the northern part to be mica-slate, quartz, clay-slate, and gneiss; the latter usually forming the summits of the mountains.

No part of this district reaches the limits of perpetual congelation, Chur being free from snow⁹ during the summer months: the temperature of the low valleys on the banks of the Pabur sometimes approximates to that of Hindostan. No country is better wooded; the northern face of the Chur especially, and the mountains stretching from it, being covered with dense forests of deodar (*Cedrus deodara*), attaining a height of 150 feet and a girth of thirty;¹ with various other conifers, pines, firs, and larches. There are also oaks, rhododendrons, hollics, horse-chestnuts, birches, and gigantic² alders, sometimes twenty feet in girth. But those fine trees, though equal to any in the world in size, strength, and durability of timber, are useless to man, from the impossibility of conveying

JOOGUL.

them to the plains over the rugged country intervening. Great havoc is made among the trees by the natives, who use them largely in the construction of their houses, and who, being unacquainted with the use of the saw, split the trunk with wedges, and then roughly dress the wood with an axe, so that a whole tree is frequently cut up to furnish a plank.

The people of Joobul are said to be distinguished by beauty of person, and some of the natives are nearly as fair³ as Europeans. The dress⁴ of the men consists of a pair of loose trousers, of thick striped woollen stuff; a sort of capote of similar stuff, reaching to the knees, and girt tight round the waist, but having many folds from the hip downwards; a cotton scarf, a shaggy flat woollen cap, and shoes of a sort of close network or twill of woollen thread, with a leather sole. Women appear in public without reserve, but are treated with little kindness or delicacy by their male relatives, who make no scruple in selling them. Mundy⁵ relates, that at Deohra "an instance of this was afforded to Lord Combermere's party, a *very pretty girl being brought to the camp, and offered for sale, at the moderate price of 150 rupees; more than which sum,*" adds the writer, "I have seen given for a Scotch terrier at Calcutta." The religion⁶ of the people is Brahminism; the language,⁶ a dialect of the Hindee. The population is believed to amount to about 15,000.⁷ The revenue is estimated at 14,136 rupees,⁸ or 1,4137. The military force consists of 800 infantry. The rana, or ruler, a descendant of a Rajpoot family, was restored to power by the British on the expulsion of the Goorkhas, in 1815. By the same authority, he was excluded in 1833, and an annual pecuniary provision assigned to him, which he, however, pertinaciously refused to accept. On his death, in 1840, the raj was restored to his son, an infant, during whose minority the territory continues under British management.⁹ The only places of importance in Joobul are the fort of Chepal, and Deolra,* the residence of the rana.

JOOLKAPOOR.—A town in the British district of Midnapoor, presidency of Bengal, 58 miles W.S.W. of Calcutta. Lat. $22^{\circ} 12'$, long. $87^{\circ} 39'$. E.I.C. Ms. Doc.

JOONAGHUR,¹ in the peninsula of Kattywar, province of Guzerat, a town in the district of Sorath. The approach² from the south-west is very picturesque, the road for some miles passing through rich topes of mango, tamarind, and other trees; and near the walls are some gardens in high cultivation. It is surrounded by a rampart about five³ miles in circumference, with numerous massive square towers⁴ and crenellated parapet, and is situate advantageously on a ridge of sandstone. Within the rampart, and in the north-east of the area inclosed by it, is the citadel,⁵ the ground-plan of which is an irregular trapezium of very great size. The huge rampart of hewn stone is on the outside strengthened by a deep and wide ditch, hewn in the solid rock. The most remarkable building within this citadel is a large mosque, built,⁶ it has been conjectured, from the ruins of ancient temples. It is 140 feet in length, and 100 in breadth. The roof is supported by above 200 pillars and pilasters of granite, and there is a finely-sculptured pulpit, consisting of one solid block of variegated marble. The citadel is supplied with water from a reservoir cut in the solid rock⁷ to the depth of 120 feet. It is of an elliptical form, the longer diameter being about seventy-five feet. On one of the western bastions of this citadel, is a huge piece of brass ordnance, the length of which is twenty-two feet, the diameter at the breech two feet two inches, at the muzzle nineteen inches, and the calibre ten inches and a quarter. There are two inscriptions, indicating that it was cast in Turkey. This vast fortress, which is called Uparkot,⁸ is at present overgrown with jungle, the sureefa or wild custard-apple predominating among the vegetation. Though thus neglected, yet, by the orders of the nawab of Joonaghur, it is guarded externally "with a jealousy perfectly oriental," and admission within it is a matter of peculiar favour. The town⁹ is ill built, with narrow, filthy streets; and not more than half of the space inclosed within the walls is

* Uparikott, or Uparkot; from Upari, "upper," and Kot, "fort."

JOSHIMATH.

united, form the Aluknunda. The town is situate on the left bank of the Aluknunda, in a hollow recess, and on a declivity, being sheltered on every side by a circular ridge, and especially to the north, where a high mountain intercepts the cold blasts rushing from the Himalaya, rising in that direction. The entrance to the town is up a bank ent into steps faced with slate or stone, with both which materials the streets also are paved, but very irregularly. The houses are neatly built of grey stone, and roofed with shingles. Amongst them is the residence of the rawal or high-priest of Bhadrinath, who lives here for the six months during which the approaches to the elevated temple that he serves are buried under snow. The building containing the idol Nara Singha is more like a private residence than a Hindoo temple. It is built with gable-ends, and covered in with a sloping roof of plates of copper. Pilgrims halting here, put up in a large square, having a stone cistern, supplied by two brazen spouts, which yield a never-failing flow of water, derived from a stream descending from the Himalaya. A collection of temples, bearing marks of great antiquity, extend along one side of the square, being ranged along a terrace about ten feet high. In the centre of the area is a temple sacred to Vishnu, surrounded by a wall thirty feet square. Several of those temples are much dilapidated, having been partially overthrown by earthquakes. The temples of Vishnu, Ganesa, Surya or the Sun, and the Nandevi, have suffered least. The statue of Vishnu is of black stone, in a very superior style of workmanship. It is about seven feet high, and is supported by four female figures, standing on a flat pedestal. The image of Ganesa is two feet high, well carved, and polished. In the town is a line of water-mills, placed one below the other, at intervals of fifteen or twenty yards, and turned by one stream, which, flowing from the mountain above, is supplied to them in succession by a communication through troughs of hollowed trunks of firs. Joshimath² is situate on the route from Hindoostan to Chinese Tartary, through the Niti Pass, and also on that by the Mana Pass. The town contains 119 houses, of which twenty-one belong to Brahmins, fourteen to merchants, sixty-eight to Ganga; having, according to this last authority, the name "from its flowing near the feet of Vishnu at Bhadrinath."

Journ. to Lake
Manasarovar.

JOT—JOU.

cultivators, and the rest to other classes. Elevation above the sea 6,185 feet.* Lat. $30^{\circ} 33'$, long. $79^{\circ} 37'$.

JOTEPOOR, on the south-west frontier of Bengal, a town in the Cuttack mehal of Keunjur, situate on the left bank of the Byeturnee river, and 95 miles N. from Cuttack. Lat. $21^{\circ} 49'$, long. $85^{\circ} 43'$. E.I.C. Ms. Doc.

JOUDPOOR.—A town of Bundelcund, in the native state of Punnah, 50 miles S.S.W. from Punnah, and 64 miles N. from Jubbulpoor. Lat. $24^{\circ} 5'$, long. $79^{\circ} 58'$. E.I.C. Ms. Doc.

JOUDPORE, or **MARWAR**,¹ † the most extensive of the Rajpoot states, is bounded on the north-west by Jessulmere; on the north by Bikaner and Shekhawuttee; on the east by Joypore, Kishengurh, Ajmeer, and Mewar; on the south by Oodeypoor and Serohee, and the Guicowar's dominions; and on the west by the Runn of Cutch and Sinde. It is 330 miles in length from south-west to north-east, and 160 in breadth in the direction of the opposite angles. It lies between lat. $24^{\circ} 36'$ — $27^{\circ} 40'$, long. $70^{\circ} 4'$ — $75^{\circ} 23'$, and has an area of 35,672 square miles.² The most marked feature in the physical aspect of the country is the river Loncee, which, rising on the eastern frontier near Pokur, takes a south-westerly course, nearly bisecting the territory, and forming the boundary between the fertile and sterile tracts; the former lying along the south-eastern or left bank, the latter along the north-western. The western part, bordering on the great desert of Scinde, is, throughout, a mere desolate³ waste. Eastward of this are numerous long ranges of rocky hills, dividing the Great from the Little Desert, which occupies the right bank of the Loncee, and runs up north-eastward between the city of Joudpore and Pokhurn. The Little Desert appears to be covered with sandhills nearly throughout, though low rocks

¹ Sutherland, Sketches of Pol. Relations, 23.

² Trig. Surv. Rep.

³ Holleau, Rajwara, 100.

* Such is the height. Traill¹ states it at 7,500 feet.

¹ Ut supra, 140.

† Hamilton¹ assigns, as its stymology, Yuddapoor, "the city of war." Tod derives it from Joda,² a native prince, who founded the capital in 1459. According to the same author,³ "Marwar is a corruption of Maroowar, classically Maroosthali or Maroosthan, the region of death. It is also called Maroodesa, whence the unintelligible Mardes of the early Mahomedan writers. The bards frequently style it Mordhur, which is synonymous with Maroodesa, or, when it suits their rhyme, simply Maroo. Anciently it comprised the whole desert between the Sutlej and the ocean."

¹ East-India Gazetteer.

² Annals of Rajasthan, ii. 18.

³ Ut supra, ii. l.

JOUDPORE.

show themselves on each flank towards Joudpore and Mundor on the east, and Pokhurn and Phulodi on the west. On the eastern frontier, the country swells upwards to the Aravalli range, which rises boldly to the height of between 3,000 and 4,000 feet above the level of the sea.⁴ The whole of the south part of Joudpore, about Sachor, Jalor, and Siwana, exhibits a succession of rocky hills; the eastern parts, about Pali, Nimaj and Merta, are less stony, and there is much arable ground between Balotra and the capital, as well as on the north-east frontier. On the southern frontier are occasional appearances of rocks, generally regarded as volcanic by geologists. Stewart states porphyry to be the prevailing, if not the only rock in that region; "which near the town of Nuggur-Parkur rises in a range of lofty hills to the height of 1,000 feet, assuming, in its rugged features, a regularity equally singular as picturesque."⁵

⁴ Bombay Literary Transacts. III. 541
—Stewart, on the Strata between Malwa and Gozerat.
⁵ Boileau, 9.

The climate is very hot in summer, but cold, healthy, and bracing in winter, when severe frosts⁶ sometimes occur. Throughout the western part, the generally sandy nature of the country renders the air dry and healthy at all times, so that it is a common native proverb, that neither mud, musquitoes, nor malarial are to be found in those regions. The case is different towards the south-east, where the Lonee occasionally rolls along with a great body of water, and the country is cut up by numerous torrents, which eventually discharge themselves into that river. There is consequently much swamp in that region during the rains, and Joudpore, the capital, itself is then considered unhealthy.⁷

⁷ Id. 163.

Salt abounds in this territory, large quantities being extracted from the waters of the Sambhur Lake,⁸ about twelve miles long and five broad, situate on the north-east frontier. Salt is also extracted at Deedwana, 110 miles north-east of Joudpore; at Puchbhudra, sixty miles south-west of that place; and at Phulowdee, seventy miles north-west of it. Boileau⁹ considers that the numerous rocky hills in the east and south of this country contain various metals, as the range which passes into Ajmeer from the northward contains lead, iron, copper, and silver; but these promising deposits do not appear to have been worked in Joudpore. There are very fine quarries of white marble at Mukrana, 120 miles north-east of the town of

⁸ Tod, II. 165.
Boileau, 172.

⁹ p. 169.

JOUDPORE.

Joudpore, which is itself built on a hill of a hard red freestone, of excellent quality as a building material. The calcareous conglomerate called *kaukar* is abundant in many districts, and burned to make lime for mortar; tin and lead are found at Sojat, alum about Pali, and iron is obtained from the districts adjoining Guzerat. Tod² classifies the soils of Joudpore under ² II. 164. the following heads:—Baikal, the most prevalent, is a light sand, having little or no earthy admixture, and only fit to produce *bajra* (millet), moong and moth (kinds of pulse), til (sesamum), melons, and other cucurbitaceous plants; *chikni*, a fat black earth, producing chiefly wheat; *pila*, a sandy clay, adapted for barley, also for tobacco, onions, and various other vegetables; *suffed* (white), consisting nearly of pure silex, and producing scarcely anything, except after heavy rains. Cotton is cultivated to a considerable extent, but is a precarious crop, being sometimes totally destroyed by frost, as happened during Tod's¹ visit, when every pod was nipped, the cold being so ¹ II. 617, 618. severe as partially to freeze the water in his bags. The districts along the base of the Aravulli being watered by the numerous small streams which flow down from that range, produce every kind of grain except *bajra*, which thrives best in a sandy soil. On an average for the whole country, the majority of the inhabitants are supported on *bajra* or moth. The emperor Shir Shah meeting with some reverses during his invasion of the country in the year 1544, declared that he had nearly lost the empire of India for a handful of millet, alluding to the poverty and low produce of Joudpore.²

The zoology is neither rich nor varied. The banks of the Lonce are in places infested by lions³ and leopards, and tigers have been discovered in some dense and secluded jungles; there are, towards Cutch, wolves,⁴ hyænas, jackals, and three kinds of foxes: *nylgaus*, antelopes, and wild asses roam about the southern frontier towards Sind. According to the account given by Macmurdo,⁵ who shot several, the wild ass "is an inhabitant of the salt wastes, so common in the desert, but frequents the cultivated country in the cold season, and does considerable damage to the crops. The wild ass is thirteen hands high; has a back, neck, and body of a light-brown colour, with a belly approximating to white. He has the dark stripe down the back in common with all dun animals. His

JOUDPORE.

ears are long, like those of the domestic ass; but his limbs are strong and well formed. His voice is a bray, but is so fine as to resemble that of a frightened deer. The animal is gregarious, being generally seen in herds, from ten to fifty; he is, however, occasionally found singly and in pairs.⁵ His food consists of the saline grasses and shrubs of the desert, and he is never seen in bad condition: he prefers brackish water to fresh. The flesh of this animal is said to afford tolerable food. Wild hogs are not uncommon in various parts of Joudpore. Game-birds are scarce, though there are a few wild ducks and grey partridges. Snakes are so common, that in some places the people are obliged to protect themselves against them by means of thick leggings or gaiters.⁶ Camels and horses are bred in great numbers, and fetch good prices. The kine⁷ of Nagor are highly celebrated; a pair broken in for draught are worth from sixty to ninety rupees. Great numbers of sheep graze in the wilder tracts of the country, and their fleeces are in large quantities converted into coarse cloths and blankets. Coarse cottons are also manufactured for home consumption. Matchlocks, swords, and other warlike instruments, are fabricated at Joudpore, at Nagor, and at Pali; at which latter places are made tinned boxes of iron, resembling those of Europe. Joudpore is famous for ivory-turning,⁸ as well as for ornamental manufactures in leather and glass; and all ordinary works in iron and brass are produced at Nagor. Iron platters, especially, are made in great numbers.

The natives of Joudpore are a commercial people, driving in every direction a brisk transit-trade, of which Pali is the chief mart. Their principal articles of commerce are camels, horses, oxen, sheep, hides, horns, tanning-bark, elephants'⁹ teeth, broad-cloths, silks, chintz, sandal-wood, camphor, musk,¹ dyes, opium and other drugs, sugar, spices, coffee, dates, gum-arabic, salt, potash, cocoa-nuts, dyed blankets, arms, copper, iron, pewter, and borax. From Sindé are brought rice, wheat, butter, silk and cotton cloths.² The people of Joudpore not only conduct this considerable commerce at home, but have overspread the neighbouring countries, where they have contrived to acquire for the most part the management of the trading concerns. According to Tod,³ natives of Marwar, principally of the Jain belief, constitute nine-tenths of the bankers and commercial

JOUDPORE.

men of India, and the tribe called Oswals have 100,000 families employed in commerce.

The Jats, a very ancient race, scattered over the great tract extending on the east of the Indus, from the Himalaya to the ocean, were probably the aboriginal population of this country, and still constitute five-eighths of the number of its inhabitants; two-eighths more being Rajpoots* of the Raktor tribe, and the remainder Brahmins or Jains. The Charuns, a tribe of Rajpoots, have among their countrymen unbounded influence, discharging the sacerdotal office, as well as the duties of chroniclers. There is a general impression, that certain and sweeping ruin results from shedding their blood or that of their families, or in being instrumental to its being shed. Hence their influence; and they lose no opportunity of warning their children not to scruple sacrificing their lives, should the measure be necessary for maintaining the claims of their order. Trusting to such influence, one of this class generally becomes the safeguard of travellers dreading the attacks of Rajpoot freebooters. Should robbers approach, he warns them off by holding a dagger in his hand, and if they disregard him, he wounds himself, and throws his blood towards them, denouncing woe and ruin in the most terrific language which he can command. If this have not the desired effect, the operation of wounding himself is repeated with increased severity. In extreme cases, one of the Charun's relatives, often either an aged or an infant female, is put to death, and sometimes the principal actor himself commits suicide, in which he is imitated by his wives and children.⁴ Something of similar character to the Charuns, but inferior in pretension and influence, are the Bhats, or bards of the community, whose power is exercised by means of satirical songs, pictures, and effigies.

The population, estimated at the rate of fifty to the square mile, which is believed to be tolerably correct, would amount to 1,783,600.

All classes in Joudpore are inordinately addicted to opium. They are⁵ fit for nothing until they take it, and after its effects have passed, are little better than idiots, until the dose be repeated. Indulgence in this baneful habit is more necessary to the Rajpoot than his food, and to eat opium together is the

JOUDPORE.

most inviolable pledge. The burning of women on the funeral pile of their deceased husbands was formerly frightfully prevalent. In 1728, six queens, and fifty-eight women of inferior position, were burned with the dead body of Maharaja Ajit Sinh.* Even at a very recent period, the atrocious practice had not become extinct, as, in 1814, the efforts of the British government to prevent the sacrifice in this way of six lives, on occasion of a deceased rajah's funeral, were unavailing.⁶ Happily, however, by the perseverance and well-timed suggestions of the British resident, the maharaja has at length been prevailed upon to prohibit the barbarous rite, and the necessary proclamation has been issued.⁷

⁶ Pol. Disp. to India, dated 6 Nov. 1844.

⁷ India Pol. Disp. 17 Aug. 1853.

⁸ Boileau, 270.

The language spoken in Joudpore is a peculiar patois, called Marwari,⁸ considered to have an affinity to Hindee. Some attention appears to be paid to education, there being, it is said, in the town of Joudpore, above 100 schools for the children of the humbler orders.

The ruler of Joudpore is styled Maharaja. The constitution, if the name can well be given to such an irregular political machine, is feudal,⁹ and the authority of the maharaja is checked by the counteracting power of a number of refractory thakoors or chiefs, by whom the greater part of the country is held, on condition of military service, the feudatory being bound to furnish troops in proportion to his estate; but as some¹ of the estates have been exempted from this burden, and the value of others falls greatly below the sums at which they have been estimated, the number of troops has diminished; and it is believed that the maharaja cannot rely upon muster-

⁹ Tod, II. 120.

¹ II 93.

* The horrible scene seems to have stimulated the native writer, quoted by Tod, to urge his eloquence to the highest flights. He thus describes it:—"The drum sounded, the funeral train moved on; all invoked the name of Heri (a deity). Charity was dispensed like falling rain, while the countenances of the queens were radiant as the sun. From heaven, Umia (a female deity) looked down; in recompense of such devotion, she promised they should enjoy the society of Ajit in each successive transmigration. As the smoke emitted from the house of flame, ascended to the sky, the assembled multitudes shouted Khaman! Khaman!—well done! well done! The pile flamed like a volcano. The faithful queens lavd their bodies in the flames, as do the celestials in the lake of Mansurwar (sacred lake in Himalaya). They sacrificed their bodies to their lords, and illustrated the races whence they sprung."

JOUDPORE.

ing more than 2,000 men from this source, instead of upwards of 4,000, which the estimates would seem to warrant. Tod² ² II. 176. gives the armed force at 11,000 men, including 2,500 cavalry, with fifty-five guns and a rocket establishment. The present military establishment consists,³ first, of the Joudpore legion, ³ Statistics of Native States. in lieu of the Joudpore contingent, amounting to 254 cavalry, 789 infantry, thirty-one artillery and Bheel companies, 222 strong, in all 1,246; and, secondly, of about 5,850 infantry and 2,680 cavalry, at the disposal of the Joudpore state; in addition to what the feudatories maintain. In the Ayeen Akbery, Joudpore is stated to furnish 15,000 cavalry and 50,000 infantry, and its revenue is there given at 363,218 rupees, equal to about 36,3217. Tod⁴ refers to ancient ⁴ II. 174. archives, from which the total revenue, feudal and fiscal, would appear in former times to have reached the sum of eighty lacs, or 800,0007. This is altogether incredible and ridiculous. The present amount of revenue is 175,2527. Salt is a fertile source of income. According to Tod's account, "this productive branch of industry still employs thousands of hands, and hundreds of thousands of oxen, and is almost entirely in the hands of that singular race of beings called Brinjarries, some of whose tandas or caravans amount to 40 000 head of oxen. The salt is exported to every region of Hindostan, from the Indus to the Ganges, and is universally known and sold under the title of Sambhur Loon, or salt of Sambhur; notwithstanding the quality of the different lakes varies, that of Pachbadra, beyond the Loni, being the most esteemed. It is produced by natural evaporation, expedited by dividing the surface into pans, by means of mats of the sirkunda grass, which lessens the superficial agitation. It is then gathered and heaped up into immense masses, on whose summit they burn a variety of alkaline plants, by which it becomes impervious to the weather." By the author just quoted, the other sources of revenue are stated to be buttaa, or corn-rent; angah, or poll-tax; gasmali, or tax on cattle; kewari, or tax on doors; sayar, or commercial imposts. The state pays to the British government an annual tribute of 108,000 rupees, and a contribution towards the expense of the Joudpore legion, amounting to 115,000 rupees. The former payment was originally made to Scindia, on whose account it is still collected

JOUNDPORE.

by the British government, and applied by that government to the maintenance⁵ of Scindia's contingent.

Besides Joudpore, the capital, nearly eighty places are mentioned by Boileau⁶ under the name of towns, though no doubt many of them little deserve the title. He enumerates thirteen hill forts and nine forts in the plain. Many of these places are described separately, as they occur in the order of the alphabetical arrangement.

The Rajpoot dynasty of Joudpore is by Tod⁷ supposed to have been established about the year 1212, by Seoji or Sivaji, son of the last Hindoo king of Kannouj, who perished in 1194, on the conquest of his capital by Shahab-ud-din,⁸ or Mohammed of Ghor, the subverter of the Ghaznevide empire in India; and that author gives the following account of the progress of the adventurers:—"In less than three centuries⁹ after their migration from Canouj, the Rahtores, the issue of Seoji, spread over a surface of four degrees of longitude and the same extent of latitude, or nearly 80,000 miles square; and they amount at this day, in spite of the havoc occasioned by perpetual wars and famines, to 500,000 souls."

In 1459,¹ Jodha, the maharaja of Marwar, removed the seat of government from Mundor to Joudporé, a fort and residence which he had built a few miles to the south. About 1569, Akber made himself master of the greater part of the state of Joudpore, which he conferred on Udi Sinh,² the son of the late maharaja, whom he had expelled. The power of Udi Sinh was subsequently strengthened by the marriage³ of his sister to Akber. About the year 1680, Aurungzebe, in one of his ineffectual attempts to enforce the observances of Mahomedanism, attacked and pillaged Joudpore, and most of the other towns in Marwar;⁴ defaced and desecrated the Hindoo temples, many of which were totally demolished; erected mosques on their sites, and compulsorily inflicted the outward mark of Islam on such Rajpoots as fell into his power. The yoke of the emperor of Delhi was, however, soon thrown off; but, for upwards of a century, the country was distracted by anarchy and a series of petty wars, till the conclusion of a treaty, ratified in the beginning of 1818, between the maharaja of Joudpore and the British government, of which the following were the chief points:—1. Perpetual amity and unity of interests

between the contracting parties. 2. Protection to be afforded by the British. 3. Acknowledgment of British supremacy by the maharaja, and engagement by him to afford subordinate co-operation, and to have no connection with any other power. 4. Engagement on part of the maharaja, not to enter into negotiation with any power without permission of the British. 5. Engagement by the maharaja, to abstain from aggressions on any one; and if disputes should arise, to submit to the arbitration of the British government. 6. Tribute, previously payable to Scindia, to be transferred to the British, and the maharaja to be exonerated from any claim on the part of Scindia. 7. The guarantee by the British government of immunity on the last head. 8. The maharaja bound, on demand, to march his whole disposable force to join the British army. 9. The maharaja to be absolute in his own territory.⁵ For⁶ several years subsequently to the conclusion of the treaty, there was little communication between the British government and Joudpore; but a series of disturbances commenced in 1824, which called for interposition, and the unsatisfactory nature of the arrangement then made, having led to their revival in 1828, when a pretender to the throne received the support of a large body of chiefs, eventually led to further interference, to the extent of a requisition from the British government to the pretender for the withdrawal of his claims. In 1829, Appa Sahib, the perfidious ex-rajah of Nagpore, having been expelled from Bikaner, sought refuge in Joudpore, the ruler of which country was required by the British government to give him up, or at least to cause his departure in a given direction. Great reluctance was manifested towards complying with this demand, and it was withdrawn, on condition that the rajah of Joudpore should be responsible for the safe custody and peaceable conduct of Appa Sahib, so long as he should remain in the country. This act of considerate regard to the alleged feelings of Rajpoot hospitality was, as usual, very indifferently required. The chief of Joudpore suffered his tribute to fall into arrear; supplied the stipulated military assistance reluctantly and tardily, protected plunderers, and was believed to have entered into political correspondence, having objects hostile to British interests and influence in India. These acts of misconduct were submitted

⁵ Treaties with Native States in India.

⁶ Sutherland, Sketches, 77, 80.

JODHPORE.

to with great forbearance for a long period, during which the misgovernment and distraction of the country were extreme; and at length, from all these causes,¹ it was deemed necessary to instruct Colonel Sutherland to proceed to Jodhpore and demand reparation. His mission proving ineffectual, a body of troops was moved to enforce that which negotiation had failed to achieve. Their approach alarmed the rajah, who forthwith displayed tokens of submission. The immediate consequences were, the establishment of a council of regency,² with a British agent at its head, to carry on the government in conjunction with the rajah, and the reception of a British garrison within his fortress. A variety of useful reforms³ followed.

The rajah died a few years after the commencement of the system which led to these beneficial steps, but they were pursued under his successor Tukht¹ Singh, of Ahmednuggur, who was elected to the vacant throne by the thakoor. Under the administration of this prince, various reforms² have been effected; among the chief of which must be reckoned, as already noticed, the abolition of suttee.³

JODHPORE,¹ the capital of the Rajpoot state of the same name, is situate at the north-eastern edge of a cultivated but woody² plain, which, farther south, passes into the low tract fertilized by the river Loni and its feeders. Its site is striking, being at the southern extremity of a ridge or rock twenty-five miles³ in length, between two and three in breadth, and rising between 300 and 400 feet above the average level of the plain. The city, inclosed by a rampart five miles in circuit, is built on an irregular surface, sloping upwards towards the base of the rock surmounted by the citadel, the view from which is thus described by Boileau:⁴—"A bird's-eye view of the city from the summit of the upper fort is really magnificent. Perched upon a parapet of the bastion, encircling the pointed pagoda at the southern extremity of the citadel, we gazed with delight upon the fair scene at our feet. The whole of the city lies close to the rock on which the palace stands, surrounding its east, south, and west sides, the north side being occupied by a hilly neck, connecting the citadel with the Munder range, and too much broken to afford good building-ground. The

JOUDPORE.

lively green of the trees, and the quantity of fine white plaster applied to the red stone houses, afforded a pleasing variety of colours, and give the city a gay look. The numerous tanks, now filled with water; the white ramparts, running along the higher parts of the city; the piles of buildings crowded upon each other, and rising tier above tier to the Chandpol gate; and the confused mass of outworks on the west side of the citadel, formed a scene that will not soon be forgotten." On a closer inspection, however, the streets are said by this writer to have been found irregular^b and ill laid out, the houses mean and badly constructed, the place being inferior in this respect to the other capitals of Rajpootann, but containing some fine temples, especially the Pasbunka Mandir. Tod gives a different and more favourable account. "The streets," he says, "are very^a regular, and adorned with many handsome edifices of freestone." There are several tanks within the walls. The Pudum Sagur, in the north-western part of the city, is excavated in rock, but is of small dimensions; the Rani Sagur, in the same quarter, is at the foot of the western entrance into the citadel, with which it is connected by low outworks, placing it under the thorough command of the garrison, for whose exclusive use it is reserved, except an extreme emergency requires it to be thrown open to the citizens. The Goolab Sagur, on the east, is of great extent, and finely built of stone throughout. The Bai-ka-talao, recently built, is also extensive, and receives several conduits, conveying the water of many distant torrents. Yet, in long-continued droughts, all fail, except the Rani Sagur. There are above thirty wells of the kind called baoli, in which access is obtained to the water by means of steps: in some of these, the water is carried up to the surface by human labour or by the Persian wheel, though the depth in many instances exceeds forty feet. The Persian wheel is even used in the Tour-jee-ka-Jhabra, where the depth, from the mouth above to the surface of the water, exceeds ninety feet, the depth of the water itself being also ninety feet. This fine well is cut in the solid rock, and, by the time-worn appearance of the carving in the interior, bears evidence of great antiquity. It is of immense size at the surface of the ground, and of square shape. On three sides, flights of steps

^b p. 121.

^a *Annals of Rajasthan*, bk. 710.

JOODPORE.

lead down to the water, but the fourth side is perpendicular, to allow the working of the Persian wheel. The water is good, and never fails.

The wall about the town was, at Boileau's visit, in 1835, in a very bad state, and in many places some yards of the parapet, and even of the rampart, had fallen down so completely as to allow free passage between the interior and exterior: and on the south side, the sand had in one place drifted to within a few inches of the crest of the parapet. Two steeply-scarped masses of rock, 80 or 100 feet high, form part of the line of defence on the east side of the city, and are crowned with walls and towers on their outer faces. In the whole circuit there are 101 bastions⁷ and 70 gates, each bearing the name of the place to which it leads. The fortifications of the town are continuous with those of the citadel, which is, however, divided from it by a rampart on the brow of the ascent, and generally 370 feet above the plain. The elevation at the north-east angle is 382 feet; and the scarp wall, which covers the great gate there, has a sheer face of hewn stone 100 feet high. Other parts of the wall appear to be still higher. These defences are well built of stone quarried from the subjacent rock. In some places, however, the ramparts and bastions are weak and ill-constructed, and would be almost contemptible, but for the stiff section of the rocks on which they are erected. The main entrance is on the north. The road passing through it is practicable for heavy guns; and the access covered by six successive gateways, besides the inner one, opening immediately into the maharaja's palace. The road over the hilly ridge extending northward from the citadel, is practicable for heavy artillery;⁸ and the place could not long hold out against an attack conducted according to the rules of European warfare. The whole citadel is 500 yards long, and about half that breadth. The royal palace and buildings attached are situate at the north end, and occupy two-fifths of the area; an equal space is occupied by magazines, granaries, and other public buildings, and the remainder is empty. There are five reservoirs of water within the citadel, but in ordinary times the principal supply is derived from the Rani Sagur. The palace overtops all other buildings, and its highest part is 451 feet above the plain. The state apartments present little

⁷ T. & L. 170.

⁸ Boileau, 120, 152.

JOUDPORE.

to excite admiration, being inferior to those of the humbler ruler of Bikaner. The most remarkable is the chamber of audience, styled "the thousand-columned hall," a vast apartment, the ceiling of which is supported by a great number of massive columns of no great height, arranged in parallel rows, about twelve feet asunder.

Outside the city, and distant a cannon-shot from the north-east angle, is the large suburb, deriving its name of Mahamandir, or "the great temple," from a building within it, which confers the right of sanctuary on its inclosure and environs. It constitutes a distinct town of 1,000 houses, with 112 shops, inclosed by a thin stone wall a mile and a quarter in circuit, having a few weak bastions, but without any parapet, unless that name can be given to battlements three feet high and five or six inches thick. The area is an irregular quadrangle, having a gateway in each of its faces. The temple above mentioned is surmounted by a spire, conspicuous from afar by the brilliant lime-wash with which it is covered. The interior is richly decorated, and the sacred shrine of the tutelary saint is placed under a canopy of silver, in the form of an umbrella. There is a tank, supplied with water brought from a distance by conduits. A baoli, eighty feet deep, has an inexhaustible supply of good water. A flight of steps reaches to the water's edge, and three Persian wheels raise and discharge no inconsiderable stream for irrigation and domestic purposes. The inclosure of the Mahamandir contains two palaces, one of which is inhabited by the maharaja's gooroo or spiritual adviser, who lives in great state; the other palace has no living occupant, being reserved by native superstition as the residence of the spirit of the last deceased gooroo, whose bed is laid out in one of the state-chambers, with a small golden canopy over the pillow.

Five miles north of Joudpore are the striking ruins of Mandor, which was the capital of Marwar previously to the foundation of the present capital by Maharaja Jodha or Joda, in 1459. Hence the name of the town, and also of the eminence of its site, which is called Jodhagir,* or "the warrior's hill." A mile and a quarter west of the town are hand-

* Jodha, the proper name of the prince, signifies also "warrior," and Gir signifies "hill."

JOUNPOOR.

p. 124.

some gardens, with a fine tank named Ukhe Rajka Talao, described by Boileau² as "a magnificent sheet of water, clear, deep, and extensive, resembling rather a natural lake than an artificial tank." Two or three miles north of this, is Bal Sumundur, a small but beautiful lake, half a mile long and about 200 yards wide, with craggy banks of red sandstone, feathered with picturesque shrubs, and bordered by a fine pleasure-ground, abounding in towering palm-trees. Two miles north of the city, and between the two last-mentioned pieces of water, is the Sur-Sagor, an immense tank, on the southern embankment of which stands the Motimahall, or Pearl Palace, a beautiful building of white marble, from the flat roof of which is a fine view of the citadel. According to the estimate of Boileau, Joudpore city, citadel, and suburbs, contain 30,000 houses, which, at the usually-received average of five persons to each house, makes the population 150,000; an amount scarcely credible. Boileau elsewhere states the amount of the population at 129,150, which reduced number is, however, probably excessive. Tod¹ says, "The number of families some years ago, stated to be 20,000, probably 80,000 souls—an estimate far too great for the present day."

¹ Ut supra, l. 710.

Joudpore is distant³ W. from Calcutta 1,128 miles; S.W. from Delhi, by Nusseerabad, 358 miles. Lat. 26° 19', long. 73° 8'.

¹ E.I.C. Ms. Doc.

JOUNPOOR,¹ under the lieutenant-governorship of the North-West Provinces, a British district, named from its principal town. It is bounded on the north-west by the territory of Oude; on the north-east by the British district Azimgurh; on the east by the British district Ghazee-pore; and on the south by the British districts Benares and Allahabad. It lies between lat.² 25° 22'—26° 12', long. 82° 12'—83° 10'; is sixty miles in length from east to west, fifty-five in breadth, and embraces an area of 1,552 square miles. It is a remarkably level tract, with a gentle declivity, probably not exceeding, on the average, six inches per mile, from north-west to south-east, as indicated by the course of its numerous streams flowing in that direction. The south-eastern extremity is about* 260 feet above the sea; and probably the elevation of

² Tassin, *Map of Bengal, Behar, &c.*

³ As. Res. xx. Append. p. x.—Prinsep (James), *Meteor. Journ.*

* The elevation of Benares above the sea is about 270 feet,¹ and the

JOUNPOOR.

no part exceeds 300 feet. The Goomtee, the principal stream, passes from Oude, over the north-western frontier, in lat. $26^{\circ} 1'$, long. $82^{\circ} 31'$; takes a direction very sinuous, but generally south-easterly, and, passing by the city of Jounpoor, winds through the district, or skirts its boundary, for a total distance of about seventy-four miles, till, in lat. $25^{\circ} 34'$, long. $83^{\circ} 2'$, it crosses the south-eastern frontier, and forms the boundary between the British districts of Benares and Ghazeepore. Its channel is in general a deep, well-defined³ trench, formed by the current in kankar or calcareous conglomerate, wave-worn horizontal marks being visible on its banks. It is well adapted for navigation, the stream nowhere, and at no season, spreading to a breadth exceeding 140 yards, and generally, even at the driest season, having a depth of four feet. Baber, who, with a view to his military operations, was led anxiously to examine all its depths and shoals, observes,⁴ "Though it is a narrow little river, yet it has no ford, so that troops are forced to pass it in boats, by rafts, and on horseback, or sometimes by swimming." During the periodical rains, the water seldom⁵ rises more than fifteen feet. In former times, it must have risen to double this height; and in 1774 it so completely swept over the celebrated bridge of Jounpoor, that a brigado of British troops sailed⁶ over it in their progress down the stream. The Sai, a river smaller than the Goomtee, but of much the same character, passes the north-west frontier in lat. $25^{\circ} 50'$, long. $82^{\circ} 13'$, and, holding a sinuous course, but generally in a south-easterly direction, for about fifty-two miles, falls into the Goomtee in lat. $25^{\circ} 40'$, long. $82^{\circ} 52'$. Like the Goomtee, its course through this district is navigable.⁷ The total length of river navigation possessed by Jounpoor extends to about 126 miles.

The climate probably differs little from that of Benares, where the mean temperature⁸ for the year was found to be 79° of Fahrenheit; the highest being in the month of June,

slope of the waterway of the Ganges, for some distance below Benares, is five inches² per mile; consequently, the elevation of Kaiti, close on the south-eastern extremity of the district of Jounpoor, and twenty-four miles lower down the stream than Benares, is about 260 feet above the sea.

JOUNPOOR.

103°, the lowest in January, 50°. The periodical rains fall through July, August, and September; and the total of rain for the year 1822 was thirty-three inches.

⁹ Report, of Select Commit. of House of Commons on East-India Produce, 52, 53, 54, 55.

The soil is very⁹ productive,* and especially suited for the growth of sugar, being inferior to no ground in India for the abundance and excellence of that commodity. Successful cultivation is, however, altogether dependent on irrigation, the water for which is mostly drawn by human labour from streams, tanks, or wells. As streams are numerous, the country level, and the soil rather porous, water is found at a small depth¹ below the surface; and there are wells in every field.

¹ Lord Valentia, Travels, I. 127.

The extent of cultivation of sugar-cane in Jounpoor has been officially estimated at 23,158 acres. The total produce of goor, that is, the entire extract before the sugar is separated from the grosser matter with which it is combined, is estimated at 255,544 cwt., of which 61,247 cwt. are believed to be consumed within the district, at an average of ten pounds per head, leaving a surplus of 194,297. It will be obvious that such estimates, and especially in regard to internal consumption, must be subject to error, from various causes; but the above are probably not widely distant from the fact.

The population was ascertained by census in 1848 to amount to 798,503, being at the rate of more than 514 to the square mile—a high average. Of the above number, 563,078 were returned as Hindoos and agricultural, 156,753 Hindoos non-agricultural, 30,620 Mahomedans and others not Hindoos, but employed in agricultural pursuits, and 48,052 persons not being Hindoos, devoted to other occupations. It thus appears that the preponderance of Hindoos in this district is overwhelming, the disciples of that creed being more than fifteen times as numerous as the followers of all other religions. The numbers of the agricultural class exceed those of the non-agricultural, in the proportion of nearly three to one.

* Perhaps from laborious and skilful cultivation, and copious irrigation. Lord Valentia represents¹ the country as a complete sand, and the heat intense. But Sym, whose evidence before the committee of the House of Commons is quoted in the text, was a practical man, experienced in the subject, and not likely to be mistaken.

¹ Travels, I. 127.

JOUNPOOR.

The townships, villages, &c., are thus arranged according to population :—

Number of towns and villages containing less than	
1,000 inhabitants	2,843
Ditto more than 1,000 and less than 5,000	93
Ditto more than 5,000 and less than 10,000	1*
Ditto more than 10,000 and less than 50,000	1†
Total.....	2,938

The civil establishment of Jounpoor consists of a civil and sessions' judge, a magistrate and collector, a joint magistrate and deputy collector, an assistant to the magistrate and collector, a deputy collector of the second grade, under Regulation XIX. of 1833, an assistant surgeon, a principal sudder aumeen, and four moonsiffs.

The principal routes are,—1. South-west to north-east, from Allahabad² cantonment to that of Jounpoor, 66 miles, and thence in the same direction to Azimgurh, 43 miles more; 2. from south to north, from³ Mirzapore cantonment to that of Jounpoor, 43 miles; 3. from⁴ south-east to north-west, from Benares cantonment to that of Jounpoor, 38 miles, and thence in the same direction to Sultanpore in Oude, 58 miles further; 4. from⁵ east to west, from Ghazcepoore cantonment to that of Jounpoor, 60 miles.

With the exception of Jounpoor, the towns are unimportant; those most requiring notice,—Singra or Sangrampur, Mureahu, Muchlishahr, Badshahpur, Zafarabad, and Ghissooa, as well as the capital,—will be found in their proper places in the alphabetical arrangement.

The tract comprised within this district was probably first reduced under Mussulman sway by Muhammad Shahabuddin, the Patan ruler of Ghor, who is recorded⁶ to have, at the close of the twelfth century, conquered Eastern India as far as the confines of China. During the confusion caused by the invasion of India by Timur, near the end of the fourteenth† century, or perhaps something earlier, Jounpoor, with some

adjacent tracts, was acquired⁷ by an officer of the padshah of Delhi. The⁸ Purebi Sherki,⁹ or Eastern dynasty, thus founded, was of no long duration, being overthrown⁹ in 1478, by Behlol Lodi, the Afghan padshah of Delhi, who reannexed Jounpoor to the empire, and made¹ it an appanage of his son Barbik Khan. In 1527, it passed from the Afghans to the victorious Baber, being conquered² by his son Humayon, acting under his orders. On the dissolution of the Timurian empire of Delhi, consequent on the invasion by Ahmed Shah Durani in 1760, it formed part of the spoil seized³ and retained by the nawab vizier of Oude. In 1761, a firman or grant of this, among other districts, was made by Shah Alum, titular padshah of Delhi, to the East-India Company, who, by the treaty of Allahabad,⁴ relinquished to the nawab vizier the claim thus founded, as well as the military occupaney established by the victory gained at Buxar in the preceding year. In 1775,⁵ it was ceded by the nawab vizier to the East-India Company, and embodied with the dominions of that power. In the Ayeen Akbery,⁶ its military contingent is stated at about 915 cavalry and 36,000 infantry, and its revenue at 14,00,853 rupees.

JOUNPOOR.^{1†}—The principal place of the British district of the same name, a city on the banks of the river Goomtee, here navigable,² and generally unfordable.^{3†} The river divides the city into two unequal parts, the greater on the left, the less on the right bank; and the communication is by means of an antique bridge, considered one of the finest specimens of architectural skill in India, but which, from the diminutive span of its arches, would scarcely be noticed in Europe. The roadway passes from the left⁴ or north-eastern bank, over ten arches, called, collectively, the great bridge, to an island in the channel, and, proceeding over it, is thence continued by the lesser bridge of five arches and a land arch, to the right side.

* Purebi,¹ "eastern," in Hindoostanee; Sherki, "eastern," in Arabic.

† Jaunpur of Tassin; Jounpoor of Khairuddin;² Jownpoor³ of the Ayeen Akbery; Jounpoor of Briggs's Index; Jaunpur of Elphinstone;⁴ Junpur, Junapur, or Jionpur, of the translators of Baber;⁵ Jaunpur of Prinsep;⁶ Jionpur of Rennell;⁷ Jaunpoor or Jaunpore of British writers generally.

‡ Lord Valentia, however, states⁸ it to be shallow in the dry season.

JOONPOOR.

A native⁵ writer enumerates the spans of the arches and the breadth of the piers of the greater bridge. It is constructed of stone, so well cemented, that it is comparatively unimpaired, though nearly three centuries old, during which period it has resisted the floods, which sometimes sweep over it in such volume, that, in 1774, a fleet of boats conveying a British army, with a numerous train of baggage, camp-followers, and attendant animals, were borne down the stream,⁶ right across the line of roadway, without any impediment from the submerged structure. The building is said to have been commenced⁷ in the year 1564, and completed in three years, by Fahnim, a freed man of Munim Khan, an officer high in the confidence of Akbar: the cost is reported to have amounted to 300,000.^{8*} The fort, situate on the bank† of the river, is a vast massive stone structure, the ground-plan of which is an oblong quadrangle, half⁹ a mile in circuit. It is said to have been built¹ A.D. 1370, by Feroz Shah Toghluk, Patan sovereign of Delhi, who named‡ it after his cousin² and predecessor on the throne. According to Lord Valentia,³ there is a gateway in the wall of the castle, "ornamented with mosaic-work of different-coloured varnished tiles. It has been beautiful. The courts are extensive, and the verandas on the walls command a very pleasing prospect, particularly on one side, which overhangs the river and the bridge; beyond which are the ruins of the different tombs, raising their cupolas among palms and tamarind-trees. The distant country is rich in cultivation, and well clothed with wood." The fort has been used as a prison. On the east of the town is a large mosque, in very bad repair, but noble even in ruin. It is described by Tieffenthaler⁴ as a splendid structure of red stone, with three lofty domes, and a fore-court, surrounded by colonnades. It is stated to be fifty

† Probably the left bank, though no traveller appears to specify its position.

‡ This was Muhammad Shah Toghluk, who, before his accession, was called Joon Khan. According to Tieffenthaler, it was founded and named 200 years earlier, by Joon, "a certain lady who tended kine." A more probable etymology than either is water-town; the Goomtee flowing through the city, and being liable to violent inundations.

latter. It is situate on the small river Piria, and has abundant supplies for troops. The river is unfordable during the rains, and is traversed by a bridge³ handsomely and solidly built of a porphyritic stone. The territory of which this town is the principal place, lies between lat. $23^{\circ} 32'$ — $24^{\circ} 10'$, long. $74^{\circ} 53'$ — $75^{\circ} 35'$. It has an area of 872 square miles, and belongs to a Patan chief, styled Nawaub of Jowra, the representative of Ghuffoor Khan, to whom, in 1818, the jaghire was secured by the British government, under the treaty⁴ of Mondesoor, concluded with Holkar, on condition that the nawaub and his heirs should maintain, independent of the sebundy (armed police) for his pergunnahs, and his personal attendants, in constant readiness for service, a body of 600 select horse; and further, that this quota of troops should be thereafter increased, in proportion to the increasing revenue of the districts granted him. The number of troops, inclusive of the sebundy, in the service of the nawaub, is 850;⁵ his annual revenue, in 1848, was 8,00,000 rupees; the population of the territory, including the jaghires of dependants, 85,456. The town, according to Maleolm,⁶ in 1820, contained 3,551 inhabitants; but Jacquemont, in 1832,⁷ estimated their number at 10,000 or 12,000. It is distant N.W. from Oojein 53 miles, S.W. from Gwalior 260. Elevation⁸ above the sea 1,437 feet. Lat. $23^{\circ} 38'$, long. $75^{\circ} 5'$.

JUBBULPOOR.

bank of the Nerbudda, fordable in that place in the season of low water, when it is three feet deep, with a width of about 300.* It is a large, well-built,³ and thriving place, in consequence of its favourable position in a populous and highly-cultivated country. Around it are several small lakes and tanks, which in the rainy season are so swollen as greatly to strengthen it as a military position. Here is a small cantonment of British troops, belonging to the Saugor division,⁴ also a political agency subsidiary to that of Saugor. The small collegiate establishment formerly existing in the town, was abolished in 1850.⁵ It has been succeeded by a school of industry, which has been brought to a state of great efficiency, and the advantages of which have been extended beyond the classes for whose benefit it was originally established.⁶ Here, on December 19th, 1817, a British force of 1,100 men, commanded by General Hardyman, defeated 5,000† Mahrattas, the troops of the rajah of Nagpore. The Mahrattas suffered severe loss, and the survivors fled precipitately, abandoning the town, nine pieces of ordnance, and a large quantity of military stores. The loss on the side of the British was only two⁷ killed and ten wounded.

The country in the vicinity of Jubbulpoor is highly interesting to the geologist, on account of the variety of its formations. The range of hills overlooking the town is granite, of several kinds; and every formation⁸ subordinate to granite is to be found in this neighbourhood, including gneiss, hornblende, schistose rock, dolomite. In a limestone⁹ range, near the town of Jubbulpoor, are deposits of fossil bones, and about fifteen miles farther west are others still more extensive, including remains of the elephant, or other gigantic quadrupeds.¹ Excellent coal² is found in some parts of the pergunnah. The district, of which this town is the chief place, contains an area of 6,237 square miles, and a population of 442,771,³ which affords an average density of seventy-one to the square mile. Elevation above the sea 1,453⁴ feet. Distant⁵ S.E. from Saugor 111 miles; S.W. from Allahabad 222; W. from

—Stirling, Ac-
count of Orissa.

JUGGURNATH, or **POOREE**, in the British district of Cuttack, presidency of Bengal, a town distinguished in India as one of the strongholds of Hindoo superstition, and deriving its celebrity from its connection with the famous temple of the same name. The town is situate on the north-western shore of the Bay of Bengal, in that part called the Coast of Orissa.¹ The surf here is very violent, so that landing can be effected only by means of Masula boats, similar² to those used on the Coromandel coast. During the south-west monsoon, a refreshing sea-breeze blows with little intermission, rendering the climate³ in the hot season one of the most agreeable and healthful in India. The beach has been selected as the site for the British military station. The town itself is to the south-west of the station, and on a low ridge of sandhills, to which an attempt has been made to give a factitious grandeur, by styling it Neilgherry, or Blue Mountain. "Every span of it is holy ground; and the whole of the land is held free of rent, on the tenure of performing certain services in and about the temple. The principal street is composed almost entirely of the religious establishments called Maths, built of masonry, having low pillared verandas in front, and plantations of trees interspersed. Being very wide, with the temple rising majestically at the southern end, it presents by no means an unpicturesque appearance; but the filth and stench, the swarms of religious mendicants, and other nauseous objects which offend one's senses in every part of the town, quite dispel any illusion which the scene might otherwise possess. Fine luxuriant groves and gardens inclose the town on the land side, and produce the best fruit in the province." In the vicinity are many fine tanks, considered of great antiquity; and among

JUGGURNAUTH.

the sands, between the sea and the south-west face of the town, are numerous ancient and curious-looking edifices, now nearly overwhelmed with sand. The temple of Juggurnauth⁴ stands within a square area, inclosed by a lofty stone wall, measuring 650 feet on a side. The inclosure is entered on the east by a grand gateway, from which a broad flight of steps gives access to a terrace twenty feet in height, inclosed by a second wall, 445 feet square. From this platform the great pagoda rises, from a base thirty feet square, to the height of about 180 feet from the platform, or 200 from the ground, tapering from bottom to top, not in the form of a cone, but rounded off in the upper part with an outline approaching to the parabola. The present edifice appears to have been completed in the year 1198, at a cost of nearly half a million sterling. Most of the Hindoo deities have temples within the inclosure; and of those, two, besides the great pagoda, are peculiarly remarkable when viewed from sea, being described as "three large⁵ circular buildings, surrounded by several smaller ones: they are of a conical form, decreasing in diameter from their bases to their summits, which are crowned with white domes, and an ornamental globe or urn and wind-vane. The westernmost pagoda is the largest, and the eastern one the smallest of the three." The eastern gate is flanked by griffins and other mythological figures, and in front stands a column of dark-coloured basalt, and of very light and elegant proportions, surmounted by a figure of the monkey-god Hanuman. This temple is dedicated to Krishna, considered as an avatar or incarnation of Vishnu, but is also held in joint tenancy by Balarama, identified with Siva or Mahadeo and Subhadra, regarded as his sister and also his consort in Hindoo mythology. Krishna is, however, the principal object of worship, and from his title Juggurnauth,⁶ the great temple is denominated. The three idols, intended to represent those three characters respectively, are three blocks of wood, each surmounted by a frightfully grim representation of the human countenance, the block, with the head, measuring about six feet in height. The block representing Krishna is painted dark blue, that representing Siva white, and Subhadra's yellow.

JUGGURNAUTH.

⁷ Bacon, First Impressions, i. 177.

Each is provided with a rath or rude chariot, being a sort of lofty platform mounted on wheels. That of Juggurnauth is $43\frac{1}{2}$ feet high, $34\frac{1}{2}$ feet square, and is mounted on sixteen wheels, each $6\frac{1}{2}$ feet in diameter. The raths of the two other idols are of dimensions somewhat less. "The grand⁷ festival occurs in the month of March,* when the moon is of a certain age, after the sun has entered Aries;" and at the *Rath Jatra*, as this festival is denominated, the idols are taken on their raths to visit their country-house, about a mile and half distant. Thousands of men, women, and children, draw them along by means of cables fastened to the raths, and Brahmins stationed on the platforms sing and repeat obscene stories, accompanied by appropriately foul gestures, hailed by the multitudes with sounds and movements expressive of applause. Formerly, wretched fanatics offered up their lives in honour of the idols, by throwing themselves down before the moving wheels, which of course crushed them to death; but those horrible deeds have for some time ceased.

The British obtained possession of the place and temple in October, 1803; previously to which occupation, a tax had been levied by the Mahrattas upon the pilgrims resorting thither. This produced a very large sum, out of which a small one was assigned to defray the expenses of the temple. The priests made application to the British commissioner for the usual donation, which was at once granted; but the continuance of the pilgrim-tax was not contemplated. The priests, however, were anxious that the tax should be continued, inasmuch as the government might become tired of making a considerable donation at its own cost, while an accession of revenue from the temple would, it was thought, render the contribution to the priests more secure. The wish of these holy persons was complied with; the government donation was withdrawn, and the collection of money for the support of the temple permitted in substitution. In 1806 a change took place. The government took the superintendence of the temple upon itself, and laid down the most minute arrangements for its management. The pilgrim-tax thus became a regular source of revenue to the state. The measure was proposed before the retirement

¹ Christian Researches, 23, 25.

* Buchanan, however, states¹ that, at the time of his visit, the Rath-jatra took place on the 18th of June.

JUGGURNAUTH.

of the Marquis Wellesley, but he refused it his sanction. Sir George Barlow had no scruple on the subject, and under him the proposal became law; not, however, without a strong protest against it from one member of council, Mr. Udney. At home it was disapproved by the Court of Directors; but the president of the Board, Mr. Dundas, took a different view, and through his influence a despatch was framed, to the effect, that as the tax on pilgrims had been levied under Mahomedan and Mahratta governments, there did not appear any objection to its continuance under the British government. In 1839, under the administration of Lord Auckland, the subject came again under notice, when the tax was abolished,⁸ the expenses of the temple fixed at a certain sum, and a donation ordered to be paid from the public treasury, to make up the amount supposed to be required, and for which no other available means of providing existed. This donation somewhat exceeded 30,000 rupees. Subsequently, more careful inquiry was made, and the allowance was fixed at 23,000 rupees.⁹ This arrangement, however, was deemed objectionable, inasmuch as it did not disconnect the government from idolatrous worship. To effect this object, orders were recently sent out directing, as a final measure, that government should withdraw altogether from the temple, leaving it to be supported by its own resources, but making such compensation, if necessary, as should suffice to place the establishment in as good a pecuniary position as it enjoyed when the country passed into the hands of the British.¹ According to a statement published a short time since,² its condition in this respect is indeed much better. The pilgrim-tax, it may be mentioned, has never ceased, it having been collected by the native authorities after it was relinquished by the government. It is a circumstance for congratulation, that the government has thus purged itself from a foul scandal, which lowered its character and impaired its usefulness.

Here, over a branch of the Mahanuddy, is an antique stone bridge, having eighteen waterways, not arched above, but traversed by "laying³ horizontal tiers of stone on the piers, the one projecting slightly beyond the other, in the manner of inverted stairs, until they approach near enough at top to sustain a keystone or cross-beam." According to official

JUG—JUH.

⁴ Sirling, *ut supra*, 10J.

report, the town of Juggurnauth or Pooree contains 5,741⁴ houses, which, if the usually-received ratio of five inmates to each house be applicable, would indicate a population of 29,705. Distance from Madras, N.E., 595 miles; Cuttack, S., 47; Nagpore, E., 450; Calcutta, S.W., 250. Lat. 19° 49', long. 85° 53'.

¹ E.I.C. Ms. Doc.

JUGGUTPOOR,¹ in the British district of Etawa, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Etawa to Calpee, and 30² miles S.E. of the former. The road in this part of the route is heavy and bad, but the country is level and cultivated. Lat. 26° 31', long. 79° 28'.

² Garden, *Tables of Routes*, 32.

¹ E.I.C. Ms. Doc.

JUGRAON,¹ in Sirhind, a town eleven miles from the left bank of the Sutlej. It is situate in the British district of Loodiana. Distance N.W. from Calcutta, by Loodiana, 1,124² miles. Lat. 30° 47', long. 75° 31'.

Garden, *Tables of Routes*, 173.

E.I.C. Ms. Doc.

JUGUR.—A town in the native state of Bhotan, 96 miles N. from Goalpara, and 138 miles E. by N. from Darjeeling. Lat. 27° 31', long. 90° 28'.

E.I.C. Ms. Doc.

JUGURNATHPOOR.—A town in the British district of Behar, presidency of Bengal, 23 miles E. of Sherghotty. Lat. 24° 36', long. 85° 12'.

E.I.C. Ms. Doc.

JUGUTPOOR.—A town in the native state of Oude, 60 miles S.S.E. from Lucknow, and 30 miles E. by N. from Futtehpore. Lat. 26° 4', long. 81° 20'.

E.I.C. Ms. Doc.

JUHANABAD.—A town on the left bank of the Ganges, in the British district Bijnour, lieutenant-governorship of the North-West Provinces. Lat. 29° 15', long. 78° 11'.

¹ E.I.C. Ms. Doc.

JUHANABAD,¹ in the British district of Allahabad, lieutenant-governorship of the North-West Provinces, a town on the left bank of the Ganges, 839² miles from Calcutta, by the river, and 30² miles above the town of Allahabad. Lat. 25° 36', long. 81° 40'.

² Garden, *Tables of Routes*, 102.

JUHANABAD, the principal place of the pergunnah Juhanabad, in the British district Bareilly, and from the pergunnah deriving its name, is situate in lat. 28° 38', long. 79° 47'.

¹ E.I.C. Ms. Doc.

JUHANGIRABAD,¹ in the British district of Boolundshuhur, lieutenant-governorship of the North-West Provinces, on the route from Bareilly to Delhi, and 63² miles S.E. of the latter, is described by Thorn³ as an extensive town, surrounded by a high wall. Its population is returned at 9,369.⁴ Supplies

² Garden, *Tables of Routes*, 88.

JULALABAD.—The principal place of a pergunnah of the E.I.C. Ms. Doc.

JUL.

same name, in the British district of Meerut, lieutenant-governorship of the North-West Provinces, a town on the route from Panceput to Boolundshuhur, 32 miles N.W. by N. of the latter. Lat. $28^{\circ} 46'$, long. $77^{\circ} 38'$.

JULALEE, the principal place of the pergunnah of the same name, lies on the route from Allyghur cantonment to Bareilly, by Khasgunj, and is 13¹ miles S.E. of the former. It has a bazar, with a markot, and is abundantly supplied with water from wells. The road in this part of the route is good; the country is open, and but partially cultivated. Lat. $27^{\circ} 52'$, long. $78^{\circ} 19'$.

¹ Garden, Tables of Routes, 43.

E.I.C. Ms. Doc.

JULALPOOR, in the Jetch Dooab division of the Punjab, a town situated six miles from the right bank of the Chenaub, 73 N. of the town of Lahore. Lat. $32^{\circ} 40'$, long. $74^{\circ} 10'$.

JULALPOOR.—See **JELALPOOR**.

¹ E.I.C. Ms. Doc.

JULALPOOR.¹—The principal place of the pergunnah of the same name, a town on the route from Banda to Calpee, 48 miles N.W. of the former.² It is situate on the right or south-east bank of the river Betwa, which here has “bed³ 550, and stream in the dry season 180 yards; bottom, sand and gravel; usual depth of water, two and a half feet; right bank steep. Some small ferry-boats at this ghat in the rains.” It is probably a place of some importance, represented to have “some⁴ hundred large brick houses,” and a population estimated by intelligenant natives at 10,000. The neighbouring country, to the south, is rather wild and sterile, being much cut up by ravines. Lat. $25^{\circ} 52'$, long. $79^{\circ} 52'$.

² Garden, Tables of Routes, 72.

JULGAUM.—A town in the British district of Candeish, presidency of Bombay, 147 miles N.E. of Bombay. Lat. $20^{\circ} 24'$, long. $74^{\circ} 30'$.

JULINDER DOOAB.—A tract of country in Upper India, lying, as the word Dooab implies, between two rivers,

JUL.

which, in this case, are the Beas and the Sutlej. It is situate between lat. $30^{\circ} 57'$ — $32^{\circ} 5'$, long. $75^{\circ} 4'$ — $76^{\circ} 38'$, and contains an area of about 374 square miles. It came into British possession during the earlier operations against the Sikhs, and was permanently retained as a portion of the British territory, under the third article of the treaty of Lahore, concluded on the 9th March, 1846,¹ whereby the maharaja of the Punjaub ceded to the East-India Company, "in perpetual sovereignty, all his forts, territories, and rights in the dooab or country, hill and plain, situate between the rivers Beas and Sutlej." The tract is fertile, and the climate agreeable. Soon after this district came into the hands of the English, some disturbances occurred between the beef-consuming part of the population and those who adhered to a simpler diet, caused by the opening of shops for the gratification of the former. They were, however, speedily suppressed, and quiet restored.

¹ Allen's *Indian Mail*, 1846, p. 801.

JULINDER, in the Punjab, the chief place of the Dooab, a considerable town near the right bank of the Sutluj, was once the residence of the Lodi-Afghan dynasty. It is situate in a tract of great richness, amidst flourishing orchards of mangoes and other trees. The vast number of large and finely-built mausoleums which are around, bear evidence of its former greatness. It has still a population of about 40,000. Lat. $31^{\circ} 21'$, long. $75^{\circ} 31'$.

Von Hügel, III. 415.

JULKAR, in Gurwhal, a feodor of the Bhageerettee river. It rises in lat. $30^{\circ} 35'$, long. $78^{\circ} 38'$, and, flowing southerly for about twenty miles, falls into the Bhageerettee, in lat. $30^{\circ} 28'$, long. $78^{\circ} 29'$.

JULLAH, in the Jetch Dooab division of the Punjab, a town situated nine miles from the right bank of the Chennab river, 81 N.W. by W. of the town of Lahore. Lat. $32^{\circ} 12'$, long. $72^{\circ} 59'$.

E.I.C. Ms. Doc.

JULLALPOOR, in the British district of Banda, lieutenant-governorship of the North-West Provinces, a town on the right bank of the Jumna, 27 miles N.E. of the town of Banda, 55 W. of Allahabad. Lat. $25^{\circ} 40'$, long. $80^{\circ} 45'$.

E.I.C. Ms. Doc.

JULLALPOOR, in the Barco Dooab division of the Punjab, a town situated seven miles from the right bank of the Ghara river, 43 miles S. by W. of the town of Mooltan. Lat. $29^{\circ} 31'$, long. $71^{\circ} 22'$.

E.I.C. Ms. Doc.

- E.I.C. Ms. Doc.** **JULLAREE**, in the Bareo Doonab division of the Punjab, a town situated on the left bank of the Ravce river, 39 miles N.E. of the town of Mooltan. Lat. $30^{\circ} 29'$, long. $71^{\circ} 59'$.
- E.I.C. Ms. Doc.** **JULLAWGOTE**, in Sinde, a village on the route from Sehwan to Larkhana, and 14 miles N. of the former town. It is situate on the right bank of a great watercourse, filled by the inundation of the Indus, and a mile and a quarter from the main channel. Lat. $26^{\circ} 37'$, long. $67^{\circ} 55'$.
- E.I.C. Ms. Doc.** **JULLMOOR**.—A town in the British district of Ganjam, presidency of Madras, 92 miles S.W. of Ganjam. Lat. $18^{\circ} 31'$, long. $84^{\circ} 4'$.
- E.I.C. Ms. Doc.** **JULLUT**,¹ in the British district of Kumaon, lieutenant-governorship of the North-West Provinces, a village on the route up the course of the river Goree, and by the Unta Dhura Pass, from Almorah fort to Hiundes or South-western Tibet, 93 miles² S.E. of Almorah. It is situate near the right bank of the river Goree. Supplies are obtainable, and there is encamping-ground near a fountain in the village. Lat. $30^{\circ} 5'$, long. $80^{\circ} 17'$.
- Garden, Tables of Routes, 63.**
- Garden, Tables of Routes, 121.** **JULOWLEE**, in the British district of Furruckabad, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Cawnpore to that of Futehgurh, and 35 miles S. of the latter. The road in this part of the route is generally bad, the country cultivated. Lat. 27° , long. 80° .
- Garden, Tables of Routes, 218.** **JULUPGURH**, in the British district of Mozuffurnuggur, lieutenant-governorship of the North-West Provinces, a village on the route from Kurnal to Meerut, and 15 miles S.E. of the former. The road in this part of the route is good, the country open and rather well cultivated. Lat. $29^{\circ} 34'$, long. $77^{\circ} 13'$.
- JUMALGURH**, in the British district of Saharunpoor, lieutenant-governorship of the North-West Provinces, a town the chief place of the pergunnah bearing the same name, is situate in lat. $29^{\circ} 54'$, long. $77^{\circ} 20'$.
- E.I.C. Ms. Doc.** **JUMALPOOR**, in the British district of Allyghur, lieutenant-governorship of the North-West Provinces, a village on the route from the cantonment of Allyghur to that of Moradabad, and one and a quarter mile N.E. of the former. The road in this part of the route is good; the country open, with a clayey soil, partially cultivated. Lat. $27^{\circ} 57'$, long. $78^{\circ} 6'$.

JUM.

JUMALPOOR, in the British district of Allyghur, lieutenant-governorship of the North-West Provinces, a village on the route by Khasganj from Bareilly to Allyghur cantonment, and 10¹ miles S.E. of the latter. Lat. 27° 52', long. 78° 16'. ¹ Garden, *Tables of Routes*, 43.

JUMALPOOR.—A British military cantonment in the district of Mymensing, presidency of Bengal, at the point where the Konaic diverges from the river Brahmapootra. Distance from Mymensing or Nusserabad, N.W., 23 miles; Burhampoor, N.E., 123; Dacca, N.W., 86; Calcutta, N.E., 190. Lat. 24° 56', long. 90° 3'. E.I.C. Ms. Doc.

JUMARRA.—A town in the British district of Bhagnipoor, presidency of Bengal, 27 miles S.W. by W. of Rajmahal. Lat. 24° 50', long. 87° 28'. E.I.C. Ms. Doc.

JUMBOO.—A town in the native state of Bhotan, three miles from the left bank of the Monas river, and 124 miles N.E. by N. from Goalpara. Lat. 27° 46', long. 91° 38'. E.I.C. Ms. Doc.

JUMBOOSEER,¹ in the British district of Broach, presidency of Bombay, a town situate on the headland projecting between the estuaries of the rivers Nerbudda and Muhi or Mhye. It is the principal place of a pergunnah of the same name. In the vicinity are numerous large tanks,² and the soil being of redundant fertility, and teeming with rank vegetation, malaria for a part of the year prevails, diffusing the seeds of disease and death. Tunkaria, a village on the seacoast, 10 miles S.W. of Jumbooseer, is its seaport, through which considerable quantities of cotton, grain, coarse cloths, and the produce of the mown (*Bassia latifolia*), are exported. The population of Jumbooseer is estimated at 10,000. Distance from Surat, N., 60 miles; Bombay, N., 212. Lat. 22° 2', long. 72° 50'. ¹ E.I.C. Ms. Doc. ² *Transacts. of Phys. and Med. Soc. of Bombay*, i. 47—Gibson, *Sketch of Guzerat*.

JUMKUNDEE,¹—A town in the Southern Mahratta jaghire of Jumbundee, 69 miles N.E. from Belgaum, and 167 miles S.E. by S. from Poonah. The jaghiredar was bound to furnish a military contingent to his feudal superior, the British government, an obligation which has now been commuted for a pecuniary payment.² His revenues amount to 2,70,246 rupees, or 27,021*l.*, per annum. Lat. 16° 30', long. 75° 20'. ¹ E.I.C. Ms. Doc. ² *Bombay Pol. Disp.* 30 Oct. 1850.

JUNLAIL.—A town in the province of Guzerat, or the dominions of the Guicowar, situate on the left bank of the

JUM.

Blader river, and 80 miles S.W. from Rajkote. Lat. $21^{\circ} 30'$, long. $70^{\circ} 1'$.

Jumna.

¹ Voyage, iv. 92.

JUMNA.¹—The name of a great river of India, and the most important feeder of the Ganges. It rises at the south-western base of the group called the Jumnotri Peaks, at an elevation of 10,819² feet, and in lat. 31° , long. $78^{\circ} 32'$. About 500 feet to the north-west of the hot spring of Jumnotri, the face of the mountain rises very steeply, and is entirely cased in snow and ice. From a rock which projects from the snow, a small rill descends during the daytime. It is about three feet wide, and very shallow, being only a shower of spray produced by the snow melted by the sun's rays, and is,* according to Hodgson, the most remote source of the Jumna. This point was found inaccessible by that observer, the snow-bed being intersected by rents and chasms, caused by the falling in of the snow as it became melted by the steam of the boiling springs below it. The rill finds its way through chasms formed in the snow-bed to the ground beneath, out of which gush numerous springs of water of nearly boiling heat, and the steam from those, melting the mass of ice and snow above them, causes a copious shower, which affords the principal supply to the nascent Jumna. The stream holds a course generally south-westerly for about eight miles, when the Berai-Ganga, a stream which down to this point surpasses the Jumna in length and volume³ of water, joins it on the left side, in lat. $30^{\circ} 56'$, long. $78^{\circ} 27'$. The declivity of the bed of the stream in this part of its course is enormous, as in a distance of sixteen miles, between its source and Kotnur, the fall is 5,036⁴ feet, being at the rate of 314 feet to the mile. About five miles below this, and in lat. $30^{\circ} 49'$, long. $78^{\circ} 19'$, it receives on the right the Budecar, a great torrent, descending from the mountain Kedar-Kanta.⁵ On the same side, about

* Jacquemont¹ states, that he ascended to the small cascade described by Hodgson, and saw the rill form, at a great distance to the north, another cascade. He visited the scene nearly a month later in the spring than Hodgson, and that interval would probably cause a great difference in the state of the snow.

JUMNA.

three miles farther, the Bunal joins⁶ it, and, eight miles beyond, it is increased by the accession (also on the right side) of the Comalda, the largest of its tributaries above the Tonse. About four miles lower down, it receives the Riekna, and ten miles farther, the Khootnec, both on the right side. At the confluence with this last stream, and in lat. $30^{\circ} 39'$, long. $78^{\circ} 5'$, Hodgson found the Jumna, at the end of March, to be ninety feet wide, from three to five feet deep, rapid, and not fordable. About fifteen miles below this, it is joined on the left side by the Aglar⁷ or Agilwar, a considerable torrent. In addition to those above enumerated, numerous streams of less importance flow into the Jumna on both sides, between the source and this confluence. At the latter point, in lat. $30^{\circ} 31'$, long. $78^{\circ} 3'$, the course of the river, previously for the most part south-westerly, turns due west, which direction it keeps for thirteen miles, to the confluence of the Tonse, in lat. $30^{\circ} 30'$, long. $77^{\circ} 53'$, and at an elevation of 1,686 feet above the sea. The Tonse is by far the more considerable stream, its discharge being found, when surveyed by Hodgson and Herbert,⁸ to amount to 2,827 cubic feet in a second of time, whilst that of the Jumna was only 1,045. About ten miles farther down, on the same side, the Jumna receives the Girree, a small river, discharging 100⁸ cubic feet in a second. At Raj Ghat, immediately below this confluence, Moorcroft⁹ describes the river as being 100 feet wide in the middle of February. Garden,¹ however, assigns it greater dimensions here: according to that authority, the channel of the river is 600 yards wide, and the stream usually about 100 during the dry season, clear, deep, and rapid. A mile below this place, it receives on the left side, and at an elevation of 1,470² feet, the Asun, flowing from the south-east, and draining or irrigating the western part of the Dehra Doon. Taking from this point a direction first westerly, then southerly, it flows through a ravine in the Sewalik Mountains, and about twelve miles below the confluence of the Asun, at Badshamahal, in lat. $30^{\circ} 20'$, long. $77^{\circ} 38'$, enters the plain of Hindostan. Herbert estimates the length of course, from the source of the Jumna to this place, at 128³ miles; its elevation here at 1,276⁴ feet, its discharge, at the beginning of March, at the rate of 4,000⁵ cubic feet in a second. This assigned length of course, however,

JUMNA.

appears too great, the actual* course being only about ninety-seven miles. Thus the fall from the source to this place is about 100 feet per mile. In the vicinity of Badshahmahal,† the Jumna divides into several‡ branches, and on its right⁶ side a canal was, in the year 1356, dug by Feroz Toghluk,⁷ king of Delhi. At about eighty miles from the commencement of this canal, the canal of Ali Mardan Khan parted from it, and, taking a southerly direction, made its way to Delhi. This work appears to have been maintained in a state of efficiency till 1760; but in the canal of Feroz Shah the water ceased to flow at Snfledon in 1740. The restoration of the Delhi Canal engaged at an early period the attention of the marquis of Hastings. In 1617, operations were commenced, and by the end of May, 1820, the water was brought to the city of Delhi, and, passing through the main conduit in the palace, rejoined its parent stream. The supply is drawn from a point in the vicinity of Chooarpore, and conducted along a natural channel to Jhyadri, thence by a new cut into the river Outralla, which it follows to its junction with the river Sonmb; and, passing through this last-named river, is carried on, *via* Dadoopur,

⁶ Journ. As. Soc. Beng., 1833, p. 163
— Colvin, on the Ancient Canals in the Delhi Territory.
⁷ Ferishia, i. 440.

* This statement is derived from the trigonometrical survey.

¹ East-India Gazetteer, ii. 20.

† The following description of the entrance of the Jumna into the plains is given by Hamilton;¹ but as it is his practice to give only a general list of authorities, without specifying the particular parts of an article which they are adduced to support, it is not possible to assign those applicable to the passage here quoted:—"The Jumna issues from the mountains in the province of Delhi, near the small village of Fyzabad, about twenty-six miles north of Saharunpoor. The hills come close to the right bank of the river, immediately opposite to this village, but on the right [qy. left] bank they are distant about three miles. The river here is deep in its bed, which is about 1,000 yards broad, and in the wet monsoon rolls down a prodigious quantity of water, but in the dry season its stream is not above 100 yards broad. A short distance below Fyzabad, the Jumna separates into several channels, but chiefly into two considerable branches, which meet again below Booraghaut, at a distance of eighteen miles, forming an extensive island, well inhabited and cultivated. Over the above space its bottom is sand and gravel, with frequent rapids, which admit, however, of small timber-rafts being floated, which are afterwards taken to pieces, and formed into large ones."

¹ Travels in Upper India, i. 137.

‡ Davidson¹ crossed the Jumna about twenty miles below Badshahmahal; and though the volume of water is diverted to the canal of Feroz Shah, and to that of the Doab, he describes the main stream (17th April) as "300 yards wide, twenty feet deep, with a strong current."

JUMNA.

Kurnaul, Rair, and Boanuh, to Delhi; its total length being 185 miles.⁸ In 1823, the restoration of the Feroz Shah Canal, passing by Hansi and Hissar, was commenced. The two canals having one common head, the work consisted in the clearance of the old line from Rair to Bahaderah, 151 miles; the construction of a branch to Rohruk, forty-five miles long; of another in the direction of Darbah, thirty-two miles; and of the new supply-head, twelve miles; making a total of 240 miles. The water was turned down the canal in 1825. The restoration of the Doonb Canal, parting from the eastern bank of the Jumna near the village of Fyzabad, and rejoining the parent stream opposite the city of Delhi, was commenced in 1824, and the works were completed in 1830. "The original⁹ and almost solo object of the government in undertaking these works, appears to have been to convey a large supply of water from the Jumna for the purposes of irrigation of the crops—1st, on lines of country where the natural depth of wells was so great as to render the cost of irrigation from them so heavy as to impede the improvement of the districts, as on the Delhi Canal; 2nd, to supply the means of cheap and easy irrigation to the districts, as on the Doonab Canal, where, although the wells are not so deep, the irrigation from the canal would be comparatively cheap and easy; and, 3rd, as on Feroz's canal, to confer the means of irrigation on districts where, from the excessive depth of the wells, none was heretofore in use, and to convey a supply of wholesome water to a country where generally it is brackish or salt."

⁸ Colvin, *ut supra*, 112.

⁹ *Id.* 118.

From Badshamahal to the point of reunion with the Delhi Canal, a distance of 145 miles, generally in a southerly direction, the Jumna is occasionally available for floating rafts¹ of timber cut in the Sewalik Mountains; though even that rude kind of navigation is attended with danger during inundation, and in hot weather with delay. In addition to the works above enumerated, the construction of a canal from the Jumna, at a point about five miles east of Kurnaul, to the Sutlej at Loodiana, has been suggested, and a survey of the line of level made, the result of which appears favourable to the plan.²

¹ *Id.* 123.

At Delhi, the river is crossed during the dry season by a bridge of boats,³ constructed every year at the cessation of the rains. From that city, the course turns a little to the east;

JUMNA.

but though in many places extraordinarily circuitous, it holds generally a south-easterly direction to its confluence with the Ganges at Allahabad, a distance from Delhi, by the river's course, of 619 miles. Between Delhi and Allahabad, the Jumna receives on the right side the following rivers:—The Baun or Ootunghun, in lat. $26^{\circ} 59'$, long. $78^{\circ} 31'$; the Chumbul, in lat. $26^{\circ} 30'$, long. $79^{\circ} 19'$; the Sind, eight miles below; the Betwa,⁴ in lat. $25^{\circ} 55'$, long. $80^{\circ} 17'$; the Cane, in lat. $25^{\circ} 47'$, long. $80^{\circ} 35'$, all considerable streams; besides some others of less importance. The chief streams which fall in on the left side are, the Hindon, in lat. $28^{\circ} 28'$, long. $77^{\circ} 30'$; the Seengoor, in lat. $26^{\circ} 9'$, long. $79^{\circ} 59'$; the Rind, in lat. $25^{\circ} 53'$, long. $80^{\circ} 37'$. Jacquemont⁵ styles the Jumna in the lower part of its course an enormous river: in the rainy season, it is in some places a mile, in others several miles, in width, and with a very rapid current. In consequence, however, of its bed being obstructed by shoals and rocks, navigation was not practicable for craft above Delhi, except by means of the canal. Prinsep⁶ thus speaks of the Jumna:—“That river, although of greater length than the Ganges above their confluence, yet much inferior to it in the average volume of its discharge, is the line of communication with some of the principal commercial marts and military stations in India,—Calpee, Etawah, Muttra, and the cities of Agra and Delhi, all situated upon its banks, and with the distant post of Kurnaul, by the ancient canal branching off at Delhi, which has been lately repaired and re-opened. Its banks are lofty and precipitous, and ridges of rock in many places advance into the stream, combining with its general shallowness and strong current to render navigation extremely difficult and dangerous.” Much has, however, been done to remedy this inconvenience. At Kurinkhan, near Oryab, lat. $26^{\circ} 26'$, long. $79^{\circ} 35'$, the whole bed was formerly interspersed with kankar rocks, abounding with organic⁷ remains and huge blocks of sandstone,⁸ which rendered the navigation so intricate and dangerous, that great numbers of boats were lost, and others delayed for several weeks; but those obstacles have, for the most part, been removed by blasting or other means, and a dam made to deepen and give permanence to the channel: other improvements⁹ have been effected, and the practicability of navigating by

JUMNOTRI.

steam the river below Calpee has been established. The Jumna contains¹ crocodiles or alligators in the lower part of its course. The total length of the river, from its source to its confluence with the Ganges at Allahabad, is 860 miles. On the rocky point where the waters meet, stands the fort of Allahabad. The streams at the junction are nearly equal in volume; the Ganges, the deeper, with yellow water; the Jumna, the more rapid, with water as clear as crystal, but considered less palatable and wholesome than that of its fellow. The Jumna² or Yamuna is by the Hindoos considered sacred, and its confluence with the still more sacred Ganges is dignified by a legend, according to which the Sarasvati or Sursuli, a stream that is lost in the wilds of Sirhind, flows underground to Allahabad, where it oozes from under one of the towers,[†]² and mingles its water with those of the other two rivers. Hence this confluence is called *Tri-veni*, or "three plaited locks."

JUMNOTRI,¹ a collection of hot springs near the source of the Jumna, is situated at the western base of the most western of three closely-adjointing mountains, styled in the trigonometrical survey the Jumnotri Peaks. The mountain-mass formed by this collection of peaks bears the common name of Banderpueh.† Fraser,² who viewed it from the south-west,

¹ E. I. C. M. S. Doc. F. 1 O. 114. Surv. Jnqur. mont. Voyage, iv. 92.

* Wilford describes it as "the blue Yamuna or Calindi, the daughter of the sun, the sister of the last Maui, and also of Yama or Samana, our Pluto or Sammanus."¹

² As. Res. xlii. 188.

† Skinner¹ describes the precise spot where, according to the superstitious Hindoos, the Sarasvati reappears:—"I descended a species of cave within the fort by a flight of steps, to a dark narrow passage, at the end of which is the trunk of a tree still alive, although the air is quite excluded; and the rock which finishes the cave is moist with water, which the people believe arises from the course of the Saraswattee, the mysterious river."

¹ As. Res. xiv. 305—Ancient Geography of India.

² Excursions in India, ii. 255.

‡ Banderpueh, according to Fraser, signifies "monkey's tail." The name, therefore, should properly be Banderpueh; from Bandar, "a monkey," and Pueh, "a tail." According to Fraser,¹ the local tradition is, that Hanuman, the monkey-god, "after his conquest of Lanka or Ceylon, when he had set that island on fire, by means of a quantity of combustible matter tied to his tail, being afraid of the flame reaching and consuming himself, was about to dip this inflamed tail in the sea, to extinguish it, but the sea remonstrated with him, on account of the probable consequences to the numerous inhabitants of its waters, whereupon Hanuman plunged it in this lake, which ever since has retained the name."

¹ As. Res. xlii. 100—Journ. to Source of Jumna.

JUMROOD.

says: "Two lofty and massy peaks rise high above the rest, deep in snow, from which all the inferior ridges appear to take their rise: they are connected low down by a sharp neck; their south and south-east exposure is the least steep, and bears a great depth of pure unbroken snow. Little or no rock is seen, except at a few points in the ridge connecting the peaks, where it is too sharp and steep for snow to lie; and here it appears of a red colour. Here and there lofty precipices are observed in the snow itself, where the lower parts have melted, and the upper masses have given way, sliding down the ravines below, leaving a face of snow of several hundred feet high, and showing the depth of that which has accumulated for ages."

According to native report, Banderpueh has four peaks, situate around a lake, in which Hanuman, the monkey-god, extinguished his flaming tail. In the trigonometrical survey, three peaks are laid down, having the respective heights and technical names,—Black E. 21,155 feet,² Great E. 20,916,³ Lower E. 20,122.³ The group of hot springs is about 500 yards from the spot where the first water of the Jumna, a small rill, shoots over the brow of a rock projecting from the perennial and unexplored snows which overspread the summit of Banderpueh. The stream quickly finds its way through the mass of snow lying beneath the precipice, and having a thickness of forty feet, and runs beneath it close to the hot springs, receiving the water flowing from them. The steam of the springs melts the lower part of the mass of snow, so as to form a number of excavations, resembling vaulted roofs of marble; and from these incessant showers fall, which yield the principal supply to the nascent Jumna. The hot springs are numerous and extensive, and the water bursts up in them with great ebullition through a granite rock, and deposits a ferruginous sediment. It is devoid of taste and smell, and has a temperature of 191°⁷, nearly that of boiling water at that elevation, which is 10,819 feet⁴ above the sea. Lat. 30° 59', long. 78° 35'.

in the Cuttaek mehal of Mohurbunge, 153 miles W. by S. from Calcutta, and 67 miles W.N.W. from Balasore. Lat. 22° , long. $86^{\circ} 8'$.

Boileau, Rajwara,
116.

JUSOL, in the Rajpoot state of Joudpore, a ruined town near the left bank of the Loonee, between Balmeer and the town of Joudpore, and 60 miles S.W. of the latter. It is situate at the northern base of a small conical hill about 200 feet high, on the upper part of the rocky side of which was the residence of the thakoor or chief. There was formerly a bazar, containing 300 shops built of stone, and the town was surrounded by a wall of the same material; but those, as well as the greater part of the private houses, are now in ruins, in consequence of the fury of inveterate private feuds, under the influence of which the population of the vicinity are intent on mutual destruction. The river Loonee, abreast of this place, was, when ferried over by Boileau in the rainy season, at the beginning of July, 700 yards wide, and running with a very violent current. The town in the time of its prosperity contained 3,000 houses; but not a tenth of that number are now inhabited. The road in this part of the route between Balmeer and the town of Joudpore is under water during the rainy season, and unsafe. Lat. $25^{\circ} 47'$, long. $72^{\circ} 23'$.

E.I.C. Ms. Doc.

JUSPOOR, in the British district of Moradabad, lieutenant-governorship of the North-West Provinces, a town on the route from Pilleebheet to Suharunpoor, and 100 miles S.W. of the former. It is situate near the southern boundary of the Terai or marshy forest extending along the base of the mountain, and in lat. $29^{\circ} 17'$, long. $78^{\circ} 58'$.

JUSSO, in Bundelcund, a town, the principal place of a jaghire or feudal possession of the same name, containing an area of 180 square miles, with a population of 24,000. The revenue of the raj is returned at 1,300*l.* per annum, and the chief maintains a small military force. The town is distant 26 miles S.E. of Punnah. Lat. $24^{\circ} 27'$, long. $80^{\circ} 35'$.

³ *Voyage*, *ibid.* 457.

JUWAHIR.

from six to twelve feet, and is wholly dissipated by the first week in June; but in confined and much-depressed places, successive avalanches sometimes cause accumulations several hundred feet thick, and in many deep valleys and ravines the whole is not melted until late in July. Webb,⁵ in the beginning of June, found an accumulation 250 feet in perpendicular depth in the bottom of a valley, where the further progress of avalanches from the inclosing mountains was arrested. At an elevation of 11,568 feet above the level of the sea, the head-water of the river Gorce flows from the base of this mass, which never quite melts, though, towards the close of the periodical rains, the side, midway up the mountain, becomes divested of snow, and yields a very scanty pasturo to goats. The upper extremity of the valley, however, is never free from snow, and in consequence the route northwards to Hiundes proceeds up the course of the Goonka, a tributary to the Gorce, rising in the Oota Dhoora Pass, where the valley or gorge of Juwahir debouches on the table-land of Hiundes. There is no account of any European having explored that pass, nor any evidence that it is ever free from snow. In the beginning of June, Webb⁶ found that, upwards from Milum, having an elevation of 11,430 feet above the sea, the river and the whole country was under deep snow, precluding the traveller's farther progress to the pass, still distant fifteen miles, and approachable only by a very bad road. He was informed by the natives, that the ascent of the pass itself was performed in sixteen or eighteen hours by loaded sheep and goats. According to Traill,⁷ the thermometer ranges, during summer at sunrise, from 40° to 55°; at noon, from 65° to 75° in the shade, from 90° to 110° in the sunshine. Towards the middle of August, the temperaturo becomes precarious, and the weather subject to sudden and severe changes, which the natives suppose are accelerated by any concussion in the air, such as that produced by discharge of firearms or loud musical instruments; and much precaution is observed to prevent the occurrence of such concussions. Heavy rains sometimes fall: Webb, during his visit in the beginning of June, found them to continue for seven nights and six days without intermission. The scanty cultivation produces barley, amaranthus, wheat and buckwheat, leeks, and turnips. Buckwheat is found wild every-

⁵ E.I.C. Ms. Dec.

⁶ E.I.C. Ms. Dec.

⁷ Ut supra, 7.

JUWAHIR.

where; celery, garlic, and rhubarb also grow wild. The crop of wheat and amaranthus are in general poor, and sometimes completely fail in consequence of the ungenial climate.^a Indigenous fruits^a are, gooseberries, red and white currants, berries, pears, and strawberries. The culture of peaches and apricots is attempted, but the produce is very poor. In the elevated parts, the deodar or Himalayan cedar, and the fir or arbor vitæ, attain frequently a girth of twenty-five feet. The other trees are, various kinds of pines and rhododendrons, birches, junipers; the usual shrubs are, ground-cypresses, rose and sweetbrier. Flowers are plentiful, especially iris and anemone. The sura gai or yak is much esteemed as a beast of burthen, on account of its strength and sureness of foot in difficult paths; and still more valuable are the hybrids between this animal and common kine. Where the sire is a yak, the hybrid is called jabbu; if the cross be of the opposite kind, the hybrid is called garjo. Goats and sheep are the most general beasts of burthen, the former carrying from twelve to twenty-four pounds, the latter from ten to sixteen. These animals journey on an average a distance of five miles daily, and are allowed to remain stationary for the greater part of the day in pasture, which affords their only means of subsistence. The inhabitants of Juwahir are supported by the traffic between Kiundes and the countries to the south. The more opulent, having command of capital, combine commercial speculation in both quarters with the carrying-business, which forms the main resource of the less opulent. The inhabitants of Juwahir are favoured by the Tibetan^a authorities, in being allowed access to all parts of Tibet, while the other British provinces of Kumaon are restricted to particular places for trade. They take into Kiundes grain, cottons, broadcloths, hardware, iron ware, wooden vessels, coral, pearls, dye-stuffs, spices, sugarcandy, and timber; and bring back gold-dust, saffron, sheep's-wool, goat's-wool or shawl-wool, chauries or shawls, coarse shawls, inferior silks, leather tanned in a similar manner to the Russian, dried fruits, and drugs. The Juwahirians, of Tibetan descent, and exhibit the singular anomaly of being in allegiance¹ both to the mother country and to the government of Kumaon; the latter enforced by military power, the former by the influence resulting from commercial relations.

tory of the rajah was secured to him by treaty.¹ It however, was regarded merely in the light of a p^{er} engagement with the reigning prince, and its conditions considered binding on his successor.² In 1835, it being that the new rajah, while heir-apparent, had ordered nived at the kidnapping of four British subjects for pose of human sacrifice, the British government confiscated possessions³ in the plains, upon which the rajah relinquished his districts in the hills. A pension of month was assigned for his support, and he retired to The forfeited possessions were annexed⁴ to the British; those situated in the plains being incorporated in district of Sylhet,⁵ and the remainder (forming the subject of this article) being placed under the jurisdiction of the agent in the Cossya Hills. Coal is stated to abound in the hills of Jynteeah.⁶
